Here in Tulia week before last the square dance news was mailed at the Tulia post office on a Monday and finally was placed in our box in the same post office on Thursday. It had been sent to Amarillo, then to Claude.

Our out-of-town papers, including Kress and Happy, were sacked and ready to go by 6:05 last Wednesday afternoon. But the door was locked at 6 and these papers had to lay in the Tulia post office until about 6:30 Thursday afternoon—24 hours and 30 minutes—before they moved! Postmaster Sanderson is cooperating to prevent this from happening again, but in so doing is probably violating the spirit of postal policy.

The deteriorating postal service is a national scandal. True, the service has problems, due largely to the increasing volume of mail to be delivered. But communications, including the mail service, telephone, telegraph, airlines, are the life blood of America, both commercial and personal.

With modern technology at our disposal, we should have the fastest and most efficient mail service in the world. As it is, mail service in "backward" Mexico is both faster and cheaper! Mexican postal service is operative seven days a week! And why shouldn't it? People live seven days a week—not four and a half or five!

The policy of the postal service is saturated with inconsistencies. For instance, it is making an effort to reduce if not eliminate "night work" because night workers are paid a slightly higher rate.

Any knowledgeable person knows that the general pattern of business mail is this: It is mailed in the afternoon and is expected to arrive at its destination the next morning. We have in the past dispatched letters in the late afternoon and they were delivered in Dallas, Denver, Oklahoma City or Albuquerque the next morning.

This simply means that mail must travel at night. We can no more limit night work in the postal service than we can eliminate night work for the police, firemen, hotel clerks or ambulance drivers. It's a part of the system.

Then there is the problem of cost, the culprit that must bear the blame for poor service.

Americans have priorities . . . or should have. Some will drive a 10-year-old car in order to have a new home. Some will forgo good clothing in order to have a new car. But there are some areas in which we demand the best . . . regardless. Business men cannot operate without reliable and efficient communications. Poor mail service means lost sales. It means halted production pending the arrival of a part or supplies. For a newspaper, it means the loss of its life blood, news, features, before publication, and effective readership after publication.

The Easter mail strike in New York City dramatized the effect of poor mail service on banking, stock markets, credit institutions, pensioners, and a thousand other businesses and individuals.

Americans want efficient mail service. And they expect to pay for it, either in the price of a stamp or through taxation. They are not interested in false economy even though it might make Mr. Nixon's budget look a little better.

VISION FOR NEW FOODS

Mr. DOLE. Mr. President, among the achievements of the World Food Congress held last month in The Hague under the auspices of the Food and Agricultural Organization of the United Nations, was a goal of seeing that every schoolchild be provided at school with half of his or her daily requirements of calories and proteins by the end of this decade.

This worthwhile goal is of particular interest to me, Mr. President, because Kansas is helping to achieve that goal as the principal supplier of wheat-soy-blend, or WSB, a versatile new low-cost high-protein food product formulated by the U.S. milling and bulgur industries in cooperation with the U.S. Department of Agriculture, and now widely distributed throughout the world under the food-for-peace program.

Mr. President, an editorial published in the Southwestern Miller of July 21 summarized the objectives of the World Food Congress and what it could mean in terms of improved human nutrition. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VISION FOR NEW FOODS

That "every school child be provided at school with half of his or her daily requirements of calories and proteins" is one of the principal goals adopted by the second World Food Congress held under auspices of the Food and Agriculture Organization of the United Nations in The Netherlands. That goal, recommended by the Commission on Higher Living Standards and Improved Diets, was among the most ambitious spelled out for achievement in the decade of the 1970's. It was presented not only as a challenge to the governments of the developing nations, but also for the developed nations such as the United States. The developed nations were urged by the commission's chairman, Professor V. A. Oyenuga, not only to assure that that child feeding target be attained among their own underprivileged populations, but also to assist the developing nations toward that very same objective.

It is no surprise that the proposal for spelling out a very specific target for nutrition level provided through school lunch programs originated with a spokesman from private industry, in this case an American company that has done considerable pioneering work in the field of specially blended foods. That Herbert J. Waters, who attended the Congress as a representative of Archer Daniels Midland Co., should be the originator of the proposal is, if anything, a tribute to the spade work that must precede acceptance of specially prepared foods as one answer to the world's very serious nutrition problems. Mr. Waters spelled out for the Oyenuga Commission the success attained by the United States in distribution of Wheat Soy Blend (WSB) and Corn-Soya-Milk (CSM) in foreign donation programs, and the undisputed documentation of the tremendous advances in health and vitality achieved in areas where these foods have been accepted. He cited the great opportunities for further enhancement of nutritional well-being around the world through application of the technology and skills already gained in what must be viewed as barely minimal steps.

No one, even the United States, could claim at The Hague sessions that the goals for the 1970's in the way of nutrition had already been achieved in their country. In the same week that the Congress was under way, Secretary of Agriculture Hardin did declare, "America has turned the corner in its drive to eliminate hunger and malnutrition." That "turning the corner" from what has generally been regarded as a shocking level of malnutrition is largely due to the Nixon administration's efforts to expand both the school lunch and food stamp program and to assure that every county provides some type of federal food assistance. Currently, some 5,000,000 needy youngsters are receiving free or reduced price lunches, compared with only 3,000,000 a year ago. In face of that progress—bringing the food stamp and commodity distribution programs to 10,000,000 people in needy families, against slightly less than 7,000,000 in May, 1969—it is generally conceded that budgetary restraints are checking success. Senator George McGovern of South Dakota, chairman of the Senate Select Committee on Nutrition and Human Needs, recently praised the administration's progress in the war on hunger as "one of its most impressive accomplishments," but at the same time declared "millions of Americans remain hungry."

The avenue raised at The Hague for dramatic improvements in the health of school children throughout the world—utilizing grain-based foods specially prepared to achieve stated nutrition levels—has hardly been given a chance in the United States. This is in face of the fact that experts such as Mr. Waters and Robert G. Lewis, both Washington consultants with government experience in the areas of food and nutrition, believe that this nation cannot afford to overlook that method. Mr. Lewis has estimated that it would cost just under $2,000,000,000 a year to reach 31,000,000 people with one pound per day of high protein, fully enriched and fortified "full nutrition food." That quantity would provide all the daily requirements for protein, minerals and vitamins and two-thirds of the calorie needs, Mr. Lewis points out that his cost estimate is less than half the outlay the Department of Agriculture is proposing for a food stamp program that will reach far fewer people. Mr. Lewis states that the use of "full nutrition foods" is not only economically feasible, but is socially desirable.

For some years one of the basic tenets of food assistance overseas was that no food could be donated abroad that did not already have commercial acceptance in the United States. The success of CSM as an overseas relief food has largely ended reliance on that precept. Based on the willingness of the World Food Congress to embrace specially blended foods as an answer to nutrition needs and the continued reluctance of domestic food administrators to take that same stand, it appears that introduction of these foods into domestic programs may well depend upon further successes with the hungry overseas.

AMERICAN BAR ASSOCIATION JOURNAL ARTICLE OPPOSING THE GENOCIDE CONVENTION

Mr. ERVIN. Mr. President, I was gratified to learn several weeks ago that the Committee on Foreign Relations had decided not to report the Genocide Convention proposal at this time. I believe that the committee acted wisely because of the far-ranging consequences which would flow from the ratification of this treaty.

In the July 1970, issue of the American Bar Association Journal, two scholars, Judge Orie L. Phillips and Mr. Eberhard P. Deutsch, who have investigated in detail the provisions of the convention and its ramifications, published an article entitled, "Pitfalls of the Genocide Convention." Even though the Genocide Convention will not be considered at this time, I hope that all Senators will read the article. It is an outstanding scholastic work, and its authors deserve praise for the public service they have performed by bringing their well reasoned objections to this treaty to the Senate's attention.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PITFALLS OF THE GENOCIDE CONVENTION

(By Orie L. Phillips and Eberhard P. Deutsch)

On September 8, 1949, the American Bar Association, through its House of Delegates, expressed the sense of the Association "that the conscience of America like that of the civilized world revolts against Genocide[1] . . .; that such acts are contrary to the moral law and are abhorrent to all who have a proper and decent regard for the dignity of human beings, regardless of the national, ethnical, racial, religious or political groups to which they belong; [and] that Genocide as thus understood should have the constant opposi-

[1] The word "genocide" was coined by the late Professor Raphael Lemkin (1900–1959) of the Yale Law School, whose parents were purged in Poland.

tion of the government of the United States and of all of its people".

The House nevertheless placed the Association on record as opposing approval by the Senate of the United States of the Convention on the Prevention and Punishment of the Crime of Genocide "as submitted" to the Senate for its advice and consent by President Truman less than three months earlier—on June 16.[2]

At its Midyear Meeting in Atlanta on February 23 of this year, the House reaffirmed the position taken in 1949, voting down by a narrow margin a recommendation for reversal of that position and for unreserved approval of the convention.

The authors of this article are in complete accord with both the declaration of and the conclusion reached by the Association. This article is written as a record of the background of that position, which, in the last analysis, is simply that wholehearted concurrence in the lofty ideals that engender promotion of moral issues should not be permitted to substitute the ephemeral tissue of those ideals for the enduring fiber of constitutional limitations.

The Genocide Convention originated in the United Nations. On December 11, 1946, the General Assembly adopted a declaration to the effect that genocide "is contrary to moral law and to the spirit and aims of the United Nations"; that "many instances . . . of genocide have occurred when racial, religious, *political* and other groups have been destroyed, entirely or in part"; and that genocide is a crime, whether it "is committed on religious, racial, *political* or any other grounds" (emphasis supplied). The declaration invited "the Member States to enact the necessary legislation for the prevention and punishment of this crime".

The United States joined in this declaration. Standing foremost as a world leader in the protection of individual rights, she could do no less. The authors of this article are in complete and unequivocable accord with the following statement made by the American Bar Association's Section of Individual Rights and Responsibilities in its report on the Genocide Convention submitted to the House of Delegates in February of this year:

"The United States, which was founded on the basis of protest against government excesses, and which grew great in substantial measure because it was a haven and the hope for oppressed persons everywhere, should be in the lead in joining in the declaration of revulsion at the organized effort to eliminate a whole people during World War II, and of determination that such an effort should not be undertaken ever again."

But the conviction of the authors is equally firm that having joined in such a declaration as to a matter which lies ultimately within the domestic sphere of each of the world's nations, the United States has gone far enough. She should not, in our opinion, join in a convention by which she would commit herself in advance to protect the people of other nations against their own governments. Nor should she agree that such other countries may determine what is to be deemed to be genocide within the borders of the United States and invite them in advance, in the words of Article VIII of the Genocide Convention, to take through "the competent organs of the United Nations, such action under the Charter of the United Nations as they consider appropriate for the "suppression" thereof.

The Section report itself makes this point abundantly clear. It is stated therein that under Article VIII of the Genocide Convention:

"Even if the complaint involved alleged prohibited action by one country against an ethnic group within its own country . . the claim that the United Nations could not consider the matter because it concerned the domestic jurisdiction of one state . . . would be foreclosed. The Security Council, or the General Assembly, or the Economic and Social Council would all be authorized to hear the complaint. In appropriate cases, where the complaint was borne out by the facts, the United Nations organs could recommend or decide on measures to be taken."

TREATIES SHOULD NOT BE USED FOR INTERNAL GOVERNMENT

It is submitted that treaties with other nations are not the proper constitutional means for the government of the people of the United States in their internal affairs, which should continue to be regulated by our own federal, state and local legislative bodies through enactments that have their foundation in our own constitutional processes.

We subscribe wholeheartedly to the statement made by John Foster Dulles as Secretary of State, testifying before a subcommittee of the Senate Judiciary Committee on a proposed constitutional amendment to limit the effect of treaties as internal law within the United States:

"I do not believe that treaties should, or lawfully can, be used as a device to circumvent the constitutional procedures established in relation to what are essentially matters of domestic concern. [The United States should] favor methods of persuasion, education and example rather than formal undertakings. . . .

"We do not ourselves look upon a treaty as the means which we would now select as the proper and most effective way to spread throughout the world the goals of human liberty to which this Nation has been dedicated since its inception."

The authors of this article do not agree with the extravagant statement in the Section report that "in terms of a threat to international peace and security, the occurrence of genocide anywhere in the world is as much a matter of international concern as, for example, the spread of nuclear weapons"; or that "when some states—or, as in this case, 74 states—consider a matter to be of sufficient concern to make a treaty about it, then realistically it is of international concern".

This is the old bootstrap doctrine by which a domestic issue, not subject as such to regulation by treaty, can be transmuted, by the very prohibited act of making it the subject of a treaty, into the arena of international affairs subject to regulation by treaty. It is the same doctrine that gave rise to the 1950 dictum by the Department of State that "there is no longer any distinction between 'domestic' and 'foreign' affairs".[3]

If the limitations contained in the Constitution of the United States are subject to circumvention by this jurisprudential sorcery, the matter becomes one of broad constitutional policy rather than of strict constitutional law. Our constitutional philosophy should not be so impaired by transplanting matters within our domestic jurisdiction into the international forum, subject to legislation by treaty and adjudication by international tribunals.

GENOCIDE BY GOVERNMENT IS NOT IN THE CONVENTION

There can really be no question, as stated in the Section report, that "the crimes which gave rise to the Genocide Convention—mass murder of Jews . . . by the Nazis was, of course, done with the encouragement and indeed at the direction of the government of Germany". It is the position of the authors of this article that in order for genocide to be an international crime, and therefore a matter of international concern appropriately the subject of a treaty, it must, by definition, be committed with the complicity of the government concerned, not merely by individuals.

When the convention was being formulated, the representatives of the United States, backed by those of other Western nations, sought as a *sine qua non* to have genocide defined as having been committed "with the complicity of government", because its "delegation felt in fact that genocide could not be an international crime unless a government participated in its perpetration."[4]

This demand was rejected, and under Article IV of the convention states-parties are required merely to enact legislation providing punishment for "persons committing genocide" and requiring the trial of "persons charged with genocide", whether they are "public officials or private individuals". Instead of including government complicity as an element of the offense, Article VIII of the convention permits "the competent organs of the United Nations" to interfere in the domestic affairs of member nations by hearing complaints as to the conduct of their individual citizens, and to "take such action . . . as they consider appropriate" against them.

The type of problem with which the United States might be faced in this regard, if it became a party to the Genocide Convention, is illustrated graphically and startlingly by a recent news item in *Time* of December 12, 1969, which reported that a "San Francisco lawyer who represents the [Black] Panthers . . . revealed plans to go before the United Nations and charge the United States with 'genocide' against the Panthers".

VAGUE LANGUAGE CAUSES PROBLEMS

Another constitutional question of some significance arises from the vagueness of

---

[2] In 1950 the Senate Foreign Relations Committee, headed by Senator Connally of Texas, having before it the genocide treaty from President Truman for advice and consent, ordered hearings by a subcommittee under the chairmanship of Senator McMahon of Connecticut. Hearings were extensive, running over a number of days. Many persons appeared in support of ratification. Carl B. Rix of Milwaukee, a former President of the American Bar Association, the late George Finch of Washington, D.C., then and for many years Editor-in-Chief of the *American Journal of International Law* and professor of international law at Georgetown University, and Alfred J. Schweppe of Seattle, formerly Dean of the University of Washington Law School and at the time Chairman of the American Bar Association's Committee on Peace and Law Through United Nations, appeared and testified against ratification, pointing out the grave inadequacies and risks of the proposed convention. The testimony taken at the hearings is part of the Senate records. After these 1950 hearings, the proposed convention became dormant for some twenty-one years, until revived by President Nixon in February, 1970. It appears significant that Dean Rusk, who as Assistant Secretary of State presented the State Department's position to the McMahon subcommittee in 1950, was Secretary of State for eight years under two recent Presidents, but did not revive the Genocide Convention, even with a heavy Democratic majority in the Senate. Equally significant is the fact that during the Eisenhower Administration John Foster Dulles, the Secretary of State, announced that the administration would not bring up the Genocide Convention.

[3] State Department Publication 3972, Foreign Policy Series 26 (1950).

[4] See record of the proceedings of the Ad Hoc Committee in 1948, and especially the statement made on April 15, 1948, by Mr. Maktos of the United States, chairman of the committee, as to the position of the United States, and also the proceedings and votes on the Sixth (Legal) Committee (75th and 128th meetings), and the Official Records of the Third Session of the General Assembly, Part I, "Legal Questions".

certain provisions of the convention. It provides in Article II, for instance, that genocide consists of certain "acts committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such" by "(b) causing serious . . . mental harm to members of the group".

There would seem to be grave doubt as to whether so vague a provision as that of "mental harm" could be cured by implementing legislation such as, for example, that proposed by the Section of Individual Rights and Responsibilities in an annex to its report on the convention, which refers to conduct "with the intent to destroy" and which "causes serious harm to the . . . mind". Even the February 19, 1970, message of the President to the Senate, with its attached letter from the Secretary of State, requesting advice and consent to ratification recommends that this be done with an "understanding" that the words "mental harm" be construed as having a clarifying narrow meaning.

Language so broad and vague, if not unconstitutional in legislation defining crime, could well have been held to characterize racial segregation practices prior to 1954 as genocide. In *Brown* v. *Board of Education*, 347 U.S. 483, the Supreme Court held expressly that separation of Negro children "from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone . . . [and] has a tendency to [retard their] education and mental development".

"POLITICAL" GROUPS REMOVED FROM THE CONVENTION

Just as the United States and her political allies were unable to get "complicity of government" into the definition of genocide, they also acquiesced at the insistence of the Communist bloc in the omission of "political" from the categories of groups as to which genocide is to be prohibited.

The original United Nations declaration denounced genocide whether "committed on religious, racial, *political* or any other grounds" (emphasis added). When this declaration was being converted into the convention, the Communist nations insisted on omission of "political" from the listed categories, and the United States capitulated. None of the Communist nations, therefore, can be charged under the convention with committing genocide by inflicting intolerable "conditions of life" on a political group and seeking to destroy its members.

When this point was raised in the House of Delegates last February, Nicholas de B. Katzenbach, a former Under Secretary of State of the United States said, in effect, that omission of "political" from the convention was simply a "trade" in the course of compromise between the Communist and Western nations by which "we succeeded in getting 'ethnical' included among the groups in place of 'political' ". Considering that "ethnical" in its ordinary meaning is defined as "pertaining to or designating races" and that "racial" already was in the draft of the convention, a compromise for the insertion of "ethnical" in return for the omission of "political" seems to have been a one-sided trade, with our side the loser.

The elimination of "political" groups and "with the complicity of government" now permits genocide where it goes on (Czechoslovakia, Hungary, Africa, Asia). Sir Hartley Shawcross, a former British Attorney General, said that the adoption of the convention will delude people into believing that a great step forward has been taken, whereas nothing has been accomplished.

This "legislative history" as to the circumstances under which "political" was omitted on the insistence of the Soviet Union and other Communist nations, so that assassination of political groups is not prohibited by the convention, is explained and confirmed by the refusal of the Soviet Union to ratify the 1957 Convention on the Abolition of Forced Labor, because it prohibits the imposition of forced labor as a means of political coercion or as punishment for the expression of political views opposed to those of the government.

WHERE CAN GENOCIDE TRIALS BE HELD?

Aside from the answerability of governments for violation of the convention on charges filed with the United Nations, the treaty provides (Article VI) that "Persons charged with genocide . . . shall be tried by a competent tribunal of the State in the territory of which the act was committed, or by such international penal tribunal as may have jurisdiction with respect to those Contracting Parties which shall have accepted its jurisdiction."

In an article in the January, 1970, issue of this *Journal* (page 71), Bruno V. Bitker inadvertently omitted the words "in the territory of which the act was committed" when he quoted from Article VI. In a letter to the editor in the April issue (page 296), the omission was corrected by Mr. Bitker, but his January article concludes that a United States citizen charged with genocide under no circumstances could be tried elsewhere than in a court of the United States.

And in the report of January, 1970, on the genocide convention submitted by the Standing Committee on World Order Under Law to the House of Delegates, the same egregious *non sequitur* is drawn to the effect that since there is no such international tribunal as is contemplated under this article, no "American citizen could be deprived of his constitutional right to trial by jury, or be forced into a trial in some foreign court under procedures not American".

It seems especially difficult to understand this fallacious syllogism in light of the provisions of Article VII of the convention that genocide is not to be considered a political crime and that the parties to the convention "pledge themselves in such cases to grant extradition", presumably for trial in "the State in the territory of which the act was committed" (Article VI), "in accordance with their laws and treaties in force".

These jurisdictional and "extraditional" provisions raise important practical problems for the United States. The authorities in Hanoi have charged that members of the Armed Forces of the United States have been guilty of genocide in "the alleged massacre of civilians in a South Vietnamese village". If the United States were a party to the Genocide Convention, she would necessarily have agreed that these soldiers are subject to trial in Vietnam under the provisions of Article VI and, if the United States and Vietnam should ever have an extradition treaty, would be subject to extradition for trial in Vietnam, even if deemed or found innocent in this country.

Of course, no extradition would be necessary as to our American prisoners in North Vietnam. That country, it may be assumed, would cite the Genocide Convention, if we were a party to it, as our consent to the trial of those prisoners on genocide charges in that country, with the Nuremberg trials as a sanctioning precedent.

WHAT HAS HAPPENED TO THE "NUREMBERG DEFENSE"?

This suggestion in turn raises another interesting, serious and dangerous question for the United States. The "Nuremberg defense", universally pleaded in war crimes trials, is that the accused was following orders he was required to obey. Article IV of the Genocide Convention provides: "Persons committing genocide . . . shall be punished, whether they are constitutionally responsible rulers, public officials or private individuals." As stated in the report of the Section of Individual Rights and Responsibilities: "The Genocide Convention makes clear, in Article IV, that in respect of the crimes specified, no one, not governmental officials, not private individuals, can escape responsibility for his action through this [Nuremberg] defense."

We join in asking the rhetorical question posed in his dissent by Ben R. Miller, a member of the council of the Section:

"Would not the military strength of this nation and hence the nation itself be endangered if in following orders of a superior officer in the heat of battle subordinates would be faced with instant decision of whether to risk court martial for refusing to follow orders, or punishment for genocide if a (tribunal) in the calm aftermath of a war could consider the result of following a particular order to have been genocide? For the Treaty abolishes the defense of subordinates that they were but following orders of their superior officers."

INTERNATIONAL PENAL TRIBUNAL STANDING IN THE WINGS?

Opponents of the Genocide Convention have insisted that if the convention were ratified by the United States, there would be the possibility of the trial of an American citizen accused of genocide before an international penal tribunal when, as and if such a court should be established and its jurisdiction accepted by the United States. The trial would be without the constitutional safeguards by which he would be protected in a court of the United States.

To this the proponents of the convention said in the Section report that "the answer is simple. No such tribunal has been established." They added:

"If one were established, parties to the Genocide Convention would have the option whether to accept its jurisdiction or not. For the United States, that option would have to be independently exercised through the Treaty Power, that is only with the advice and consent of the Senate by a two-thirds vote."

Issue is taken, in the first place, with the last-quoted statement. This is just the type of action that, like recognition of a new foreign government, might be accomplished by an executive agreement without the advice and consent of the Senate. The point is well illustrated by the recent case of the International Anti-Dumping Code, concluded by the United States with seventeen other nations in Geneva on June 10, 1967. All those countries treated the code as a formal treaty requiring parliamentary approval—and so ratified it. The United States alone dealt with the document as an executive agreement, and because certain of its provisions were in direct conflict with corresponding provisions of Congressional tariff acts, the code was not submitted to the Senate for its advice and consent for fear of adverse action by that body.[5]

There possibly would be no practical way in which to assert the invalidity of an executive agreement accepting, in behalf of the United States, the jurisdiction of an international penal tribunal established for the trial of offenders under the Genocide Convention, once that convention itself had been ratified by the United States.

Nor can it be said cavalierly that it is not contemplated by the United States that an international penal tribunal is to be established. The minutes of the 74th meeting of the Sixth (Legal) Committee of the General

[5] See Public Law 90–634, 82 Stat. 1347 (October 24, 1968), 19 U.S.C.A. § 160, note (Suppl.), suspending certain provisions of the code, and its legislative history in *U.S. Congressional and Administrative News* (1968), Vol. 3, 4359 *ff.* See also Long, *United States Law and the Anti-Dumping Code*, 3 INT'L LAWYER 464 (1969).

Assembly of the United Nations, held at Paris in October, 1948, contain a significant statement to the effect that the United States delegation stated that it "intended, at a later stage, to show the need for the establishment of an appropriate international tribunal" in connection with Article VI of the Genocide Convention.

George A. Finch, a former Deputy Under Secretary of State, professor of international law at Georgetown University, Vice President of the American Society of International Law and editor-in-chief of its journal, in an address before the annual meeting of the society at Washington on April 29, 1949, said: "The proposals . . . to prevent genocide . . . have been framed so as to take American domestic questions out of the jurisdiction of American courts and place them under some form of international jurisdiction."

In a book on international enforcement of human rights, Professor Paul Gormley of the University of Tulsa School of Law states: "A private individual must be able to prosecute an action before an international tribunal—in his own name—against an offending government, particularly his own."

The Bangkok Conference on World Peace Through Law, held in September, 1969, unanimously adopted a resolution commending its committee engaged in a project entitled "Toward a Feasible International Criminal Court" and giving it all possible support and assistance.

How can it be said in good conscience, in the face of this wealth of background material to the contrary, that Americans may rest assured that ratification of the Genocide Convention by the United States at this time will not carry with it the ultimate establishment of an international penal tribunal for the trial of citizens of the United States charged with commission of offenses thereunder?

An American citizen or any other person residing in the United States who is tried by an international tribunal created for the trial of persons charged with the offense of genocide would be deprived of many of the rights provided in our Constitution for persons charged with offenses against the laws of United States in our national courts. Among these are the right to be charged for a capital or infamous crime only on a presentment or indictment of a grand jury and the right to a speedy and public trial by an impartial jury of the state and district wherein the crime is alleged to have been committed. The privilege against self-incrimination and the protection against unreasonable searches and seizures also might disappear.

Another reason militating against ratification of the Genocide Convention arises from the provision of Article III(c) making punishable "direct and public incitement to commit genocide" vis-à-vis the First Amendment's guarantees of free speech and press. Suffice it to say here that there is at least grave doubt under recent decisions of the Supreme Court as to the effect to be given, even by that Court, to such a treaty provision in the circumstances of different cases—certainly completely incomprehensible to judges of an international tribunal to whom our concepts of freedom of thought and expression might be chimeric mysteries at best.

RESERVATIONS ON ADHERENCE WOULD BE INEFFECTIVE

It is extremely doubtful that objections to the ratification of the convention by the United States can be obviated by reservations attached to our adherence. It will be recalled that by the Connally Amendment to the reservation of the United States to its declaration of adherence to the International Court of Justice, it is stipulated that the United States is not to be subjected to the processes of that court as to disputes which are essentially within her own domestic jurisdiction "as determined by the United States of America".

To circumvent that reservational safeguard, it was provided by Article IX of the Genocide Convention:

"Disputes between the Contracting Parties relating to the interpretation, application or fulfillment of the present Convention, including those relating to the responsibility of a State for genocide or any of the other acts enumerated in article III, shall be submitted to the International Court of Justice at the request of any of the parties to the dispute."

This article clearly overrides the Connally Amendment and subjects the United States to the unreserved jurisdiction of the International Court of Justice as to all matters involving the "interpretation, application or fulfillment" of the convention. Thus, if our Supreme Court should hold that a case under the convention is within this country's domestic jurisdiction and the conduct protected by the First Amendment, any party to the treaty could take the matter before the International Court of Justice, which need not follow our Court's decision. It might hold that the case was not within our domestic jurisdiction, and the United States would be bound by that decision despite the Connally Amendment.[6] This is a constitutional consummation devoutly to be avoided.

HOW EFFECTIVE COULD THE GENOCIDE CONVENTION BE?

In the final analysis, the prohibition of genocide by treaty must become an exercise in futility. Adolph Hitler would hardly have restrained the frightful acts of genocide that gave rise to the convention, even if it had been in existence and Germany had been a party to it during the Nazi reign of terror. The Soviet Union and her Communist-bloc allies were not deterred from the 1968 invasion of Czechoslovakia by the nonaggression provisions of the Charter of the United Nations.

The Genocide Convention places in the hands of nations whose peoples have never known the freedoms guaranteed under our Constitution the power to judge whether those freedoms are being protected properly within our domestic borders.

It is submitted that an international convention whose provisions may be invoked in an international forum when an individual commits a crime within the domestic jurisdiction of a state would cause far more friction between peoples and governments than does the evil it seeks to correct. It would tend to promote war rather than to maintain international peace and security within the letter and spirit of the charter of the United Nations.

ADVICE OF BAR SOUGHT ON REVISION OF ARTICLE 9

The permanent editorial Board for the Uniform Commercial Code is inviting all interested members of the Bar to comment on Preliminary Draft No. 2 of amendments to Article 9 of the Code. On May 22 the draft was submitted for members' suggestions at the 47th Annual Meeting of the American Law Institute.

The Uniform Commercial Code is cosponsored by the institute and the National Conference of Commissioners on Uniform State Laws. The editorial board is appointed by the two sponsoring organizations.

Copies of Preliminary Draft No. 2 of the Review Committee for Article 9 are available from the executive office of the Permanent Editorial Board for the Uniform Commercial Code, 4025 Chestnut Street, Philadelphia, Pennsylvania 19104.

Since its completion in 1952, the Uniform Commercial Code has been adopted in forty-nine states, the District of Columbia and the Virgin Islands. In the words of the Review Committee, Article 9 "was the first integration of the badly fragmented field of chattel security" and "the most innovative of the articles of the Code".

Preliminary Draft No. 2, replacing an earlier draft dealing with fixtures, contains all the current recommendations for revising Article 9. Professor Robert Braucher of Harvard Law School is Reporter to the Committee and Professor Homer Kriske of New York University Law School is Associate Reporter.

Following reconsideration of the draft in light of the suggestions received, the committee hopes to submit final proposed amendments with official comments to the editorial board before January, 1971.

Comments on Preliminary Draft No. 2 should be addressed to Secretary of the Permanent Editorial Board, 4025 Chestnut Street, Philadelphia, Pennsylvania 19104.

RESULTS OF 1970 ELECTIONS FOR STATE DELEGATES

Jurisdiction	Delegate elected	Ballots mailed	Ballots returned	Percent of return
Arkansas	John C. Deacon, Jonesboro	887	484	55
Colorado	James K. Groves, Denver	2,219	1,052	47
Delaware	Howard L. Williams, Wilmington	439	210	48
Georgia	Kirk M. McAlpin, Atlanta	2,580	1,281	50
Idaho	J. Blaine Anderson, Blackfoot	466	263	56
Indiana	C. B. Dutton, Indianapolis	2,593	1,413	54
Louisiana	Thomas W. Leigh, Monroe	2,843	1,142	40
Maryland	Norman P. Ramsey, Baltimore	3,971	1,670	42

U.S. POLICY TOWARD GREECE

Mr. PELL. Mr. President, in an article published in the Washington Post on August 9, Mr. Alfred Friendly succinctly described the present situation in Greece and pinpointed what I consider to be the principal failings of current U.S. policy toward the junta. The article, appropriately entitled "The Greek Junta's Hopeless Future," underscores the need for a clear public statement of disapproval on the part of the Nixon administration of the junta's failure to begin the process of a reform to democratic government. Such action is long overdue and, as Mr. Friendly points out, the failure of the U.S. Government to take an unequivocal stand on this issue may well cost us "the

[6] See Phillips, *The Genocide Convention*, 35 A.B.A.J. 623, 625 (1949).

good will and future friendship of the oppressed Greek people."

I ask unanimous consent that Mr. Friendly's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREEK JUNTA'S HOPELESS FUTURE

(By Alfred Friendly)

ATHENS.—In the more than three years since it seized power, the Greek military regime has run up a curiously mixed record of success and failure. It has been completely successful in establishing itself in power. Its control of the country is absolute and not threatened by any force, internal or external, on the horizon. It has completely failed to fulfill its promises of giving Greece a new basis for political life, a political "cleansing" or even a minimally competent government. Most important, it has failed miserably to win popular support at home or acceptance abroad.

A striking consequence of these failures—and also in part a cause of them—is the junta's total inability to enlist anyone of technical competence, good reputation and public stature to work in the government. The feeling remains, and is probably growing, that anyone who joins up is a quisling.

For the last few weeks it has been common knowledge, and the source for much joking in Athens, that Prime Minister George Papadopoulos has been hawking top jobs to battalions or prominent Greeks who are anti-junta. Some of them have only recently returned from prison or exile. Papadopoulos is known to be frustrated on this score and to realize—as his infinitely more blinkered and primitive military colleagues do not—that his government is simply unable to deal with its problems. It can make its writ run, but its writ is incompetent.

The failure to win popular support, to operate an effective government, to obtain the necessary economic agreements with the Common Market and other international agencies abroad, to secure the flow of indispensable foreign investment—these are the junta's Achille's heel. Because of this, the Western democracies, and the United States in particular, possess some leverage that can be exerted on the dictatorship. The junta can afford to be indifferent or unmoved by the essentially meaningless threat of withholding future weapons supply but it can not remain unconcerned about international condemnation and lack of real American support, for these are at the root of the junta's hopeless future prospects. Greece has not reached the point of Spain and Portugal, nor is soon likely to, where it can thumb its nose at the rest of the world.

But it is in just this area of pressure politics where Greek liberal (as against left) anti-junta opinion leaders believe the United States has not made intelligent or courageous use of its clear potential. Whatever they think about the attitude of the Pentagon or CIA, a small group of informed and pro-Western Greeks concedes that the White House and the State Department detest the junta and are sensible to the dangerous consequences of its continuance.

But, they complain, the American government has not made clear to the junta, in cold turkey terms, the degree of its condemnation, nor threatened to use the not insignificent arsenal of political and psychological weapons at its disposal if the junta does not begin the process of a return to democratic rule. Granted, the Greek critics continue, the United States cannot tell the colonels how to run the Greek government. But it can certainly make much more explicit to the colonels that they cannot expect to be admitted into decent society, must less be supported or loved, as long as they are on their present course.

A second complaint against the American government is that in failing to take its stance of moral opposition to the junta clearly and publicly, it is forfeiting the goodwill and future friendship of the oppressed Greek people. Instead—at least until the arrival here of American Ambassador Henry Tasca, who put a stop to it—American military officers would greet their Greek counterparts with excessive cordiality and fulsome statements, all of which were reproduced by the government and disseminated far and wide as evidence of how the United States loved the regime. Even Tasca has on occasion carelessly shown up on platforms with junta leaders, and seen his appearance instantly exploited by the junta propaganda machine. The gist of the complaint is that Papadopoulos is a brilliant chess and poker player who has made chumps of us.

In defense, the Americans insist that they are telling the junta, privately but in the most emphatic terms, that America intends sharply adverse action, of which public denunciation will only be one part, if the junta fails to announce before the end of the year a date for parliamentary elections.

They also argue that for maximum influence America must apply the carrot as well as the stick: an outright public condemnation at this point would be premature and would simply drive the colonels out of the Western ball park and end any possible outside influence on them.

The defense is not particularly persuasive. It is hard to see a good reason why the United States cannot play poker as well as Papadopoulos or why it cannot reassure the Greek people about its attitude toward the junta and its suppression of democracy. Instead, it lets persist in the mind of the overwhelming proportion of the Greeks—almost everyone but a handful of staunchly pro-Western sophisticates—that we cherish the colonels and support them to the hilt.

It is hard to see any good reason why the American government has not officially and publicly expressed its ourtrage at the indecencies the junta commits against civil rights. Or why it has not shown—as it could, subtly but unmistakably to an audience as politically savvy as the Greeks—that it will support a democratic opposition movement as it develops in the society. The question is how long America can remain equivocal, at least in public, and still convince anyone that it is *not* in love with the junta, or that it is really using what weapons it has to push toward a democratic future for Greece.

SECOND ANNIVERSARY OF THE INVASION OF CZECHOSLOVAKIA

Mr. YARBOROUGH. Mr. President, I have long held a high regard for the courage and strength of character found among the people of Czechoslovakia. After the outbreak of World War II, I requested combat service overseas and was assigned to the 97th Division. This division saw action as a part of the 1st Army in the Rhineland when the powerful Allied armies raced across Europe to attack Hitler's Germany. The 97th was subsequently shifted to General Patton's 3d Army, where it spearheaded the drive to liberate Czechoslovakia. The people of Pilsen rose in defiance against the Nazi occupation forces on May 4, 1945, when students and workers took over the radio station and city hall. The next day, May 5, 1945, the liberation was consummated by the victorious tanks of the U.S. Army which definitively ended the rule of the swastika over West Bohemia. I am proud to have had a small role in this noble effort.

Unfortunately, the Czechoslovak people were not long to enjoy the freedom of choice which they so richly deserved. The demise of Nazi Germany left a vacuum into which the Soviet Union was soon to step. During the summer of 1968, after a long series of frustrations, there appeared to be cause for hope. The people of Czechoslovakia were engaged in a vigorous struggle to prevent the lamp of liberty's faint glimmer of light from being extinguished. The Czechoslovak citizenry, after over 20 years of oppression, had a real chance to restore some of their basic human rights. Unfortunately these hopes, like all the others, were soon to be dashed by the Soviet invasion of the Czechoslovak Republic on the night of August 20, 1968. I was in Prague for one day visit during April of 1969, 24 years after the country's liberation from Nazi Germany. At that time I witnessed the great sadness in the faces of the people who had again lost the freedoms that they had worked so hard to restore.

By the morning of August 21, 1968, the Soviet Armed Forces had completely invaded and occupied the territory of the Czechoslovak Republic. In order to make her brutal act appear more respectable, the Soviet Union was joined by the armies of four other members of the Warsaw Pact in this infamous venture. Since then, only her own forces have remained stationed in Czechoslovakia—a symbol of Soviet oppression and exploitation.

Through this act 2 years ago, the Soviet Union violated the fundamental rules of international law as accepted and practiced by civilized nations, and embodied in the Charter of the United Nations. Czechoslovakia is a sovereign state. The Soviet invasion and occupation violated her sovereignty and independence. The Soviet invasion of Czechoslovakia made a mockery of the hope that the Soviet Union had become a law-abiding member of the family of nations.

By invading Czechoslovakia and occupying her territory, the Soviet Union violated the treaty of friendship that had bound the two countries together since 1943. In that treaty the partners promised to respect each other's sovereignty, independence, and territorial integrity, and not to interfere in one another's internal affairs. The Soviet Union invaded and occupied Czechoslovakia to change certain internal developments in Czechoslovakia so as to fit Soviet interests. Not a single Czechoslovak could legitimize the Soviet Union's conduct.

Finally, the Soviet invasion and occupation of Czechoslovakia destroyed the arrangements that the United States and the Soviet Union had made with regard to Czechoslovakia in 1945. The United States and the Soviet Union had agreed that their Armed Forces, which liberated Czechoslovakia from the Nazi rule and had been stationed on her territory through the first postwar months, would evacuate the country and that Czechoslovakia would not be subject to Allied

occupation. American and Soviet forces left Czechoslovakia before the end of 1945. In the summer of 1968, in blatant violation of that agreement so essential to the balance of power on the continent of Europe, Soviet Armed Forces invaded Czechoslovakia and stationed themselves on her territory permanently.

Since then, Czechoslovakia has been no more than a Soviet colony. The Soviets forced upon the Czechoslovak people, as their rulers, a group of men who have no legitimacy whatsoever. The only source of their power is their willingness to carry out the orders of their Soviet masters. The morale of the Czechoslovak people, once among the highest in Europe, is again at its lowest. The purposeful demoralization of the nation through purges, persecution, and threats is still being carried out at full speed.

The Czechoslovak people are being bled white. Faced with the overwhelming and brutal presence of the Soviet Armies, they cannot raise their own voice in protest. I urge my colleagues in the Senate to appeal to the conscience of the entire world not to leave the Czechoslovak people at the mercy of the Soviet Union. The time has come for the Czech people to determine their own destiny.

REORGANIZATION PLANS NOS. 3 AND 4

Mr. BAKER. Mr. President, when President Nixon submitted Reorganization Plans Nos. 3 and 4 to the Congress on July 9, I prepared a statement in support of these measures for inclusion in the RECORD. For some reason which I have been unable to ascertain, this statement was not printed on July 9. I ask unanimous consent that my remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR HOWARD H. BAKER ON PRESIDENT NIXON'S REORGANIZATION PLANS ESTABLISHING A NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION AND AN ENVIRONMENTAL PROTECTION AGENCY

As a member of both the Public Works Committee Air and Water Pollution Subcommittee and the Commerce Committee Oceanography Subcommittee, I have a considerable interest in the two executive reorganization plans sent to the Congress today.

Reorganization Plan 3 establishes the Environmental Protection Agency as a new independent agency within the executive branch, bringing together in a single organization the major federal pollution control program now existing in four separate agencies and one interagency council. Reorganization Plan 4 establishes the National Oceanographic and Atmospheric Administration within the Department of Commerce, bringing together in a single administration the major federal programs dealing with the seas and atmosphere.

Basically the President is proposing that we order our federal house as a necessary first step for effective national programs to control pollution and to make wise use of our atmosphere and oceans. The EPA will permit the rapid recognition of new pollution problems and early, more effective controls because one agency will be clearly responsible. We must support the new agency, supplying it with authority, funds and personnel, but it is equally important to support the concept that it represents. We must commit ourselves, as individuals and as a nation, to restoring the quality of our environment.

There are many possible approaches to the problem of pollution, some immediate, some long-term. In proposing the formation of the new agency, the President has attacked the immediate problems. But in proposing the National Oceanic and Atmospheric Administration in tandem with this proposal, the President also seeks to work toward an understanding of both the immediate and long-term consequences of environmental contamination upon our lives and our resources.

NOAA is, in fact, an environmental agency formed with in the Department of Commerce around the nucleus provided by its Environmental Science Services Administration. One of its most important tasks will be to provide the basic, multi-purpose environmental monitoring capacity to underpin the national effort to reverse the process of pollution.

This is by no means all NOAA will be called upon to do. It will work to protect the nation against the natural hazards which are ever with us, and will support the industrial, transport, recreational, agricultural and commercial activities of the nation.

The President's Reorganization Plan 4 will bring together an outstanding group of organizations and talents to achieve these high tasks. They include the Bureau of Commercial Fisheries, the Sea Grant program, the U.S. Lake Survey, the Coast Guard Data Buoy National Development Program, the marine sport fish programs of the Bureau of Sport Fisheries, the Bureau of Mines' marine mining technology program, and the Navy's National Oceanographic Data and Instrumentation Centers.

These agencies, and these capabilities—historically effective and respected in their separate efforts—will give the Commerce Department the opportunity to build an environmental team second to none.

I support these two reorganization plans and pledge all possible assistance to overcome the problems these two new organizations are designed to achieve.

EXTENT OF GOVERNMENT INVESTMENT IN LOCKHEED FACILITIES AT MARIETTA, GA.

Mr. TALMADGE. Mr. President, on August 17, during debate on his "fly before you buy" amendment, the distinguished Senator from Wisconsin (Mr. PROXMIRE) said that the C–5 is built in a plant "that is owned by the Government."

Mr. President, I wish to set the record straight on the matter of the Lockheed capital investment in the Georgia facility. To do so, I need to point out that the Government built that plant during World War II. During this time it was known as the Bell Bomber Plant. Following the war the plant was used as a machine tool storage center until it was reopened by Lockheed in 1951 at the request of the Government. The Government's total fixed asset investment in the Marietta plant up until today is about $95 million.

Since 1951, Lockheed has invested $126 million. Lockheed has also arranged leases from private owners of additional assets costing another $46 million.

Therefore, at acquisition cost, the Government's investment represents only 35 percent of the total.

Mr. President, as I mentioned earlier, the Government investment in plant and facilities began during the mid-1940's. Therefore, if one were to estimate depreciated values for the Government's investment as industry does, the earlier Government investment would represent a smaller proportion on the total—approximately 17 percent.

Mr. President, I have here a table which shows the ownership of the facilities at Marietta, Ga. I ask unanimous consent that the table be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

LOCKHEED MARIETTA PLANT DATA

[Dollar amount in millions]

	Amount	Percent
Company owned fixed assets at depreciated book value	$69.708	62.2
Leased fixed assets at depreciated book value	23.694	21.2
Government owned fixed assets at estimated depreciated book value	18.688	16.6
Total facilities at depreciated book value (June 1970)	112.900	100.0
Company owned fixed assets at cost	126.134	47.0
Leased fixed assets at cost	46.429	17.4
Government owned fixed assets at cost	95.331	35.6
Total facilities at cost (June 1970)	267.894	100.0

THE FAIRNESS DOCTRINE AND TELEVISION BROADCASTING

Mr. DOLE. Mr. President, I wish to report to the Senate today that 36 of the TV stations across the Nation have responded to my request to present contrasting views to answer the "paid" commercials of the so-called amendment-to-end-the-war committee. These stations understand the fairness doctrine and are presenting to their viewers arguments on both sides of this particular issue. The stations presenting contrasting views are as follows:

WSAV–TV, Harrisonburg, Va.
KQTV–TV, St. Joseph, Mo.
KSD–TV, St. Louis, Mo.
KOMU–TV, Columbia, Mo.
WHIS–TV, Bluefield, W. Va.
KODE–TV, Joplin, Mo.
KIFI–TV, Idaho Falls, Idaho.
KCRL–TV, Reno, Nev.
WTAP–TV, Parkersburg, W. Va.
KOAM–TV, Pittsburg, Kans.
KFYR–TV, Bismarck, N. Dak.
KTTS–TV, Springfield, Mo.
WPSD–TV, Paducah, Ky.
KCMO–TV, Kansas City, Mo.
WDTV–TV, Bridgeport, W. Va.
KHQ–TV, Spokane, Wash.
KID–TV, Idaho Falls, Idaho.
KOAT–TV, Albuquerque, N. Mex.
WDBJ–TV, Roanoke, Va.
WSAZ–TV, Huntington, W. Va.
WPRI–TV, Providence, R.I.
WDAF–TV, Kansas City, Mo.
KXYL–TV, Spokane, Wash.
KING–TV, Seattle, Wash.
KCND–TV, Pembina, N. Dak.
KVAL–TV, Eugene, Oreg.
WCHS–TV, Charleston, W. Va.
WVNY–TV, Burlington, Vt.
KOB–TV, Albuquerque, N. Mex.
KRCG–TV, Jefferson City, Mo.
WBOY–TV, Clarksburg, W. Va.
WSTV–TV, Steubenville, Ohio.
KREM–TV, Spokane, Wash.
KMTV–TV, Twin Falls, Idaho.

KTVN–TV, Reno, Nev.
WTVR–TV, Richmond, Va.

A number of other television stations have refused to present contrasting views, but some have indicated that they are adhering to the requirements of the "fairness doctrine." A few responses, unfortunately, indicate only those with money are entitled to express their views on this powerful public media, while other responses indicate that the "fairness doctrine" has been complied with in various ways .

Those stations declining to present contrasting views are:

KVOS–TV, Bellingham, Wash.
WMUR–TV, Mancheser, N.H.
KBIM–TV, Roswell, N. Mex.
WTRF–TV, Wheeling, W. Va.
WOAY–TV, Oak Hill, W .Va.
KXJB–TV, Fargo, N. Dak.
WDAY–TV, Fargo, N. Dak.
KTVC–TV, Ensign, Kans.
KBOI–TV, Boise, Idaho
KOLO–TV, Reno, Nev.
KORK–TV, Las Vegas, Nev.
KGGM–TV, Albuquerque, N. Mex.
KMED–TV, Medford, Oreg.
WTEV–TV, Providence, R.I.
WSLS–TV, Roanoke, Va.
KYTV–TV, Springfield, Mo.
KTVH–TV, Wichita, Kans.
KTVC–TV, Dodge City, Kans.
Cascade Broadcasting Co., Yakima, Wash.

Now that the principal sponsors of the so-called amendment to end the war—which should be designated the "lose the peace amendment"—have entirely rewritten their proposal, I shall again contact the stations which previously declined. The amendment is more meaningless than ever and it occurs to me that the sponsors should return the hundreds of thousands of dollars solicited from the public—based on the original text of the amendment.

CHINA THE REAL WINNER OF OUR INCURSION INTO CAMBODIA

Mr. PELL. Mr. President, Look magazine contains a very interesting article, written by Philippe Devillers, to the effect that the real winner of our incursion into Cambodia is China.

I agree with the thrust of his article and think it would interest Senators.

I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FRENCH EXPERT'S VIEW: CHINA—THE REAL WINNER IN CAMBODIA

(By Philippe Devillers)

President Nixon's decision to mop up the Cambodian sanctuary will have long-term results that the American people do not expect. Rather than shortening the war, the move will extend it and make it even more dangerous.

"It was the drop which made the bottle pour out,' Chou En-lai, the premier of China, has said. "Following the sudden overthrow of a royal, neutral and even pro-Western prince [Norodom Sihanouk] by just a group of ambitious politicians and generals supported by the CIA, no government in the world can now feel secure. Now is the time for action."

American intervention in Cambodia has indeed given China a valuable opportunity. For years, it has been waiting to take over the leadership of Asian nationalism and anti-imperialist resistance. The decision has facilitated the work of the Chinese political strategists.

Secretary of State William Rogers indicated recently that he recognized this, when he told an interviewer: "They [the Chinese] have increased their influence with Hanoi as the result of the Cambodian incursions. We think the Soviet Union's influence has decreased at the expense of Communist China. Whether the Communist Chinese have any reason to want to bring an end to the war or not, we do not know. We rather doubt it. We think it serves their purposes to have the war continue, because, in effect, they use Hanoi as their instrumentality for causing trouble."

When Ho Chi Minh died on September 3 of last year—about a week after having written to President Nixon that a bit of goodwill could permit a settlement to take place—the Maoist group in Hanoi, led by Truong Chinh, increased its influence. Convinced that the White House did not want to negotiate seriously, except on the basis of North Vietnam's political surrender, the Maoist group won a shift to the strategy of "protracted war"—protracted until 1972 and the next U.S. President.

Rather than respond to valuable overtures from President Nixon, Secretary Rogers and others, Hanoi and the Provisional Revolutionary Government (PRG) in South Vietnam preferred to use the pretext of U.S. insistence on "mutual withdrawal" and "the legality of the Saigon government" and to remain immobile in Paris. This reflected, perhaps, a stalemate in the political struggle in Hanoi.

There are hints that in the Communist camp other voices were saying that this tactic could not achieve results and could even lead to uncontrolled developments. It would be wiser, they reasoned, not to let opportunities pass.

There was significance, in this respect, to the trips made by Le Duan, Ho Chi Minh's real heir, to Moscow in January, and by Le Duc Tho, the chief adviser to the delegation at the peace talks, to Paris from January 30 to April 10. The "downgrading" of the Paris conference by Washington certainly did not help.

At the same time, in Cambodia, Prince Norodom Sihanouk maneuvered on his own to defeat the "protracted war" plan. He agreed with Prime Minister Lon Nol that something had to be done to press the Vietcong out of Cambodia, and was going to Moscow and Peking to ask them to request from Hanoi more discretion and realism. Both Le Duan and Sihanouk were thus moving in a direction that could have brought a resumption of serious negotiations in Paris—the cheapest way to end the war.

Nixon's Cambodian decision wrecked, for a long time, any diplomatic possibility of a settlement and polarized forces in Indochina in such a way that the United States now can expect years more of fighting there—if the Paris negotiations fade out. This can only raise serious doubts about the quality of information supplied by the American intelligence services or Washington's capacity to assess any situation in Asia.

The President apparently made his decision on purely military grounds: prevent the Vietcong from preparing or launching important offensives while the American withdrawals are proceeding; deprive them of sanctuaries and resources; support Lon Nol's government in its struggle against the VC; accelerate the "Vietnamization" in South Vietnam and save American lives. Indeed, the motivation for the decision was only local and military, linked to the belief in the "necessity" of reinforcing the Saigon regime and maintaining in Paris a political position that Washington knows well to be unacceptable for the other side.

Surprisingly, the decision neglected vital political considerations. The stake was not Sihanouk as man or leader but Cambodian neutrality. On March 18, Paris, Moscow and Peking seemed unwilling to take sides, provided Pnompenh stood firmly on the policy of strict neutrality.

But in Pnompenh, the right wing wanted not only to oust Sihanouk but also the Vietcong. It could not do that without American aid. For this, it had to shift from neutrality to de facto belligerence. And then Hanoi and the PRG had to react. And Saigon and Washington rushed into the trap.

By welcoming Sihanouk (who did not find support in Paris or Moscow) in Peking on March 23, the Chinese Government seized the opportunity to play a wonderful Cambodian card: not with a small and weak Red party or a joker, but a head of state, a Westernized prince. Sihanouk could bring Cambodian resistance, leftist, centrist and nationalist, under the Chinese umbrella and patronage, and give the Indochinese struggle as a whole the look of "nationalism"—putting "Communism" in the background.

At the same time, Peking showed the Hanoi "doves" that they no longer had to rely on Moscow or to trust Nixon. They had only to side with the "Indochinese Front" advocated by Sihanouk—a front that is resolutely anti-imperialist and will find a wide response in the Third World. The Indochinese conference (April 24–25), in which the Chinese did not participate, welded the alliance of the four governments and parties—North Vietnam, Sihanouk's government in exile, the Pathet Lao and the PRG—opposing the United States.

China now looks like the Big Brother and the Great Ally of the Indochinese people struggling for freedom and independence.

Sihanouk and Le Duan can no longer act without China's assent. In Vietnam, Cambodia, Laos and Thailand, Malaysia, Burma, Indonesia and even Bengal, all anti-American forces are now entirely under Chinese patronage and encouragement. No settlement in the area can be arranged without the approval of Peking. China has emerged as the dominant factor in this part of Asia and cannot easily be divested of its role. This means that the U.S. is now in direct confrontation with China, even if for the time being this confrontation remains political and is fought locally by indigenous forces.

In any settlement, the Indochinese people *alone* will act—backed by the Chinese behind the scenes—in the name of independence and democracy, nationalism and self-determination. This clearly puts Washington on the defensive. There is no longer any point to arrange a conference in Geneva, to court intermediaries such as Britain or Russia or to establish an international control commission with "false neutrals." The Indochinese expect, and will be ready for, direct negotiations with the Americans when the time is ripe.

The United States has succeeded in ten years in eliminating neutralism in Asia, and this March, it helped overthrow the last neutral, Sihanouk. Everywhere, the U.S. now faces leftist nationalism, which China has the capacity to help.

Of course, the Soviet Union is not wholly eliminated and will still probably be listened to in Hanoi. Its influence, however, will be weaker than that of Peking, and China has the capacity to counter Russian influence in Asia. It is, therefore, a waste of time for Washington to ask Moscow to pressure Hanoi for "flexibility." Now Washington can negotiate its peace only with the Indochinese.

Faster than Mr. Nixon, the other side has succeeded in "Asianizing" the war.

MORE PRAISE TO THE PORTSMOUTH NAVAL SHIPYARD AND THE DEDICATED MEN AND WOMEN WHO MAKE IT THE BEST IN THE NATION

Mr. McINTYRE. Mr. President, last week I spoke here of the fact that the Portsmouth Naval Shipyard had achieved first place in the Navy's cost-reduction program for 1970. I praised the shipyard, its officers, its civilian leaders, and the thousands who work there and made this achievement possible.

I now have additional facts and figures available which reveal the amazing accomplishments at the shipyard in cost reduction and some of the individuals responsible can now be identified.

First, I ask unanimous consent to have printed at this point in my statement a table showing the results of the cost-reduction program at the shipyard since 1965. During these years these figures showing a saving of nearly $10 million by the shipyard. This table shows that among nine major shipyards, the Portsmouth Shipyard has never rated below fourth in its cost reduction efforts in the last 6 years, and it shows that it has been first among the nine yards during 2 years and second during 3 years.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COST REDUCTION PROGRAM HISTORY—PORTSMOUTH NAVAL SHIPYARD

	1965	1966	1967	1968	1969	1970
Annual goal	$5,000,000	$7,500,000	$1,000,000	$1,200,000	$1,696,000	$1,662,500
Cost reduction account	7,970,000	9,462,000	2,100,000	2,040,000	2,114,900	3,748,200
Percent of goal attained	159	126	210	170	125	225.5
Standing among 9 shipyards	2	2	1	2	4	1

Mr. McINTYRE. Mr. President, cost reductions such as have been achieved at Portsmouth do not come from adding machines or computers. These reductions come because there are dedicated men and women who work hard, such as Capt. D. H. Kern, the commander of the shipyard, and Mr. D. T. Sowerby, the cost-reduction program manager.

Under the direction of these leaders, the able workers at the shipyard have achieved these reductions. I am proud to say that many of these workers live in New Hampshire and I would say a special word of praise to them. I would also like Senators to know who they are, for during the last year alone they brought about more than $2 million of the cost reductions.

Mr. President, I ask unanimous consent to have printed in the RECORD, the names of these New Hampshire citizens and a brief description of the awards they so richly deserved.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

N. R. Turgeon, Somersworth, N.H.: Received a Navy certificate of merit from the Naval Ships Systems Command, Washington, D.C. Mr. Turgeon's principal cost reduction item resulted in the elimination of the scheduled procurement of 32 Sub Safe piping components for the USS TINOSA and the USS HADDO. In addition, he directed a review and analysis of the scheduled work on the main propulsion train of the USS TINOSA, USS HADDO, USS POLLACK and USS JACK which reduced or modified the requirements while still meeting overhaul objectives and directed a procedural modification which utilized naval personnel to accomplish the work of removing and replacing all deck coverings during submarine overhauls.

Robert W. Burton, New Castle, N.H.: For outstanding performance in administration and support to the PNSY Public Works Dept's Cost Reduction effort.

Michael A. Cyr, Somersworth, N.H.: For outstanding performance in administration and support to the PNSY Production Dept's Cost Reduction effort.

Clay B. Tucker, Exeter, N.H.: For outstanding performance in administration and support of the PNSY Cost Reduction effort in the PERA (SS) Dept. Mr. Tucker's efforts were a significant factor in the PERA (SS) achievement of 47.4% of the validated total shipyard savings.

Bernard L. Bergeron, Dover, N.H.: Improved installation of value hangers by utilization of asbestos tape thus eliminating slippage and misalignment.

J. A. Coellner, Hapton, N.H.: Reported a cost-saving action for the procurement of torpedo rammer control valves on a multi-ship-basis.

R. M. Grossman, Portsmouth, N.H.: Reported three cost-saving actions that resulted in a substantial reduction of Fleet Ballistic Missile Weapons information sheets sent to other activities and a tech spec modification which reduced the man-days required for engineering drawing preparation.

George W. Marston, Dover, N.H.: Eliminated duplicate inspection of material that was a direct delivery item to a production shop and modified inspection procedures to make them responsive to the value of the material.

W. J. Minnon, Jr., Exeter, N.H.: Reported two cost-saving actions involving the identification and utilization of surplus material.

Domenico DiBona, Dover, N.H.: In collaboration with James H. Pike III improved method of lagging pipe to facilitate location of valves and joints.

Roger A. Blouin, Newmarket, N.H.: Suggested a new technique for restoring undersized bearing seats on submarine auxiliary motor shafts eliminating the need for remachining.

Kenneth D. Lurvey, Portsmouth, N.H.: Took action to show that the use of aluminum-bronze nipples in a submarine's electronic fresh water cooling system were corrosion free; thereby eliminating the scheduled replacement purchase of 19 CRES nipples.

John K. Hall, Hampton, N.H.: Consolidated the review of Technical Repair Standards by individual shipyard and developed standardized tests for restoration of electric submarine motors.

Richard P. Millette, Hampton, N.H.: Recommended by the utilization of refurbished secondary propulsion motors thus avoiding the re-docking of two submarines at a late date; consolidated individual shipyard planning effort for refurbishment of complex submarine components.

Paul E. Moody, Hampton, N.H.: Had inspection requirements modified for submarine torpedo ejection pump cylinder heads and eliminated the necessity for removing the pumps.

P. W. Smith, Stratham, N.H.: In collaboration with C. S. Bilodeau reported two cost-saving actions which significantly reduced the amount of work involved in the development and issue of drawing and material ordering schedules.

A REQUEST FOR EXPLANATION

Mr. CHURCH. Mr. President, the recently concluded Executive agreement on extending our use of military bases in Spain has stirred misgiving among Members of the Senate. The Foreign Relations Committee has called for hearings at which administration spokesmen would appear before the committee and explain—perhaps "translate" would be a better word—the meaning of the executive agreement.

An editorial published in the Rexburg Idaho, Standard takes the same point of view. The editorial suggests that the Nixon administration "has not made a convincing case" that the accord be in form of an executive agreement, rather than a treaty subject to ratification by the Senate. The editorial state:

At very least, however, the administration should respond to the Foreign Relations Committee's promised demand that it explain, in public, and on the record, what the agreement involves.

I agree and ask unanimous consent that the editorial published August 11, 1970, under the title "The Agreement With Spain," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE AGREEMENT WITH SPAIN

There are strong arguments on both sides of the running controversy over presidential and senatorial power in the conduct of foreign affairs. Neither the administration or Chairman Fulbright and other members of the Senate Foreign Relations Committee have all truth by the tail in this many-faceted dispute.

Having noted this, we come down on the side of Fulbright and like-thinkers in the matter of the new military agreement with Spain. This extends for five years the U.S. right to air and naval bases in that country, in return for loans and grants which may total as much as 400 million dollars.

Such an arrangement, we believe, should have been made in the form of a treaty requiring the advice and consent of the Senate. It is not palatable that, instead, the extension is embodied in a mere executive agreement on the basis of prolonged negotiations in which the Senate played no part.

The administration maintains that no stated or implied commitment to defend Spain against attack is involved, and that therefore the agreement need not be in treaty form. This may be so, but the assurance is not wholly convincing. We think it significant that members of the Foreign Relations Committee have doubts on this point and others.

Sen. Frank Church of Idaho, for example, said he spoke for a majority of the committee in remarking, "I don't approve of secret deals with the Franco government, particularly of the kind that could involve us in a war." He further said, "I think the committee, the Senate and the people of the United States are entitled to know what this agreement is all about" and added: "Without question it (the executive agree-

ment) deals with a prolonged involvement in Spain of such importance that it ought to be the subject of a treaty."

The administration has not made a convincing case to the contrary. Now that the executive agreement has taken effect, perhaps the Senate will not be able to do anything about it. At very least, however, the administration should respond to the Foreign Relations Committee's promised demand that it "explain, in public and on the record, what the agreement involves."

Someone's figured that the U.S. population is shifting westward at the average rate of 58 feet a day. There just doesn't seem to be anything stable and certain about life anymore.

ARTICLE IN AMERICAN LEGION MAGAZINE CALLS FOR ALTERNATIVE HEALTH SYSTEMS

Mr. YARBOROUGH. Mr. President, one of the most significant problems our society faces is our health crisis. Too little has been proposed, and there has been too little discussion of the alternatives we must choose from to deliver improved health care to our citizens at a reasonable cost.

American Legion magazine for August, 1970, contains an article entitled "Better Medical Care at Less Cost is Possible," written by Roul Tunley. Because of the article's contribution to the discussions of improved health delivery and its relation to a national health plan, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BETTER MEDICAL CARE AT LESS COST IS POSSIBLE

(By Roul Tunley)

In the matter of medical care and doctors' bills, America's patients have been just that—*patient*. But at long last, after a generation of frustration, it looks as though relief were on the way. Better medical care at less cost is not only possible, but a small section of the American public has been enjoying it, almost unnoticed, for a quarter of a century.

Today, the medical situation has gotten so bad for the rest of us that all of a sudden more people are paying attention to those lucky few who are members of what are called "prepaid group practice" medical plans. Perhaps the rest of the long-suffering public, and doctors too, will join them in the near future.

For years we've been talking about doctor shortages, hospital shortages and inescapably high and rising costs. And as long as we talked, things just got worse. We concerned ourselves principally with how to pay the bill and argued about the need to socialize the *cost* of medicine—with sparks flying on all sides of the argument.

Now there is increasing evidence that the experts are beginning to realize what the rest of us have known for a long time—that the sickest thing around is the delivery of medical care. It's not so much the question of where to find the money as it is the costly and wasteful method by which we receive that health care.

Anyone who has had to wait three months to see a specialist, anyone who has waited two hours in a doctor's office *after* he got his appointment, anyone who's tried to persuade a physician to make a house call, anyone who's struggled to pay a medical bill which he thought was covered because he had insurance *knows* that something is wrong.

No one doubts that we have good medicine and fine doctors. But who wants to keep reading about miracle heart transplants when the business of affording regular shots for the kids seems more and more of a miracle? And who wants to renegotiate the mortgage just because a parent has had a longer hospital stay than Medicare allows? Especially when you know that right across the border in Canada no one has had to pay a hospital bill in ten years—or that about 5 million are already getting better care at less cost right here at home, with about 2 million of them in a primarily West Coast "group practice" plan that dates all the way back to WW2.

The trouble with the traditional practice of American medicine is not the medicine or the doctors. The trouble is the distribution and financing. Or rather the lack of any sensible system for either of them. And the results are health statistics that, compared with other countries, get worse all the time despite all those headlines about miracle drugs and operations.

For example, according to the latest United Nations survey, a boy in America today can expect a shorter life than a boy in 21 other countries, and it's not a great deal better for girls. If you're an American mother, you have a better chance of dying in childbirth than in 11 poorer nations. Moreover, our infant mortality gets worse each year. We were sixth among Western nations in 1950. Today we're down to 16th! And let no one tell you this is because the unfortunates in the ghettos "spoil" the statistics. Someone recently eliminated all minority groups and found we *still* had inferior ranking in infant mortality—10th! While other countries continue to increase their life spans, ours has stopped expanding and actually started to decrease for the first time in years. No wonder that at an international conference on health in Holland almost a decade ago an American heard his country described as "undeveloped."

No one spends more on medicine than we do. The proportion of our gross national product now going into medical care is the highest in the world—almost 7%, or $63 billion. Moreover, the rate of increase is such that, if it continues, it will reach the absurd point of absorbing *all* the gross national product by the next century. In other words, after doctors, hospitals and drugs are paid for there won't be anything left for food, clothing or shelter, to say nothing of education, defense or the salaries of politicians. And if comparative trends hold, we'll be even further behind other countries. Naturally it can't go on like this, and it doesn't have to. It has already been proved here and abroad that the problem is simply one of organization and *not* a shortage of doctors, hospitals or money. We are spending all the money on medicine that we need to spend. We have all the doctors and hospitals required to deliver the kind of health care we need. The main reason we don't *seem* to have such doctors and hospitals is because we are still stuck with an archaic, outgrown system—a curious anomaly for a nation that prides itself on its organizational genius in business, in science and in production generally. According to Harvard Medical Deal Dr. Robert H. Ebert, our doctors operate "one of the last of the pushcart industries." It's costly, inefficient and dangerous.

Because of a number of factors, but largely the opposition of organized medicine—which in its time has opposed everything from Blue Cross to Social Security—we are the only industrial nation in the world without some form of national health plan. And because we have been unwilling to solve our problems on a coordinated, nationwide scale, we are now trapped between the grinding millstones of skyrocketing costs and giant shortages in doctors, hospitals and facilities. President Nixon has rightly called it a "massive crisis."

The symptoms are everywhere:

1) Hospital costs have gone up 100% faster and doctors' fees 50% faster than the cost of living. By the end of this decade, experts predict hospital rooms will cost $400 to $600 a day.

2) In rural areas, there are thousands of communities that have no resident doctor. It is estimated that one out of 50 Americans cannot get a doctor under any circumstance.

3) City areas look better off on paper, but for vast segments of the population they might just as well be living in the Sahara as far as doctoring goes. New York, for example, has a high doctor ratio of one for every 360 citizens. Sections of Park Avenue seem to have nothing but doctors' offices on the ground floors, but there are ghetto areas where the ratio is worse than one doctor for 10,000 people. We're told we need 55,000 more doctors and 85,000 more hospital beds immediately. That's probably true if we stick with our present system, but meanwhile, the system isn't producing them.

4) Voluntary insurance leaves disastrous payment gaps. Although roughly 80% of Americans have some sort of medical insurance, it pays only a third of the total medical bill.

Faced with rapidly worsening conditions, medical watchers say we have a strong climate for change, and that we'll have some form of national health insurance within two to five years. In fact, a recent Harris poll indicated a majority for the first time (51%) favoring a Medicare-like plan for all ages.

"It's no longer a question of *whether* we'll have a national plan, but *when*," says. Rep. Martha Griffiths, of Michigan.

The air, especially in Washington, is thick with proposals.

But what sort of national health insurance? If it is to be just another way of paying the bills it won't get us very far. In fact, Dr. Sidney Garfield has been warning of disaster ahead if all we do is set up an assured bill-paying system for everybody under a federal plan. The present doctors and hospitals, with their archaic system, would be snowed under by a rush of patients who could afford good care for the first time in their lives. Nobody could cope with the rush, says Dr. Garfield, who set up the remarkably successful Kaiser "group practice" system on the West Coast back before WW2.

Most of the proponents of various national health insurance plans, except the American Medical Association and some (not all) insurance companies, are tuned in to Dr. Garfield. Their proposals for national health plans include some sort of reorganization of medical practice in line with the tested and proven "prepaid group practice" concepts that Dr. Garfield pioneered.

Although such practice is operating today in only about a dozen cities and involves no more than 5 million Americans, repeated studies have shown that the savings in cost, doctors and hospitals, as well as the achievements in health, are overwhelming. The basic idea is unbelievably simple. You pay your medical insurance premiums regularly to a medical group—and it then gives you whatever care you need. While there are all sorts of details, basically that's it!

If that seems just too simple to be an answer to the medical problems we're burdened with, let's look briefly at a couple of extreme cases of personal medical disaster, in and out of "group practice."

The Wall Street Journal of last May 7 featured the medical catastrophe of a Virginia Beach, Va., couple, John and Betty Baines. Their little daughter, Karen, was stung by a bee and developed nephrosis (a serious kidney malfunction). In one year and four days the costs came to $57,794, and Karen apparently needs four more years of the same if she's ever to be normal. The medical insurance ran out almost before care

had fairly begun, although the insurors bent over backward to pay all they could under the contract. The Baines' pediatrician, Dr. Harriett Guild, never even sent a bill. Baines said he wouldn't think her wrong if she charged $20,000 for the care she'd given Karen. Johns Hopkins University came up with some special funds to help the family out. Though John Baines is a top level executive in a large firm, he and his family are now strapped financially while the catastrophe stretches out farther ahead than behind.

Under a contract like Kaiser's, Karen's care would have been assured at no additional cost above the premiums Baines would have been paying regularly. The Baineses would not have gotten off scot free, because there were costs at home to readapt to Karen's predicament, but tens of thousands of dollars worth of care under the old system would simply have been given with no billing.

Let's look at a Kaiser patient in need of costly care. Mrs. Cathlyn Albanese, of San Diego, told—on a CBS telecast—what happened to her. "About Thanksgiving time," she said, "I had an operation at the Kaiser Hospital in San Diego and they discovered that I had cancer. They don't have the cobalt equipment in the Kaiser Hospital in San Diego. So they brought me to the Kaiser Hospital in Los Angeles. I was concerned because I thought it would be very expensive and I'd have to pay for an apartment and they told me, no, I didn't—that it was completely furnished at no cost to me at all. The apartment is one bedroom and it has two beds, and linens, and it's quite large for a one bedroom. We have maid service, and it's quite nice as you can see. My husband comes up on weekends and takes me home and then we come back on Monday, and Monday and Tuesday are his days off so he stays with me then and then he goes home. I'll be here for six to eight weeks, approximately 34 treatments. It's five-day a week—Monday through Friday—therapy The cobalt treatment won't cost me anything. It's all furnished with the plan."

But getting whatever care you need is only a small part of the story. The unique thing about prepaid group practice is that it has a built-in incentive for doctors *to keep patients well and to hold costs down*. Other plans like Medicare, Medicaid, Blue Cross-Blue Shield and private insurance schemes merely pay bills (or part of them) *after* they've been incurred. Under these plans there's no real incentive for doctors either to save money or to keep people well by practicing preventive medicine, while there is an incentive to run up the bills. For this reason, prepaid group practice has been called "health insurance" and, by contrast, all other forms "sickness insurance."

Let's see how this works by taking a look at the largest, and possibly the best, of the country's group practices—the famous Kaiser Plan.

Starting back in the Depression, California's Dr. Garfield conceived the idea of giving total medical care for a fixed fee to Kaiser workers on the Colorado River project. The idea was adopted for all of Henry J. Kaiser's shipyard workers during WW2. After the war, when most of the workers had gone home, the rolls were opened to the general community. From 9,000 members in 1945, the Kaiser Plan has grown to 2 million today, embracing all income levels from gas station attendants to university presidents. Having its own doctors, hospitals and outpatient clinics, the plan grows steadily at the rate of about 10% a year. It could grow faster if hospitals could be built and doctors enrolled more quickly. Moreover, it's operated along strictly business lines. The plan, except for one minor instance, has never accepted a penny of government support and has never launched any community drive for funds.

"We're incredibly capitalistic," remarked a Kaiser spokesman recently. "You can't tell our board meetings from General Motors', except the product is different."

Kaiser doctors have absolute control in medical matters. And they are never inhibited in choosing a course of treatment by uncertainty over whether the patient can afford to pay. They know it will cost him nothing more than he has already paid. They also have free choice of patient, just as the latter has free choice of doctor. When members are first enrolled, they are given a fairly long list of doctors in the group from whom they choose a "family" physician, either an internist or a general practitioner. Some keep him for years; others change. When they need a specialist, they are referred to a Kaiser consultant by their "family" doctor. If they need hospitalization, they get it promptly. The only extra charge is $1 or $2 for an office call, just to keep the patients from dropping in to waste time.

Dr. Garfield described the Kaiser plan in a recent issue of Scientific American as follows:

"Since 1945 the plan has grown of its own impetus, without advertising, to its present size: more than 2 million subscribers served by outpatient centers, 51 clinics and 22 hospitals in California, Oregon, Washington and Hawaii and in Cleveland and Denver. The plan provides comprehensive care at an annual cost of $100 per capita, which is approximately two-thirds the cost of comparable care in most parts of the country.

"The plan is completely self-sustaining. Physical facilities and equipment worth $267 million have been financed by health-plan income and bank loans (except for gifts and loans to the extent of about 2%). The plan income provides funds for teaching, training and research and pays competitive incomes to 2,000 physicians and 13,000 non-physician employees."

For your $100 a year you get the medical care you need. There's no complex contract putting elaborate fences around what's covered.

Kaiser costs have gone up less than half as fast as general medical costs, largely because of its unique, cost-conscious structure. For example, each year Kaiser doctors negotiate a contract with the plan. In return for a fixed sum of money, they agree to give complete care, including hospital but excepting some things like dental care, to all members. If any money is left over at the end of the year—and it always is—the funds are divided as a bonus among the physicians, in addition to their regular salaries. Doctors at Kaiser currently average about $36,000 a year, although some range up to $60,000. These figures, plus regular hours, paid vacations and generous pensions are enough to attract top physicians.

There is another factor working toward superior doctors. Since sloppy medical care can lead to expensive treatment and long hospitalization, both of which affect year-end bonuses, Kaiser doctors choose their colleagues with extreme care. New physicans serve a probationary period. If they prove incompetent, wasteful or too prone to surgery, they are dropped. In this way, doctor quality remains high.

So does patient care. Members are urged to have routine checkups, Pap smears, electrocardiograms, shots and all the other safeguards of modern medicine. Since there is only a minimum financial barrier to office visits, symptoms are unlikely to run on without being checked. With no incentive for unnecessary surgery, Kaiser members have only half as many operations as those with comparable coverage in Blue Cross-Blue Shield or private indemnity plans which do not have such effective roadblocks against useless surgery. Moreover, many diagnostic procedure (x-rays, etc.) which people go to hospitals for because that's the only way to get the bills paid under their hospital insurance, are handled in ambulatory, outpatient clinics at Kaiser. The result of all this is that Kaiser patients spend only half as much time in hospitals as those with the other plans. Thus hospital care, the most fantastically expensive item in the whole health package, is kept to a minimum—something that the government operators of Medicare and Medicaid envy and would like to emulate.

Kaiser's success in keeping costs down and care up is probably the best in the country. But other prepaid group practices around the country are doing well. New York City's Health Insurance Plan, for example, is the second largest in the country (770,000 members), and it has been giving better-than-average care at less-than-average prices for several decades. Despite the handicaps of not owning its own hospitals (like Kaiser) and not being as fully organized, its records in infant and maternal mortality are considerably better than the rest of the city, even those using private, fee-for-service practitioners.

The improvement that systematic, group medicine can bring to people was dramatically demonstrated several years ago when H.I.P. agreed to enroll half the city's Medicare patients on old-age assistance, i.e. 13,000 persons. This gave researchers a chance to compare these people with the other 13,000 outside H.I.P. After the first year, the record showed no difference in mortality. But after the second year, when H.I.P. care had a chance to make itself felt, the group's Medicare patients showed *14% less mortality than the others.*

Since the success of group practice depends largely on attracting and holding good doctors, care is taken not to waste their time and skills in doing things that can be done by less highly-trained assistants. For example, group optometrists (vision testers and eyeglass prescribers) do routine eye exams and refractions. Scarce ophthalmologists (eye physicians) are thus saved for disease and surgery. With children, nurses take histories, weights and measurements, give injections and do other things that do not require the attention of busy baby doctors. Moreover, automated, multiphasic health testing is often used to save time in checkups, and there's a liberal use of nutritionists, health educators, social workers, psychiatric assistants and other non-doctor medical technicians whenever possible.

Best of all for the patient, group medicine is practiced in a fishbowl. Doctors are always looking over doctors' shoulders so that, unlike private practice, shoddy medicine and downright mistakes cannot be hidden. A Columbia University study, made for the New York Teamsters Union, once found that as high as 33% of hysterectomies are unnecessary. And in a study of the care of federal employees, group practice's hysterectomy and appendectomy rate was only half what it was among those covered by Blue Shield. Tonsillectomies were only a quarter as many.

In spite of the excellent record of prepaid group practice in providing quality medicine at lower cost, however, and despite the fact that every study examining it has ended with its recommendation, progress has been slow. Largely this is because of the determined opposition of organized medicine, often at the lower level, which has looked upon any change in traditional methods as a threat. Even today there are 17 states which still have restrictive laws called "Blue Shield Acts" which prohibit group practices like Kaiser from operating.

Despite this opposition, the enthusiasm for group practice has never been higher. "This is because those who are chiefly concerned with national health are worried, and as they look around, the only thing they see on the horizon that works is group practice," says Louis J. Segadelli, of the Group Health Association of America.

In any event, almost all medical planners are making group methods a part of their proposals. The Administration is encouraging such groups, private insurance companies are starting them, even Blue Cross is involved in setting up several. In addition to the 12 cities with established plans (San Francisco, Los Angeles, Honolulu, Seattle, Portland, Denver, St. Paul, Cleveland, Detroit, Washington, Philadelphia and New York), new ones have recently been inaugurated in Cambridge, Mass.; New Haven, Conn., and Columbia, Md. Other plans are being readied for Providence, Nashville, Cincinnati, Newark, Pittsburgh and Phoenix. And the Group Health Association has just received a government grant from the Public Health Service to set up 18 more across the land.

Interestingly enough, even the most loosely-structured groups, hastily thrown together and without the careful planning of a Kaiser, seem able to achieve better-than-average results.

Not long ago, for example, the state of California contracted with the regular medical society in the San Joaquin valley to give all necessary care to those eligible for Medicaid. It turned over to the society those funds that the state planned to spend that year. The doctor members knew that if bills got out of hand, if one practitioner got a lion's share, or if someone had an expensive illness as a result of incompetent treatment the others would have to pay for it. Consequently, they set up a review board to police the quality of care, using computers to spot deviations from the norm.

The result was that even though doctors were paid on the traditional fee-for-service basis, they not only managed to treat all who came to them but even had $200,000 left over at the end of the year which they returned to a startled state finance department.

The San Joaquin experiment was important in that it encouraged national health planners to insist we don't have to wait until the entire nation develops group practice before we embark on a universal scheme. We can, they say, contract with almost any group of doctors—medical society, hospital, school, even those linked by nothing more solid than being in the same "medical arts" building.

They also insist that with medicine organized on a group basis, the country has all the doctors and hospitals it needs, and that present shortages are artificial, induced by a wasteful and inefficient non-system.

There is plenty of evidence to support this argument.

For example, it has been repeatedly established by outside survey that Kaiser gives as good or better care than is generally available by using a doctor ratio of one per 1,100 patients. Group practices as a whole average one per 1,000. On this basis, we'd need only 200,000 doctors to care for *every* man, woman and child in the United States. Since we have between 275,000 and 300,000 physicians practicing at the moment, there would be plenty of physicians left over for research, teaching, administration or just practicing privately if that was what they wanted.

As for hospitals, we now have 3.9 beds per 1,000 people for the country as a whole. We are told this is not nearly enough. Yet Kaiser manages to meet *all* the hospital needs of its 2 million members with a ratio of only 1.7 beds per 1,000, *less than half the national average*. On this basis, we have far more beds than we need.

Certainly some sort of organization is needed to prevent hospitals from acting like jealous little empire-builders, acquiring expensive equipment for status purposes rather than for the community's needs. Moreover, through charity drives they're constantly asking citizens . . .

In Denver, for example, there are four hospitals within a five-block area all of which have costly cobalt radiation treatment centers. Since these are used less than 50% of the time, the duplication not only wastes money but the medical talent to staff them as well.

In New York City, there are 18 open-heart surgery teams in 18 different hospitals. Yet nine of them do 90% of all the operations. This is not only a misuse of one of the costliest services in medicine but a dangerous one as well. For, unless such a team performs at least one operation a week, its statistical chance of success has proven to be poor.

Since this kind of medical extravagance would come out of doctors' pockets at Kaiser and other groups, such duplication of costly skills and equipment is virtually unknown.

All in all, the record of prepaid group practice has convinced the experts that the old methods of practice are not good enough. The group way is less costly and more productive of good health. The old charge of organized medicine that group practice is "assembly-line" medicine no longer seems valid. On the contrary, people are realizing that just the opposite is true. For, group doctors, freed from having to worry about whether a patient can afford it, are able to practice "purer" medicine. They also are finding, incidentally, that they can earn more money than in private practice—and have decent hours, too. On balance, prepaid group practice appears to many doctors to be less radical than our present Medicaid system in which the poor run up bills of varying amounts to be paid by the government.

"It's the only effective answer to socialized medicine," says Dr. J. Fenimore Cooper, one of Kaiser's top specialists, who feels that the profession should rally round the prepaid system.

Indeed, what is more American and less socialistic than accepting a private job at an agreed wage, price or salary scale? That's how almost everyone else works.

Certainly, with costs going through the roof and with medical care being priced out of the reach of even the middle class, few planners see much sense in just pouring more and more money into the old, leaky system in which more and more people bid for the services of too few doctors and facilities and drive prices even higher. The feeling is that what we need now is a drastic overhaul of the way medical care is delivered, not just more oil.

With all our medical problems, one might expect an air of pessimism. We're spending more than anyone else and not getting as good results. But the opposite is true: medical reformers today exhibit an air of optimism that is almost heady. Precisely because we *have* reached such a low point, they say, and because the achievements of group practice are so heartening, we have a better chance now than ever before of getting the kind of national health plan that will provide America with the quality of care we can not only afford but have long been capable of delivering, namely, the best in the world. And this time they feel it will have built into it that philosophy that Americans have learned the hard way: it's cheaper to *keep* people well than to *make* them well!

THE REAL SOVIET PLOY IN THE MIDDLE EAST

Mr. GOLDWATER. Mr. President, during the course of debate on the military authorization bill, we have heard remarks from several Senators, particularly those who serve on the Foreign Relations Committee, relative to the situation in the Middle East. I cannot recall, however, ever hearing any of these Senators discuss what should be obvious to every Senator, the real Soviet ploy in the Middle East. I think it should be obvious to any student of foreign affairs that the Soviets are not there to help the Egyptians; they are there to gain control of the Suez Canal either by force or by requiring Nasser to recognize this control in return for helping them against the Israelis.

The central question as many of us see it is whether we should face up to the Soviet challenge now or wait a few years, when our strategic situation will have deteriorated to nothing.

One of my best sources for information on this ticklish part of the world has always been Dr. William R. Kintner of the Foreign Policy Research Institute of the University of Pennsylvania. He has written a paper which I think every Senator should read. The paper is entitled "The Soviet Orchestration of the Middle East Crisis." I ask unanimous consent that it be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

THE SOVIET ORCHESTRATION OF THE MIDDLE EAST CRISIS

PRELUDE

The Soviet Union has designedly transformed the Arab-Israeli conflict into an adroit campaign to upset the world balance of power. Yet Washington appears to act as if the Arab-Israeli dispute still overshadows the emerging test of will and power between the Soviet Union and the United States.

Soviet offensive strategy in the Middle East has been masked under the cover of providing Egypt assistance in defending the West Bank of the Suez Canal. Its ultimate purpose is to force Israeli withdrawal from the Canal's East Bank. If this maneuver succeeds, the tenuous balance of power that now exists in the Middle East will be shattered beyond repair. If the scheme is to be checked the United States may be confronted with what an Eastern European diplomat has described as a Cuban Missile Crisis in reverse with momentous consequences for all mankind.

Soviet policy in the Middle East since 1967 has been persistent and logical. By supporting the Arab position morally, militarily, and politically the Soviet government has eliminated any American overtures to the Arabs which do not compromise the Israeli bargaining position. From Mr. Nasser's viewpoint, Soviet help served to keep him afloat until the U.S. (the only power sufficient to pressure the Israelis) weighed its interests against Soviet influence and found the Israelis not worth the cost. If the Soviets could obtain sufficient credit for the results, then Soviet positions would be ratified and Egypt could resume her "neutrality." Moscow need be relied upon rigidly only long enough to detach or isolate the U.S. and Israel.

The Soviet government, which conducts a Great Power policy, understands better than the Egyptian government that Egyptian "neutrality" after such a Soviet triumph would be imaginary. In this respect, although there is a distinction between Mr. Nasser's wishes and Mr. Brezhnev's object, there is no difference in the end. The Soviets are perfectly agreeable to detaching the Israelis and pressuring the Americans. As for Nasser's waning independence, the Soviets

would at least save Nasser from his worst enemy: himself.

As for the U.S., the Nixon Administration decided that a show of detachment from Israeli policy might restore American influence in Arabia, while incidentally enabling the Soviet government to detach herself from the Arab states. Then the two powers could negotiate a settlement. This was the rationale for the Rogers Plan. The plan itself proposed that the Israelis withdraw to "negotiated and secure" boundaries in exchange for "binding" Arab commitments to peace. In any case, the new boundaries might involve only "insubstantial adjustments" in territory. While peace and security were thus established, the refugees and status of Jerusalem could be settled. The refugees would be either paid off or repatriated to pre-June 1967 Israel, since the West Bank must be returned to Jordan. Jerusalem should be administered in light of "its international character."

By proffering the plan in the Four-Power talks without reference to the immediate situation in the Middle East, the United States spared the Soviet Union a nasty wicket. Working against time, Mr. Nasser had convinced himself that he could not await the deliberations of the Four-Power gentlemen in New York and survive. Palestinian guerrillas were active already on other fronts. Occasional artillery barrages along the Canal Zone were not enough to return Nasser to the forefront of Israel's opponents. In April 1969, the Egyptian government proclaimed the end of the cease-fire. The Egyptian Army opened an artillery offensive. Despite testimony of U.N. observers that Mr. Nasser was not whistling when he took this responsibility, *neither the U.N. nor the Western powers did anything.* Nor were Four-Power talks made contingent upon the official cessation of hostilities. In short, the war resumed, *while the diplomats behaved as if they were considering peace.*

Since a great weight of Soviet-supplied artillery had to be used against the entrenched Israeli positions on the East Bank of the Suez Canal to make Nasser's War of Attrition effective, the Soviets must have been astonished to receive an American peace plan, which not only required the resurrection of Hussein—whose position had become almost hopeless between the guerrillas and the Israeli Army—but necessitated a Soviet-American condominium to work. Was it not evident that the U.S. feared to be alone with Israel, and wished to avoid any clear choice between Israel and Arabia—hence its "neutrality?"

The Soviet government might have accepted the Rogers Plan at once if both powers had arrived at it through a joint communiqué. However, with no pressure about the cease-fire violations, and the spirit of compromise in the Rogers Plan, why should the Soviet government allow advantage to the U.S.? Would Mr. Brezhnev compel the Arabs to abandon their 1967 Khartoum summit conference position of no negotiation, no recognition and no concession, for the sake of restoring American influence with the Arabs? Should the Soviet Union pay for a détente in the Middle East with the compromise of its clients?

The Soviets thus had proof, buttressed further by the delayed Phantom jet affair, that their initial premises were correct. American policy would not stand on Israel alone for fear of jeopardizing U.S.-Arabian interests. At the same time, the U.S. would not contest Egyptian renewal of the war, so long as the Soviets were not "directly" involved.

Mr. Nasser's game, in turn, became easier. He had only to proclaim the dawn of coming Arab victories. When the inevitable Israeli retaliation embarrassed these proclamations, he had only to threaten the Soviets that he might be "lost" without fresh evidence of their support—artillery, missiles, and eventually Migs, all of which had to be Russian manned or directed if they were to be effective.

The Israeli government, a quaking coalition unable to decide minimum or maximum terms, settled upon a diplomacy fit for the least likely situation: both victor and defeated should sit together, bargaining out the oddballs in either camp. The only acts Mrs. Meir's government seemed able to countenance were inertia, and meeting force with force. The last policy went seriously awry when Israeli bombing in Central Egypt provided the justification for Russian pilots and SAM–3 defenses.

While the Soviets have helped to isolate Israel and the U.S. by simple intransigence, they have chosen physical involvement to save Nasser from himself. The only risk they face lies precisely in the last point. Prestige has its inertia, too. As Dean Acheson wrote: "Prestige is but the shadow of power." Mr. Nasser's prestige and Soviet power are now entwined.

INTERLUDE

It has been held that fear of confrontation prevents either major power from unilateral intervention with its own forces in the Middle East. This thesis derives from the same simple logic sustaining the détente. The U.S. and USSR are equal in their capacity for mutual nuclear destruction. Serious confrontations in exciting circumstances change this devastation. These confrontations are therefore to be mitigated or avoided. But the notion of détente is also based on the willingness of one power to meet the other should the challenge be presented. The spirit of détente is devoted to eliminating these "challenges."

Thus, détente in the Middle East rests upon a willingness of one power to meet an intervention of another power with its own, and the fear of both powers regarding the ensuing confrontation. Should either the U.S. or the USSR conclude the other unwilling to meet such an intervention, then the fear of confrontation sustaining the logic of détente recedes or disappears.

To avoid such a test, Secretary of State Rogers launched a fresh diplomatic initiative in June to stop the fighting along the Suez Canal. There were two main specifications in "the American initiative." The first called for a 90-day temporary cease-fire. The second asked for all parties to negotiate through Mr. Jarring on the U.N. resolution, as interpreted by Mr. Rogers in his original approach. This overture sustained Soviet and Arab assumptions. For if it were true that the U.S. feared "confrontation" with the Soviet Union, and feared isolation with Israel for its oil and strategic interests, then U.S. policy could be expected to take two directions. First, the United States would wish to avoid or lessen the chance of confrontation. Second, the Israelies must be pressed for some concessions, while at the same time the U.S. publicly refrains from dispatching military supplies.

In a televised appearance on July 12, 1970, Undersecretary of State Joseph Sisco confirmed these impressions. The purpose of *not* announcing a sale of U.S. jets was twofold: (1) not to "provoke" further "destabilizing" maneuvers by the Soviet Union or the Arabs, and (2) to make the Israelis more amenable to the Rogers initiative.

In late June and early July, President Nixon evidently decided the situation was approaching a confrontation. In his press discussion of July 1, and in subsequent briefings, Mr. Nixon and his staff issued sternly phrased warnings to the Soviet Union. The U.S. would do what was "necessary," even into confrontation.

Unfortunately, these solemnities confused rather than clarified our position. The Secretary of State and his Undersecretary persisted in regarding the Soviet missiles as "defensive."[1] While Mr. Sisco admitted that recently arrived armored amphibious craft were "offensive" weapons, his diplomacy attempted simultaneously to avoid confrontation by proposing solutions chiefly deleterious to the Israeli position. Having been emptied of significance by the diplomacy of his own government, Mr. Nixon's gestures were rewarded by amphibious craft, SAM–3 installations and on July 26–27, Soviet pilots battling the Israelis in the Canal Zone.

At this point, both the Secretary General of the U.N. and unnamed diplomats declared that Moscow had submitted a "substantial" improvement in the Soviet peace plan. The improvement seems to be a requirement that the Arabs declare more than simple nonbelligerency as their recognition of Israel. For this document, the Israelis are to return to the geography of 1967, and the demography of 1947, loaded with verbal security guarantees enforceable only by the Soviet Union's influence over the Arabs. One suspects the "substantial improvements" resides in the realm of desire.

In conclusion then, Soviet orchestration of the Middle East crises has proceeded against the détente thesis. Extension of Soviet air and missile power indicates that they no longer fear the chancy confrontation which sustains the détente concept. The Soviet game is to destroy our political position in the Middle East by undermining the State of Israel, with inevitable repercussions upon the security of Western Europe.

The next 90 days: finale?

Acceptance on August 8th of the Rogers 90-day cease-fire in the Middle East has inspired a wave of euphoric anticipation towards a Middle East settlement. At last the shooting would stop and the talking would start.

On July 24, 1970, President Nasser accepted the American peace initiative. Addressing the Arab Socialist Union National Congress, Nasser explained that this "initiative" was in fact "no more than a procedural process." According to Nasser, this maneuver was in response to Nasser's own May Day speech stressing that a cease-fire must be connected to total Israeli withdrawal from occupied territories. Indeed, Mr. Nasser declared, he had only broken the original cease-fire and begun the "War of Attrition" because Israel would not accede to the U.N. resolution of November 1967, which provided for total withdrawal from "all occupied territories." The basis for this interpretation, Mr. Nasser explained, was the preamble to the resolution: "the inadmissibility of the acquisition of territory by war. . . ." Secretary Rogers had proposed (June 19) that the cease-fire be reestablished for 3 months, and discussions engaged between the parties on the basis of the resolution; the Egyptian government accepted this proposal, according to its interpretation of the resolution.

Mr. Nasser thus employed the diplomatic language peculiar to the Middle East. He accepted the cease-fire initiative as a procedural matter, but only if it issued in a substantive result: negotiations on the basis of complete Israeli withdrawal * * *.

The Jordanian government soon followed

[1] NOTE.—The missiles are supposedly defending Mr. Nasser's political perch against the demoralizing deep penetration raids, and are thus merely a "protective reaction" against Israeli initiative. It is alarming to hear such nonsense from high persons. The Israeli raids, in the pattern of all air forces mesmerized by "strategic bombing," inspired new support for Mr. Nasser when the inevitable civilians were killed. Despite their unwisdom, the raids began in response to the *War of Attrition* in the Canal Zone, proudly and unilaterally declared by Nasser himself. That initiative was made possible by Russian artillery pieces.

suit, although King Hussein had never declared a War of Attrition. Here again, the other main Arab demand besides withdrawal was stressed. Jordan would observe the cease-fire, but the justice of the Palestinian Cause could not be constrained: the guerrillas would continue their operations.

In accepting the Roger's Initiative, Mr. Nasser took a considerable gamble. The Algerian, Syrian and Iraqui governments—the latter with 12,000 troops in Jordan—denounced Nasser bitterly. The Palestine Guerrilla outfits swore to sabotage the cease-fire, regarding the Egyptian move as a betrayal. Mr. Nasser, in brief, staked the prestige of his claim to Arab leadership on his acceptance, for if something should come of the negotiations, he must enforce his part of the bargain. And if the result involves recognition of any State of Israel, Nasser and Hussein will be separated from the three States mentioned, not to speak of the moral consequences to his leadership claim. This is an expensive prospect for a man of Mr. Nasser's sensibilities.

After much hesitation and maneuvering, better publicized than Mr. Nasser's five-week delay on the Rogers proposal, the Israeli government also accepted the proposal. On August 14, the *New York Times* published an Israeli release of Truce Accord, signed by Israel and the U.A.R. There are two important additions to the normal criteria of a cease-fire, that is, absence of shooting. First, "both sides will refrain from changing the military status quo extending 50 kilometers to the east and the west of the cease-fire line." Maintenance of facilities is permitted: *new facilities* are prohibited. Second, verification shall be primarily by the national means of the parties.

In the same article, the Israelis let it be known that the United States and the Soviet Union were also monitoring the situation through spy devices, and that previous to the ceasefire, the U.S. had given categorical assurances regarding the enforcement of these clauses, assurances only possible if the Soviet Union itself had transmitted its responsibility for Egyptian observance of the bargain.

The Israelis have also taken great chances in accepting the initiative. Their chances are not in the realm of claims to leadership. Should the U.A.R. break the first of the qualifying clauses to the cease-fire, Israel would consider three paths. She could publicize the violations and complain to the U.N. and the U.S. as foreseen in the acceptance text. She could refuse the peace talks or bomb the new installations if the U.S. and U.N. and USSR did not get the U.A.R. to remove the violations. She could continue the "negotiations" and do nothing.

In all of these cases, the initiative for discussion would be throttled by either one of the parties, or by the U.S. or Soviet Union in their respective roles as guarantors for local behavior.

What do the Great Powers stand to gain or lose from the next ninety days, that is, by talking instead of shooting? To comprehend this question, we must engage in the most necessary and risky analysis, the meaning of recent events, specifically the War of Attrition.

What did the War of Attrition accomplish? For one thing, as President Nasser said, the Egyptian government refused to accept the status quo. It is easy to see that the status quo, with diminishing hopes of either political or military changes, should have doomed Nasser himself. For the status quo registered as "final" the most momentous defeat in modern Egyptian history.

Even more importantly, from the Soviet point of view, the status quo symbolized Moscow's impotency in aiding her clients during the Six-Day War. The Soviet Union could hardly be expected to tolerate such circumstances. Finally, the United States for reason of financial and political stakes, could hardly allow herself to remain in near total isolation from most of the Arab states.

The routes taken by each of the parties concerned to alter the status quo is instructive. The Soviet Union rearmed the Arabs. The Arabs refused to negotiate or concede the existence of Israel. The Western Powers divided their efforts into diplomatic overtones, and sporadic arms agreements, with the French concentration on the Arabs, and the United States on both sides.

The crucial point in these different routes lay in the attitudes of the Great Powers. The Soviet Government promoted the Four-Power and Two-Power discussions, and clung closely to the Arab position. The United States, after the Nixon Administration took office, produced the more "even-handed" approach of the Rogers Proposals. In these plans, peace could be secured by an exchange of almost all Israeli occupied territory (with "insubstantial exceptions") for declarations of recognition and security for Israel by the Arab States. Plainly, such proposals required the collusion of the Soviet Union in enforcing the settlement. For these good reasons, the Arabs and Soviets initially turned them down.

The "War of Attrition," however, comprised more than merely diplomatic discussion. Egyptian bombardment of Israel's Suez Canal positions was enabled by Soviet artillery. When the Israelis tired of steady losses and replied with flying artillery, Egyptian military weakness stood exposed. Mr. Nasser could have no diplomatic chances if he had no military chances. The Soviet government then had a critical choice. Since the Egyptians could not maintain any military position on their own, would the United States tolerate more direct Soviet intervention?

The answer to this question also involves the question of détente. Fear of direct confrontation sustains the concept. But under *conditions of parity*, it is logical to presume that conventional faits accomplis can hardly be reversed by threats of mutual suicide.

According to Soviet diplomats, the Middle East "talking" now in prospect is the consequence of the Middle East "shooting" of the War of Attrition. Mr. Nasser is now "strong enough" to negotiate because the Israeli military advantage has been worn away by Soviet military intervention. And the United States is now less "pro-Israeli," as evidenced by the stalled Phantom deliveries. According to other Soviet spokesmen, direct confrontation can now be avoided by defining carefully what constitutes cause for confrontation.

These propositions were embodied practically by the appearance of Soviet-piloted planes and SAM sites—with high and low altitude capability—in the Canal Zone. The aircraft were supposedly "out of bounds"; the SAM's were not. Hence, the Soviet Union was merely "defending" Egypt and President Nasser by giving her the means to wage the War of Attrition preparatory to a political settlement which would restore the pre-1967 Egyptian political position.

There is one difficulty with this version of events. Why did Soviet jets engage Israeli planes twice in late July over the southern Canal Zone,[2] immediately after President Nasser accepted the Rogers Proposal? Was this to be a further "incentive" for the Israelis to accept the initiative? And if so, could not the War of Attrition be simply extended by degrees to force the Israelis into diplomatic defeat before she suffered military defeat through loss of air superiority?

One might surmise that Mr. Nixon's strong remarks on July 1, regarding American willingness to "do what is necessary" in the Middle East would thwart the Soviet plan. In a security briefing on June 26 (published by the *Jerusalem Post*), the White House staffer recognized that the "expulsion" of Soviet troops was a primary desire of American policy. The U.S. thus recognized that Soviet diplomacy was pursuing an inflexible position while improving the military situation sustaining that position. Shy of threatening "mutual suicide," the U.S. could only aid Israel with equipment. Unfortunately, the Nixon Administration compromised this card by delay in the name of possible damage to negotiations and Arab interests. In fact, the delay and its explanation place the U.S. dilemma in sharper focus than ever before. For the Administration has taken upon itself an obligation to review, judge and act directly upon any threat to Israeli security. When and if the U.S. should do such a thing, as Mr. Nasser stated in his May Day threats, the Arabs would see clearly that the Israelis were imperialist puppets and the U.S. directly inimical to all Arabia.

Thus, the War of Attrition demonstrated that the Arab military position could be dramatically improved by direct Soviet military intervention in the face of American displeasure. Was it therefore not entirely to the advantage of Israel to get into diplomatic discussions before it suffered military defeat with fatal consequences for its future independence? Was it not sensible for the Americans to develop a diplomatic position much more amenable to the Arab demands lest it suffer fatal political consequences upon an Israeli military defeat? Could Mr. Nixon's remarks be taken very seriously, if they were combined with the Rogers cease-fire initiative, an activity with great military risk for the Israelis?

Thus, whatever Mr. Nasser's desires for military triumph, the Rogers initiative *as a procedure* was a convincing demonstration of Soviet prowess. Since the nuclear threat is not credible, and the Phantom supply now represents a confession of diplomatic disaster for the U.S. in the Arab world, the Soviet Union can and is exploiting American fears to produce a favorable settlement.

During the next ninety days, the U.S. faces the following possibilities. The Soviet Union's assurances of the status quo on the Canal Zone will prove worthless; the Israelis have complained that SAM missiles are already moving into the Canal Zone. This is merely a repetition of the same tactic employed in the War of Attrition. Will the United States therefore abandon a "procedure" while the Soviet side unilaterally alters the "substantive" military circumstances? If the U.S. does not secure Soviet compliance, the U.S. then faces the same circumstances of impotency she had in late July, save that the Israeli air force's accomplishments of the last three months in denying amphibious capability to the Egyptian army will have been lost. Then it will be even easier to favor a settlement on Soviet terms, even if those terms insure the Soviet Union as arbiter and guarantor of the Middle East. As for Israel, any formula for returning her to the military position of 1967 and the demographic position of 1947, even with declarations of non-belligerency, are equations for her ruin.

The noxious dispute now surrounding Israeli charges of truce violations in the movement of Soviet missiles is an ominous sign. On Sunday, August 16, Secretary Laird (as reported in the *New York Times* of August 17) delared it was impossible to ascertain any violations within the first twenty-four hours, because U.S. intelligence procedures were not completely in track.

Secretary Laird added, however, that the important thing was to begin negotiations, rather than quibble over violations. Meanwhile, the Israelis charge another missile movement occurred on August 13. Foreign Minister Eban has complained that all bene-

[2] Joseph Alsop, "M.E. Ceasefire Was Preceded by Soviet-Israel Aerial Dogfight," Philadelphia *Bulletin*, Tuesday, August 11, 1970; July 25 and 27 were the battle dates.

fit of doubt was being extended to the Arabs and none to the Israelis. According to Mr. Eban, continuance of the talks, while the cease-fire was being "mocked" by the U.A.R. and the Soviet Union, undermined all confidence in the value of signed commitments with these states. In Washington, however, high officials were described as "very irked" with the Israeli position. Marvin Kalb reported for CBS on August 17 that the charges had not even been raised with the Soviet Union, and not "seriously with the U.A.R." The U.A.R. has not bothered to comment on the changes at all.

If Secretary Laird's remarks are official policy, then the "inertia" of peace-talks will overcome the cease-fire guarantees. The consequence of this inertia is a new version of the War of Attrition. Should the "talks" not be settled on Arab or Soviet terms, (the Egyptian government, in the inimitable form of Husaynen Haikal, Abdel Nasser's confidant, have reiterated strongly that their policy is still on the Khartoum formula), then the prospects are Israeli military defeat by Soviet intervention.

Continued American acceptance of the War of Attrition strategy will thus lead straight to military and diplomatic catastrophe. The "impression of ascendancy" by the Soviet Union, and the "impression of descendancy" by the United States would be given a general credence with global repercussion. One term or the other, the diplomatic position of the Soviet government and the Arabs on substantive matters, or Soviet military intervention, must be altered. Otherwise the meaning of détente will be Soviet diplomatic superiority.

The Israelis cannot be expected to allow their security to wash away in American misunderstanding of the stakes. They may attempt a maneuver as desperate as 1967, probably at the Southern sector of the Canal, where a good tank road leads to Cairo, and a swing movement against the Egyptian Army at the central and northern sectors, while they have still got air cover. It is no coincidence that Soviet pilots have engaged them in this area.

A new Middle East war caused by Israeli desperation with inevitable Russian participation must signify the death of the détente.

Should the Israelis lose, will it not be too late to speak of "power balances" in the Middle East? Will both the impression and fact of ascendancy thus established by the Soviet Union not erode the rest of our Middle East position, as regimes rally to the victors? And what will happen to the cherished détente, the foundation of possible improvements with the Soviet Union?

But a Middle East war will be disastrous to everyone—to Israel, to the Arabs, to the United States, to Western Europe, and to the Soviet Union. The immensity of the booty at stake in the Middle East must sorely tempt the Kremlin leaders. The Soviet and Egyptian governments can only be encouraged into new escapades by unmistakable revelation of American weakness. If this progression is not reversed, the confrontation recognized; the Soviet Union faced straight-away with prospects of American invention. then we shall have neither safety nor relief. Sir Winston Churchill said: "There is nothing the Soviet government respects more than strength and nothing they despise more than weakness." The moment for concessionary proposals to those who never concede has passed. The perilous moment for action against those who are testing us has arrived.

At this eleventh hour the United States must communicate convincingly to the Soviet Union its determination that the basis of détente, the fear of mutual confrontation, will not be abrogated unilaterally in the Middle East. To forestall the death of the détente and the success of the War of Attrition during the next 90 days, the U.S. must regard any refusal to abide by the cease-fire guarantees as the end of the cease-fire, and cause for dispatching Phantoms to Israel.

AN IDAHO LUMBERMAN COMMENTS ON THE NEEDS OF THE FOREST SERVICE

Mr. CHURCH. Mr. President, Theodore "Ted" Hoff is the president of the Hoff Lumber Co., of Horseshoe Bend, Idaho, and is extremely knowledgeable in the area of forest management.

Recently he sent me an excellent letter in which he decried the level of funding which has been granted to the Forest Service to properly administer its functions over the past 10 years. I commend it to the attention of my colleagues.

I ask unanimous consent that the text of Mr. Hoff's letter and the table he enclosed be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

HOFF LUMBER CO.,
Horseshoe Bend, Idaho, July 30, 1970.

Hon. FRANK CHURCH,
U.S. Senate,
Washington, D.C.

DEAR FRANK: I have been reviewing the USFS fiscal financing for the years 1963 through 1970, an eight year total.

I was born and raised in McCall, Idaho, a small community adjacent to the Central Idaho Wilderness Area. My life, except for 5 years in the Navy Air Corps during World War II, has been lived within the natural resource habitat. Living within the natural resource area has given me an excellent opportunity to observe the multiple use practices of the Forest Service, and the impact of its management program.

No federal agency that I have observed, gets as much mileage from a dollar in preplanning and programing and its performance, as does the Forest Service. As a matter of fact, it is my considered opinion that these dedicated Forest Service employees are giving back to the public much more in land management, loyalty and performance than is appreciated by the public and some public servants. This does not get to the point of my letter, merely scratches in my background and interests.

On the fiscal comparison sheet enclosed, you will note that the planned financing for the United States Forest Service, percentagewise, is well over the actual financing. To one such as myself who makes his living by working with natural resources, this indicates that the Department of Agriculture, which budgets and our Congress which votes the dollars, are willing to settle for less than 100% land management and multiple use programs.

The second item, "Reforestation and Timber Stand Improvement" is a perpetuity program that will give back to future generations, timber stands for housing, recreation and wildlife habitat. You will note that in the reforestation and timber stand improvement, Congress has financed 40% of the program. Our past Secretaries of Agriculture have been content with this inadequate financing. Future generations will pay for this lack of funds.

Another point, when you talk about water and soil improvements, you are talking of a program that reaches into perpetuity. In soil and water management, 52% of the program during the eight years was actually financed and 48% of the program requested by the USFS was not financed. Our papers are full of future water requirements, water pollution and related problems. Something as basic to the life of future generations as soil and water require full time management and monies necessary for buying full time performance.

Idaho is blessed with natural resources. A large percentage of the lands that contain these natural resources are federally owned. We are all dedicated in passing on to future generations improvements for their livelihood. We must not let them down by underfinancing a national forest system management program.

Please let our track record, so to speak, be a better one over the next eight years than the one attached to this letter designating the financing and expenditures for the past eight years.

As a United States Senator, let me urge you to take a firm stand and not settle for lukewarm compromises.

Thank you.

Sincerely,

THEODORE HOFF, Jr.,
President.

COMPARISON OF PLANNED LEVEL OF FINANCING FOR THE NATIONAL FOREST SYSTEM AND THE ACTUAL EXPENDITURES FOR THE PERIOD FISCAL YEARS 1963–70

[In millions of dollars]

Activity	Fiscal years 1963–70 (8-year total) Planned level of financing	Actual financing	Percent financed
Timber sale administration and management	285	271	95
Reforestation and timber stand improvement	342	137	40
Recreation	572	260	45
Wildlife habitat management	54	34	63
Range management, revegetation and improvements	120	97	81
Soil and water management	94	49	52
Minerals and special uses	38	32	84
Land classification, adjustments, and surveys	68	41	60
Forest fire protection	283	203	72
Construction and maintenance of improvements for fire and general purposes	142	100	70
Insect and disease control	99	93	94
Acqusition of lands	52	14	27
Roads and trails	1,138	842	74

Note: This fact sheet taken from public document "Management Practices, Bitterroot National Forest."

ARTICLE BY JUDGE FRANK ARMSTRONG IN OPPOSITION TO THE PROPOSED NATIONAL COURT ASSISTANCE ACT

Mr. ERVIN. Mr. President, as a member of the Senate Subcommitee on Improvements in Judicial Machinery, I have followed the progress of S. 3289, the so-called National Court Assistance Act, since it was introduced several years ago. Since its introduction, I have doubted the wisdom of the Federal assistance to our State court structure which would be required by the act. Because of this extensive Federal involvement, I have felt that the bill would be a negative force in our concept of separate State and Federal court systems.

After introducing the National Court Assistance Act, the Subcommittee on Improvements in Judicial Machinery asked numerous State judges for their comments on the bill. I am familiar with many of these letters and with their almost unanimous opposition to the bill. This year an outstanding superior court judge from North Carolina, Frank M. Armstrong, has expanded his views in

opposition to the bill into an article in the American Bar Association Journal. Judge Armstrong has performed a real public service by examining S. 3289 in great detail, and I feel that his comments merit the attention of the Senate. Accordingly, I ask unanimous consent that the article published in the August 1970 issue of the American Bar Association Journal entitled, "The Proposed National Court Assistance Act" be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PROPOSED NATIONAL COURT ASSISTANCE ACT

(By Frank M. Armstrong)

(NOTE.—Under the guise of helping the states improve the organization, procedure and administration of their courts, the proposed National Court Assistance Act, sponsored by Senator Tydings, would not help the fight against crime and is unnecessary, expensive and wasteful. But, most serious, it would undermine the American federal concept of dual court systems.)

Senator Joseph D. Tydings of Maryland introduced in the 91st Congress a bill to create a new federal agency, the Institute for Judicial Studies and Assistance. The purpose of this institute would be "to further the adoption and development of improvements in the organization, procedure, and administration of local and State courts". This is the third time that this proposal has been made, as Senator Tydings sponsored similar bills during the 89th and 90th Congresses.

The bill, S. 3289, has been referred to the Senate Committee on the Judiciary and by it to the Subcommittee on Improvements in Judicial Machinery. Because in my view passage of legislation of this description would have an adverse long-run impact on the independence of state and local courts, I am writing to alert the members of the American Bar Association and others to the provisions of this bill.

The proposed legislation, called the National Court Assistance Act, contains two main sections. The first adds a new chapter to Title 28 of the United States Code establishing the Institute for Judicial Studies and Assistance. The second sets out an appropriation authorization for the first three years of the institute's operations. In discussing the proposal, references will be made to the purposes of the proposal as explained by Senator Tydings. Unless otherwise indicated, the Senator's expression of purpose will be drawn from his remarks in the *Congressional Record*.

The governing board of the institute would consist of seven members appointed by the President. Six of the seven must be state court officials, and the seventh must be an attorney engaged in the private practice of law. The board is required to hold regular meetings at least twice a year and has the final responsibility for establishing institute policies. The board has the authority to select the director of the institute, who serves at the pleasure of the board. The director's position is viewed as a high-level one; he is to receive the same salary as a federal district court judge and have highly attractive retirement provisions.

Although the board is granted the final power with respect to the external activities of the institute, the director has the sole right of selecting the employees of the institute. He also has the right, within certain constraints, to fix the compensation of employees. No limit is set on the number of employees, although Congress would undoubtedly exercise control through the appropriation process.

To be eligible for appointment as a board member, a person must have a full-time professional association with state or local courts. The bill requires that the board be composed of two active state appellate judges, two active state trial judges, two state court administrative officers and one attorney engaged in the private practice of law.

Members are to serve staggered three-year terms and are eligible for reappointment to one full term of office. The President is to designate one of the board members as chairman, who serves as such at the pleasure of the President. The legislation enjoins the President to give "due consideration to recommendations and endorsements from professional societies and organizations concerned with judicial administration and management techniques, including . . ." The organizations then specifically listed are the American Bar Association, the American Society for Public Administration, the Association of American Law Schools, the American Judicature Society, the Institute of Judicial Administration, the Conference of Chief Justices, the National Conference of Court Administrative Officers, the National Conference of Metropolitan Courts, the National Conference of State Trial Judges and the North American Judges Association.

To assure balance on the Board, no two members may be residents of the same state, and no more than four members may belong to the same political party.

INSTITUTE WOULD HAVE TWO MAJOR OBJECTIVES

The two major objectives of the institute, as characterized by Senator Tydings, would be (1) to establish a grant-in-aid program to encourage and financially assist the modernization and improvement of judicial machinery in state and local courts; and (2) to serve to create a national reservoir of up-to-date information on court management and organization.

These purposes are reflected in the caption to the bill, though the powers actually granted the board in the text are slightly broader and the stated purpose of the institute is more generalized. Among the powers granted the board are (1) to conduct studies and evaluations of local and state court systems; (2) to make grants to local or state courts for such studies and evaluations; and (3) to make grants to public or private nonprofit organizations making such studies and evaluations.

The expected outgrowth of these studies and evaluations of local and state court systems is to be "recommendations for organizational, procedural, and administrative improvements of such systems . . .". Following these recommendations, the board is authorized to make grants to local and state courts, and to public and private nonprofit organizations, to implement the recommended improvements.

Other provisions grant the board the power (1) to conduct, or make grants to courts and others to conduct seminars and other educational programs for judges and personnel of local and state courts; (2) to make grants to establish in accredited universities and colleges programs of instruction in court administration and management; (3) to cooperate with and render technical assistance to federal, state, local or other public or private agencies in carrying out the purposes of the act; and (4) to make grants for other purposes, consistent with those of the act, as the board determines necessary or desirable in carrying out the purpose of the institute.

As the making of grants is perhaps the most important function of the institute, the proposed legislation contains a specific section on that. The director is required to make regulations establishing general standards for obtaining grants and for reporting to the director by recipients of grants. These regulations are subject to the approval of the board. Applications are to be processed by the director, who recommends approval or disapproval to the board. No grant is effective until approved by the board, but the director is responsible for disbursement and may control the timing of payments and place conditions on the payment of installments. The matter is not clear, but under a permissible reading of the bill's language the board may not make a grant unless it first secures the director's recommendation for approval.

RESTRICTIONS ON THE INSTITUTE IN FAVOR OF STATE COURTS

There are two major restrictions on the powers of the institute, restrictions that Senator Tydings states are designed "to protect the independence and autonomy of State and local courts". One of the provisions is an administrative restriction in the grant procedure:

"No application submitted by any local or State court for a grant under this chapter shall be recommended by the Director for approval unless such application has been first approved by the highest judicial authority of the State in which is located the court submitting such application. No application submitted by any public or private nonprofit organization for a grant under this chapter in connection with any local or State court shall acquire [*sic*] the approval of any State's highest judicial authority. . . ."

It is not clear whether the word "acquire" in the second sentence is intended or whether it is a misprint for "require". The literal impact of "acquire" would be that an outside organization could not get a grant to study a local or state court even with the approval of the highest judicial authority of the state. The probabilities are that the word is a misprint, especially in light of the second restriction:

"Nothing in this Act shall be construed as authorizing the Institute, the Board, or the Director thereof, to supervise or control in any manner or to any extent the administration, organization, [*sic*] of any local or State court, or to conduct or to cause to be conducted any study of [*or?*] evaluation of any local or State court without the prior approval of the highest judicial authority of the State in which such study or evaluation is to be conducted."

The term "highest judicial authority" of a state is defined to mean "the person or body of people who have been granted, by State constitution or statute, supreme supervisory authority over the courts of the State or, in the absence of such a grant, the chief judge of the State's highest court".

In connection with these two restrictions, Senator Tydings stated on introducing the bill that others have suggested that the veto power be lodged in the judge of the court directly involved rather than with the "highest judicial authority". He said: "I believe that this issue would benefit from further hearings and pending the recital of the views of other State and local judges, I am reserving final judgment on this matter."

As an indication of the scale of the institute's activity as visualized by Senator Tydings, the final section of the bill authorizes up to $15,000,000 in grants to be made during the first three years of operations. These authorized sums, even if retained in enacted legislation, are subject to being cut down on passage of actual appropriation measures, but the actual figure is often a substantial fraction of the authorized amount.

CRITICISM OF THE TYDINGS PROPOSAL

During the years that Senator Tydings has been advocating his National Court Assistance Act, I have contended, along with many other appellate and trial judges and lawyers throughout the United States, that it is a dangerous and unnecessary measure. My criticisms are that Senator Tydings is arguing on a misleading basis

in asserting that the current law and order crisis makes his bill necessary.

The bill is unnecessary on several different counts.

The proposal will be expensive and wasteful and will lead to bureaucratic rigidity.

The safeguards in the bill to preserve the independence and autonomy of state and local courts are illusory and ineffective.

Even with safeguards, the bill constitutes a long step toward dismantling our dual system of courts and substituting a unitary system.

MISLEADING INVOCATION OF THE LAW AND ORDER CRISIS

Senator Tydings, having heretofore failed to get the Congress to approve the bill on its merits, has changed his tactics in an effort to frighten the Congress, the Bar and the public into lending support to the bill by referring to the law and order crisis and by citing the staff report to the National Commission on the Causes and Prevention of Violence. In his remarks on the introduction of the bill, Senator Tydings quoted from this report and other authorities to the effect that congestion, delay and poor management in our criminal courts may be a major abetting cause of the crime wave those courts were intended to eliminate. Any person who carefully considers this argument, however, will see that it is more illusion than substance. The causes of crime and violence, as all informed persons who study the recent reports on the subject know, are extremely complex. The behavior of the courts may constitute a piece of the problem, but it is not a significant element.

In any event, the type of congestion and delay pictured by Senator Tydings as endemic in urban criminal courts will not be cured by mere incremental improvements in management and efficiency. The real problem is a many-fold increase in the number of cases, and the only effective solution is a corresponding increase in judges, court personnel and courtrooms. The bill, however, contains this restriction on grants:

Provided, That no such grant or part thereof be used for the construction, improvement, or alteration of buildings, or for the payments of salaries of judges or court personnel on a continuing basis.

I do not question the wisdom of this provision so far as this grant proposal is concerned, of course, but it does indicate clearly the extent to which the proposal is irrelevant to the law and order crisis.

LACK OF NECESSITY FOR BILL

The proposed measure appears to be unnecessary on several different counts.

First, as a law and order measure it would have to give way to the Omnibus Crime Control and Safe Streets Act of 1968. This act provides for the creation by the states of state and local plans with respect to criminal justice, and it applies to the entire criminal justice system—including the courts. Under the block-grant provisions of this act, states that have modernized their courts on their own motion (as has my own state) may utilize the moneys received from the Federal Government in a perhaps different manner from that employed elsewhere. North Carolina has received $5,174,000 from the Federal Government under the 1968 act and to date has allocated $1,532,063 for the improvement of criminal justice in the state. The projection for the next five years is $40,000,000 in planning and action grants. So, North Carolina, through the concerted efforts of all elements of its criminal justice system at the state and local levels, is proceeding promptly and effectively with the business of meeting the challenge of the law and order crisis. The other forty-nine states are meeting this challenge in the same manner.

Second, since 1966 I have been corresponding with Senator Tydings regarding this bill. I repeatedly have requested an explanation as to why he is so interested in establishing another federal bureaucracy for the purpose of improving the organization, procedure and administration of the state courts when, according to former Chief Justice Warren, the federal courts are in such a deplorable condition. His first concern should be the improvement of the quantity and quality of justice in the federal system of courts. Senator Tydings has not answered my inquiries because, I believe, there is no plausible answer. Senator Tydings and the Congress should concern themselves with the tremendous volume of litigation and congestion in the federal courts, rather than assume the role of guardian in the states' courts and legislative bodies. In my view, those responsible for the improvement of the state courts have done and are doing much more than those responsible for the operation of federal courts, including Congress, have done and are doing to remedy the ills that beset us all.

Third, the things that are to be done under this bill are already being done in most if not in all the states by those who are experienced and have first-hand knowledge of their state court systems. The American Bar Association, state and local bar associations, the law-making bodies of the states, citizens' committees, the National College of State Trial Judges, the Institute of Judicial Administration, judicial councils, legislative councils, as well as the appellate and trial judges of the states, are working toward the common end of improving the administration of justice in the courts nationwide. How can a Washington bureaucracy do more, especially with a politically inspired and less efficient staff?

To illustrate the duplication of effort and needless waste of funds that would be involved in the administration of the Tydings bill, I call attention to what my own state has done in recent years without any prodding or unsolicited assistance from the Federal Government. While I believe we have had, for about a century, one of the best and most efficient judicial systems in America, needing only a little attention here and there to make it meet the needs of the times, nevertheless, in 1962 the people of North Carolina rewrote the judicial article of our constitution. The General Assembly has implemented our new judicial article, which provides for a state-wide General Court of Justice, with effective administrative management staffed by able men with judicial and administrative ability to co-ordinate and supervise the business end of our General Court of Justice. This was a major task! And it was performed by North Carolinians utilizing their own resources.

EXPENSE AND WASTEFULNESS OF ANOTHER FEDERAL BUREAUCRACY

Whether or not the grants made by the Federal Institute for Judicial Studies and Assistance were to total $15,000,000 during the first three years of its existence, this amount would certainly be only a small fraction of the ultimate cost of the program. The scope and extent of federal intrusion into the affairs of state government are well known, and there is little doubt that the long-term effect of the Tydings bill would be the creation of another sprawling bureaucracy, with its legions of bureaucrats who, armed with guidelines sanctioned by federal court decrees, would eventually be breathing down the necks of state judges and court personnel. The bill's ostensible safeguards against these abuses are manifestly nothing more than gestures of appeasement, temporary in nature, since they can be later removed by amendment.

ILLUSORY NATURE OF THE PURPORTED SAFEGUARDS

Each time Senator Tydings has introduced this bill he seems to have recognized that it does pose a threat by the Federal Government to the preservation of the autonomy and vigor of the state and local courts. He has stated that he has "placed in the act specific provisions to protect the independence and autonomy of State and local courts," and he has mentioned the following provisions of the bill:

The restrictions on the composition of the board—with special emphasis on the requirement that six of the seven members be associated with state courts.

The veto power of the "highest judicial authority" of a state over grants to local and state courts.

The veto power of the "highest judicial authority" of a state over any study or evaluation of its local and state courts that might be conducted under the terms of the act.

The explicit restriction forbidding the institute, the board or its director from supervising or controlling "in any manner or to any extent" the organization or administration of any local or state court.

After a close study of the provisions cited by the Senator, I fail to see by any reasonable interpretation that they provide these safeguards. The last general prohibition is broad almost to the point of meaninglessness. It prohibits direct control or supervision or administration, but it nevertheless leaves the door open to indirect and informal controls through the process of enforcing grant guidelines, written and unwritten. The veto power given the "highest judicial authority" of a state does nothing to protect the independence and autonomy of the local and state judges and other court personnel who might be subject to the subtle and unsubtle pressures generated by studies and evaluations of their courts. It is conceivable that these studies would take forms and directions not reasonably to be anticipated by the "highest judicial authority" from the generalized descriptions of the projects as initially submitted for state approval. Last, it is obvious that the important day-to-day shaping of institute policy will be by the director—not by the state officials on the board, who will meet only infrequently in Washington and who will continue to serve full time in their state positions.

AN AMENDMENT TO THE BILL WOULD HELP, BUT NOT CURE

Senator Tydings should be willing at least to insert more iron-clad restrictive language in his bill. I have suggested to him that he amend his proposed act to include wording similar to this:

"It is the intention of the Congress that nothing in any of the provisions of this Act shall be interpreted to require any judge of any local or State court of record to perform any act, make any report, attend any seminar, or do anything whatsoever under this Act unless such judge voluntarily consents in writing to do so. Any order, direction, guideline, or rule issued by the Director, the Board, anyone under his or its direction, or by anyone else under the purported authority of this Act shall be null and void and unenforceable in either the State or Federal courts. This section shall be controlling notwithstanding that the chief or presiding judge of a local or state court, or that the highest judicial authority of the State, may have elected to receive grants or other assistance under this Act or to permit studies or evaluations under this Act."

This language and protection could be improved, but Senator Tydings has refused to amend his bill in accordance with the substance of this proposal. But even if Senator Tydings were to consent to a restrictive provision of this type, I still am unalterably opposed to the bill because of its basic philosophical and policy thrust.

UNDERMINING OF OUR DUAL SYSTEM OF COURTS

Under our constitutional system of checks and balances, we have maintained a dual

system of courts: the federal courts on the one hand and those of the states on the other. Except for authorization of injunctive and contempt powers designed to secure the jurisdiction of the lower federal courts from encroachments by the state courts, our fundamental statutes have called for direct review of state court action only by the Supreme Court of the United States. This desirable separation of judicial powers has been weakened in recent years. One major example has been the federal decisions shifting to more liberal interpretations concerning the federal habeas corpus rights of state prisoners. Nevertheless, the dual court structure of our nation is still substantially intact and functioning.

I am confident that from a lack of knowledge of our dual system of courts many persons do not realize that the Tydings bill is another step—and a long one—toward a unitary judicial system in America. If that is the ultimate objective, it should be approached openly and constitutionally. The architects of our system of courts were judiciously and bitterly opposed to a unitary system for the same reasons that it should be rejected today. The concentration of excessive power invites corruption and collapse.

I hope this article will serve to inform the *Journal's* readers of the important issues that underlie the proposed National Court Assistance Act. The admonition of Justice Brandeis is pertinent:

"Experience should teach us to be most on guard to protect liberty when the government's purposes are beneficent. . . . The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning, but without understanding."

J. MARK TRICE, 50TH ANNIVERSARY OF SERVICE TO THE U.S. SENATE

Mr. CASE. Mr. President, I am happy to join Senators, both Republicans and Democrats, in pausing briefly today to honor J. Mark Trice, who has served this institution and countless individual Members, but most of all our country, for 50 years. It takes a most unusual combination of many qualities to fit a man for the service Mark has rendered. Intelligence, industry, sensitivity, compassion are among these qualities, and I think most important of all is the kind of simple, straightforward integrity which has guided Mark's every action and relationship over this half century.

It is an especially happy occasion when we can honor one who is still around to hear what is said about him. And we all, I think, will agree that what Samuel Johnson called the "tardy bust" is no comfort to the man it honors too late.

Mrs. Case and I join in wishing Mark and his lovely wife long life and continued happiness in it and in each other. We look forward to sharing it with them.

DESTROYER CONSTRUCTION AWARD TO LITTON INDUSTRIES, INC.

Mrs. SMITH of Maine. Mr. President, in a Senate speech on June 29, 1970, I challenged the award of the construction of 30 destroyers to Litton Industries, Inc. on several bases. One challenge was on the base of credibility—essentially the credibility of a situation where almost overnight after three rounds of prices Litton could drop its price by some $270 million from the last previous price it submitted.

Another aspect of doubt as to the credibility of Litton's overnight drop in price was the contract pricing reset provision introduced as a last minute change—for this may have permitted a contractor to take an irregular advantage of the regulations to lower estimated costs with the full knowledge that costs can be negotiated upward several years after the award at a small sacrifice in profit—but at the expense of another substantial overrun to the Government.

To use a harsh, but potentially most accurate, term—a "buy-in." In fact, a high Defense official admitted to me that the combination of the sudden last minute drop in Litton's price together with the last minute change of the price reset provision gave a very strong appearance of a potential "buy-in" maneuver but with this admission he expressed doubt that a "buy-in" could be proved now but might take some years to prove.

The credibility factor on this award continues. The Navy has resorted to what might be characterized as a "numbers" or "figures" game in which the commander of the Naval Ship Systems Command provides a lower estimated cost figure to the chairman of the Senate Armed Services Committee on a classified basis marked "Confidential—For Official Use Only" but on the other hand makes statements to the news media for publication of another and much higher figure—nearly three times as high as that submitted on a confidential basis to the chairman. At my request, the Navy subsequently gave me the same memorandum.

This pertains to the estimated cost impact on the DD–963 program if the construction is split between two shipbuilders instead of being given to one.

I do not know how Admiral Sonenshein can really make a credible estimate of extra cost unless he has not required from Litton and Bath what their respective prices would be if there were a split in the contract. Bath officials tell me that the Navy has required of Bath its prices in the event of a split contract. I do not see how anyone can make a really intelligent and informed estimate other than the suppliers themselves. If Admiral Sonenshein has not required Bath officials to make such an estimate on their part, then what credibility can be attached the estimates that Admiral Sonenshein advances?

Let me first deal with the restricted "Confidential" classification placed by the Navy on Admiral Sonenshein's memorandum of May 18, 1970. The credibility of that classification restriction is highly suspect—when the estimated extra cost set forth in that memorandum is the same as reported on page 30 of the July 4, 1970, issue of Business Week in its Washington Outlook section.

One wonders why such restriction is placed by the Navy on the Senate Armed Services Committee—when the Navy turns around and gives the same figure to a national weekly magazine. What is the credibility of the classification?

The estimated extra cost set forth in that so-called confidential memorandum to the chairman of the committee is the figure of $225 million as reported by Business Week.

Not long thereafter the writer of that confidential memorandum, Rear Adm. Nathan Sonenshein, commander of the Naval Ship Systems Command, made statements to the news media, and which statements were published, to the effect that splitting the work would inflate the cost by $600 million. Thus, within a matter of a very few weeks, Admiral Sonenshein tripled his estimate of extra cost from a split award. All of us know that we have inflation, but we never realized that it was so runaway that within the short period of a month to 6 weeks the cost could triple on a split of this contract.

In fact, the rise in the estimate of the extra cost of $225 million as of May 18, 1970, to $600 million prior to the July 4, 1970, issue of Business Week is incredible—and on its face raises a serious question of the credibility of the Navy in this award. The pattern of lack of credibility runs all the way from the lack of credibility of the sharp last minute drop in Litton's price and the last minute change by the Navy to let Litton reset the price 39 months later after the award now to the lack of credibility in the Navy's "confidential" classification on its memorandum to the chairman of the committee and the widely differing estimates by Admiral Sonenshein confidentially to the chairman of the committee and publicly to the news media.

Business Week characterizes Admiral Sonenshein's publically announced estimate of an extra $600 millions as a "scare figure." Now remember, that is the characterization made by Business Week. However, I will not take issue with that characterization in view of the fact that Admiral Sonenshein, in giving an estimated cost to the news media, tripled the estimate cost given confidentially to the chairman.

Business Week itself has questioned the credibility of Admiral Sonenshein's $600 million estimate by calling it a "scare figure"—obviously interpreting it as trying to "scare" the Congress out of splitting the award legislatively.

Attempting to scare Congress will not add to either Admiral Sonenshein's credibility nor the Navy's credibility on this matter of the DD–963 award about which there is such a lack of credibility in so many respects. Let us hope that the Navy's defense of the award and its tactics, whether "scare" or not, are not so repeatedly lacking in credibility as to threaten an adverse image on the score of integrity.

REMARKS OF SENATOR SAM J. ERVIN, JR., BEFORE THE NORTH CAROLINA LAW ENFORCEMENT OFFICERS ASSOCIATION

Mr. ERVIN. Mr. President, on August 4, 1970, I was privileged to attend the annual meeting of the North Carolina Law Enforcement Officers Association in Salisbury, N.C. The association is concerned with the profession of law enforcement in our State and its president, Sheriff L. B. Falkner, has done a magnificent job leading the organization. In addition to Sheriff Falkner, I was greatly

impressed with the men I met in Salisbury who were guiding the association. The officers are Sheriff L. B. Falkner, president; W. M. Anthony, first vice president; M. A. Goldston, second vice president; Carson B. Annis, secretary-treasurer; M. J. Dellinger, sergeant at arms. Also, I was privileged to meet the members of the board of directors who were attending the meeting. Their names are J. T. Rich, J. A. Creech, Marvin Pope, A. L. Whaley, F. G. Fleming, and Broadus Hester.

You can tell a great deal about an organization from the caliber of its leaders; and from talking to these officials in Salisbury, I realized how fortunate we were to have such dedicated men in the profession of law enforcement in North Carolina.

Mr. President, at the meeting, I made a speech on the work of the Law Enforcement Assistance Administration in North Carolina. Since I had strongly supported the Law Enforcement Assistance Act of 1965, and the Safe Streets and Crime Control Act of 1969, I was very glad to have an opportunity to review these programs and the benefits they have brought to North Carolina. I hope the Senate will find my State's experiences with the Law Enforcement Assistance Administration at the Department of Justice typical of their own.

Mr. President, I ask unanimous consent that my speech given in Salisbury, N.C., on August 4, 1970, before the North Carolina Law Enforcement Officers Association, be printed at this point in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE SAM ERVIN, JR.

A few months ago I received a letter from your president, Mr. Falkner. He stated that I had been chosen to speak to you because my record shows that I have an understanding of the job you are trying to do. I find it difficult to believe that anyone in America today does not realize the importance of the work our law enforcement personnel are performing.

Crime has become a bitter, grim reality in this country. For millions of Americans fear is a daily companion; fear spawned by the soaring crime rate reaches into every city of every state. No one is immune. Crime is tarnishing the whole quality of life in the United States in very real and evident ways.

As law enforcement officers, you bear the initial burden in the fight against crime. It is not an easy burden to bear. Criminal behavior today is as complex as our society. Not only are you faced with increased crime in the streets, but also with vast numbers of low visibility crimes: vice crimes, white collar crimes and those committed by the professional criminal. Last year alone, crime took 13,000 lives in the United States and cost more than $30 billion.

But I don't have to tell you about the magnitude of the crime problem. Right here in North Carolina an average day brings the murder of at least one person, the forcible rape of one or two women, the robbery of five people, the serious aggravated assault of forty citizens, the theft of 20 cars, 51 major thefts and 70 burglaries. And these daily averages are twice what they were in 1960.

It was statistics like these that prompted Congress to create the Law Enforcement Assistance Administration in 1968 to provide financial and technical assistance to aid states and local governments in improving the administration of criminal justice throughout the country; in short, to help halt the increase in crime. Because I believe LEAA will prove to be the turning point in the war on crime, I want to spend a good part of my time with you today talking about LEAA and the activities it has funded, particularly in North Carolina.

In fiscal 1969, the LEAA budget was $63 million. In fiscal 1970, that amount was increased four-fold to $268 million. This fiscal year, which began July 1, LEAA has requested and appears certain to receive an appropriation of $480 million—nearly eight times the amount it received two years ago when it began. You can see from the increases that the problem of fighting crime in the streets and improving the administration of criminal justice has become a major federal priority.

Because we believe that fighting crime is a job which must be done primarily on a state and local basis, most of LEAA's funds are distributed in the form of block grants allocated to the states on the basis of population. Each state has a planning agency which distributes the money throughout its state on the basis of comprehensive statewide plan approved by LEAA.

For example, in fiscal year 1970, North Carolina requested and received $4,625,000 to carry out its plan. That amount is almost 7½ times the $621,307 awarded to this state in the previous year.

In its 1970 plan, North Carolina placed heavy emphasis on police-related activities. Almost 50% of the funds was spent on programs to improve the detection and apprehension of criminals; approximately 9% was devoted to the prevention and control of juvenile delinquency; 5% went to improving police-community relations, and 1% each to prevention of crime and public education, and prevention and control of civil disorders.

The remainder of the funds was spent to improve prosecution and corrections, both vital areas for a well-rounded system of criminal justice. It is not enough to improve our ability to apprehend criminals. That is the first step, and is an extremely important one. But even if you doubled arrests tomorrow, there would be no real progress if the courts were still backlogged and the prisons unable to rehabilitate.

I don't have to tell you that court dockets are crowded—so crowded in some cases that individuals have to wait as long as two years before they come to trial. By that time witnesses may have disappeared, the criminal probably will have lost the connection between the offense and the punishment, and he may even have committed more crime.

Once he is tried and sent to prison, his time in jail may just be further training for a criminal career. Studies indicate that between 40 and 70 percent of those released from prison go on to commit new crimes. Eight out of every ten offenders in a recent FBI study had at least one prior arrest, and seven out of 10 had a prior conviction. These and similar statistics prove that we must improve our abilities to convict and rehabilitate criminals, as well as apprehend them. For this reason, LEAA block grant funds must be devoted in each State, as they have in North Carolina, to comprehensive systemwide improvements in all components of criminal justice.

In addition to block grants to the states, LEAA also makes several types of direct grants. One of these, the discretionary grant program, provides funds to help meet special problems such as those of big cities.

In the fiscal year which ended June 30, North Carolina received ten discretionary grants, totalling $778,426. A little more than half of these funds were used for corrections-related projects. Cumberland County is establishing a new community correctional center to replace its old facilities. Other projects in the corrections field helped improve employment opportunities for offenders, aided diagnosis and treatment of juvenile problems, and provided fellowships for correctional personnel.

Two grants were made to improve police-community relations in Winston-Salem and Charlotte. Another provided an attorney for the Winston-Salem Police Department to advise and train the police.

A second type of LEAA direct grant program provides academic assistance funds for public law enforcement officers and people who promise to enter the law enforcement field. These funds are given in the form of loans and fellowships to finance college studies for police and correctional personnel.

In fiscal 1970, 19 institutions of higher education in North Carolina received a total of $65,600. This amount sent 434 law enforcement officers to school during the last school year. This year, 23 of our colleges and universities have already received $145,344, and it is estimated that they will receive close to $100,000 more by June 30, 1971. That means that over 1,700 law enforcement officers in North Carolina will study under the program in the coming year.

Finally, I would like to tell you about an LEAA-sponsored program that will have special meaning for North Carolina. It is called the Pilot Cities Program and Charlotte is one of three cities chosen to initiate the project subject to the resolution of final details.

What does this program mean for Charlotte?

For the first time, a project will emphasize system-wide improvement in criminal justice operations. Past improvements in law enforcement and criminal justice have generally been piecemeal in character: one city updates its police communications capability, while a second city improves its bail procedures, and a third tests a work-release program. Under the Pilot Cities Program, LEAA, in cooperation with cities like Charlotte, will test the impact of coordinated improvements throughout the entire justice system. Particular emphasis will be placed on typical urban problems, such as street crime, drug addiction, drunkenness and delinquency.

In addition, new data systems will be developed in three areas: crime reporting, local system-wide criminal offender information systems, and statistical data for analytical purposes.

The result of the Model Cities Program will be used to aid other localities in improving their law enforcement operations by providing a comprehensive approach to urban problems.

In this short time, I have tried to give you some idea of what we, at the federal level, are doing to ease the burdens of local law enforcement.

But the problems of today require effort and cooperation at every level.

One of the most important aspects of law enforcement today is frequently referred to as "community relations." It is important because respect for you as law enforcement officers, and for your profession in general, is necessary if there is to be any respect for the law. Cooperation from the public can also make your job much easier.

This is one goal, however, that can only be accomplished through the individual efforts of each of you.

In this regard, I am reminded of a story that appeared in last month's FBI Bulletin. It told of the arrest by the FBI of a young man who was wanted for false pretense. The young man was known to be a militant political activist. The day after the arrest the man telephoned the local FBI office and told them he felt obligated to inform them of his feelings about his arrest. Like many

people today, he had been skeptical about law enforcement officers at local, state and federal levels. He stated, however, that the professional manner in which his arrest had been handled had given him a new attitude toward law enforcement.

I sincerely hope that you will take full advantage, not only of the opportunities available under the LEAA program, but also of those that are available to you to increase public respect for your uniform, your profession and the system of laws you represent.

CLEAN WATER IS A MATTER OF HUMAN RIGHTS

Mr. PROXMIRE. Mr. President, I wish to call this body's attention to the fifth international water quality symposium now meeting at the Sheraton-Park Hotel during this week. The theme of this year's symposium is "Water Pollution and Health." Sponsored by the Water Quality Research Council, this body has gone far in making the public aware of the increasing danger that exists in the quality of water. In the keynote luncheon speech yesterday, my distinguished friend and colleague, the Senator from Indiana (Mr. BAYH) emphasized the need to stem pollution by forcing technology to take the initiative in adapting to human needs.

Mr. President, I have been speaking regularly on the floor of the Senate in behalf of the Human Rights Convention on Genocide, Women's Rights, and Forced Labor. But clean water, Mr. President, is also a matter of human rights. And the Senator from Indiana has made a significant contribution to the efforts to secure these rights.

Mr. President, I ask unanimous consent that the full text of Senator BAYH's address to the fifth international water quality symposium be provided in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NOW IT'S TECHNOLOGY'S TURN

(Speech by Senator BIRCH BAYH, Fifth International Water Quality Symposium, August 19, 1970, Washington, D.C.)

Poets, like politicians, once joined in complaining that good deeds were so quickly forgotten that they seemed to have been written in water.

Well, today what is written in our water is not good deeds, but the misdeeds of an entire civilization. Today our water is a dirge containing words such as: "coliform organisms," "virtuses;" chemicals spanning the inorganic alphabet from ammonia to zinc; organic chemicals that poison quickly, such as cyanide, and those that climb slowly up the food chain, such as DDT. And for those with a taste for more exotic words, the moving finger of our industrial progress has written on the water such Doctor Strangelove terms as "Radium 226" and "Strontium 90."

Yes, we look into our water and perceive, not a reflection of beauty, but the record of what ignorance, irresponsibility, greed, and contempt for nature can accomplish.

Our waters would not stand as silent witness to neglect and abuse if it were not for the attitude of the people and the nation which uses them.

The attitude to which I refer has been implicit in our Western society ever since James Watt harnessed steam, and a host of inventors found ways to put it to work pumping out mines, driving trains, spinning cotton, and in a thousand ways doing the world's work. Grateful to a power that lifted the heaviest burden of labor from his back, man has not only adapted to the new technology but, more importantly, adopted the attitude that *Man adapting to machine* was the right and proper and only course.

If trains hooted in the night, it was the sweet sound of success.

If factories belched clouds of sulphur dioxide, people took a deep breath of relief. Black smokestack plumes were pennants of progress, to be engraved proudly on stock certificates and featured in corporate coats of arm. Women looked up from the sewing, noticed those black bars of smoke across the horizon and said a silent prayer: "Thank God the men will be going back to work."

The attitude of man adapting to technology naturally included our waters. Each stain and befoulment was evidence that somewhere upstream the machines were humming; the chemical processes proceeding. Pollution formed visable signs that we were being enriched.

Machines were king, and for two centuries man played them court only to discover that he had become their jester. There was no question about whether this was good or bad. We were involved in a kind of industrial geometry in which certain factors were given as axiomatic. And, being given, were accepted. Machines make noise . . . produce soot and smoke . . . poison water. True. But that was considered to be the nature of machines, just as it is the nature of dogs to bark

Further, while it is in the nature of machines to dispose, it was equally in the nature of man to accept.

Thus, we have inherited the results of 200 years of machine disposing and man accepting.

It is now technology's turn to do the accepting.

After 200 years of man adapting to technology there is a swelling chorus of questioning voices.

At first a few quite voices wondered—wondered whether it was necessary for man to continue accepting the degradation and ultimate destruction of his world.

Then more and more voices were added, young people appalled by the legacy we had devised for them; and from others who had been awakened and who were asking the most explosive question ever uttered by man throughout history: "Why?"

All these voices joined into a demand that technology adapt to man before there would be no man left to adapt to technology.

These basic questions created still others—here at this symposium being so expertly and minutely delineated and examined—concerning the *ways* by which technology can be made to adapt to the needs of man.

And may I say that the very fact that there is a fifth annual water quality symposium asking "how" is itself a significant measure of the distance we have traveled in this revolution in attitude.

But the kind of questions being asked at this symposium reflects another fact as well: water pollution is not a "real" problem.

"Real" problems, in my judgment, consist of those questions for which no answers have yet to be discovered.

What is the shape of the universe?

What is the cause of cancer?

What is the ultimate physical particle?

What are quasars?

What is gravity?

What need we do to bring peace to the world?

These and a host of other elemental questions comprise the universe of "real" problems. In regard to such questions, science has not reached the "how" stage but is still searching for the more basic answers. Indeed science cannot even be sure it is asking properly framed questions.

With water pollution the situation is quite different. Although there are many technical areas for which full answers are not yet available, as the panels during these two days will attest, we do know what causes water pollution. And, most important, we do know essentially how to stop water pollution.

In reaching this point, many of you here in this room have made an enormous contribution to civilization and the quality of life.

If water pollution is not a "real" problem, why is it such a matter for public concern? Why, indeed, is it a problem at all?

The answer lies not in a failure of science but in a failure of policy.

You have done your job well.

It is we in the political arena who have failed.

The new attitude, that technology must adapt to man, has not been translated into programs and policies because the will to do so has been absent.

We see the job. We have the tools. But we are not willing to provide the funds and the legislation that will unite job and tool.

My major purpose today is to explore ways by which that unity of job and tool may be effected, and to suggest some steps through which the will to act may be generated and supported.

The first step is *education*. And by education I do not mean a spate of articles and speeches, no matter how well executed, on environmental quality.

The attention span of the public is short, and there are always new issues standing in the wings ready to elbow today's out of public attention. The news media, by definition, cannot linger over what everybody has already heard. Remember when there was a deluge of stories about Appalachia? The stories come no more, but Appalachia still exists. The novelty has worn away while the poverty there remains.

I think it vital that education concerning ecology generally, and water quality in particular, be institutionalized.

I propose a program of public education that would stretch from the primary school to the White House.

For the school system, I urge the United States Office of Education to begin immediately devising curricula for various grade levels, employing the latest learning techniques, and thereby instilling a knowledge of the importance of repairing our environment and protecting it when required.

While the school system is thus creating a new generation free from ecological illiteracy and liberated from the outworn and obsolete attitude of accepting as indivisible both the benefits and the banes of technology, the vast educational potential of the White House could be enlisted to inform and to dramatize. Specifically, I suggest that the president consider an annual or bi-annual State of the Environment Address, informing the nation of the air and water quality balance sheet and suggesting legislation needed to plug gaps in public policy. The whole moral force of the highest office in our land would thus constantly reinforce the need for action.

Concurrently with this program of education and fostering of public awareness, we should employ the most modern management skills to advance this vital cause.

A first step in this direction is placing under one roof all the agencies concerned with the environment. I made such a proposal in a speech last Feb., and was highly pleased to see the president adopt this idea a few weeks ago when he outlined to the Congress his plan of reorganizing environmental agencies. I think the new Environmental Protection Agency, given proper support and leadership, can do much to shake from environmental matters both the timid hand of bureaucracy and the forceful grip of entrenched special interests.

But it is not enough merely to establish an independent agency to attack the nation's pollution problems. To help assure

that an Environmental Protection Agency reaches its maximum potential effectiveness, I would suggest that it must aggressively seek out ways to employ proven space age techniques to meet the crisis facing space ship Earth.

I specifically refer to the methods used by our space program to place a man on the moon. Just a dozen years ago, no matter how much the United States would huff and puff, we couldn't seem to get even a grapefruit size satellite off the ground. Then the Russians stunned us with Sputnik, and the country rolled up its sleeves.

Those years of space activity are nothing less than one of the greatest management stories in history.

Fortunately, there is no secret about the methods used to gain this success. The former Administrator of the space agency, James E. Webb, has told precisely how it was done. According to Mr. Webb, it is vital for a large scale research and development task to move beyond the confines of a traditional bureaucratic establishment. Success in such a venture requires flexibility; it requires organizing and managing the use of available knowledge and technology in a purposeful and effective way; and it requires maximum use of the experience and skills of private industry.

All of these elements are important. And all, I hope, will be facilitated by creation of the new Environmental Protection Agency.

But there is yet another element that Mr. Webb considered absolutely essential—a specific goal.

"I believe," he told us, "that it is necessary to make the most careful analysis of all known needs at the start, to fix on a goal or set of goals that will encompass all of these needs and at the same time make adequate allowances for unknown factors and unexpected developments."

A goal.

The Manhattan Project had a specific, measurable goal, and we won the race to create atomic power.

Projects Mercury . . . Gemini . . . Apollo—each had its goal leading to the ultimate goal of achieving that first giant leap for mankind to the moon.

Water Quality too must have its goal.

We must enlist all the skills at our command, first to devise a goal or set of goals, and then to match our reach with our grasp.

For example, we might set 1980 as the deadline for each city and town in America to equip itself with adequate waste disposal facilities. We would establish water standards for every river and lake in the country. And we would determine exactly what the limits are to using the oceans as sinks for our waste products.

We would, in short, revise our priorities to reflect the fact that achieving water quality is one of the central political tasks of our age, a task that can no longer wait: to produce the vision needed to lift our eyes and inspire our hopes and, above all, to generate, the will to *act*.

A few weeks ago, on our national holiday, thousands of people met here in Washington in another kind of symposia—called Honor America Day. There were speeches . . . pagentry . . . flags . . . music . . . and the singing of songs about America the Beautiful. With the end of that day, the pageant disbanded; the last echoes of the songs and speeches and shouts died away; the flags were folded and stored. The celebration honoring America the Beautiful ended. But time is now too short to permit us any longer the luxury of affording annual genuflections and emotional outpourings to a beautiful America. We have to move from rhetoric to action, and from pageantry to concrete policy.

I call for honoring America, not by remembering the beauty even as it is being eroded, but by creating and restoring the beauty that is our heritage and the heritage of all men. Let us together join in waging an all out battle against threats to our environment.

Let us devote our energies and minds to the creation of an America great not because it has under its control terrible powers of destruction but because it has demonstrated the most effective powers of construction and the proper measure of respect for nature and for this Earth that is our home.

SICKNESS ABSENTEEISM OF ALCOHOLICS

Mr. HUGHES. Mr. President, E. I. du Pont de Nemours & Co. has been a pioneer in recognizing alcoholism as a disease and in initiating programs for the rehabilitation of their alcoholic employees. Since du Pont first hired an alcoholic counselor in 1942, many of their employees have recovered from the disease of alcoholism and gone on to high positions within the company and have made outstanding contributions which would have been lost were it not for the company's foresight and humanitarian attitude toward its employees.

Sidney Pell, Ph. D., and C. A. d'Alonzo, M.D., both of I. E. du Pont de Nemours & Co., have recently completed a study which was published in the June 1970 issue of the Journal of Occupational Medicine entitled "Sickness Absenteeism of Alcoholics." This study clearly demonstrates the economic drain caused by untreated alcoholics. The untreated alcoholic averages 14 days excess sick leave every year as compared with non-alcoholic employees. This increased absenteeism is due to gastrointestinal ailments, accidents, and so forth.

As I have pointed out in this Chamber many times, untreated alcoholism is costing American industry in excess of $7 billion each year.

I commend E. I. du Pont de Nemours & Co. for its pioneer leadership and ask unanimous consent that this article be printed in full in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SICKNESS ABSENTEEISM OF ALCOHOLICS

(By Sidney Pell, Ph. D. and C. A. D'Alonzo, M.D.)

Absence from work is one of the major factors contributing to the economic cost of alcoholism, but there is surprisingly little documentation of the amount of absenteeism among alcoholics and how much their absenteeism differs from that of nonalcoholics.

One of the earliest studies, done by Stevenson in a steel mill, started in 1940.[1] In one year, 382 employees lost 2,692 working days as a direct result of drinking, an average of seven days a year. Stevenson's data did not include time lost by alcoholics for illnesses unrelated to drinking. An analysis of absenteeism among problem drinkers and in a matched control group was done by Observer and Maxwell, but they investigated only 48 problem drinkers, and the absences they studied were only those whose duration was eight days or longer.[2] However, they found that the absence rates of the alcoholics were 2.5 times as great as in the control group. Thorpe and Perrett reported the average number of days of absenteeism of 97 to 119 alcoholics in each year from 1953 to 1956.[3] The average declined from 29.9 in 1953 to 17.6 in 1956. Among all employees, the averages in these years were, respectively, 10.5 and 8.9. Trice found the proportion of employees losing 10 or more days per year to be 37 percent in 72 alcoholics, and 6 percent in 204 "normal" subjects.[4]

The data reported here have been derived from a long-term DuPont Company study of alcoholism in the DuPont Company that was started in 1964. During that year, the authors conducted a survey of DuPont physicians to identify all known or suspected alcoholics. The first phase of this project was a retrospective comparison of the prevalence of chronic disease between alcoholics and a matched control group of nonalcoholics. This phase has been completed and the findings published.[5,6] Another phase, now under way, is a long-term follow-up of the alcoholics and controls to assess the mortality experience of the alcoholics. A third phase, an analysis of sickness absenteeism, is presented in this paper.

METHODS

The information required for these studies of alcoholism has been derived mainly from DuPont's medical program, which was started in 1933. This program provides, for all employees, periodic health examinations, consultations, emergency treatment, and work evaluation after a disabling illness. The periodic examination is given annually to employees 40 years of age and older, and biennially to employees under 40 years. The medical section in each plant maintains close surveillance over employees absent from work because of illness. Company physicians frequently contact private physicians and local hospitals to obtain diagnoses and other information needed to determine the employee's fitness for work at the end of his disability. In addition, some plant medical units provide a visiting nurse service.

The Medical Division's activities also include an alcoholic rehabilitation program, which has been in operation since 1942. Employees who appear to have a drinking problem are asked to seek help from medical personnel or Alcoholics Anonymous. The program is conducted, to a large extent, by a recovered alcoholic who is a member of Alcoholics Anonymous and on the staff of the Medical Division. His main functions are to: (1) educate employees by talks to groups at all levels on the nature of alcoholism and how it can be controlled; (2) contact problem drinkers to induce them to enter the company's program; and (3) follow up alcoholics under treatment. As a result of the program, many alcoholics who might have remained hidden are brought to the attention of company physicians, and subsequently rehabilitated.

CASE FINDING

The alcoholics in this study were identified, as mentioned earlier, by a survey of Du Pont physicians conducted in 1964. The physicians were asked to place each alcoholic into one of the following categories:

Known alcoholics: This category includes persons who exhibit alcohol dependency, drinking patterns, and behavioral characteristics, such as disturbed personal relations and impaired work efficiency, that clearly demonstrate they are chronic, uncontrolled alcoholics.

Suspected alcoholics: These are problem drinkers who show evidence of excessive drinking, but for whom information is insufficient to determine unequivocally whether they are alcoholics as defined above.

Recovered alcoholics: These are arrested alcoholics who, as far as it can be determined, are no longer drinking.

SELECTION OF CONTROLS

For each alcoholic admitted to the study, an employee not known to be an alcoholic was selected at random to serve as a control. The controls were matched to the alcoholics by four factors: age, sex, payroll class (ie,

Footnotes at end of article.

salaried or hourly-paid), and geographical location. The age matching was so arranged that the control was not more than two years younger or two years older than the alcoholic. The division by payroll class separated the white-collar workers from the blue-collar workers. In this paper, the former have been designated as "salary", and the latter as "wage." The selection of the controls was made from a complete list of company employees, with the aid of a table of random numbers.

CHARACTERISTICS OF THE COMPANY POPULATION

At the time the survey was conducted, the company employed about 100,000 persons, but the number surveyed for this study was 76,687. The remainder were not included because they were located at small installations, such as sales offices, warehouses, and small plants. Employees at these locations are examined by part-time or referral doctors and, therefore, are not under medical surveillance that is close enough to detect evidence of alcoholism.

The ratio of wage roll to salaried workers in the company is about 3 to 2, and the ratio of males to females is 6 to 1. Employees range in age from 17 to 64. Retirement is mandatory at age 65.

COLLECTION OF DATA ON SICKNESS ABSENTEEISM

Sickness absenteeism of the alcoholics and controls were analyzed for the year 1965, the year following the survey. No influenza epidemic occurred in the company population that year, so that the data on sickness absenteeism are fairly representative of a normal year. From the medical section at each plant and office location, a list of sickness absences of each subject during the year was obtained. The information included the diagnosis of the illness. Only those absences which began between January 1 and December 31 were included. Sickness absences which started before January 1 and extended into 1965 were excluded. When a sickness absence began in 1965 and continued beyond December 31, the number of days of disability that extended into the following year were included in the study.

MEASURES OF SICKNESS ABSENTEEISM

To analyze the frequency and duration of sickness absences, frequency distributions were constructed of the number of sickness absences and of the number of days of disability, and various kinds of rates computed. Three of these were the frequency rate, disability rate, and severity rate, defined as follows:

$$\text{Frequency rate (FR)} = \frac{\text{Number of sickness absences}}{\text{Number of persons}}$$

$$\text{Disability rate (DR)} = \frac{\text{Number of days of disability}}{\text{Number of persons}}$$

$$\text{Severity rate (SR)} = \frac{\text{Number of days of disability}}{\text{Number of sickness absences}}$$

Thus, the frequency rate is the number of absences per person; the disability rate is the number of days of disability per person; and the severity rate, the number of days of disability per absence.

The disability rate is equal to the frequency rate multiplied by the severity rate (DR = FR x SR); that is, the total number of disability days is determined by the number of absences and the duration of the absences.

The "percent disabled per day", which is the average percentage of persons who are disabled each day of the year were also computed. To compute this rate directly, the number of persons disabled on a given day is divided by the number of persons in the work force on that day. The average percentage for the year was computed by the following formula:

$$\frac{\text{Total number of days of disability x 100}}{\text{Number of person-days}}$$

When the number of person-days equals the number of persons x 365.

The rate can also be computed by dividing the disability rate by 365.

RESULTS

The survey identified 922 alcoholics. For this study of sickness absenteeism, however, persons who left the company population during the year of the study because of layoff, retirement, or death had to be excluded. Also excluded were employees at certain office locations where records of short-term absences are not maintained. After these exclusions, there was usable data for 764 alcoholics and 863 controls.

The breakdown of the number of alcoholics and controls by sex and payroll class is shown in Table I; and the age distribution by drinking category, in Table II. Of the 764 alcoholics, 168 were classified as "known," 344 as "suspected," and 252 as "recovered." The median age of the alcoholics was 50.7 years, and was about the same in each drinking category. The median age of the controls was 50.9 years. The large majority of the alcoholics were middle aged; only 97 (12.7 percent) were below the age of 40.

TABLE I.—NUMBER OF ALCOHOLICS AND CONTROLS, BY SEX AND PAYROLL CLASS

	Number	Payroll class	
		Wage	Salary
Alcoholics:			
Male	729	547	182
Female	35	15	20
Total	764	562	202
Controls:			
Male	817	608	209
Female	46	22	24
Total	863	630	233

TABLE II.—AGE DISTRIBUTION OF ALCOHOLICS BY DRINKING CATEGORY

Age	Number	Drinking category		
		Known	Suspected	Recovered
25 to 29	7	1	6	0
30 to 34	15	4	9	2
35 to 39	75	14	42	19
40 to 44	111	19	58	34
45 to 49	146	37	61	48
50 to 54	197	42	85	70
55 to 59	151	38	62	51
60 to 64	62	13	21	28
Total	764	168	344	252
Median age	50.7	51.1	49.7	51.6

FREQUENCY AND DURATION OF SICKNESS ABSENTEEISM

Among the 764 alcoholics, there were 984 sickness absences and 9,941 days of disability during the year. Among the 863 controls, the number of sickness absences was 569, and the number of days of disability, 5,046.

The frequency rate of the alcoholics was 128.8 percent, compared to 65.9 percent among the controls, a ratio of almost 2 to 1. The disability rates were 13.0 days per person among the alcoholics and 5.8 among the controls, a ratio slightly greater than 2 to 1. The severity rate of the alcoholics was 10.1 days per absence, compared to 8.7 among the controls. The average percentage of alcoholics disabled each day was 3.6; among the controls, it was 1.6.

Of the two factors that make up the disability rate, frequency and duration, the frequency of illness contributed more to the excess absenteeism of the alcoholics than did the duration of the absences, as evidenced by the greater disparity seen in frequency rates than in severity rates.

Differences in sickness absenteeism between the alcoholics and controls can also be seen in the frequency distributions of the number of sickness absences and number of days of disability. Repeated bouts of illness during the year were much more common among the alcoholics (Table III). Two or more absences occurred in 32.7 percent of the alcoholics and in 15 percent of the controls; four or more absences, in 9.1 percent of the alcoholics and in only 2.5 percent of the controls. The differences between the frequency distributions of the alcoholics and controls was highly significant ($P < 0.001$).

The alcoholics also showed a greater incidence of prolonged periods of disability (Table IV). Twenty-three percent of the alcoholics compared to 10.3 percent of the controls were disabled for 15 or more days. Thirty or more days of disability occurred in 12.8 percent of the alcoholics and in 6.5 percent of the controls. Twenty-nine alcoholics (3.8 percent) and only six controls (0.6 percent) were disabled for 90 days or more.

TABLE III.—FREQUENCY DISTRIBUTIONS OF THE NUMBER OF SICKNESS ABSENCES AMONG ALCOHOLICS AND CONTROLS[1]

Number of sickness absences	Number		Percent		Cumulative percent	
	Alcoholics	Controls	Alcoholics	Controls	Alcoholics	Controls
0	289	515	37.8	59.7	100.0	100.0
1	226	212	29.5	24.6	62.2	40.3
2	115	83	15.1	9.6	32.7	15.7
3	65	31	8.5	3.6	17.6	6.1
4	38	14	4.9	1.6	9.1	2.5
5	18	7	2.4	.8	4.2	.9
6	6	1	.8	.1	1.8	.1
7	3	0	.4	0	1.0	0
8	2	0	.3	0	.6	0
9+	2	0	.3	0	.3	0
Total	764	863	100.0	100.0		

[1] Chi-Square = 101.7 (5 df) $P < 0.001$.

TABLE IV.—FREQUENCY DISTRIBUTIONS OF THE NUMBER OF DAYS OF DISABILITY AMONG ALCOHOLICS AND CONTROLS [1]

Number of days of disability	Number		Percent		Cumulative percent	
	Alcoholics	Controls	Alcoholics	Controls	Alcoholics	Controls
None	289	515	37.8	59.7	100.0	100.0
1 to 2	82	100	10.8	11.6	62.2	40.3
3 to 4	61	67	8.0	7.8	51.4	28.7
5 to 9	107	62	14.0	7.2	43.4	20.9
10 to 14	49	29	6.4	3.4	29.4	13.7
15 to 19	38	16	5.0	1.8	23.0	10.3
20 to 29	42	18	5.5	2.1	18.0	8.5
30 to 59	53	36	6.9	4.2	12.5	6.4
60 to 89	15	14	2.0	1.6	5.6	2.2
90 to 119	14	3	1.8	.3	3.6	.6
>120	14	3	1.8	.3	1.8	.3
Total	764	863	100.0	100.0		

[1] Chi-Square=112.6 (9 df) P<0.001.

Fig 2 (not printed in the RECORD) shows graphically the cumulative percent distribution of the number of days of disability of the alcoholics and controls who were absent at least once during the year. The curves, therefore, represent the rate of return to work following the onset of illness. It is clear from a comparison of the two curves that the alcoholics returned at a slower rate. The inceasing distance between the curves for the larger numbers of days of disability indicates the higher incidence of prolonged disability among the alcoholics that was mentioned previously.

In addition to an examination of excessive absenteeism of alcoholics, it is also worthwhile to note those alcoholics who had no sickness absences during the year or who had what might be regarded as an acceptable number of days of disability (Tables III & IV). Of the 764 alcoholics, 289, or 37.8 percent, had no sickness absenteeism. An additional 143 were disabled for from one to four days, so that a total of 422, or 55.2 percent of the alcoholics had a reasonably good attendance record for the year.

Age: Disability rates for the alcoholics and controls are shown by age from 35 to 64 years. Age groups under 35 years were omitted because of the small number of subjects. Disability rates were considerably higher among the alcoholics at all ages. The curves were rather erratic, but indicated a general increase of rates with age in both groups.

Sex and payroll class: Women have long been known to have higher rates of sickness absenteeism than do men. This can be seen from the data in Table V which shows frequency, disability, and severity rates by sex and payroll class for alcoholics and controls. The higher rates in women usually arise from an increased frequency of absences rather from longer duration of absences. The data in Table V show that the increase in disability for the female alcoholics was roughly proportional to the increase found in male alcoholics, when each is compared to its respective control groups. For both sexes, the frequency rate of the alcoholics was about twice that of their controls.

A further breakdown by payroll class shows higher frequency and disability rates among wage-roll employees for both alcholics and nonalcoholics. There were only 15 female wage-roll alcoholics in the study, but their illness experience indicated an especially high rate of absenteeism. Their frequency rate was 233.2 percent, and disability rate 22.1 days per person per year.

Occupation: Frequency and disability rates in seven occupational categories are shown in Table VI. In every category, illness rates were considerably higher in the alcoholics than in the controls. Both frequency and disability rates were highest among alcoholics classified as "laborers and other unskilled workers." There is no indication in these data that any particular occupational group of alcoholic employees is able to keep its absenteeism down to the level of nonalcoholics.

TABLE V.—FREQUENCY RATES, DISABILITY RATES, AND SEVERITY RATES OF ALCOHOLICS AND CONTROLS, BY SEX AND PAYROLL CLASS

	Total	Wage	Salary
Males:			
Frequency rate (percent):			
Alcoholics	125.0	132.2	103.3
Controls	63.3	65.8	56.0
Disability rate (percent):			
Alcoholics	12.8	12.9	12.3
Controls	5.8	5.9	5.4
Severity rate (percent):			
Alcoholics	10.2	9.8	11.9
Controls	9.0	9.0	9.6
Females:			
Frequency rate (percent):			
Alcoholics	213.9	233.3	190.0
Controls	110.9	113.6	108.3
Disability rate (percent):

Controls	40.3	34.3	42.1	42.8

[1] Differences between alcoholics and controls significant by chi-square test in all groups. P<0.01 in Recovered category; P<0.001 in all other groups.

DIFFERENCES BY DRINKING CATEGORY

Frequency rates: Table VII shows various rates of sickness absenteeism in each of the three drinking categories. The frequency rate was highest among the known alcoholics (144.0 percent), somewhat lower in the suspected group (136.9 percent), and lowest among the recovered alcoholics (107.5 percent). In all categories, however, the rates among the alcoholics were considerably higher than those of the controls. It is interesting that, although the recovered alcoholics had a notably lower frequency rate than those found among the known and suspected alcoholics, they nevertheless had a much higher frequency rate than the controls to whom they were matched; ie, 107.5 percent compared to 66.5 percent.

Disability rates: Among the known alcoholics, the disability rate was 19.4 days per person, considerably higher than the rates found in the suspected and recovered groups, which were 10.8 and 11.7. In these latter groups, the rates were a little less than twice that of their controls, but the disability rate of the known alcoholics was 3.6 times the rate in their control group.

Perhaps the most meaningful estimate of the amount of excess absenteeism resulting from alcoholism is the difference in disability rates between the known, uncontrolled alcoholics and their controls; ie, 19.4 less 5.4. This difference, 14 days per person per year, is an estimate of the average number of disability days among alcoholics that is in excess of what can normally be expected among nonalcoholics.

Severity rates: The severity rate was highest among the known alcoholics (13.5 days per absence), but it was not much higher than the rates in the other two categories, or than in the control groups. The severity rate of the suspected alcoholics, 7.9, was comparatively low and equal to their controls.

Incidence of prolonged disability: Although a majority of the alcoholics were disabled for five days or less, a comparatively high percentage were disabled for long periods of time (Table VIII). About 1 out of every 10 controls were disabled for 15 or more days, but this amount of disability was experienced by one out of three known alcoholics and one out of five suspected and recovered alcoholics. Disability of 30 or more days and of 60 or more days occurred at a slightly higher rate in the suspected and recovered alcoholics than in the controls, but among the known alcoholics, the incidence was very high: 36, or 21.4 percent, were disabled for 30 or more days; and 16, or 9.5 percent, for 60 or more days. The proportion of controls disabled for these lengths of time were, respectively, 5.8 percent and 1.9 percent.

TABLE VIII.—PERCENT OF ALCOHOLICS AND CONTROLS DISABLED FOR 15, 30, AND 60 OR MORE DAYS BY DRINKING CATEGORY

Number of subjects	Total	Drinking category: Known	Suspected	Recovered
Number of days of disability:				
15 or more days:				
Alcoholics	178.0	55.0	75.0	48.0
Controls	90.0	19.0	39.0	32.0
30 or more days:

CAUSES OF DISABILITY

In analyzing sickness absenteeism by cause of disability, it was necessary to contend with a certain amount of inaccuracies in the diagnosis reported. The problem is greatest for short-term absences, when very often the employee is not attended by a physician, so that the diagnosis must be based upon symptoms reported to the plant medical section by the employee when he returns to work. The problem is even greater for alcoholics. Short-term absenteeism resulting from alcoholic intoxication would probably be reported as some common minor disorder, such as a cold, "flu," or gastrointestinal upset. In this study, a diagnosis of alcoholism was made in only 26 absences. There were probably many more.

Frequency rates for alcoholics in major diagnostic categories (Table IX) were higher in all categories except genitourinary disorders. The magnitude of the differences is shown by the ratio of frequency rates; that is, the rate among the alcoholics divided by the rate among the controls. The highest ratios were seen for accidents (3.5), musculoskeletal disorders (2.7), and digestive disorders (2.4). The ratio for mental illness was 3.3, but the number of absences in this category was small. All the disabling accidents of the alcoholics occurred off the job.

TABLE IX.—FREQUENCY RATES OF ALCOHOLICS AND CONTROLS BY DIAGNOSTIC CATEGORY

Diagnostic category	Number of absences	Frequency rate (percent)	Ratio of frequency rates: alcoholics / controls
Respiratory infections:			
Alcoholics	294	38.5	1.7
Controls	194	22.5

Controls	569	65.9	

Respiratory infections and digestive disorders combined accounted for about one-half of the absences and about one-third of the total number of disability days in both the alcoholics and controls. Frequency distributions of the number of absences in these illness categories are shown in Tables X and XI. Differences between the frequency distributions of the alcoholics and controls are highly significant ($P<0.001$). In both categories, a much higher percentage of alcoholics than controls were absent one or more times, and had repeated bouts of these illnesses. Two or more absences for respiratory infections occurred in 7.2 percent of the controls and in 3.8 percent of the alcoholics. Differences between alcoholics and controls were even greater for digestive disorders. Almost 20 percent of the alcoholics but only about 10 percent of the controls were disabled at least once. Two or more absences occurred in a little more than one percent of the controls, but in 5.8 percent of the alcoholics.

TABLE X.—FREQUENCY DISTRIBUTIONS OF THE NUMBER OF ABSENCES AMONG ALCOHOLICS AND CONTROLS FOR RESPIRATORY INFECTIONS[1]

For some of the more common illness categories, specific illnesses within these categories were examined to find out how much each illness contributed to the excess rate in the alcoholics. The breakdown of various types of digestive disorders is shown in Table XII. The category *gastrointestinal upsets* accounted for most of the absences and the largest difference between alcoholics and controls. This category includes such conditions as nausea, vomiting, diarrhea, indigestion, gastritis, gastroenteritis, and "stomach upsets," usually resulting in only short-term, but, among the alcoholics, frequent disability. Occasionally, diagnoses of this type may have been made when alcoholics stated they were afflicted with one of these conditions to explain an absence resulting from alcoholic intoxication. At other times, these conditions may actually have occurred, but as a result of excessive drinking.

As for the other diagnoses in the category of digestive disorders, the numbers of absences were too small to draw any firm conclusions. It is worth noting, however, that six alcoholics, but no controls,, were disabled by cirrhosis of the liver; and 11 alcoholics and 4 controls, by hernia.

TABLE XII.—FREQUENCY RATES OF ALCOHOLICS AND CONTROLS FOR SELECTED DIGESTIVE DISORDERS

Diagnosis	Number of absences	Frequency rate (percent)
Gastrointestinal upsets:		
Alcoholics	167	21.9
Controls	66	7.6

Alcoholics	294	38.5
Controls	194	22.5

The very high incidence of absenteeism of alcoholics for musculoskeletal disorders was unexpected. A breakdown of the six most common diagnoses in this category are shown in Table XIV. For each of these diagnoses, the frequency rate of the alcoholics was considerably higher than that of the controls. The frequent occurrence of low back disorders, disc problems, and muscular strain may have been brought on as a result of poor judgment or impaired reflexes in lifting or in the execution of other bodily movements while under the influence of alcohol.

TABLE XIV.—FREQUENCY RATES OF ALCOHOLICS AND CONTROLS FOR SELECTED MUSCULOSKELETAL DISORDERS

Absenteeism for cardiovascular disease was almost twice as great among the alcoholics as among the controls. Frequency rates for the most common forms are shown in Table XV. Although the rates were higher among the alcoholics in each category, the breakdown yields numbers that are too small to draw any inferences. In the comparison of chronic disease history between these alcoholics and controls, it was found that among the alcoholics the prevalence rate of hypertension was 2.3 times as great as in the controls; and the prevalence of coronary heart disease, 1.3 times as great.[5]

The same study of chonic disease history among these subjects revealed, for almost every disease, a higher prevalence among the alcoholics. The one notable exception was kidney stones. A history of this condition was found in only 32 alcoholics—compared to 55 in the control group. This difference is reflected in the data on sickness absenteeism, even though the numbers are much smaller; that is, three alcoholics compared to nine controls. The data in Table XVI suggest that the alcoholics may be less prone to develop other types of disorders of the urinary system as well. Urinary tract infections caused disability in 6 alcoholics and 12 controls and, in a miscellaneous and ill-defined group of kidney disorders, there were no alcoholics and four controls. When the three classes of urinary disorders were combined, nine cases were found among the alcoholics and 25 among the controls, frequency rates of 1.2 percent and 3.3 percent, respectively.

TABLE XVI.—FREQUENCY RATES OF ALCOHOLICS AND CONTROLS FOR SELECTED GENITOURINARY DISORDERS

Respiratory infections by drinking category: Absence rates for respiratory infections did not differ appreciably among known, suspected, and recovered alcoholics (Table XVII). In fact, the disability rates of the three groups were almost identical. It is worth noting that there was no indication of any significant reduction in absenteeism for respiratory infections among the recovered alcoholics. In all groups, all absence rates were higher among the alcoholics than the controls.

Digestive disorders by drinking category: In contrast to respiratory infections, there were notable differences in absenteeism for digestive disorders among the three categories of alcoholics (Table XVIII). The dis-

ability rate among the known alcoholics, 3.5 days per person, was substantially higher than those of the suspected and recovered alcoholics (2.2 and 1.3 days, respectively). This elevated disability rate of the known alcoholics came about mainly as the result of a rather high severity rate: 14.4 days per absence. Although the absence rates of the recovered alcoholics were somewhat lower than those of the known and suspected alcoholics, their rates were higher than the rates of their control group.

DISCUSSION

It is difficult to come up with a single figure that will specify by how much absenteeism of alcoholics exceeds that of nonalcoholics. One reason is that absenteeism is measured in different ways: by the frequency with which it occurs, by the duration of the absences, and by a combination of the two. The latter, the disability rate, is probably the most meaningful. It specifies the number of days of disability per person during a given period of time. Using the disability rate, the data in this study show that alcoholics were disabled, on the average, for 13 days per year, and the controls for 5.8 days, an excess among the alcoholics of 7.2 days, and a ratio of 2.2.

Another problem in measuring the amount of excess absenteeism of alcoholics is the differences in absenteeism that exist among different types of alcoholics. Alcoholics differ with respect to the stage to which the disease has progressed, by drinking patterns, or by whether they are controlled or uncontrolled. In the three categories established, "known," "suspected," and "recovered," some notable differences were found in absenteeism. Not unexpectedly, absenteeism was highest among the known, uncontrolled alcoholics. In this group, the disability rate was 19.4 days of disability per year, compared to 5.4 days in the control group, an excess of 14 days per year, and a ratio of 3.6.

Among recovered alcoholics, the disability rate was 11.7 days per year, considerably lower than the rate found in known, uncontrolled alcoholics. Nevertheless, sickness absenteeism of the recovered alcoholics was substantially greater than among the nonalcoholics. Three factors may explain the excess absenteeism of the recovered group. First, not all of them may have actually recovered. The decision to classify them *recovered* was based only on what could be observed. It is not known how many of these alcoholics, if any, were classified *recovered* simply because they had become more skillful in hiding their drinking. Second, some of the recovered alcoholics could have suffered relapses during the year of the study, either with or without the knowledge of their supervisors or the plant medical department. Third, the most important and most likely reason is that physical and emotional disturbances that produced absenteeism while they were drinking may have persisted among some recovered alcoholics even after they stopped drinking.

The various absence rates presented in this report are essentially averages, and describe the experience of the subjects as a whole, without regard to differences among individuals. Therefore, the picture is not complete without an examination of the frequency distributions of the numbers of absences and the numbers of days of disability. One important feature of these distributions is that a substantial proportion of alcoholics (controlled and uncontrolled) had good attendance during the year of the study. About 38 percent had no sickness absences, and an additional 19 percent were disabled for no more than four days. Two-thirds had either one or no sickness absences during the year. Obviously, poor attendance is not universal among alcoholics, and even a certain segment of uncontrolled alcoholics can at least maintain a good attendance record. How well they perform while on the job is another question, and beyond the scope of this paper.

In studying the causes of sickness absenteeism, it was found that the differences between alcoholics and nonalcoholics were greatest for accidents, musculoskeletal disorders, and digestive disorders. The "accident proneness" of alcoholics needs no explanation. A rather high frequency of disability for low back problems, disc disorders, bursitis, and muscular strains may be a direct effect of alcoholic intoxication. Gastritis is a well-known effect of heavy drinking, and is probably responsible for most of the excess disability reported as gastrointestinal upsets.

Absenteeism for respiratory infections was also excessive among the alcoholics, but to a lesser extent than for the previously mentioned conditions. How many of these absences were actually the result of drinking bouts reported as colds or "flu" is not known, but it is possible that poor nutrition and laxity in health habits of some alcoholics may reduce their resistance of infectious diseases.

A word of caution is needed at this point regarding generalizations of the data presented here to other populations. Absence rates vary by time and place. Over a period of time absence rates are affected by prevailing economic conditions, changes in environmental hazards, and epidemic infectious diseases. Rates also vary among working populations because of such diverse factors as the age and sex composition of the working force, socioeconomic characteristics, types of occupations in the population, provisions of disability insurance plans, and the extent of supervisory control over absenteeism. These factors may affect the magnitude of differences between alcoholics and nonalcoholics in various study populations.

Regardless of the variability of absence rates, there is little doubt that excessive drinking produces excessive absenteeism in alcoholics. It can do so either by causing behavioral changes or by producing physiological changes that lead to acute or chronic illness. These data have thrown some light on the role of each factor, but still leave not completely answered the question of how much excess absenteeism of the alcoholics is due exclusively to alcoholic intoxication, how much to acute illness brought on by heavy drinking, and how much to chronic conditions directly or indirectly related to alcoholism. In addition, some of the excess absenteeism of the alcoholics may result not from alcohol *per se*, but from such factors as excessive use of other drugs, heavy cigarette smoking, inadequate diet, and certain mental and physiological characteristics that lead to disabling illness and, concomitantly, play a role in the etiology of alcoholism.

SUMMARY

Sickness absenteeism of 764 alcoholics during a one-year period was compared to that of a control group of 862 nonalcoholics. The

subjects were divided into three categories: known alcoholics, suspected alcholics, and recovered alcoholics. The frequency rate of the alcoholics was 128.8 percent compared to 65.9 percent among the controls. The disability rate was 13.0 days of disability per person per year among the alcoholics and 5.8 days among the controls. Alcoholics greatly exceeded nonalcoholics in both short-term and long-term disability. Age, sex, and occupation appeared to have little influence on the amount of excess absenteeism of the alcoholics.

Absenteeism of known, uncontrolled alcoholics exceeded that of suspected and recovered alcoholics. The disability rate of the known alcoholics was 19.4 days per person compared to 5.4 days in their control group, an excess of 14 days per year.

Although absenteeism of recovered alcoholics was less than that of the drinkers, their rates of absenteeism were, nevertheless, considerably greater than that of the controls.

A little more than one-third of the alcoholics had no sickness absences during the year, and an additional 20 percent were disabled for from one to four days, so that slightly more than half had an acceptable attendance record for the year.

Absenteeism of the alcoholics was greater than that of the nonalcoholics in all major diagnostic categories except for disorders of the urinary system. The excess among the alcoholics was greatest for accidents, musculoskeletal disorders, and digestive disorders.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER (Mr. ALLEN). Is there further morning business? If not, morning business is concluded.

RECESS UNTIL 9 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9 a.m. tomorrow morning.

The motion was agreed to; and (at 7 o'clock and 1 minute p.m.) the Senate recessed until tomorrow, Friday, August 21, 1970, at 9 a.m.

NOMINATIONS

Executive nominations received by the Senate August 20, 1970:

OFFICE OF SCIENCE AND TECHNOLOGY

Edward E. David, Jr., of New Jersey, to be Director of the Office of Science and Technology, vice Lee A. DuBridge.

EXTENSIONS OF REMARKS

SECOND ANNIVERSARY OF THE DEATH OF REFORM IN CZECHOSLOVAKIA

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1970

Mr. SCOTT. Mr. President, today marks the second anniversary of the death of reform in Czechoslovakia. Two years ago today, troops of the Soviet Union, the Polish People's Republic, the Hungarian People's Republic, the Bulgarian People's Republic, and the German Democratic People's Republic, smashed across the Czechoslovakian border and ended the reform movement of Premier Alexander Dubcek.

For 8 months, Dubcek's regime had been loosening the Communist grip on the people of Czechoslovakia. Hardline Stalinists were expelled from the Government, censorship was eased, and fuller civil rights were promised. But these liberties were short lived. The 200,000 troops who poured into Czechoslovakia the night of August 20 effectively snuffed out the candle of liberalization.

Admittedly, Mr. President, the reforms were not all-encompassing, but it was a start. The people of Czechoslovakia, for the first time while under Communist occupation, experienced a lessening of internal tensions and a broadening of their individual freedoms. The reforms even went so far as to seek a peaceful relationship with the much persecuted Roman Catholic Church.

The Communist bloc leaders, however, afraid of truth, knowledge, and freedom, could not stand idly by. Ultimately 650,000 troops swarmed across Czechoslovakia. Accordingly, the cities were ringed with tanks, reformers were jailed, and the reform movement branded "counterrevolutionary." The valiant Czechoslovakians carried out a program of passive resistance. The Czech people are not quislings. This alone indicates the intense desire for freedom which burns deep in their souls. Mr. President, I began by saying that 2 years ago reform had been killed in Czechoslovakia. The hope and desire, however, for reform is not dead. The Czechs live. Today we let them know that we stand with them.

COMPLETING THE WORK OF CONGRESS

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. GERALD R. FORD. Mr. Speaker, as the House contemplates a 3-week recess, I must express the hope that its purpose is to restore our energies so that the unfinished business of the 91st Congress can be substantially completed before submitting its record to the voters in November. The electorate, according to all recent surveys, is becoming increasingly discerning and increasingly impatient.

Americans of both the silent and vocal varieties are well aware that in 1969 a new President came into office with a politically opposed Congress for the first time in 120 years. They applaud and approve of President Nixon's program of reform and redirection. They will judge the Democratic leadership of this Congress by its record of cooperation and support.

That record, Mr. Speaker, is sadly deficient so far in some key areas.

I would be less than candid not to concede that the people's House, the more responsible and representative body in modern times, has a far better score than the other body in this Congress and in this session to date. This is true not only in matters of national security and foreign affairs, where our distinguished Speaker and many of his Democratic colleagues have never hesitated to put country above partisanship, but also in some of the far-reaching domestic reforms and legislative innovations sought by the Nixon administration.

Among these I particularly mention the first fundamental reform of the U.S. postal service, comprehensive overhaul of the tax laws, welfare reform, a more equitable draft selection system and historic advances for the District of Columbia in crime control and self-government.

Nor is there cause this year to be critical of the pace of the appropriations process in the House of Representatives. The Senate is another story. The sums finally appropriated may, unless the recent warnings of the President are heeded, prove to be budget-busting and inflationary in the aggregate. But the foot-dragging and delay of the Democratic majority in this Congress, of which some of my Republican friends are speaking, cannot fairly be blamed on the House Appropriations Committee.

I have carried in my pocket throughout this Congress a little list of major requests which President Nixon has made to the legislative branch of the Government since the voters elected him Chief Executive less than 2 years ago. No appropriation bills are included.

There are 100 Presidential requests for congressional action on my list.

In 19 months, this Congress has completed action—not always favorably—on only 39 of them. Five more for a total of 44 out of 100 have passed both the House and Senate. They either are in confer-

ence or awaiting final conference action at this time.

There are 56 major requests to Congress by the President—reasoned reforms and critically needed programs which cannot be carried out without legislative approval—56 items out of 100 which remain unfinished business.

On 34 of these measures neither body of this Democrat-controlled Congress has worked its will. Twelve have passed the House only; 10 have Senate approval only.

How can any President hope to carry out his mandate for change from the American people when he sends 100 major proposals to Congress and nothing happens to more than half of them? How can Democrat critics assert that the Nixon administration has shown little initiative in the domestic field and has failed to follow through on its recommendations with specific legislative drafts? Draft legislation has been sent up for every one of these 56 uncompleted measures on my list of 100 Nixon initiatives. These are important reforms geared to the new directions Americans want their National Government to go in the 1970's. Why have we had no action?

I do not suggest that this Congress should be a rubberstamp for the White House. We are still burdened with the disastrous results of the lopsided Democratic 89th Congress of 1965–66 which rubberstamped almost everything President Johnson sent up, leading to spectacular spending deficits.

But I do say we should bring these measures to the floor of the House and of the other body before election day. Let every elected legislator stand up and be counted for or against President Nixon's proposals. They should not be allowed to languish and die in Democrat-dominated committees while Democrat campaign orators berate President Nixon for lack of legislative results.

On the very top of my little list of unfinished business are the President's anticrime bills. Law enforcement and crime control are uppermost in the concerns of all our citizens.

The Nixon administration responded promptly with a strong example and a specific list of legislative requests—17 bills to strengthen the Federal Government's hand, effectively but constitutionally, in an all-out war against crime and criminals.

Of these, only one relating to the District of Columbia—where lawmakers feel the same personal concern for their families that all Americans do—is now public law. The House has acted to curb pornography and extend the Law Enforcement Assistance Act—a Republican minority initiative in the 90th Congress—and the Senate has passed somewhat weakened versions of other parts of the anticrime package.

But the real hangup is here in the House.

Why did the Committee on the Judiciary take 13 months to schedule hearings on the organized crime bill? Why has a jurisdictional dispute been permitted to delay House consideration of the important drug control measures sought by the Nixon administration?

Mr. Speaker, these are vital tools which the law enforcement agencies desperately need to stem the tide of crime and violence that threatens every citizen's safety and happiness. Will this Congress adjourn sine die, or go home for election, without heeding President Nixon's requests in this fundamental field?

Also high on my unfinished business list are the administration's widely hailed proposals for revenue sharing with the States, improvements in social security, consumer protection, environmental cleanup, disaster assistance, occupational safety, and scores of others.

Fifty-six out of 100 important Nixon requests to Congress—and no final action.

Forty-four of these have still to reach the House floor. I list them in the order in which the President proposed them, along with the month and year in which draft legislation was available to the Congress:

Wagering tax amendment, January 1969.
Illegal gambling, April 1969.
Witness immunity, May 1969.
Organized crime, May 1969.
Grant consolidation, May 1969.
Food stamps, June 1969.
Drug control, July 1969.
Occupational safety, August 1969.
Mass transit, August 1969.
Manpower training, August 1969.
Rail passenger bill, August 1969.
Revenue sharing, September 1969.
Equal Employment Opportunity Commission, October 1969.
Consumer protection, November 1969.
Consumer representation, November 1969.
Estuarine resources, November 1969.
Trade Act, November 1969.
Family planning, December 1969.
Highway user, December 1969.
Consumer product testing, December 1969.
Latin American program, January 1970.
Parklands, February 1970.
Water pollution control enforcement, February 1970.
Water pollution research and training, February 1970.
Waste treatment facilities, February 1970.
Environmental financing authority, February 1970.
Emergency public interest protection, February 1970.
Economy Act, February 1970.
Asian Development Bank, March 1970.
Public broadcasting, March 1970.
Education institute, March 1970.
Employee benefits, March 1970.
Small Business Administration extension, March 1970.
Higher education opportunity, March 1970.
Housing and Urban Development, March 1970.
Explosives legislation, March 1970.
Fire, research, and safety, March 1970.
Great Lakes disposal, April 1970.
Disaster assistance, April 1970.
Selective Service amendments, April 1970.
Ports and waterways safety, May 1970.
Emergency school aid, May 1970.
Emergency transportation assistance. June 1970.
Indian affairs bills, July 1970.

Mr. Speaker, at the close of the first session of this Congress, I declined to join those who characterized it as a do-nothing, do-little, or dilly-dallying Democrat Congress. I said I would wait and see. I am still reserving final judgment. But my little list tells me it had better do something soon.

DEATH OF DR. MELCHIOR PALYI

HON. PETER H. DOMINICK

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1970

Mr. DOMINICK. Mr. President, recently Mr. Felix Wormser, a good friend and a highly respected and competent financial analyst and former Government official, sent to me an article by Mr. Sidney Brown, published in the Commercial and Financial Chronicle of August 6, 1970, outlining the career of the late Dr. Melchior Palyi.

Dr. Palyi's currently thoughtful analyses of this country's monetary and gold dilemmas and his many books and articles on the subject were widely read in the financial worlds but, unfortunately, not understood or at least not followed by our governmental leaders or Members of Congress.

His strong objections to fiat money, inflation, and cheap dollar theories so prevalent in our country's history will be sadly missed.

I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. MELCHIOR PALYI DIES

Dr. Melchior Palyi, 78, died suddenly, July 29, in Billings General Hospital, Chicago, Ill. His home and office were located in Chicago.

His column, "A Point of View" appeared weekly in this space, and he formerly wrote a weekly column for the Chicago Tribune's news section. Dr. Palyi was hardly a stranger to the medium, having written for more than 40 major newspapers which required frequent assignments abroad covering economic and political conditions.

An internationally distinguished economist, Dr. Palyi was on intimate terms with the workings of every major financial crisis just prior to World War I through the most recent June 21 Penn-Central accentuated one. He was equally familiar with most of the world's leading economists going back to Max Weber who held a professorship at the University of Munich at the time when, and where, Dr. Palyi obtained his doctorate and taught, and under whom Dr. Palyi studied and later assisted immensely.

A scholar and author in his own right, Dr. Palyi had a superb felicity for turning even his esoteric constructive criticisms of economic nostrums into a popular, understandable magnetic style for the readers of his column. At the same time, his books commanded the respect of the world economic community. They included: The Chicago Credit Market (1937), Compulsory Medical Care and the Welfare State (1950), The Dollar Dilemma: Perpetual Aid to Europe (1954), Managed Money at the Crossroads (1958). An

Inflation Primer (1961) and, scheduled for publication in the fall of 1971, The Twilight of Gold. The latter distills his behind-the-scenes knowledge of the workings of the European central banks, and the great European banks, to which he blends his years of economic analysis with his first hand knowledge of economic and political events.

Indicative of his pressing concern these past few years, Dr. Palyi's first formal column with this publication dealt with "A Flood Tide in Monetary Nostrums" (September 26, 1968) and his last column, published a week ago, July 30, after his death, coincidentally re-examined many of the current economic "Remedies (which he showed) Are Worse Than The Cure". Over the many years, he contributed numerous articles to this and other publications both here and abroad.

A conservative economist, opposed to Socialism, he defined a conservative as one willing to change for something better, and castigated liberals for their inflexible inability to admit the deleterious consequences of their inspired causative prescriptions gone awry.

ESSAYS CAPTURED CRUCIAL EVENTS

One tragedy which his column caught was the substitution of flat money for a $35 dollar redeemable gold standard, the search for a "Gold Standard Without Gold," blaming "A Gold Shortage on Watered Stock", and making ourselves "Prisoners of Our Debt Behemoth". He took no joy in twitting the "The Dry Rot in Bretton Woods,," the "pie-in-the-sky" promulgation of "Painless Anti-Inflation Policies—Shamless Surrender to Inflation", the evolution of our economy into "A Workers' Paradise Lost", and "the Generic Name of SDR's—Easy Money."

Prior to the leveling out of the stock market in 1968, he called attention to 1929 parallels. In 1963 he wrote on the Federal Reserve's teetering on the edge of a monetary catastrophe (which we now know). One of his analyses of Milton Friedman's fixed money supply growth rule saw therein a strange variation of Keynesianism—one that would require heavy governmental stabilizing efforts to make the proposed 4 per cent money supply formula work.

He was a strong advocate of: "credit created for productive purposes only; a monetary system of currencies and credit measured and tested by a redeemable gold standard; a relatively fixed exchange rate; and deflation as a necessary, unavoidable medicine whenever we failed to take the opportunity to check avoidable inflationary excesses.

The Hungarian-born son of a newspaper publisher, Dr. Palyi was educated in Switzerland and Germany and received his master's degree from the Munich School of Commerce and his doctorate from the University of Munich.

His academic career included faculty memberships in the Universities of Goettingen and Kiel, and it was at the Graduate School of Commerce at Berlin that he obtained his professorship of finance in 1929.

His banking experience included the Austro-Hungarian National Bank, the Deutsche Bank in Berlin, and guest consultants to the Midland Bank, Ltd., London. He was adviser to the Reichsbank, the central bank of Germany, from 1931–1933, and an expert to the German government's Industrialization Nationalization Committee.

Dr. Palyi's first visit to the United States was in 1926–27 as visiting professor and research economist at the University of Chicago; also, Wisconsin, Southern California, and Northwestern University.

In 1933, he elected to live in and become a citizen of the United States. He was a member of the Executive Committee of the Economists' National Committee on Monetary Policy, and a member of the Board of Lehigh Valley Industries, Inc. As a private consultant, he took numerous trips to Europe for first hand knowledge of developments there.

He leaves his wife, Raissa, who is a Russian language Professor, presently on the faculty of Rosary College.

There are few truly great economists left who personally lived through the accomplishments, hopes and misfortunes of the pre- and post-World Wars' economies. Unfortunately, economists did not appreciate his adamant advice against inflationary policies as a cure to economic ills. When the world wanted gold that glittered he could only offer gold.

OF WORDS AND WAR

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CRANE. Mr. Speaker, as we commemorate the second anniversary of the ruthless Soviet-led invasion of Czechoslovakia, certain voices in our Nation are calling for a unilateral cessation of our opposition to communism. We are told that the Communists have changed, that there is a new spirit of rapprochement, and that a yielding by the United States on one or another issue will be sufficient to change their attitudes.

A very thoughtful article in the July–August issue of Ordnance magazine belies these assertions. It is entitled "Of Words and War" and is written by the noted military strategist and author, Samuel F. Clabaugh. Colonel Clabaugh cites historical events in this article and notes that the Communists consider international negotiation as a means of waging and continuing hostilities, as well as ending them. Colonel Clabaugh's article follows:

OF WORDS AND WAR

(By Col. Samuel F. Clabaugh)

One of President Nixon's favorite phrases is "from confrontation to negotiation." It is a good one, and especially timely, as we continue the Strategic Arms Limitation Talks (SALT)—the most crucial and hazardous negotiations in the history of our relations with the Soviet Union—and as other negotiations proceed in Paris, in Geneva, and in Panmunjom.

Like most such phrases, it requires analysis. In the quarter century of the cold war, what has been our experience with confrontation and negotiation as we moved from one to the other?

In Communist strategy and ideology, negotiation and confrontation are parts of one organic whole. They are practically synonymous. Each, to paraphrase Clausewitz slightly, is a continuation of war by means of the other. As Senator Henry M. Jackson said more recently:

"Some Americans see international negotiation as a means of ending conflict. They are blind to the fact that negotiation as practiced by Moscow is equally adapted to *waging* and *continuing* conflict."

To confrontation and negotiation must be added a third phase—the treaty. Indeed the word "treaty" derives from the French *traiter*—to negotiate.

The treaty is implicit as a consequence of confrontation and negotiation. Like them, it may come at any point in the sequence of the cycle. It may initiate the conflict, or it may end it. Sometimes, to the surprise of one or both parties, it may—in due time—revive it.

Treaties, all treaties, constitute a paper chain—the treaty trap—as they are described in a recent excellent book by that title ("The Treaty Trap," by Laurence W. Beilenson; Washington: Public Affairs Press, 1969). Confrontation, negotiation, and the treaty—there abide these three, and the worst and most dangerous of these is the treaty.

In our confrontations we have more often succeeded; in our negotiations we have more often failed; and in our treaties we have usually been entrapped. This was true of both World Wars. We won the wars, bungled the peace negotiations, and were trapped by the treaties.

The Soviet Union began the cold war with the Allied occupation of Berlin. They rejected the United States offer of Marshall Plan assistance, clobbered Czechoslovakia when she tried to participate, and denied free elections to the countries of Eastern Europe.

The fruits of Yalta and Potsdam, they greedily plucked; the commitments they as readily repudiated. New negotiations failed. In their attempted strategy of driving the Allies from West Berlin, the Soviets engaged in one harassment after another in their familiar probing tactic. Finally they blockaded West Berlin.

It was a critical time. Some in the military wanted to arm a convoy and send it through, which the Allies had a right to do. It seems inconceivable that the Soviets would have resisted with force when the United States had a monopoly of atomic weapons.

The Soviet blockade was imposed on June 24, 1948. It is reasonable to believe that confrontation, in the form of a counterblockade by the West, would have brought the Soviets to terms, as indeed it did in February following.

But the immediate crisis was the survival of the 2,250,000 people of West Berlin. Gen. Lucius Clay inaugurated the airlift on June 26th. There were questions of its feasibility and its possibly provocative effect. General Clay told a reluctant Washington that "whenever the Soviets want to make war, they will not be deterred by our weakness." President Truman supported General Clay's decision.

When, seven months later, the Western Allies imposed a tight counterblockade, Stalin sought negotiations immediately. On May 4, 1949, the Allied powers announced agreement to end the blockade, and on May 12th the Soviet blockade came to en end. The airlift continued until September 30th because of material in the pipe line and to restore the city's depleted reserves.

It was a magnificent achievement. It had carried 2,500,000 tons of vital supplies to the beleaguered city and enabled its people to survive. It was accomplished at terrific cost, including the loss of 48 lives. It could have been avoided if the Soviet Union had been confronted immediately with a counterblockade.

The airlift cost the Soviets nothing. Stalin was glad to have Western air power thus occupied. But the West's counterblockade was something else. That hit him where it hurt. It should have been a valuable guide to the new North Atlantic Treaty Organization (NATO) which had been born April 4th. It should have been—but it was not.

In Korea, the confrontation came first and seemed to be succeeding. General MacArthur, declaring there was "no substitute for victory," advocated bombing the Communist bases across the Yalu and blockading the coast.

Official Washington feared that the bombing of the "privileged sanctuaries" would bring the Chinese into the war. It also feared the loss of the support of our UN "allies." The Chinese came anyhow, and the support of our UN allies remained minimal.

In the controversy between President Truman and General MacArthur, the general was summarily removed. The see-saw war continued until the "uneasy truce," which

was followed by 18 years of humiliating and fruitless negotiation.

The "United Nations War," with 50,000 American soldiers and the South Korean Army, bids fair to out-live the United Nations itself. Both confrontation and negotiation continue in the travesty in Panmunjom, hardly a satisfactory substitute for victory.

The Cuban missile crisis in 1962 came to a climax in the magnificent mobilization of our air and sea power and the "selective interdiction" of Soviet missiles bound for Cuba. The United States won the almost unanimous support of the free world. The trade and shipping of our allies that had been supporting the Cuban economy declined sharply. The Organization of American States was ready to support an economic and military blockade of Cuba. The instant confrontation was an instant success—but short-lived. What we won in confrontation we immediately lost in secret negotiations between President Kennedy and Khrushchev. The great array of ships, aircraft, and armor was dispersed to their bases even more quickly than they had been mobilized.

Khrushchev felt relieved of the threat of the invasion of Cuba and even reneged on his promise of international inspection of his missiles. The ships of our allies resumed their flow of critical supplies to Castro, and the ardor of our Latin-American friends was cooled somewhat by the revival of old grievances.

We later removed our missiles from Turkey—but seven years later Cuba is still a powerful air, naval, and missile base for the Soviet Union and a training ground for guerrilla forces for use throughout the Americas, including the United States itself.

Vietnam has presented us with our most horrible potpourri of confrontation, negotiation, and treaties.

Despite the recommendation of the military strategists, we have had the wrong sort of confrontation with North Vietnam and the Viet Cong, and only a fantasy of negotiation. From the beginning of the confrontation (escalation) to the mythical negotiation (deescalation) it has been our sorriest performance in the 25-year record of confrontation and negotiation with the Communists.

In Vietnam, as in Korea, we have failed to win either the war or the negotiation. We have failed to win the negotiation precisely because we have failed to win the war. We have failed to win the war primarily for the same reasons: (1) we have granted privileged sanctuaries (such as Haiphong) and safe havens to the enemy—at least until the Cambodian entry; (2) we have failed to cut off his source of supply, and (3) we have suffered from civilian direction of military operations.

In Vietnam, we threw ourselves into the war and began suing for peace at the same time—something rare in history. Each negated the other. Each was directed at the wrong target, in the wrong way, with the wrong weapons, at the wrong time.

North Vietnam was bombed just enough to arouse and unite the people but not enough to deter them. Vital targets were spared. Our mighty bombers attacked footbridges, rice paddies, and jungles, and scorched the earth in South Vietnam, while a free flow of deadly weapons has poured through the port of Haiphong unhindered.

The negotiations which President Johnson had proposed "anywhere, any time" were begun in response to imaginary smoke signals. They have set a new low even for the Communists. But nothing better could have been expected.

President Nixon has found himself on the horns of a polar dilemma—to get in or to get out. That's the nature of dilemmas—two equally painful choices. But he can seize *both* horns; first, get in effectively, and then, get out honorably. The operations to clean out Red armament and supply caches and to uproot COSVN in the Parrot's Beak of Cambodia are boldly in that direction.

The mutual threat to national survival now impels the two great powers to look to the third instrument of conflict resolution—treaty making—to curb the arms race which is growing more intolerable daily.

So it is that the world watches with hope and apprehension the Strategic Arms Limitation Talks (SALT), as it recalls the dismal pattern of treaty making and breaking throughout history—and especially on the part of the Soviet Union.

COLONEL CLABAUGH

Colonel Clabaugh, an Ordnance Reserve officer, has served as military attaché in London, as a member of the General Staff Corps, a faculty member of the Industrial College of the Armed Forces, and as a research associate of the Center for Strategic and International Studies.

TRAUMA—THE NEGLECTED DISEASE OF MODERN SOCIETY

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. HOGAN. Mr. Speaker, WRC–TV recently devoted their editorial time to a discussion of the fourth highest cause of death in the United States—trauma, or accidental injury.

WRC has performed a true public service in calling attention to this little-known killer which strikes most often among persons between the ages of 1 and 37.

For the benefit of my colleagues who may not have heard this editorial broadcast, I include it in the RECORD at this point:

TRAUMA

Trauma, which is defined as physical injury, is the fourth highest cause of death in the United States. And tragically, most of its victims are between the ages of one and thirty-seven. In that life span it is the major cause of death.

Yet, based on recent figures, less than 50 cents was spent on research for each of the 10 million persons who suffered accidental injury. At the same time $220 was spent for each of an estimated 540 thousand cancer cases.

Trauma is not limited to weekdays or working hours. It strikes at any time. And when it does—the first thirty minutes in an emergency room of a hospital are most important.

Vital signs must be monitored by specialists, yet many emergency rooms are staffed by junior physicians and life and death decisions, even for experts, are too often limited because of inadequate treatment facilities. Much-needed chemistry and blood laboratory facilities and supplies are not available around the clock.

The condition of emergency rooms in Washington area hospitals was dramatically revealed in a recent survey. Of the 22 civilian hospitals with 24 hour service, only five were rated as "very good," eight were rated "good."

This is not a reassuring picture for the thousands in the Washington area that will become victims of accidental injury.

There is a good deal of trauma research results available—WRC–TV urges that it be applied, and quickly, to Washington area emergency hospital facilities.

In connection with the intent of this editorial, I recently had the opportunity to address the delegates to the International Trauma Symposium held here in the Nation's Capital.

In preparation for this speech, I had the opportunity to explore many new ideas which I would like to share with my colleagues. For this reason, I include my remarks before the symposium at this point in the RECORD:

ADDRESS BY HON. LAWRENCE J. HOGAN BEFORE THE INTERNATIONAL TRAUMA SYMPOSIUM

It is a great pleasure to join with you this morning for the start of the first international conference devoted to the study of trauma. I commend you for coming together to examine this critical problem and I hope you have a very successful meeting.

April 22 was hailed throughout the country as Earth Day 1970. Our deteriorating environment received a lot of attention on that day as a result of a nationwide teach-in on our college and high school campuses. I joined in the activities of that day and in several speeches pointed to our dirty air, our foul water-ways, our congested traffic, and our deplorable housing and urged a massive effort to restore the quality of our surroundings. I said, at that time, that the issue, in a word, is survival, and that's not something we can compromise with.

I bring up my activities on Earth Day because the National Academy of Sciences considers accidental injuries, or trauma, to be the nation's most important *environmental* health problem. Considering that physical injury is the leading cause of death among persons between the ages of 1 and 37 and that they are the fourth leading cause of death at all ages, then it is readily apparent that the issue is indeed one of survival.

The tragedy of this realization is that trauma kills thousands of our young people in the first half of the life span who otherwise could expect to live long and productive lives. Preventable accidental death afflicts the very same young people who are today demonstrating in the streets against the ravages of the war in Southeast Asia. We must find ways to communicate to them the fact that in one year alone automobile accidents kill more Americans than we lost in the Korean war. We must tell them that accident costs in the neighborhood of $18 billion are rapidly approaching the annual appropriation of $20 billion for conducting the war in Vietnam. Somehow, we must get our young people as involved in protesting this abuse to the life and well-being of members of their generation as they are about the threat of the draft and military service in Vietnam.

I am pleased that you have stated as one of your purposes for meeting this week the effort to generate more scientific attention to a neglected field, but also to stimulate greater *public* awareness that trauma is a major national health problem. Public apathy is one of the greatest hurdles in this field. The public finds injury and trauma "distasteful" and would rather not think of it.

Most of us, and I include myself in the category of the generally unaware public, do not realize that most accidents not only damage the outer body but that, too often, the real "accident" and the resulting traumatic state are brought on by internal injuries. For example, a study of 950 autopsies of accident cases revealed that in 38 percent of the cases of those who died following a fracture of the hip, the primary cause of death was actually pulmonary embolism. Yet in a large number of similar patients who had not been autopsied, pulmonary embolism was the recorded cause of death in only 2 percent of the cases. These figures, I believe, demonstrate how much we really

still don't know and how much further research can teach us.

These are astounding facts and they can only be attributed to a lack of awareness on the part of the general public but apparently also on the part of general medical practitioners. It would seem to be the responsibility of the members of this symposium to reach the latter group and I hope that concerned public officials and interested citizens will continue to disseminate information about this neglected killer to the general public.

I said before that these statistics also show us the tremendous need for more research in this fight against accidental death and disability. We must increase appropriations for further research in this area. We expended vast amounts of money for cancer and cardiovascular research to find cures for those afflicted with chronic diseases which usually take their toll late in life. Why then have we not placed a similar priority on finding a better means of treatment for trauma? Recent studies indicate that the National Institutes of Health and the Public Health Service expend only 50 cents for each of the 10 million persons disabled by accidental injury, while research funds in the amount of $220 and $76, respectively, are expended for each of the estimated 540,000 cancer cases, and 1.4 million cardiovascular cases.

My interest in emergency medical care was aroused by a series of reports on the ambulance situation in the District of Columbia and by the concomitant problems in the emergency rooms of D.C. hospitals.

As a member of the House District of Columbia Committee, I investigated the complaints of citizens regarding the ambulance service and I was appalled at the deficiencies in emergency care in the capital of this great country. This word-of-mouth testimony was supplemented by several studies, including a report by the District of Columbia City Council Ad Hoc Committee on Emergency Ambulance Service; the Definition: Emergency reports aired by WWDC radio; and an in-depth study by the National Highway Safety Bureau of the U.S. Department of Transportation.

In addition to these studies, I received first-hand exposure to the shortcomings of our emergency medical facilities by participating in a mock disaster drill held in Washington on June 28 of last year. In order to assess the effectiveness of emergency medical response by rescue workers and the emergency rooms of ten area hospitals, I along with over one hundred other volunteers, served as a litter case "casualty" with very realistically simulated second degree burns of the face and lungs. Cyanosis was my simulated condition.

The overall mock disaster exercise pointed out many shortcomings in our emergency facilities which are probably symptomatic of similar conditions throughout the country, particularly in more rural areas.

While most of the hospitals have well thought out plans for handling emergency cases, the implementation of these plans frequently leaves much to be desired.

Most of the emergency rooms—the good and the less than good—are very busy. If you have to go to one, chances are you would have to wait, and you probably would have to wait longer than the period that particular hospital considers an average waiting time, since, like most patients, you would probably arrive in the evening or on a weekend.

From a legislative point of view, the major thrust of my efforts in this field has related to a bill which I sponsored last year to establish an Ambulance Service Corps for the District of Columbia, administratively separate from the Fire Department under which it is now placed.

Because of the highly specialized nature of life-saving services, it is quite evident that we need a special system for recruiting and training men with a special aptitude for ambulance work. The Armed Forces have recognized this for a long time.

Once the corps is established it will be responsible for the selection, training, and supervision of its own personnel. As it stands now, members of the fire department serve for one year in the ambulance service. Many do so reluctantly. Others have no special aptitude for this work and, as far as I am concerned, it is imperative that anyone who is involved in emergency medical service be particularly dedicated to his work for it requires an unusual interest and empathy which many do not have.

At the present time a man serving in ambulance work must prove his proficiency in fire-fighting in order to qualify for a promotion. Under the administrative setup which my bill envisions a member of the Ambulance Service Corps could make a career in the ambulance field and be promoted on the basis of his proficiency in this work within his own organization. Those who dedicate themselves to this essential activity are entitled to recognition, as well as satisfaction. The new organization would also provide the technical training which each member must have to keep abreast of the newest techniques and developments. There are some problems related to Washington's emergency medical service to which my bill does not respond.

An important adjunct to the new Ambulance Service Corps is establishment of the neighborhood health centers which the city has requested to take the burden from the ambulance service and allow them to concentrate on true emergencies. Presently, the ambulance service in Washington has been overburdened and deviated from its purpose by being used as a "taxi service" to bring indigents, most ambulatory, to the hospitals. While such "taxi runs" are being made, a real emergency victim must wait, and, in some tragic cases, die. I believe that the neighborhood medical centers will help to solve this problem.

I have spoken so far in terms of emergency when applied to individual victims. However, there is also the very important question of disasters. In such cases, augmentation of personnel is needed. I have provided in my bill for trained volunteers who will serve as reserve members of the Ambulance Service Corps. In having a volunteer reserve, the authorities could call upon an additional force to assist, knowing that they are trained in the methods and use of equipment.

Particularly in the case of disaster relief, an emergency rescue service must be prepared with the proper equipment. During the mock disaster in which I participated, helicopters were used to transport the "casualties" to the hospitals. This service is not now available in the District of Columbia.

The ambulance corps which would be established by enactment of my bill would regulate its equipment needs according to its criteria for proficient operation. As the transportation picture changes with the introduction of new equipment, the corps can utilize new methods to achieve its own particular mission. It is imperative that technical equipment is available as close to the point of injury as possible. For example, ambulances should be equipped with electrocardiographs and they should be furnished with devices to alert the hospitals to their imminent arrival. These are two serious deficiencies in the present system.

The helicopter has proved itself on the battlefield as an excellent emergency vehicle and it is now used in many parts of this country for highway emergencies and disaster evacuation. While I was in Vietnam last August, I was most impressed with the "dust-off" helicopter pilots who could pick up the wounded from the battlefield and within a matter of minutes transport them to hospitals. Enroute the helicopter pilots would alert the emergency centers in the hospital and a team of medical experts would be prepared for their arrival. This procedure is so refined that even artificial kidneys are always available because the kidneys of the wounded often break down when the human body is under great stress and strain.

The versatility and speed of the emergency care available in Vietnam must be harnessed as an adjunct to ambulance service in this country.

The Vietnam war has also developed skills in many of our returning veterans which can and should be utilized in the field of emergency medical care here at home.

There are, of course, many other aspects of emergency medical service and accidental injury which I haven't mentioned but I'm sure you, as experts in this field, are aware of them and will discuss their merits and demerits during this symposium.

I'm hopeful that your discussions will lead to many useful recommendations for implementation throughout this country and in other parts of the world. I look forward to being kept informed of your progress.

ST. STEPHEN'S DAY

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 20, 1970

Mr. SCOTT. Mr. President, today marks the annual observance of St. Stephen's Day—a celebration in honor of the patron saint of Hungary. Hungarians everywhere, especially Hungarian-Americans, point to St. Stephen as a symbol of freedom.

St. Stephen was a man of outstanding ability. It was he, as King of the Hungarian nation, who shaped that nation and gave it a greatness of purpose that still endures in the Hungarian soul. That purpose is an intense desire for universal freedom. The Hungarians have demonstrated this deep-seated emotion many times in the past. We all anxiously await the day when the Hungarian nation will once again take its rightful place in the family of free nations of the world.

King Stephen, among his many accomplishments, made two outstanding contributions to humanity. He taught the Hungarians the exemplary virtues of charity and tolerance. He taught that it was the responsibility of the rich to help care for the needy. He taught that it was the moral responsibility of every man to be tolerant of, to respect, and to love all other people—regardless of class or background. These teachings, in combination with his other Christian virtues accounted for the cannonization of King Stephen by the Roman Catholic Church.

Would that all men in the world today were of St. Stephen's caliber. As we commemorate him here today, we honor and salute all Hungarians, who have wisely chosen him as their patron saint.

CARL BRABLEC'S PREMATURE RETIREMENT

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. O'HARA. Mr. Speaker, on September 17, the Board of Education of Roseville, Mich., will host a dinner in honor of the premature retirement of Carl Brablec, after 23 years as superintendent of the Roseville Public Schools.

I describe Carl Brablec's retirement as "premature," as I would do if he were retiring 20 years from now—because his is the kind of experience, and dedication that cannot be let go without being sadly missed.

His contribution to education in the city of Roseville and, indeed, in the State of Michigan as a whole, can only be hinted at by a list of the formal activities in which he has served the public over these years. In addition to his professional title as superintendent of schools, Carl Brablec has been a member of the State Corrections Commission for Juveniles, a member of the Governor's Commission on Educational Finance, president of the Detroit Metropolitan Region School Administrators Association, a member of the State Advisory Committee on Teacher Education and Certification, and in 1959, he served as emergency interim State superintendent of public instruction. From 1957 through 1966, the people of Michigan selected Carl Brablec to serve as a regent of the University of Michigan.

But, Mr. Speaker, as most of us know, it is not in a man's titles that you find his life work. And this is particularly true in the life of an educator. In the Roseville district's schools—of which there were four when he took office, and of which there are 24 now; in the 14,750 students—as opposed to the 1,200 when Carl first took office; in the growth of Roseville as a strong, healthy, and happy community—there we find Carl Brablec's accomplishments.

It is my privliege and my pleasure to join with my friends and neighbors in Roseville and the adjoining communities in our unlimited good wishes to him in the years ahead.

I ask unanimous consent, Mr. Speaker, that an article from the Macomb Daily of June 16, 1970, be printed at this point in the RECORD. The article seeks, as these few remarks of mine have sought, to delineate something of the priceless public resource that we call Carl Brablec:

THE "OLD MAN" BEHIND ROSEVILLE'S RAPID GROWTH

(By Jane Hoyt)

ROSEVILLE.—The Roseville school district has undergone three large boundary changes.

The four original schools have changed in size and character and the student enrollment has increased from about 1,200 to 14,750.

All of these changes are due to the firm guiding hand of an administrator with a dry wit, called "the old man" by teacher federation members in the same way young naval officers respectively dub their commander.

When Carl Brablec retires in September he is going to "get out of town for a bit so my successors can clean up the school system."

His associates will likely miss the characteristic chortle that usually accompanies such a statement.

Nonetheless, the district owes its structure to Brablec and those who aided him in the years since he began his job in 1947.

At that time the district, which was known as Kern-Washington, contained East Detroit, Roseville and St. Clair Shores. "In the early 50s we reorganized so our district attached the part of Roseville north of Ten Mile," he said.

East Detroit annexed the area south of Ten Mile, and Lakeview incorporated the area between Beaconsfield and Little Mack. The next annexation to the Roseville District was the Eastland District, north of Twelve Mile and, toward the end of the 50s, the Greater Gratiot District.

Now the district coincides with the city boundaries except for three-quarters of a mile into the Fraser district.

The original Roseville district consisted of four schools, according to Brablec. Today the system consists of 24 schools.

The old Burton building which served as a junior and senior high was torn down in 1966 and the new Burton school stands on the site. It was the only school demolished over the years, although MacArthur School, one of the original four, will be demolished this summer to make way for the I–696 Freeway.

The two elementary schools have a new look. Lincoln's original eight classrooms are now called the "old building" and the third of three additions is just being finished. Pierce School has had two additions.

Despite an impressive construction record, it is not, according to Brablec, his most rewarding accomplishment.

"Taking part in the development of educational opportunities for all the children means more," he said. "The rewarding part is not, for example, that we have a new high school, but that there's a good environment with the necessary facilities and materials."

"Born on a farm in Ogden Township, Lenawee County, in 1908, Brablec received his B.S. from Eastern Michigan, his M.A. from the University of Michigan and served as an American Exchange Fellow at Charles University, Prague, Czechoslovakia.

A teacher and principal at Britton High School he later served as superintendent of that district and the Clarkston district before coming to Roseville as head administrator in 1947.

In education, he feels "we are doing a good job but not the best. We're trying to educate all the children which wasn't done in the old days," he said.

In the future, we will increasingly employ technology, so the efforts of any one person are extended. We will find this university true in our society," he said.

He doesn't think this means fewer teachers.

"We will find that the teaching force is greater, but deployed in different ways," he said. "Technology would extend teaching effectiveness, giving more opportunity to reach those children in need of special assistance."

Although he is a life member of the National Education Association, he feels teachers should leave many decisions to their representatives.

"I believe we see the best education where teachers are free to teach. It's troublesome to see the confusion which has resulted in recent years when teachers enter into administration and policy-making to such an extent that their concern upon their specialty is reduced. I think most teachers would like to be out of this .

"In the past years when boards and administrations might have been capricious and not given to due process, perhaps this was good, but now there are safeguards and representatives can work."

He served as a University of Michigan regent from 1957 through 1966 and believes, "there is no question that over the past 10 years more students are more involved and this will continue, but no one can be heard while he's burning the library down."

"I'm inclined to think that whatever the students had to express by this means has been done and any further lawless and violent means will not be beneficial to their goals."

He believes "the thing has peaked and young people will employ different methods because they have gone about as far as a very liberal society is going to allow."

This does not mean he is against young ideas. "The kids have something to say. There is so much in society just screaming for remedy and in some intuitive way the young grasp this are alarmed at it and have reacted, in some cases overreacted. If they believe in our democracy and means for bringing about change, they can work within the system," he said.

An avid sportsman (even his wife is skilled with a pistol) and a member of the Small Arms Commission of Michigan, he is also a noted naturalist.

"You can save almost anything you're determined to save," Brablec said, for 10 years he has been encouraging the preservation of 40 wooded acres near Bryden. "We've attracted quite a bit of wild life into the sanctuary," which is part of a woodland management program.

Brablec believes conservation is "one place where people will rally rapidly," and compares it to diminishing the effects of polio in a surprisingly short time. He has much faith in people whom he said will realize the necessity for action and "will respond rapidly as a nation."

SECOND ANNIVERSARY OF INVASION OF CZECHOSLOVAKIA

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MONAGAN. Mr. Speaker, on the second anniversary of the invasion of Czechoslovakia, the development of events in Eastern Europe and especially the continuing trend toward consolidation of Soviet control in Czechoslovakia provide mournful fare for those who hope for better things for the people of this area. This August 20 marks the anniversary of that invasion which, in its blatant disregard of every tenet of international law and diplomatic convention, produced a shockwave of revulsion around the world.

The history of the past 2 years in Czechoslovakia can be found mirrored in the life of Alexander Dubcek, the illfated reformer who failed in his attempt to liberalize the Czech economy and society. In the immediate wake of the Soviet invasion, Dubcek was permitted to remain in his position as First Secretary of the Czechoslovak Communist Party; under the most unsubtle pressure of Soviet troops, tanks, planes, and secret police, he was forced to dismantle the major achievements of his brief rule: freedom of the press and freedom of expression of political dissent. Then, once the Russians had secured their hold on the Czech Government through the aid of

Czech collaborators, Dubcek, with many of his fellow reformers, was shipped abroad to fill a diplomatic post. The reason underlying his appointment as Ambassador to Turkey was clear: Dubcek was still far too powerful a domestic political force to attack openly at that time; his appointment to Ankara was therefore a convenient method for the hardliners to move him away from the center of affairs with the smallest amount of domestic strife, and thus make it somewhat easier for them to carry out their regressive policies at home.

Last month, having finally secured their hold on Czechoslovakia, and with 70,000 Soviet troops to back them in case of trouble, the neo-Novotny faction recalled Dubcek from Turkey, dismissed him from his ambassadorial post, and proceeded to strip him of his membership in the Communist Party. These steps were justified by the allegation that he had led the country to "the brink of chaos and destruction." Today Dubcek is incarcerated in a prison disguised as a mental hospital, where he has undergone harassment and interrogation by his pro-Moscow captors. There exists a possibility that he will be subjected to the ordeal of a show trial, both for the benefit of the Russians and as a warning to the Czech nation at large.

The progressive blackening of the reputation of this Czechoslovak patriot and confirmed Communist, and the continued degradation of his official position and the destruction of his reforms, are symptomatic of the malady which afflicts Czechoslovakia today. They provide proof that the ultraconservative wing of the Czech Party remains ascendant, that its program of recasting Czechoslovakia in the mold prepared for it by Moscow continues apace. What has happened to Alexander Dubcek, then, is far more than just a personal tragedy, for it has happened, and is happening now, to literally tens of thousands of less well-known Czechoslovaks. Oldrich Cernik, Dubcek's Prime Minister, has been suspended from both the Central Party Committee and from the party itself. Seven members of the Czechoslovak Supreme Court, including its president, have been dismissed on the grounds that they purportedly hold rightist, opportunist, anti-Socialist, and anti-Soviet views. The entire presidium and secretariat of the National Trade Union Council were also removed from their positions. A purge of the entire Czechoslovak Communist Party is underway, and 200,000 people from all walks of life have been expelled from it along with Dubcek.

One of the areas of Czechoslovak society most heavily affected by this renaissance of Stalinism is the academic world. According to the Czech Government itself, over 300 university professors and lecturers and over 1,000 students have defected to the West. An additional 300 professors have been arbitrarily removed from their posts. Students in Czechoslovak universities are being forced to undergo rigorous loyalty tests before being allowed to continue their studies. Those now in power are also bringing about extensive changes in curricula, and are eliminating almost entirely any study in those disciplines such as political science, logic, sociology and philosophy which are considered threats to the new pro-Soviet dogma. The Husak government taking another leaf from the Moscow book, has also undertaken a systematic campaign against writers and poets.

Further evidence of the results of the internal upheaval produced by these new policies is to be found in the Czechoslovak foreign service. Rather than return home to face the kangaroo courts in Prague, several prominent Czechoslovak diplomats have defected to the West, among them the Czech Ambassador to Denmark, the third ranking official of the Czech Mission to the United Nations, and the scientific affairs officer of their Embassy here in Washington.

Mr. Speaker, it is with an eye on these events that I again call attention to the two resolutions which I introduced earlier in this session of Congress, House Concurrent Resolution 457 and House Concurrent Resolution 465. I feel that it is particularly important at this point in time that we express to the world our own sense of anger and outrage at the actions and policies of the present leaders of Czechoslovakia. To this end, House Concurrent Resolution 457 attacks the Soviet invasion for what it was, a denial of the basic sovereign rights of an independent nation; it asks the President to instruct our representative to the United Nations to ask the General Assembly of that organization to condemn the Soviet action and to direct the U.S.S.R. to remove once and for all those forces which it still maintains in Czechoslovakia in violation of international law. In addition, it stipulates that the Czechoslovak question be added to the agenda of any future negotiations between this Government and the Soviet Union. Further, in view of the fact that we may expect more, and increased, numbers of defectors as the Husak regime continues to enforce and toughen its harsh and repressive laws, I feel that it is imperative that steps be taken to aid those brave Czechoslovaks who are fleeing their homeland rather than submit to the iron rule of Soviet sycophants and Russian tanks. Recognizing this problem, House Concurrent Resolution 465 asks the President to direct the United States representative to the United Nations to ask the U.N. High Commissioner for Refugees to provide funds to aid the more than 60,000 Czechoslovak defectors seeking to remake their lives in free lands.

LEGISLATION TO REQUIRE THE OPEN DATING OF PACKAGED FOODS—XI

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FARBSTEIN. Mr. Speaker, I have today released a Department of Agriculture survey of European open food dating laws, which demonstrates that consumer protection in the United States is far behind more stringent requirements in many European countries.

Open dating of packaged foods is a well-established practice in eight of the nine countries surveyed, and in at least 17 other countries. The survey found open dating has met with a strong and positive consumer response, especially in those countries in which open dating is most extensively applied.

The food industry abroad had been no less reluctant to provide consumers with information on the quality of their products than have their American counterparts.

In Germany they warned that the consumer would choose the freshest dated item, even though other items were still good.

In Austria, there came a similar warning.

In Denmark, the food industry claimed that open dating was unnecessary for brand items, as both producers and retailers were interested in supplying good products from the quality point of view.

But the European food industry has generally learned to live with the practice. Except for some problems during the short transitional period, none of the expected difficulties arose. In Germany, for example, the trade associations now fully accept the idea of open dating. In many countries the food industry not only found it popular with the consumer, but also profitable for themselves to the point where many companies are introducing open dating on products not required by law.

The Department of Agriculture survey of nine European countries found that Denmark, France, and West Germany have adopted relatively extensive open dating requirements; and five others have less comprehensive regulations. Only Great Britain did not require its food industry to provide the consumer with information about the freshness of its products, although here also many supermarkets have adopted the practice voluntarily, because they found it to their economic advantage to do so.

Denmark, which initiated consumer dating requirements in the 1950's on a limited basis, found that consumer response was so positive that the Government has now extended the policy to a significant portion of all food sold. A government unit, the Home Economics Council, hopes to extend open dating to all commodities in the near future.

A spokesman for the West German Ministry of Health said that his country found open dating to have a positive effect from the point of view of the consumer, "by improving product quality and freshness." A representative of the French Government said that the experience of his country, which dates many canned goods as well as perishable items, is that it forced many retailers to pay closer attention to their inventory.

The food dating survey was done by the U.S. Foreign Agriculture Service through the agriculture attachés in the various countries being surveyed. They were asked to investigate: First, if the country had open dating laws and regulations; second, circumstances sur-

rounding their enactment; third, their economic impact; fourth, the consumer reaction; fifth, the government's assessment; and sixth, the food industry's reaction.

The Department of Agriculture was also able to supply me with data on food dating requirements in other countries.

At the present at least 25 countries have open dating requirements. These include Argentina, Australia, Austria, Belgium, Chile, Denmark, Finland, France, Germany (West), Greece, Israel, Italy, Netherlands, New Zealand, Norway, Pakistan, Portugal, Poland, Spain, Sweden, Switzerland, Thailand, Turkey, and Yugoslavia.

The European Economic Community is currently considering open dating requirements.

The experience with open dating in Europe and elsewhere clearly demonstrates how fallacious is the argument that the American food industry would lose its shirt by better informing the consumer.

I insert at this point in the RECORD the text of the survey and excerpts from a World Health Organization survey summarizing many of the countries which have open dating requirements:

U.S. DEPARTMENT OF AGRICULTURE,
FOREIGN AGRICULTURAL SERVICE,
Washington, D.C., August 7, 1970.

Hon. LEONARD FARBSTEIN,
House of Representatives

DEAR MR. FARBSTEIN: Following the arrangements which have been previously discussed (conversations with Mr. Levin of your office, my letter of July 30, 1970 to you), I am enclosing the replies received from our agricultural attachés to the inquiries, made at your request, regarding the practices abroad concerning open-dating of packaged foods.

To permit a complete over-view of this project from the enclosures, I am including also a representative copy of the inquiry that was sent to the attachés regarding foreign practice on open-dating. This is followed by the responses received from Austria, Belgium, France, Germany, Italy, Spain, Switzerland, and United Kingdom.

In the case of Austria, the current response mentions an earlier cable on a related subject; that cable is also enclosed. In the case of France, the aircomm to which reference is made has not yet arrived; when it comes it will be forwarded separately to your office.

Sincerely,

RAYMOND A. IOANES,
Administrator.

COPY OF INQUIRY SENT TO AGRICULTURE ATTACHÉS PARTICIPATING IN THE FOOD DATING SURVEY

Representative Farbstein of New York has asked us to secure from you a report regarding the experience in Switzerland with respect to opendating of food products. His concern is principally with packaged food products but extends to nonpackaged foods also; please respond accordingly.

The Congressman's interest related to bill he is sponsoring is in opendating for food offered at retail as differentiated from code-dating. A legislative reference service (Library of Congress) survey for the congressman has listed Switzerland among these that have legislation applying to either (1) pull-date (2) date of packing (3) date of manufacture (4) any similar date or variants thereof. This may even include a labeling of crop year or year of manufacture with no more precise labeling.

What we are asking from you is a discussion of (a) what regulations exist with regard to such dating (b) what background preceded the adoption of those regulations (c) what exceptions if any occur under the regulations (d) What their acceptance has been by both consumer and trade group (e) What effects economic or otherwise can be attributed to their operation and (f) What assessment of the operation of such regulation has been made by Government or other official agency? Please differentiate to the extent necessary among the various commodities as they might be covered in your discussion.

The detail in which you can provide the desired discussion will obviously be limited by the deadline for this request. Please plan that your report on this subject shall be received in fas not later than August 4.

The legislative reference service report for Switzerland follows:

Under the Swiss Federal Constitution the issuance of laws on trade in food products and consumer articles is within the jurisdiction of the Confederation; the execution of such laws is however a cantonal matter (sec. 69 BIS).

The basic federal act on the trade in foodstuffs and consumer goods dates back to as early as Dec. 8, 1905 (Vereinigte Sammlung der Bundesgesetze und Verordnungen 1848–1947. v. 4 p. 549) but its original text was subject to a great number of amendments in the course of its over-sixty-years of existence.

There is no general provision in this act which requires the dating of food and other consumer products for the period during which these articles may remain on the shelves of stores. Only the amendment of this act of Dec. 29, 1954 (Amtliche Sammlung der Bundesgesetze und Verordnungen v. 1954 p. 1354) states that every bottle of milk must bear an inscription or label indicating "the date of the production (gewinnung) of the milk."

Similar inquiry being dispatched to Vienna.

REPORTS ON FOOD DATING LAWS PREPARED BY THE LEGISLATIVE REFERENCE SERVICE, WHICH WERE SENT TO AGRICULTURE ATTACHÉS

AUSTRIA

(Prepared by George Jovanovich, senior legal specialist)

There are no provisions dealing directly with the dating of food and other perishable products for the period during which they may remain on the shelves of stores. However, certain controls have been established by the Law Concerning Food and Drugs (*Lebensmittelgesetz*) of 1896,[1] reintroduced in 1951[2] and amended in 1952,[3] 1960,[4] 1965,[5] and in 1966.[6] This Law regulates commerce in food, drugs, cosmetics, spices, tapestry, as well as china ware, cooking utensils, and the like (Sec. 1).

This Law provides for controls on the marketability of the product and the determination of its fitness for human consumption, as well as for establishing agencies to be in charge and outlining the scope of their authority in regulating, controlling and conducting health inspections (Sec. 2).

The Law contains provisions for standards to be met, violation of which entails punishments and fines (Sec. 9–18). It also provides for establishing a commission to collect all regulations and instructions concerning food and drugs, as well as to issue the Food and Drug Legal Compilation (*Österreichisches Lebensmittelbuch—Codex Alimentarius Austricus*) (Sec. 23).

The compilation is arranged by the groups of provisions affecting a particular food or drug product.

The inspection agencies, the Commission and the courts have the power to confiscate and destroy all merchandise declared unfit for human consumption. This system has no specific provisions for dating merchandise for the purpose of exhibiting it for sale.

BELGIUM

(Prepared by Dr. Virgiliu Stoicoiu, senior legal specialist)

The only regulation on the dating of foodstuffs was found in the Ministerial Resolution of September 1, 1949 (as amended), Creating Official Control over the Quality of Butter, *Moniteur belge*, September 22, 1949, which reads as follows:

Art. 9. The butter from a dairy farm classified in the first category (with a control stamp) must, among other things, have a mark in conformity with the model reproduced below on its package or container:

The National Office of Milk and its Derivatives shall establish and directly inform the interested enterprises about the models and conditions according to which the control stamp shall be applied to the package or container.

This office shall, among other things, require the reproduction of the control stamp to be accompanied by an indication of the date of production or the number of the order to determine the date.

FRANCE

(Prepared by Dr. Domas Krivickas, senior legal specialist)

According to the provisions of Article 3 of Decree No. 66–180 of March 25, 1966, the labeling of dietetic products must contain mention of "the date of production or else the date limit for consumption and, if necessary, the precautions to be observed for the preservation of the product as established by interministerial order."[1]

Flavored milk (lait aromatisé). Milk containers should bear the following information:

An indication of the time of pasteurization and the period for use under conditions established by a joint order of the Minister of Agriculture and the Minister of Public Health and Population (Art. 5 quater of the Decree of March 25, 1924, as amended by Decree No. 55–952 of July 17, 1955).[2]

Coffee called "superior." According to the provisions of Article 4 of Decree No. 65–763 of September 3, 1965, the date of roasting must be marked on the label or wrapping. However, this date may be replaced by the date limit for sale to consumers.[3]

Powdered and dry milk. The Decree of August 24, 1961, prescribes that the date (year and month) and the place of production be indicated on the wrapping.[4]

"Gruyère de Comté" or "Comté" cheese. The month of production must be mentioned on the label.[5]

Canned Foods. The date of production must be indicated on canned food.[6]

FEDERAL REPUBLIC OF GERMANY

(Prepared by Dr. William Sólyom-Fekete, senior legal specialist)

Labels on prepackaged or canned food products have been regulated by the Gov-

Footnotes at end of article.

ernment of Germany since 1916.[1] Such regulations have often been the subject of changes and amendments during the past decades.

The Government of the Federal Republic of Germany most recently amended the provisions for the contents of such labels in 1966 through a decree.[2]

This Decree included amendments on the description of groups of different food products which are subject to similar rules of labeling requirements and also provided regulations pertaining to the indication of the date of production or the period of shelf life of perishable food products.

The provision of the Decree pertinent to the date of production reads as follows:

Section 2. (1) On packages or containers [the following] shall be indicated on an easily visible place in the German language in clear and easily legible writing:

1–3. [irrelevant]

4. in case of food products described in Section 1(1), Nos. 1–3,[3] the time of production of the food product given uncoded by day, month and year, or, if the food product is not packaged immediately after production for the purpose of delivery to the consumer, the time of packaging or filling; these data may be omitted if the time until which the food product may be stored is given uncoded by the day, month and year; in case of the products described in Section 3(2), Nos. 2 and 3,[4] the indication of the day, and in case of the products described in Section 3 (2), No. 4,[5] the indication of the day and month may be omitted.

ITALY

(Prepared by Kemal Vokopola, senior legal specialist)

Italian legislation on foods and consumer goods does not provide any general rule in regard to the period during which such foods and consumer goods may or should remain on sale.

However, Article 8 of Law 441 of February 26, 1963, amending the Unified Text of Laws on Hygiene and Health of 1934, states that regulations will eventually establish what food products and manufactured beverages should bear the date of their production.[1]

A law was enacted in 1951 with regard to the rules and regulations for the production and sale of baby food as well as dietetic food. This law requires that such products must show the date of production and the quality expiration date.[2]

SCANDINAVIA

(Prepared by Veijo Ollikainen, legal specialist)

A thorough search of Danish, Finnish, Norwegian and Swedish literature in the Library of Congress holdings did not disclose any laws providing for the dating of food packages or other consumer products for the period during which they may remain on the shelves of stores.

There is a provision dealing with dating packages of products sold retail * in Denmark, according to which "meat products may be supplied with information on keeping qualities or the last day they may be sold." This information is not mandatory. In some of these countries products such as butter, milk, fish, etc., must bear the date of packaging on the container.

SPAIN—CONSUMER PROTECTION REQUIRING DATE LIMITATIONS UNDER FOOD LAW

(Prepared by Helen L. Clagett, Chief, Hispanic Law Division, Law Library—Library of Congress)

Decree 2,484 of September 21, 1967 adopted Spain's new "Food Code," covering in its 38 chapters many detailed aspects on the handling of food and beverages and related activities. The first part of the *Código Alimentario* is concerned generally with applicable measures on processing, marketing, sanitary and health treatment, storage, transportation, additives and impurities, and other matters. The following chapters are devoted to specific categories of food, such as dairy products, meat, seafood, preserved or canned products, and to categories of beverages—alcoholic and non-alcoholic, coffee, tea, etc.

On the particular point of interest to this report, that is, the setting of dates beyond which a product should not be sold to or used by the consumer, the Code contains several instances of direct and indirect limitations of time.

Part II of the Code deals with general requirements and rules governing materials, their treatment, and persons in contact with the preparation, processing, distribution and consumption of food. Section 2.04.18 of this portion concerns dating controls in this manner:

The corresponding Regulations shall indicate, in addition to those specified in this Code [referring to data on labels], the manner and form in which they are to be consigned, expressed either in authorized figures or in code, showing the lot number, date of manufacture or date of canning, in the case of those foods requiring it; and for those whose contents may be altered or contaminated after opening, the additional warning must be included: "For immediate consumption once opened."

In the chapter of the Code dealing with aspects of food storage and transportation, the general rules for storing, under Section 2.06.02, include a condition under Paragraph (c) which reads: "The rotation of stock and periodic removal based on duration of storage and conditions required by each product for its preservation."

In the specific chapter dealing with eggs, milk and other dairy products, Section 3.14.15 deals with the imprinted data that must appear on the eggs, or on their containers, which reads as follows:

Preserved eggs [*conservados*—defined as being under a certain degree of refrigeration for more than 10 days, but less than 6 months] and refrigerated eggs [defined as refrigerated at specified temperature between 15 and 30 days] must be marked on each shell, in visible and indelible characters: a) the type of egg, as defined under Section 3.14.42; b) the date it was placed under refrigeration, or the means of preservation employed. . . .

Milk and milk by-products are governed by Section 3.15.06 of the Code. In setting forth hygienic requirements, different treatment is indicated for fresh milk when delivered directly to consumer, and when served elsewhere.

Paragraph (g)—Milk containers must bear on the main body of the container, or on its carrying strap, or on the opening, a stamp in clear and indelible letters stating the limitation date for its sale; [Refers to milk delivered to homes].

Paragraph (h)—The sale of sanitized milk for consumption at group centers or institutions may be made in containers of larger size [than ½ gallon] . . . with a stamp thereon indicating the date for limitation on its sale.

Other sections of this Code requiring a date stamp on containers or labels, or indicating notice of similar nature, relate to containers used for meat or vegetable preserves, or for prepared and seasoned foods in containers. Section 3.26.07 refers to indication of the dates when processed or canned, while Section 3.26.08 indicates requirement of vigilance as to the dates of entry or departure from storage places of this conserved food "pursuant to the time expiration of same, according to the local climatical conditions." Similar dating treatment is prescribed for breakfast foods requiring cooking, cereals made from dried grain, flour, powdered milk, etc., on which the label, according to Section 3.26.24, must express "the expiration date, when its preservation so requires it."

SWITZERLAND

(Prepared by Dr. Ivan Sipkov, assistant chief)

Under the Swiss Federal Constitution, the issuance of laws on trade in food products and consmer articles is within the jurisdiction of the Confederation; the execution of such laws is, however, a cantonal matter (Sec. 69 bis).

The basic Federal Act on the Trade in Foodstuffs and Consumer Goods dates back to as early as December 8, 1905,[1] but its original text was subject to a great number of amendments in the course of its over-sixty-years of existence.

There is no general provision in this Act which requires the dating of food and other consumer products for the period during which these articles may remain on the shelves of stores. Only the amendment of this Act of December 29, 1954,[2] states that every bottle of milk must bear an inscription or label indicating "the date of the production (*Gewinnung*) of the milk."

TEXTS OF COMMUNIQUES FROM THE AGRICULTURE ATTACHÉS

Following information keyed to questions raised in para 3 ref fasto:

A. The only Austrian regulation which sets forth labeling requirements re dating of food products is food labeling ordinance of 1963, details reported in A–41, dated Jan. 16, 1969. On the basis of this ordinance, a limited number of packed food products, besides other labeling requirements, must carry in uncoded form information as to date of packing, or show date up to which the food will keep under proper storage conditions. For a number of other food products, the date of packing in coded form is mandatory. There are no such requirements for unpacked foods. The food labeling ordinance became effective Jan. 1, 1970; foods packed prior to the date in a way that does not conform to provisions of the ordinance may be sold for one additional year.

The following packed food products must either show in uncoded form the date of packing, or the date up to which they will keep under proper storage conditions. (For foods marked with #'s, this date must indicate month and year of packing, or month and year up to which product should be consumed; for other food items, the indication of the year only is required):

Preserves from meat and other food preserves with meat added; partially preserved food products from meat or with meat added (#); preserves from fish and crustaceans, or

---

* Decree on the Sale of Certain Meat Products Sold at Retail of April 24, 1968, Art. 6, *In Lovtidende for Kongeriget Danmark 1968 Afdelning A.* Kobenhavn 1968. p. 234–245.

other food preserves with fish or crustaceans added; partially preserved food products from fish and crustaceans added (#); diabetic foods, including infant foods (#).

B. Prior to adoption of regulations which established open-dating labeling requirements for a limited number of packed food products, such dating was not practiced in Austria. However, code-rating of food preserves has always been customary among local canners.

C. Packed foods are exempt from labeling requirements provided that the total weight does not exceed the 50 gram mark.

D. Consumer representatives consider existing labeling regulations as first step toward their goal, i.e. the open-dating of all major food products. At present, consumer organizations are striving for inclusion of dairy products and margarine in existing labeling requirements.

Representatives of the food industry believe that consumers would reject open-dated products if food carried label indicating that it was either produced one or two years earlier but is still of good quality, or has to be used within a few months.

E. Reports from importers and wholesalers indicate that a number of foreign suppliers are not in position or are reluctant to label their products in accordance with Austrian regulations. Austria is considered to be too small a market to justify special labeling of food products. Since the responsibility to meet domestic labeling requirements rests with importer, a large number of them put aside bids for foods which are * * * with labeling specifications. Past experience shows that small foreign suppliers are more willing to comply with labeling regulations than larger firms. As result, some Austrian food importers now seem to do more business with small food exporters and packers than before. Price increases in connection with labeling of packed food have not been observed thus far by Austrian food trade.

F. The authorities are not yet in position to make an official assessment of the implementation and effectiveness of the ordinance, especially since it provides for transition period ending Dec. 31, 1970. Austrian authorities informed us inofficially that so far no major problems have occurred in connection with execution of the ordinance and that its operation is presently judged satisfactory. The inclusion of other packed foods in the food labeling ordinance is a possibility.

JANUARY 16, 1969.

From: AmEmbassy Vienna.
Subject: New Food Labeling Ordinance.
Ref.: OBR, No. 64-57, July 1964.

Under authority of the "Federal Law Against Unfair Competition of 1923", the Ministries of Trade and Agriculture recently issued an ordinance which establishes labeling requirements for a number of packed food products. The ordinance will become effective on January 1, 1970. Foods packed prior to that date in a way that does not conform to the provisions of the new decree may be sold in Austria for one additional year.

The packer or, in the case of a custom order, the individual or company placing the order is responsible for the observance of this ordinance. For foreign-made goods, the responsibility rests with the importer.

The 15 separate labeling requirements provided for by the ordinance call for (as informally translated from the text):

1. The labeling in wording of common usage which, together with other specifications, defines the nature of the food product;

2. (a) The name (or abbreviation thereof) and address of the producing, packing, or merchandising firm; in the case of foreign products, also the country of origin; or, (b) the label "Produced in . . ." with information as to the place and country of production;

3. The net weight according to the metric system, i.e. the average weight of the food product being packed; deviations due to packing technique and technology will be tolerated;

4. The net volume according to the metric system, i.e. the average volume of the food product being packed; deviations due to packing technique and technology will be tolerated;

5. The raw product filling weight (expressed in metric units) of the ingredients determining the product value at the time of packing, i.e. the quantity of fruit, fish, or meat (in the case of poultry, including bone weight) used in filling; deviations due to packing technique and technology will be tolerated;

6. Information as to the methods applied in the production of the packed food product. This includes such methods as pasteurization, sterilization, deep-freezing and dehydrating;

7. Information as to limited shelf life, stating "limited shelf life" or "for early consumption";

8. Conditions under which a product is to be stored, *in German language;*

9. Date of packing, or date up to which the food product will keep under proper storage conditions, in uncoded form:

(a) indicating month and year; or (in other cases):

(b) indicating the year; or (in other specified cases):

10. Date of packing in coded form;

11. A listing of vitamins added, by kind and quantity;

12. Information as to the average number of dishes (portions) which may be prepared from the packed food, or the quantity required for the preparation of a specific amount of food;

13. Information as to the average number of eggs or egg yolks contained in the product;

14. Information as to the number of pieces; deviations due to packing technique will be tolerated;

15. Information as to the cocoa content in weight percentages.

The ordinance also stipulates a few exemptions from the above labeling requirements. These are of minor importance, however. Finally, the labeling text must be clearly legible and in wipe-proof letters. If it is not possible or not feasible to place the information on the container or the package, it is permissible to place the required labeling near the packed foods on display. The labeling text must be in Latin letters and in Arabic numbers.

The following packed food items will become subject to these labeling requirements: (Numbers following the commodity description denote specific labeling requirements as listed above applicable for individual commodity groups.)

Preserves from meat and other food preserves with meat added; (1), (2), (3), (5), (6), (8), (9b), and (11).

Deep-frozen foods made from meat or other deep-frozen foods with meat added—excluding poultry (whole birds, plucked, with intestines removed); (1), (2), (3), (6), (8), (10), and (11).

Partially preserved food products from meat or with meat added; (1), (2), (3), (7), (8), (9a), and (11).

Preserves from fish and crustaceans or other food preserves with fish or crustaceans added; (1), (2), (3), (5), (6), (8), (9b), and (11).

Deep-frozen foods from fish and crustaceans or other deep-frozen foods with fish and crustaceans added; (1), (2), (3), (6), (8), (10), and (11).

Partially preserved food products from fish and crustaceans or with fish and crustaceans added; (1), (2), (3), (7), (8), (9a), and (11).

Vegetable preserves—excluding dry pulses; (1), (2), (3), (5), (6), (8), (10), and (11).

Deep-frozen vegetables; (1), (2), (3), (6), (8), (10), and (11).

Partially preserved vegetables; (1), (2), (3), (7), (8), (10), and (11).

Vegetable juices; (1), (2), (4), (8), and (11).

Fruit preserves—excluding citrus fruits, grapes and preserves of fruit falling within customs tariff number 08.05; (1), (2), (3), (5), (6), (8), (10), and (11).

Deep-frozen fruit products; (1), (2), (3), (6), (8), (10), and (11).

Marmalade (jam), fruit jelly; (1), (2), (3), and (11).

Fruit juices and fruit syrup; (1), (2), (4), (6), and (11).

Partially preserved fruit; (1), (2), (3), (7), (8), (10), and (11).

Diabetic foods, including infant foods; (1), (2), (6), (7), (8), (9a), (11), and, optionally, (3) or (4).

Meat extracts and extracts from other protein-containing products, products therefrom, substitutes for these extracts and products; (1), (2), (11), and, optionally, (3), (4), or (12).

Whole egg and egg yoke; (1), (2), (3), (6), (8), and (13).

Baking powder and pudding powder; (1), (2), (8), and (12).

Candies; (1), (2), (11), and, optionally, (3) or (14).

Chocolate in bars, blocks, etc.; (1), (2), (3), (11), and (15).

Chocolate products; (1), (2), (11), (15), and, optionally, (3) or (14).

Chocolate products in fancy shapes; (1), (2), and (3).

Bakery products with extended shelf life; (1), (2), (8), (11), and, optionally, (3) or (14).

Coffee, coffee extracts and their substiutes, tea, mate and their extracts; (1), (2), (8), and, optionally, (3) or (12).

Pastries; (1), (2), (3), and (13).

Pre-sliced bread, biscuit, bread crumbs; (1), (2), and, optionally, (3) or (14).

Rolled oats, oatmeal, oat grits, and oat flour; (1), (2), (8), and, optionally, (3) and (12).

Rice; (1), (2) and (3).

Edible oils and fats; (1), (2), (8), (10), (11), and, optionally, (3) or (4).

Comment: So far as we know, most U.S. food products packed for export to Austria already specify all or most of the information called for under this new ordinance. A few of the requirements may cause difficulties, however. The obligation to show weight in the metric system, storage conditions in German, and the date of packing or latest safe consumption in uncoded language could prove troublesome and expensive for some packers.

BRUSSELS

1. Belgium has no repeat no general requirement of opendating of food products. Only requirement this area is that mentioned by legislative reference service which applies to butter produced on farms classified first category. Date becomes in effect part of the control stamps. All other butter is not repeat not required to show date of production on package.

2. Food inspection division of public health ministry not repeat not in favor opendating of food products. States that most canned products such as peas keep indefinitely and opendating would tend to influence consumers to buy newest product first thus making a problem of moving older products. This might result in waste. Said that dating of semi-preserved products considered but that difficult to know exact condition of product when it preserved and if this done they would have to prescribe preserving methods to be followed.

3. Understand that EC commission considering the possibility of regulation requiring opendating but there is considerable

difference of opinion among EC countries and whole idea generally opposed strongly by food processing industry.

COPENHAGEN

The discussion below of current regulations applicable to opendating of food products in Denmark is limited by the short time available for pulling information together and the Danish vacation season.

The Law on Foodstuffs (No. 174 of April 28, 1950 and amendments) contains no overall requirement for open or code-dating of food products. Regulations on opendating or code-dating are not contained in any one single law or uniform decree but have been introduced for individual commodities as the need or demand developed. The regulations are in nearly every instance laid down in decrees issued under basic legislation by the pertinent Ministry involved in control of the specific commodities (Agriculture, Interior, Fisheries). More coordination among the authorities involved in food legislation is expected in the future. The following listing of products to which regulations apply on opendating is believed to be complete and shows the most recent applicable regulation. Code-dating has been included in the listing as in certain instances it may be supplemented or substituted by opendating. A copy of each regulation can be forwarded to Washington if desired.

In addition to what is required by regulations, a number of chainstores and supermarkets have voluntarily introduced opendating which goes beyond the requirements set forth in the legislation. This practice is spreading.

Milk: Ministry of Interior Decree No. 377 of September 13, 1967—Article 13, clause 1, item 3. *Day of the week of heat treatment* must be shown on the packaging. Exception for buttermilk and special milk products (yoghurt, etc.) where day of packaging (bottling) or final processing must be shown. On a *voluntary* basis, all milk sold in the Copenhagen area is marked with two dates, the day of heat treatment as well as last sales date (pull-date), which normally is 3 days after heat treatment day.

Ministry of Interior Decree No. 441 of December 5, 1967 (on Aromatizer Milk Products)—marking of cocoa milk and fruit yoghurt must be according to Article 13 of above Decree. For sterilized milk products, the *sterilization date* shown must include day, month and year. If last sales date also given, the date of heat treatment must be clearly shown.

Butter: Ministry of Agriculture Decree No. 295 of June 23, 1967, Article 5, clause 1, item 6, and Article 13, clause 2, item 5—revised by *Ministry of Agriculture Decree No. 93 of March 25, 1968. Date of manufacture* must be given on each individual retail package—applies both to domestic as well as export sales. Repackaged butter must show date of packaging on each retail wrapping. Effective date April 1, 1969.

Cheese: Ministry of Agriculture Decree No. 540 of December 3, 1969, Article 17, clause 1d. and Article 18, 1e. Applies only to sliced cheese, dried cheese products (powdered, grated, granulated) and processed cheese. *Date* or calendar week of *packaging* for sale to wholesale trade (sliced and dried cheese) or *date of manufacture* (processed cheese) must be shown on individual packages—however, may be in *code*.

Date-marking is not applied to other dairy products, such as ice cream, canned milk products, etc.

Eggs: Ministry of Agriculture Decree No. 295 of June 23, 1967, Article 7 clause 1 (marking of eggs) and Article 9, clause 3 (marking of retail containers)—revised by *Ministry of Agriculture Decree No. 430 of December 20, 1968*. Each egg of prime quality must be stamped with *code* defining week or grading (weekly codes are announced in daily press). Consumer retail containers (cartons, etc.) of prime eggs for sale on home market must be marked with *weekly code number* as well as *beginning and ending dates* of week in question. Effective date of latter regulation February 1, 1969.

Egg Products: Ministry of Agriculture Decree No. 341 of August 1, 1967, Article 6g. Applies to eggs without shell (fluid, frozen and dried). Packaging must be marked with *production serial number* so date of manufacture can be identified.

Meat: Law No. 189 of June 4, 1964, Article 7, clause 2, re Deep-Frozen Foods—*date of packaging* must be shown on ready-packaged, sliced meat products in retail packages (applies to "chilled" products).

Ministry of Interior Decree No. 369 of December 19, 1964, Article 6, clause 1f. re Deep-Frozen Foods, except Ice Cream—*month and year of packaging* must be shown; may be in *code* on *retail* packages but *opendating mandatory on wholesale* packages.

Ministry of Interior Decree No. 133 of April 24, 1968, Article 6, clauses 4 and 5 (note this is decree referred to in last para of referenced FASTO)—applies only to certain meat products in retail packages (salami, smoked pork backfat, sliced and chopped bacon and heat-treated sausages) and only to sales premises not approved as butcher and delicatessen stores. *Opendate* of packaging must be shown. Date of keeping quality limitation or last sales date *may be* shown.

NOTE.—New coordinated regulation by Ministries of Agriculture and Interior about to be issued which will apply to all prepared meat products and which will require showing of *packaging date* and *pull-date*. See also section on Deep-Frozen Foods.

Canned Meats: Serial production number must be stamped on base of can so date of manufacture can be identified.

Fish: Ministry of Fisheries Decree No. 6 of January 10, 1962, Article 32, clause 5, re production of fully and semi-hermetic fish products, etc.—*day, week or month and year of manufacture* must be shown; may be in *code* provided code approved in advance by Ministry of Fisheries' Industrial Board.

Ministry of Fisheries Decree No. 310 of September 1, 1966, Article 2. Applies only to semi-hermetic fish products—*opendate* of manufacture must be shown (i.e. code marking not allowed).

Ministry of Fisheries Decree No. 305 of August 13, 1968 re Ready-Packaged Fresh Fish and Fish Products in Retail Packages, Article 5, clause 4—*opendating of packaging* and *open last sales date* must be shown.

Ministry of Fisheries Decree No. 90 of March 31, 1965, Article 7, clause 5, re slightly-preserved fish and fish products—*open packaging date* mandatory.

Fresh Fruits: Ministry of Agriculture Decree No. 379 of July 25, 1969, Article V6—Packaging date must be shown on containers sold in wholesale trade—applies only to fresh apples and pears.

Canned Fruits and Vegetables: Ministry of Interior Decree No. 377 of December 19, 1959, Article 4, clause 1. Mandatory that labels on all *domestically-produced* items must show the *year of manufacture* expressed by the last two figures.

Marmalade, Jams, etc. Ministry of Interior Decree No. 97 of March 30, 1955, Article 5. *Date of week or date of month and year* mandatory for domestically-produced items—may be given in *code*.

Margarine (Dietary): Ministry of Agriculture Decree No. 162 of May 10, 1962, Article 5e. *Date of manufacture* (may be in *code*) as well as *last sales date* to consumers must be shown.

Deep-Frozen Foods: Ministry of Interior Decree No. 414 of August 21, 1969, Article 8, clause 1f.—the *month and year of packaging* of the retail packages must be given—may be shown in code determined by the Ministry of Interior on the retail packages, but in such cases the wholesale packaging must carry opendating.

Mayonnaise: Copenhagen Health Commission Decree of October 1, 1966—applicable to Copenhagen only. *Last date of sale* must be shown. May be extended to apply to whole country.

Regulation on mayonnaise and mayonnaise products presently being studied by special Interior Committee, which would require opendating of these products, but study not yet completed.

Opendating applies also to vitamin preparations and certain medicines but is not covered by this report.

There has been considerable discussion among trade and consumer groups regarding the opendating of food products but no final overall solution has been reached. In general, trade groups are opposed to government regulations requiring opendating, preferring to handle on a voluntary basis, while consumer groups are working actively for the declaration of last sales date, packaging date, and keeping quality deadline. Several supermarket chains have voluntarily introduced opendating, usually pull-date or keeping quality limits, on many items and this practice is spreading to other trade groups. It has been found to have consumer appeal and is believed to be an economic advantage to the stores in question. The authorities have taken the standpoint that voluntary action by the trade on opendating is preferable to government regulations.

In regard to the deep-frost law, the authorities' main concern prior to adoption was whether the "cool chain" could be maintained from producer/processor to consumer. This is, however, no problem today. Consumer organizations strongly recommended that the decree of August 1969 require opendating but this was not supported by the industry, and the final decree was a compromise.

The Home Economics Council carried out an investigation of semi-hermetic fish products in retail trade in 1965, which demonstrated that the product turnover rate was not sufficiently rapid. The investigation was a contributory factor to issuance of the decree on opendating of semi-hermetic fish products in September 1966.

It should perhaps be mentioned that Denmark is expected to support the Codex international proposal for labelling of prepackaged foods, which will be presented this year for acceptance by Codex country members. Although it was discussed, agreement was not reached on the inclusion of general regulations on opendating and the question has been referred to the individual commodity committees.

The Government Home Economics Council, a strong advocate of opendating of foods, prepared a document on the subject in November 1969, summarizing current regulations and attitudes. Informal excerpt translations of this paper are given below:

"The Home Economics Council regards it as a very important objective to work for the marking of keeping quality limits of a large number of consumer products, particularly in regard to food products, as it is a reasonable consumer demand that products bought retail are of satisfactory quality. Satisfactory quality not only means that the products are wholesome from the health standpoint but also that they have not become so aged that the flavor has markedly deteriorated.

"Legislative action is aimed primarily at assuring health aspects but unfortunately appears to do so to some extent at the expense of the product quality in general. Even though it is not directly injurious to eat dried-out frozen products and old bread, consumers cannot be satisfied with such products in a modern society where it is possible to regulate production, distribution and trade

for the improvement of quality on the market.

"The Government Home Economics Council has during the present decade worked for opendating in several ways:

"The Board of Health requested the Council on February 11, 1961 for a statement on the desirability of certain products being marked with, inter alia, the packaging date. In its reply, the Government Home Economics Council pointed to a number of products that should be date-marked. This applied to milk, cream, etc., eggs, butter, margarine, frozen products, mayonnaise and products, semi-hermetic products, consumer packages of fish, cleaned vegetables, and bread.

"For use in discussions on opendating problems in the *Nordic Committee on Consumer Questions*, the Council prepared a paper on September 21, 1963 on the positive and negative sides of various forms for opendating (this was revised on September 5, 1968). The discussion in the Nordic Committee in October 1963 concluded with unanimous support of opendating and recommended that the most suitable form for each commodity group should be considered.

"At the request of the Ministry of Interior on April 9, 1964, the Federation of Danish Industries issued a statement on December 30, 1964 on opendating in relation to the specific products mentioned by the Council above. The Federation believes that the marking of keeping quality need only be considered for a few products but agreed to some extent to the utilization of packaging date in code plus open packaging date on wholesale containers so that the trade can assure appropriate product turnover. The arguments against opendating include the factor that the raw materials, production methods, packaging, etc., result in such variation in keeping quality that the period cannot be set with any certainty, which might lead to the discarding of still usable products if the pull-date has been exceeded. . . . Exactly the same arguments are used by consumer groups in favor of opendating, as included in the Home Economics Council's comments of March 15, 1965 to the viewpoints expressed by the Federation of Danish Industries. The Council finds that opendating is becoming more and more necessary as the variety of products increases. In addition, manufacturers must be the ones who are most familiar with the qualities of their products.

"The Council's latter statement gave a detailed account of the Council's investigation of semi-hermetic fish products (Råd og Resultater med Tekniske Meddelelser No. 1, 1965) as an example of a non-dated product with limited keeping quality. Although this product has a keeping period of seven months, its rate of turnover is not sufficiently rapid. Cans one or more years old were found in several stores. Thirteen percent of the old cans purchased that were more than five months old needed discarding, which leads to the conclusion that at the time of the investigation semi-hermetic products to a value of about 200,000 kroner that should have been discarded were on sale in stores throughout the country. A cautious estimate indicates that about one million kroner's worth of this product is discarded each year and this is a product with a relatively small turnover. . . .

"The industry's arguments are surprising as it does not appear likely that opendating could make this situation worse. In addition, it would seem to be in the interests of the manufacturers that their products reach the consumer in a condition which invites a new purchase. The semi-hermetic investigation was instrumental in issuance of the decree of September 1, 1966 which required opendating of semi-hermetic fish products. . . .

"The Government Home Economics Council has prepared statements earlier on the opendating of consumer products which form the basis for the comments given below as well as the discussion that has taken place in the daily press of the eight forms of date-marking presently used.

"During the last few years, a number of chainstores and supermarkets have introduced the marketing of keeping quality (pull-date) on a large number of products on a voluntary basis. This initiative is welcomed by the consumers—it is a step in the right direction—but fewer, more appropriate forms of marking would be preferable. It would be easier for the consumer, and consumer institutions would be more strongly placed in relation to the legislative authorities if they were able to present concrete proposals in regard to the form of marking which ought to be introduced."

(The eight types of marking listed by the Council are: (1) date of manufacture; (2) date of packaging; (3) date of placement in cool desks; (4) control date; (5) date of heat treatment; (6) last date of sale; (7) "Also fresh until . . . (date) or period of keeping quality; (8) period for cool-desk life (for deep-frozen products).)

"While the industry claims that date-marking is unnecessary for brand items as both producers and retailers are interested in supplying good products from the quality point of view, consumer approach (to the Council) indicates that consumers often complain about the quality of the product because of the age of the product. It is unreasonable that consumers, who neither have any influence on the rate of turnover nor on storage conditions, should carry the risk of buying products which have deteriorated because of errors in producers' or retailers' turnover estimates. . . .

"Looking at the question of amount of desirable information, it appears that the pull-date (keeping quality deadline) supplemented by packaging date and period of keeping quality are the dates most acceptable from the consumer viewpoint; however, the packaging date should also be given for products which require maturing (cheese, semi-hermetic fish products). In order to trace non-acceptable products back to the production date, the packaging or manufacturing date—at least in code—is recommended."

The Home Economics Council also lists the advantages and disadvantages of the various forms of opendating as well as a summary of opendating in Sweden, but lack of time prohibits translation. If this information is desired, please let us know.

HARLAN J. DIRKS,
Agricultural Attaché.

PARIS

Repression des fraudes laws passed by French assembly place responsibility of selling only safe, edible foods on manufacturer and retail distributor. Administration has assisted industry in meeting such obligations by establishing measurable criteria. Ref. dating of food, manufacturing dates were first used, and for some products are still used, i.e., canned items. Milk and dairy product were historically consumed by children and aged people. High sickness and death rates in children from unsafe milk and dairy products led government to impose date of consumption markngs on most dairy products to aid mothers in purchasing such items.

The repression des fraudes, Dairy Producers Association, Consumers Technical Institute, Food Retailers Association, not aware of any studies on economic effects of regulations. The repression des fraudes has not done any "in house" evaluation of these operations.

Additional information including pertinent regulations contained in our aircomm pouched to FAS/W on July 31. Copy of Aircomm sent open mail to Engebretson.

PARIS

Enclosed are copies of information on date-marking in response to ref FASTO. These include: (1) Copy of the Law of 1905, on which government administrative actions are founded; (2) Regulations referring to coffee; (3) Regulations on canned and semi-processed foods; (4) Dating of certain cheeses which is an industry ruling—not government; (5) Regulations on hamburger; (6) Explanations of dating code for use on canned foods; (7) General background on Repression des Fraudes—why it was brought into existence; (8) Remarks by Institute Technique de Consumption on labeling.

We were not able to obtain published reports or notes concerning background information on the adoption of such regulations as we were told there are none. The government invites interested parties to a round-table discussion and determines the regulations to be issued after such meetings. No public hearings are held.

Exception Question (e) paragraph (3) rather broad. In dairy industry-butter (except butter made from pasteurized cream) and ice cream not currently covered, as well as aged cheeses. Fresh produce is not covered nor pasta products. Frozen products are marked-as-to-year and date-of production.

Consumers have not been aware of requirements until recently and do not seem to have an opinion except wonder what dates mean. This is caused by a lack of consumer education. Trade groups satisfied as they were heavily involved in decision making meetings.

Economic effects—All responses to this question were that no analyses have been made but feelings were that it was small. It has caused some small retailers to be more accurate on estimating sales volume and in some cases to group purchases with other retailers. It has also increased the returns of expired items to the manufacturer but it is not known how much.

The Repression des Fraudes told us that they do not have sufficient staff to properly carry out the surveillance, let alone do a study assessing their operation.

We hope the above information is helpful. Some people handling this question were on vacation. If more information is wanted, please let us know.

FRANK A. PADOVANO,
Acting Agricultural Attaché.

GERMANY

1. The following points are in response to your fasto 151 concerning the open-dating of food products in Germany:

A. The provisions for open-dating of products are included in (1) the food labeling ordinance (Lebensmittel-Kennzeichnungs-Verordnung) of May 8, 1935, as amended February 25, 1970, (2) the butter ordinance (Butterverordnung) of June 1951, as amended July 31, 1967, (3) the EEC regulation on marketing standards for eggs, No. 16 19/68 of October 15, 1968 and (4) the first implementing ordinance to the milk-law of May 15, 1931, as amended December 9, 1968.

The above mentioned ordinances basically provide open-date labeling for the following major food products: butter, canned and packaged meats and fish products, certain sterilized, dried and canned dairy products and fresh milk and eggs.

2. B. A campaign for the adoption of open-dating for food products was originally started by the consumer association as early as 1962/63. It was based originally on the relatively frequent cases of spoilage experienced with semi-preserved fish products. In contrast to fully preserved foods, which are usually canned and/or heat sealed, semi-preserved foods have a limited shelf life and require refrigeration. They are usually treated with chemical preservatives. At that time, consumers and retailers did not realize that these semi-preserved products have

a substantially shorter shelf life than fully preserved products. Also, more and more prepacked items, such as prepacked sliced sausage, ham, hard and semi-hard cheeses, etc. which vary considerably in shelf life were being introduced in Germany and the need to inform the consumer re shelf-life was intensified. This problem was taken up by the Bundestag, which on Dec. 6, 1963 decided that the ministry of health should prepare draft legislation establishing open-dating for certain foods (Bundestagsdrucksache IV 1623). The first action, however, was taken by the ministry of agriculture, which established an amendment to the butter ordinance providing for open-date labeling on butter, i.e. the day of packaging. This decision represented a compromise between the consumer associations request to show the production date of the butter and the industry which advocated maintaining a coded dating of the day of packaging, which at that time was the general practice.

The Ministry of Health then prepared a draft amendment to the "federal labeling ordinance" requiring open-dating for certain meat and fish products (for details and comments see agr. 11 of July 22, 1966).

As a result of the most recent amendment to the labeling ordinance, February 25, 1970, certain sterilized, dried and canned dairy products also became subject to open-date labeling.

The processor in the case of domestic products and the importer in the case of imported products is free to choose to either put the open-date of production or the expiration date of shelf life of the particular product on the package. So far only packaged products are subject to open-date labeling. In the case of eggs, the date of packing (i.e. 1 up to 52 depending on the calendar week) the eggs were packed, must be shown on each carton.

3. C. The legislation does not provide for exceptions for those product groups subject to open-date labeling. However, many of the larger product groups are not yet covered by open-date labeling provisions, eg. fresh and processed fruit and vegetable products, all bakery products, chocolate, fats, (other than butter) and numerous other products which have almost unlimited shelf life. The federal ministry of health, however, plans eventually to also include bread into the group of foods subject to open-date labeling.

4. D. Originally trade associations advocated against the adoption of open-date labeling, stressing the possible difficulties for the whole-sale and retail trade which might occur through consumers selecting the freshest products and leaving the older, but still well within the limits of shelf life. However, according to information obtained from trade associations, none of the difficulties at first anticipated, except during a short transitional period, apparently materialized. The trade now generally accepts the idea of open-dating. Consumer acceptance of this action was relatively good though a fairly large number of consumers do not yet, make full use of the dating. It is the general feeling in government and industry circles that the consumer still must be further educated as to the meaning of these dates and even more so about the importance of the proper storage of the dated products.

5. E. Contrary to the relatively positive statement obtained from the trade associations, the food processing industry stresses that many food processors had to increase prices as a result of open-dating. This development is reportedly due to two cost factors: (1) the additional cost of installing the dating machinery and the continuing dating adjustments and maintenance and (2) additional costs such as more frequent delivery of products etc. which apply heavily to processors. This goes so far that the trade requests the processor to take back products getting close to the expiration date of shelf life and replace them with fresher products. This is usually done by the processor, who in turn includes a corresponding loss factor into his price calculations. This factor varies considerably from product to product depending on the additional delivery costs etc. and no one seems willing to estimate the degree of price increases attributable to date labeling. Most contacts, however, agreed that the introduction of open-date labeling has generally improved product quality and freshness.

6. F. The Federal Ministry of Health has not made any official assessment of the effects of open-date labeling on food products. They have, however, indicated that open-labeling has generally had a positive effect, particularly from the point of view of the consumer, in spite of the limited price increases.

ITALY

The following is the situation regarding open-dating of food products in Italy.

1. Article 8 of law No. 283 of April 30, 1962 was amended by article 5 of law 441 of February 26, 1963 with a proviso that regulation concerning dating will be issued in the near future listing all food items that have to show on their labels the date of packing (unspecified whether a code date or open date). Neither the regulation nor the list of food items concerned has as yet been published.

2. According to some sources we understand that the ministry of health has a proposed regulation drafted which is currently being circulated to other ministries for their concurrence. No comments or action are anticipated before September. It has been also brought to our attention that confindustria (the industrialists association) has already started a move to reduce the number of items to a minimum. The proposed draft refers to code dating only.

3. According to article 9 of presidential decree No. 578 of May 30, 1953 all baby foods are required to carry label declaration showing date of production and the extent of safe period based on the judgment of high commission for health and hygiene. Actually present labeling shows only open date of the expiration date.

4. According to article 30 of law 994 of May 9, 1929 the law required that bottles containing milk for human consumption must visably show the date of bottling. However, article 3 of law 1504 of August 11, 1963 and circular 158 of August 1968 indicate that either bottling date or expiration date are acceptable. In practice, however, an open date is used on tetrapack indicating the quality expiration date.

SPAIN

1. In response to Congressman Farbstein's interest, Embassy representatives have completed brief but extensive study Spanish regulations relative to dating food products for Spanish market.

2. Codigo Alimentario Espanol cited by legislative reference service in Reftel was approved through decree 2484 September 21, 1967. However, this decree specifically limits itself to approval text of food code. Decree requires Spanish council of ministers to take further action before distinct parts of code enter into effect. This has not yet been done and no one will hazard a guess as to when it will be done. According to trade, the various Spanish syndicates (tripartite labor, management and government organizations which control all economic activity within specific lines) related to food processing are now currently adapting their various regulations to the provisions of the code. Even these regulations are not being effectively enforced at this time. In absence compelling force, trade apparently relying upon individual company policy relative to dating, with result that practices vary widely fro no date, coded or open, to consumer recog nizable open dating. This latter practic rather limited and date not too precise. Ma jor packers are generally code dating in ord be able determine production date and batc their products.

3. Food industry is governed by countles official regulations which are not codifie and are widely dispersed through at leas eight of the aforementioned syndicates re sponsible for various groupings of food prod ucts such as flours and breads, edible oil fish and fish products, meat, meat product and dairy products, candies, etc. within tim limitations established by Reftel, its impos sible to determine dating requirements thes various regulations. In response to embass staff inquiry, pertinent syndicates were un able to produce codified or other compre hensive compilation official food processin regulations including requirements for da ing in any form, that may be applicable the constituent firms. Spot check of local super markets failed to indicate any extensive c consistent pattern application of produc dating.

4. Codigo Alimentario Espanol is result o four year study by special commission plu two year subsequent consideration by inter ministerial committee. This action result o long felt need for efficient government con trol over wholesomeness of canned and othe preserved foods to protect consumers fro overage products. According directorate ge eral of health, the office officially responsibl for policing trade, consumers have welcome this system because they believe it consti tutes protection for their health an welfare. Trade, on other hand, feels con sumers not too concerned about dating a voluntary basis seriously limits extent thi practice.

5. One important spokesman for trade re ported his firm would like to see food cod officially implemented as he feels would giv him competitive advantage since his organi zation presently able to meet requirement code. He believes Spanish food code possibl best piece of legislation in its field, not onl in Europe, but possible in world.

6. If Congressman Farbstein or Washing ton agencies desire them, additional copie Codigo Alimentario Espanol can be mad available at approximately $1.20 per cop

---

SWITZERLAND

1. The Swiss food control regulations re quire open dating of only a few food prod ucts. Milk and dairy products, dietetic food and meat products in retail packages fa under this category. Reason for open datin these products is quite obvious since the are the most perishable foods.

2. Besides this compulsory open datin voluntary open dating is gaining importanc Big cooperative retail chain migros went int open dating of most of their food product except for the very stable products lik canned fruits and vegetables. Other firm are also open dating a variety of foods lik potato chips, dried soups, biscuits etc. Thi practice has been welcomed by consumer wh is thus ensured fresh products. Most commo dating system is "to be sold until . . ."

3. Swiss food control commission is cu rently studying a food declaration syste under which all ingredients of product woul have to be declared on the label. Compulsor declaration is already applied for variety o colors, preservatives and additives. Commis sion might take up at same time compul sory open dating of all food products.

UNITED KINGDOM

We are informed by Ministry of Agricul ture, Fisheries and Food that no regulation on the dating of food for consumer protec tion exist in the United Kingdom. Protectio provided in the Food and Drugs Act of 195 which makes it an offense to sell food whic

would be harmful is considered adequate. Nevertheless, certain firms voluntarily print on their packages the date by which the food should be eaten and/or cooked, for example, bacon, cooked ham and some other meat products. This voluntary dating is provided as a service by the manufacturer to both the retailer, as an aid to stop rotation and to protect them from the possibility of selling stale or decayed food, and to the consumer.

Code dating on cans and other packages is commonly practised in the United Kingdom, but only as an aid to manufacturers and distributors, again for stock rotation purposes.

Therefore, questions B, C, D, E and F do not apply in the absence of regulations. Mrs. Joyce Butler, M.P. for Wood Green in London conducts an assiduous campaign for the introduction of such regulations. While Mrs. Butler has been successful in some field (U.K. Trade Descriptions Act is due in large part to her pressure on the last Government), there is as yet no sign that she will be successful in geting dating regulations introduced.

We wonder if the reference to legislation found by Library of Congress refers to private members bill, the labelling of food and toilet preparations bill, bill 52, given first reading House of Commons and printed December 4, 1969, sponsored by Mrs. Butler. Under procedure for private bills in House of Commons little time is made available unless backed by Government; No Government backing for this bill. The bill was again due for second reading March 5, March 13, March 20, April 10, April 17 and several subsequent dates. On each occasion bill objected to and deferred and the prorogation of Parliament prior to election, June 18, meant uncompleted bills automatically lapsed. In requesting copy of the bill, we learned that copies of all lapsed bills are disposed of and are unavailable. That is the case with this bill.

[From World Health Organization-Food and Agriculture Organization of the United Nations, *General Food Labelling Provisions*, May 7, 1965]

IV (v)—Is the date of packing or production required on packages, and if so, in code or otherwise?

The date of packing or production, or both, is generally required in Spain, in Pakistan, and in Yugoslavia, where the time limit for use must also be given for perishable foods.

In a number of countries the date of packing or production is required for specific foods, as shown:

(Canada, India, Luxembourg, and the United States excluded since their dating requirements are limited to coded dating.)

Australia: Under Commonwealth legislation on imports and exports, imported food is subject to special requirements including disclosure on the label of the date when the food was packed. The date is required in *Queensland*, only for bottled milks, infant foods and oysters removed from shells, and in *Western Australia* for infant foods. In *New South Wales* the date is required only for infant foods, pre-packed meat and oysters in glass containers. No dates are required in *Victoria* or *Tasmania*.

Chile: Dates are required on margarine; foodstuffs for medical uses, including flour products for infants; foods for animal or plant origin in cans or glass containers; frozen foods of animal or plant origin; meat sauces; concentrated broth; powdered eggs; smoked fish; sausages in general except Vienna sausages, for which the date must be shown on the container for distribution; milk in all forms except pasteurized milk, on the containers of which only the name of the day of distribution need be shown; cheeses; containers for the distribution of small cheeses and for the transport and distribution of oysters.

Denmark: Deep-frozen foods (month and year; may be in code); milk and cream; lurbrand butter (date and year); fish, fish products and semi-preserved fish products (week, month, year; may be in code); fish fillets (date of production; may be in code); cheese (date or week; may be in code); eggs (in code); fruit and vegetable preserves (week or month, year; may be in code); apples (date of packing).

France: Certain perishable foods (yoghurts, fermented, flavored or powdered milks, cheeses); preserves and semi-conserves. The indication is almost invariably in code.

Germany (Fed. Rep.): Vitaminized foods; dietetic foods, and (since 1 April 1965) butter.

Greece: Dried currants (year of harvest).

Israel: Most standardized foods; all foods intended for export; preserves in hermetically-sealed containers; cereal products in quantities greater than 10 kg. The date of production is to be furnished; for cereal products, the date of import must be added. For standardized foods, the day is indicated on plum preserves and sauerkraut, a less precise date is accepted in the other cases, indicating the production season (which runs officially from November to April for citrus and certain other fruits).

Netherlands: Pasteurized milk products.

New Zealand: Butter and dairy products, such as pasteurized cream and milk.

Norway: Cold cuts, bacon and pre-packed foods in sealed packages in plastic, etc., must bear the last date for consumption (i.e., the date until which the product is guaranteed to maintain its quality). Codes may not be used.

Portugal: Flour (packaged or for bread-making); pasteurized milk; margarine.

Sweden: Cheeses other than fresh or processed cheeses must bear the date of curdling; salt herring sold otherwise than on retail premises (year and month during which salting took place).

Thailand: Canned foods.

Turkey: Perishable foods (date of manufacture).

In Argentina, the label must state, if appropriate, that the product is for immediate consumption. In certain cases (e.g., peaches *au natural* and tomato preserves) the expiration date must be given.

In Austria, the production date must be shown in code on bagged wheat and rye flour and semolina (by giving the number of the milling lot). The production date of butter, evaporated or powdered milk, and casein must be shown, in code or ordinary terms. The Dairy Economy Board may require the date, in code or ordinary terms, on rendered butter. The date, in ordinary terms, or the number of the loaf, must appear on Emmonthaler, mountain and Alpine cheeses.

In Finland, the last permissible day for sale must be indicated for milk. Dates may be given in code in some cases in Canada, Luxembourg and the United States of America.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

SENATE—*Friday, August 21, 1970*

(Legislative day of Thursday, August 20, 1970)

The Senate met at 9 a.m., on the expiration of the recess, and was called to order by the Acting President pro tempore (Mr. METCALF).

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Breathe on us, breath of God.
Fill us with life anew,
That we may love what Thou dost love
And do what Thou wouldst do.

In the silence of Thy presence, cleanse us, refresh us, and in the toiling hours yet to come be our companion and our guide. Keep us from parading our piety, or from the worse hypocrisy of pretending to be worse than we are. For we are the sons of Thy creation and redemption—born to be free and in freedom under Thy rulership to guide our own destiny. We need Thee, O Lord. Every hour we need Thee.

Strengthen our weakness, control our emotions, calm our anxieties, allay our fears and fill us with the hope of the gospel, that we may have the wisdom and character for the living of these days.

In the Redeemer's name. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Thursday, August 20, 1970, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE CALENDAR

Mr. MANSFIELD. Mr. President in the interest of time, it is the intention of the joint leadership not to call up unobjected-to items on the Legislative Calendar today.

ORDER FOR ADJOURNMENT TO MONDAY, AUGUST 24, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 11 a.m. on Monday next.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(Subsequently, this order was modified to provide for the Senate to adjourn until 10 a.m. on Monday.)

ORDER FOR RECOGNITION OF SENATOR FULBRIGHT ON MONDAY NEXT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that on Monday next, following the disposition of the Journal and the unobjected to items on the calendar, and after the unfinished business has been laid before the Senate, the distinguished Senator from Arkansas (Mr. FULBRIGHT) be recognized for 1 hour.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from New York (Mr. JAVITS) is now recognized for 30 minutes.

Mr. MANSFIELD. Mr. President, will the Senator from New York yield to me so that I may proceed for about 2 minutes?

Mr. JAVITS. I am glad to yield to the majority leader.

THE VICE PRESIDENT'S SPEECH IN LOS ANGELES

Mr. MANSFIELD. Mr. President, it is my understanding that the distinguished Vice President of the United States, SPIRO AGNEW, the Presiding Officer of this body, made a speech in Los Angeles on yesterday. According to a report in the Los Angeles Times, he is supposed to have stated that the press would headline the speech not as he would like it—a speech in support of the candidacy of our distinguished colleague from California (Mr. MURPHY)—but would instead probably label it to the effect that "Agnew Assails Mansfield and O'Brien."

Mr. O'Brien can speak for himself. The Senator from Montana can speak for himself, as well.

Evidently, the reference is to some questions raised by the Vice President about a speech which I made on the economic state of the Union. It was delivered pursuant to the unanimous request of my Democratic colleagues, following a report on the same issue by the President of the United States.

In my speech, I indicated that $375 out of each $1,000 which the administration spends for every American man, woman, and child goes for military spending while, at the same time, only $7 of each American's $1,000 is being spent for health and mental health research; $7.50 for elementary and secondary education; $5 for urban renewal; $4.50 for air and water pollution control; $1.40 for vocational education; 50 cents for education for the handicapped; and $2.40 to assist State and local governments in combating crime. In citing these figures, I had hoped to convey to the American people the misplaced emphasis of our national priorities.

Mr. President, it is reported that Mr. AGNEW referred to these figures taken from data in the budget saying they "are essentially correct," but that they "do not give a complete or accurate picture of comparable efforts in the categories mentioned."

I am delighted that the Vice President did say that the figures used by me "are essentially correct." The Vice President is entitled to his opinion, just as I am, and just as every other Senator is.

I wish to make the record clear. I do not consider this as a personal attack upon MANSFIELD. I am particularly delighted that the Vice President acknowledges that the figures used are essentially correct.

I would hope that if and when we debate the economic and other issues, we would do so not on the basis of personalities but on the basis of facts and figures. Though they may be interpreted differently by different individuals, the figures are a matter of record. Furthermore, any differences between us should be placed on a high plane, to the end that we will maintain the dignity, the integrity, and the dedication of the Senate as a body, of Senators as individuals and, may I say, of the Vice President himself, as the Presiding Officer of this institution.

Mr. President, I ask unanimous consent to have printed in the RECORD the speech which I made detailing the figures referred to so that the whole story can be told so far as the Senator from Montana is concerned.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE NATION'S ECONOMY AND THE CONGRESS

It is unusual for a Member of Congress to report in this fashion to the people of the Nation. I do so because the circumstances are unusual and so, too, are the times. The matters to which your attention is directed affect every American. They hang over every deliberation of the Congress.

The Congress, I might say, was established by the very first article of the Constitution. Along with the executive and the judiciary, it is a coequal branch of the Government of the United States. Your Representatives in Congress—Members of the House of Representatives and of the Senate—are there to do a job for you. In the main, it consists of writing the laws. You have a right to know how that job is being done.

I speak with you today as the elected leader of the majority of the U.S. Senate and with the concurrence of the majority leadership of the House of Representatives. In recent days, you have heard from the President on the state of the Nation's economy. It is on the same matter that I ask your attention.

Three words say a great deal about the Nation's economy: inflation, unemployment, and war. Whether the term is used or not, these words spell recession. That is today's fact. It is not a political fact. It is an economic fact. References to the mistakes of the past cannot paper over it. The rhetoric of a radiant tomorrow does not alter it. To be sure, much of what transpires now began in an earlier time. We may regret it but we cannot undo it. To be sure, the basic strength of the American economy promises a great deal. But that is for the future. What of today? What of the now?

Inflation is still with us; it is still rising. Three years ago prices were up by 3 percent; 2 years ago by 4.6 percent. Last year they rose 6.1 percent. In recent months the increase has been at a rate of 6.3 percent. Interest rates have climbed to highs not seen in over 100 years. Today it costs a builder 10 to 11 percent in borrowing costs to finance the construction of a home. To finance its purchase, home buyers put up another 9 percent or more in interest charges. Even at those inflated rates, mortgages are often impossible to obtain.

Five years ago the typical monthly payment on a $20,000 house was $115. To buy the same house today takes an outlay of $205 a month. Inflated costs and higher interest rates represent the difference. Recently the administration's Secretary of Housing and Urban Development put it bluntly: he said that 80 percent of the American people cannot afford to buy a new home.

Unemployment climbs steadily, from 3½ percent a year ago to 5 percent-plus last month. There are over 1 million more people out of work now than there were last year. In farming, there are a quarter of a million fewer people employed. The price the farmer is paid for his crops has actually declined since 1968 but his costs have increased by 10 percent. The take-home pay of factory workers has fallen. Corporate profits are $10 billion lower than they were a year ago. Stock prices have slumped.

Homebuilding was at the low rate of 1.5 million new units a year ago. It has slipped still further to 1.2 million. That is less than half the 2½ million new homes needed each year to keep up with the growth of new families. It is less than half of what this Nation set as its housing goal to replace substandard housing 2 years ago.

In short, the things which should be going up—home building, take-home pay, and real economic growth—are coming down. At the same time, the things that should be coming down—such as interest rates, the cost of living, and unemployment—are going up.

Congress shares the responsibility for correcting these discouraging economic trends which started under previous administrations. To be sure, the Congress has not concurred completely in the President's approach to them. Nor has the President responded to all of the actions of the Congress. That is neither unprecedented nor undesirable. Each branch has its separate responsibilities even as each branch shares in a common obligation to the people of the Nation. When there are differences, insofar as the majority leadership is concerned, it will not waste time in political recriminations. It will concentrate, instead, on doing what can be done in the Congress.

In my judgment, much of what can readily be initiated by Congress to improve the economic situation has been forthcoming. Congress has required no prompting from any quarter, for example, to make cuts in the administration's budget as a counter to inflation. Overall spending for this fiscal year was reduced by $6.4 billion. To repeat: Congress did not increase the administration's budgetary requests; Congress made a $6.4-billion reduction.

Acting on its own, Congress passed a selective credit control law last December. The law gives the administration authority which can be used to bring down home mortgage costs. I do not know why that authority has not been used by the administration; nor do I know, if the legislation is unsatisfactory, why a legislative alternative to reduce mortgage rates has not been requested by the administration.

Acting on its own, Congress last year passed a general Tax Reform and Reduction

Act. Tax loopholes of $6.6 billion were closed. These savings were converted into lower taxes for all Americans. Millions of persons on low and fixed incomes will get the principal benefit of these changes, which will begin to take effect in the months immediately ahead. This initiative was, first, ridiculed as impossible to achieve, then, enactment was resisted. Now the Tax Reform and Reduction Act is embraced. The fact is that its benefits will be no laughing matter as they begin to flow to persons dependent on moderate salaries or other fixed incomes.

Congress can cooperate with the administration in dealing with the problems of the economy. We have done so and we will continue to do so. We can provide the President with specific authority to take action. We have done so and we will continue to do so.

We can support the President if he wishes to use the persuasion of the Presidency, for example, as a means of discouraging excessive price and wage increases. That persuasive power has yet to be tried. It is not clear why it has not been tried. Its effectiveness was demonstrated in 1962 when prices were rolled back in a basic industry by the determined efforts of the President at that time. As a result, other industries held the price line, the economy avoided inflation and experienced a sound and dynamic growth. By contrast, without Presidential intervention, prices in that same basic industry have been raised four times already this year—and the year is only half over. Other industries follow suit. The dollar loses value both at home and abroad. Millions of Americans are caught in a vise of higher prices and declining incomes.

Congress has already given more authority to the President than he wishes, apparently, to use against the rise in prices. That is his option. I do not criticize his decision. But the record should be clear. Congress has been ready and stands ready to cooperate with the President. We are prepared to move on any proposals which may be forthcoming from the administration to end the inflation and to check the slide into a deepening recession. We need concrete proposals for today. We can hardly act on either the administration's rejection of what was done yesterday or on the administration's assurances of what will emerge tomorrow.

Last Wednesday, President Nixon announced the formation of a National Commission on Productivity. It is a welcome initiative. The commission will gather the information on the basis of which wage and price changes can be measured—guidelines for control of inflation. The concept of guidelines, however, has not yet been accepted by the administration. If it is not, then for what purpose will the Commission function? What is the value of a commission in controlling inflation if its work is not subject to use as a yardstick to persuade all who require persuasion to stay within established limits?

Congress cannot very well call to the attention of particular business and labor leaders the consequences of excessive price and wage increases. But the Congress can and, I am confident, will support the President should he decide to do so.

Congress cannot itself draw up and administer a set of guidelines for reasonable wage and price behavior on the part of industry and labor. But Congress can and, I am confident, will, support the President if he chooses to do so.

In short, Congress can and, I am confident, will, support initiatives of the administration which are designed to reverse the whole psychology of inflation.

For its part, Congress, as I have noted, cut $6.4 billion from the administration's budgetary requests last year. Further cuts below the President's spending requests are to be anticipated this year.

For this part, Congress is attempting to assist the housing industry. The Senate began work last February on the Emergency Home Finance Act, a measure conceived by Congressman PATMAN and Senator SPARKMAN which now has the support of the President. It has passed the Senate unanimously. The House has scheduled action on the measure tomorrow.

Congress will provide funds for expanded manpower training programs to equip the unemployed and the disadvantaged for jobs. The President has requested it. It will be forthcoming.

The Congress will enact improved unemployment compensation, as the President has requested. Indeed, both Houses of Congress have already acted, and final passage of this authority awaits only the formal approval of details to be worked out between the two Houses.

The willingness of the Congress to work with the President reaches beyond efforts to stop the downward drift in the economy. The fact is that the economic uncertainty today is only a reflection of a deeper concern. The root of our economic difficulties lies in the distorted use of the Nation's resources. We are casting vast quantities of these resources, for example, into the continuing war in Southeast Asia—the estimates are over $26 billion a year, not to speak of the tragic loss of young lives.

We are using our resources at a reckless rate and with dubious wisdom in other places and in other ways.

Government spending, to put it bluntly, is seriously out of date. It is not how much is being spent. It is how it is being spent. Priorities are still determined largely by yesterday's fears and fallacies. They scarcely meet today's urgencies. They only begin to perceive tomorrow's needs.

If there is an overriding imperative, it is to readjust these national priorities—these allocations of Government expenditures. It will take a great and painful effort to make the changes. Yet, they must be made, if this Nation is to have a strong economy, a healthy people, and a livable environment. It is a matter of emphasis.

How we choose has much to do with what we conceive to be threats against the national security. To be sure, we are strong militarily, and we use by far the greatest share of the taxpayers resources to maintain the Defense Establishment which provides that strength. But while the security of a nation depends on a sophistication of arms, it depends, too, on the inner stability and unity of the nation.

Nations may be attacked from without. They may also crumble from within. For 5 years we have put great emphasis on protecting the Nation from the inhabitants of Vietnam, Laos, and now Cambodia. In the meantime, what of the attacks on the very livability of our cities and their surrounding suburbs? What of the growing pollution of the environment? What of the mounting array of domestic difficulties? Crime? Transportation? Railroads? Drug addiction? Power shortages? Educational needs? Racial tensions? Health? Have any of these difficulties yet been brought under reasonably secure control? Will they stand still, awaiting some undefined solution to the war in Vietnam when, presumably, sufficient resources will be released to permit them to be dealt with without inflation? Will they remain quiescent, to the end that the United States may first be enclosed in a web of antiballistic missiles at a cost of billions of dollars which may or may not act to protect us from a missile attack which may or may not come before the system is obsolete?

Every dollar spent by Government whether for Vietnam or for weapons or whatever comes from you, the taxpayer. For every man, woman, and child in the United States, the administration now requests about $1,000 in spending. How and where each $1,000 is spent sets the Nation's priorities.

For the coming year, of each $1,000:

About $7 is requested for health and mental health research;

About $7.50 for elementary and secondary education;

About $5 for urban renewal for our cities;

About $4.50 for air and water pollution;

About $1.40 for vocational education;

About $0.50 for education for the handicapped;

About $2.40 to assist State and local government in their fight against crime;

Over $375 for military defense.

Consider that just the cost overrun—that is, what was actually paid above what was quoted to the Congress as the initial price tag—for a single airplane—the C5–A cargo plane—has cost each American $10. Consider as well that it costs every American today $70 a year to back and maintain in Europe the several hundred thousand U.S. forces and their dependents who are still there—25 years after World War II.

These illustrative examples clearly demonstrate where the emphasis in Federal spending has been placed for many years. For too long, we have pursued the Nation's security all over the globe. For too long, we have forgotten that national security begins at home. It has taken the tragic war in Indochina to show us that our resources are not unlimited. Our wealth is not endless. Inflation and recession are a part of the price of this overdue insight.

As I have noted, Congress has begun to deal with the reality of our limited resources by reducing Federal spending by $6.4 billion, I must say, also, that the President reduced expenditures by $3 billion and I commend him. By far, the greatest share of the congressional cut was taken for defense spending and the foreign aid program. Foreign aid alone was cut by $1 billion. Of the $32 saved for each American, Congress attempted to reallocate $5 to pressing needs in health, education, and the protection of the environment.

That is what has been labeled in some quarters as inflationary and irresponsible. Let the most be made of the labels. For those reallocations, there will be no apology from the congressional leadership. Nor will the Congress be deferred from trying to meet essential domestic needs of this kind by charges of isolation or neoisolation. There is not a Member of the Senate who believes this Nation can turn away from the international problems of peace without devastating consequences to this Nation and the world. By the same token, the neglect of needs at home will no longer be accepted in the name of some vapid internationalism such as we have witnessed on the mainland of Asia during the past 5 years—well over 50,000 American lives later, a total of 331,000 casualties overall, and well over $100 billion in resources later.

The congressional majority seeks to cooperate with the President in an effort to readjust the Nation's budgetary priorities in terms of today's needs. It must be stated in all frankness, however, that there are still differences to be reconciled if that cooperation is to be possible. It is difficult, for example, to understand how a congressional effort to divert about $1 billion of the $6.4 billion savings in the budget to pollution control, education, health, and welfare is struck down by a veto as inflationary but at the same time the Senate is urged not to foreclose a future expansion of military and foreign aid spending in Cambodia.

When you consider, moreover, that $2.50 a person was all that was allocated by the administration during this past year to combat rising crime—one wonders whether it is rhetoric or results that count.

The Senate has passed all but two of the major 13 administration crime proposals. In addition, Congress has originated and passed seven additional anti-crime laws which have been endorsed by the administration. Even the enactment of these laws will be insufficient, however, if we do not devote greater

resources to the causes of crime, to reform of penal institutions, and to providing assistance to enforcement officials. Two dollars and fifty cents per person for crime control is simply not enough.

These issues which I have been discussing are of the utmost seriousness. Every American is affected directly or indirectly by an economy in distress and the war from which, to a great extent, the difficulties are derived. Every American has a stake in the way the Government makes broad commitments of national resources abroad and at home. It was for this reason that I was asked by colleagues in the Senate and the majority leadership of the House of Representatives to address you this afternoon.

We hold the view that the economic problems of this Nation will not disappear at a date uncertain in the future, if only they are left alone by Government, especially in the light of our continuing involvement in the war in Indochina.

We do not accept the view that a little unemployment is good for the Nation any more than we can believe that a lot of inflation is good for the Nation.

Within these premises, the majority in the Congress will give the most respectful consideration to whatever the President may propose to halt the inflation and high interest rates, to reduce unemployment, and terminate our involvement in Vietnam. To that end, the President has had the cooperation of the Congress in the past. He has it now. He will have it in the future. He has it in good conscience—without ifs, ands, or buts.

The Republic deserves no less.

Mr. SCOTT. Mr. President, will the Senator from New York yield to me for about 3 minutes?

Mr. JAVITS. I have just been warned that I will not get any more time after 9:30, so I will yield 3 minutes to the Senator from Pennsylvania.

Mr. SCOTT. I appreciate it.

Mr. President, I rise only to say that I have read the speech of the Vice President and I am very glad and, as a matter of fact, very much relieved to find that in it there is no attack on the distinguished majority leader.

I also rise for the purpose of making the Vice President's speech available to the distinguished majority leader. I believe the only phrase other than the normal use of someone else's name refers to a suggestion for more careful research, something we may say about each other. The reference is to another gentleman in here where the phraseology goes, perhaps, more in depth, but I would like to show the speech to the distinguished majority leader, if he has no objection, and then will ask unanimous consent to have it printed in the RECORD.

My purpose in rising, in addition to that——

Mr. MANSFIELD. Mr. President, will the distinguished Senator from Pennsylvania yield?

Mr. SCOTT. I yield.

Mr. MANSFIELD. I would be delighted if the Senator would place that speech in the RECORD. May I say that I find no personal fault with the Vice President, but I did refer to his statement, that was published in the Los Angeles Times of this morning—and how that paper gets here so early on the same day is something I have not figured out yet. Mr. AGNEW was said to have said—and I am paraphrasing now—that the main purpose of his being in California was to encourage and support the candidacy of our distinguished colleague, Senator MURPHY, but—he added—the press would probably headline it to the effect that "Agnew Assails Mansfield and O'Brien."

I wanted to make the record straight. There is nothing personal in it, so far as I am concerned.

I think the Vice President did well to call attention to these figures. I am delighted that he said they were "essentially correct." As on all issues, there is room for honest differences of opinion as to what they mean in terms of priorities. I wanted to make my views known and put them in the RECORD for all to see.

Thus, I hope the Senator from Pennsylvania will have the Vice President's speech printed in the RECORD, as well.

Mr. SCOTT. I, too, appreciate it. I think the Vice President does make that statement in the speech. But my purpose in rising is principally to point out that while he refers to the amount of spending for military defense, for health and mental research, for elementary education, and other items, and that while these items seem small when one takes for example $7 for health and mental research out of every $1,000 of taxes, the point he does not make—and he might well have made it—which I intend to research myself and to make, is that each of these items out of a given $1,000 represent, or certainly must represent, a greater proportion of the $1,000 unit than ever heretofore appropriated in any fiscal year.

While I am not certain that this figure will always stand up, I know that in some instances it will.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. MANSFIELD. Mr. President, I agree with the distinguished minority leader. In some areas no doubt, it is more money than in previous years. The purpose in using the figures in the way I did was to make comparisons so that all Americans can better understand where tax dollars were being spent by the Federal Government on a category-by-category basis.

Mr. SCOTT. The other reason that I have for inserting it in the RECORD is that the Vice President mentioned the 10 members of the majority on the Senate Labor and Public Welfare Committee and noted that the bills proposed by them, without duplication or overlapping, but referring only to limited appropriation bills, where the appropriation can be deduced from the bills themselves, would call for an expenditure of $440,960,030,600 a year, which is over two times our Federal budget and more than one-half the gross national product of our country.

The ACTING PRESIDENT pro tempore. Does the Senator from Pennsylvania desire to offer the speech for the RECORD?

Mr. SCOTT. Mr. President, I ask unanimous consent that the speech of the Vice President, delivered in California last night, be printed at this point in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE VICE PRESIDENT

Back in June, President Nixon delivered an address to the nation on the economy. It was a balanced and positive message, well considered. It was not partisan. Immediately, however, there was adverse comment from some of our friends in the other party.

Among the most interesting observations were those of Lawrence O'Brien. Because President Nixon refused to clamp on wage and price controls, O'Brien stated that the President had "sold out to big business."

Now, I trust that all of you know who this man O'Brien is. He used to be Postmaster General. He then left the Federal Government to go work for an investment house on Wall Street. In fact, he became the President of that investment house. Under his adroit management, the firm collapsed, and it is presently being liquidated. Isn't that a splendid credential for a man who would advise the President of his country on economics? And isn't that an interesting background for a man who would accuse his President of selling out to big business?

I should not forget to note, however, that Mr. O'Brien did not stick around to see the final demise of that old brokerage house that he had guided so clumsily. Mr. O'Brien is a shrewd and knowing man. When he saw the end in sight, he hitched up his pants and ran.

Now he is chairman of another shaky organization, the Democratic party. It is not faring too well, either. Small wonder, when it cannot find men more qualified than Larry O'Brien to lead it.

And that same Democratic Party is why our country is having economic difficulties now. We have high prices and we have high interest rates today because for eight years Democrats like O'Brien sat in the highest councils of this country. For seven of those eight years they spent more than they took in, and in that period they piled up a deficit of $57 billion dollars. In their final year alone, the Johnson Administration recorded a deficit of $25 billion dollars. That is the greatest single year deficit that any administration has incurred since World War II.

And so, fellow Republicans, I am going to talk about Democrats tonight, and about spending, and about the economics of our national priorities, because these are important matters—and because the Democrats have been raising certain questions about them that have to be answered.

A number of Democrat leaders have been saying lately, among them Senator Mansfield and Mr. O'Brien, that we Republicans are not spending the taxpayers' money the way we should be spending it, and that we have our national priorities backwards. Senator Mansfield said it in June in his message to the American people, and Mr. O'Brien said it in those 25 minutes that he managed to obtain free of charge from a TV network in order to make a partisan attack on our President.

The two Democrat leaders complained that we spend $375 for military defense out of every $1,000 of taxes, while for the coming year we have requested only $7 for health and mental health research, only $7.50 for elementary and secondary education, only $5 for urban renewal, only $4.50 for air and water pollution control, only $1.40 for vocational education, only 50¢ for education for the handicapped and only $2.40 to assist state and local governments in their fight against crime.

Our Democrat friends are playing tricks with figures. They found these data in our National Budget and they are essentially correct. But they do not give a complete or accurate picture of comparable efforts in the categories mentioned. The comparisons they make may be valid in a country where the only expenditures for health, education, crime and pollution control are those made

by the central government—in other words, a one government, socialistic or totalitarian system; but they are not valid comparisons for our three-level system, which is further supported by the free enterprise system.

Let's put these figures into context. The Democrats have implied that spending $375 out of every $1,000 on national defense is a terrible thing when we only spend so little for other pressing concerns like air pollution and education. But it seems that they have never bothered to consider that the Federal Government is the only entity in our entire society—private or public—that can properly undertake the national defense and that, therefore, virtually every penny spent by this nation for national defense must and does show up in the Federal Budget.

This is not the case for air pollution or vocational education or mental health research. In fact, it is not the case for any other major "problem" that we face today. Because for all of our major concerns outside of defense there is substantial spending by state and local governments and by private business as well as private educational institutions and churches and foundations and labor unions.

Consequently, in order to assess the balance between national defense and our other major concerns; that is, in order to judge accurately our national priorities as reflected in our spending, it is necessary to consider not only the figures that show up in the national budget, but the outlay of the entire nation.

Let me give you an example. The Democrats have complained that the Federal Government spends only $7.50 out of every $1,000 in taxes for secondary and elementary education, as compared to $375 for defense. But what about the $15.7 billion spent by our fifty states? And what about the $23.5 billion spent by the 22,000 local school systems within those states? What about the $5.1 billion spent by parochial schools and private schools? What about the contributions of foundations and business and fraternal orders and labor unions?

All of these expenditures for our nation's elementary and secondary schools together with the Federal outlay, amount to more than $47 billion dollars per year, that is, about $235 dollars for every citizen in this country. And that, my fellow Republicans, is the figure that counts, not the meager and highly unrepresentative $7.50 that is quoted by our friends who are busy feeding the donkey what they hope will be high potency vitamins.

Indeed, if Mr. Mansfield and Mr. O'Brien had been more careful in their research, they would have noted that the Defense Department itself will spend $963 million for education this coming year, and that, therefore, it is somewhat inaccurate to say that $375 out of every $1,000 are spent on military defense. That figure represents what the Department of Defense spends, but that Department spends its money on many things, among which are education, as well as housing and health.

And there are also many other public expenditures for education besides those indicated by our Democratic friends, expenditures not reflected in agencies that bear the title, "Education".

In fact, if you look at the whole picture, you will see that there has been a complete reversal of priorities since the Nixon Administration took office. In the current fiscal year the expenditures for defense, as a percentage of Gross National Product, will be the lowest since 1950, at the start of the Korean War.

And in the area of education alone, the switch in emphasis is startling. In 1968, with a Democratic Administration in Washington, the American people spent $23 billion more on the military than we spent on education at all levels, public and private.

In the fiscal year ahead, with a Republican Administration in Washington, the American people will spend $2.4 billion *less* on the military than on education.

How's that for a country moving in the right direction?

And that is how it is for all of the top priority issues that our Democratic friends have touched on. In every single case, whether it's health and mental health research, or pollution control, or urban renewal, or vocational education, or whatever, you will find that their figures just do not represent the true investment of our society. And their figures do not represent the true efforts of the Federal Government, either. For Mr. Mansfield and Mr. O'Brien did not mention that we pass laws to require rather heavy expenditures on the part of the private sector for things like pollution control and we pass tax regulations that will encourage investment in areas like education. Yet none of this shows up in the Federal Budget.

So, if the Democrats come whining and bawling to you and say that this Republican Administration is neglecting education for defense, do not believe them. Do not let them tell you that this country is spending only $7.50 for elementary and secondary education per person this year, because that is not true. In point of fact we are spending $235.00 per person. And do not let them tell you that we are only spending $4.50 for pollution control, because that is not true. We are spending well over $30 per person. Do not let them rearrange the figures in order to make it appear that America is in such terrible shape, because the plain fact is that America is in darn good shape. We have problems, I'll be the first to admit it. But we also have a great system that can take care of our problems, and we should be proud of it.

And, you know, that is one of the differences that has always stuck me, between the Democratic and the Republican parties. The Democrats are always trying to spend their way out of America's imagined difficulties, while the Republicans are always trying to find ways to pay the bills run up by the Democrats. Every time we get the bills paid, the Democrats come in on another set of free-wheeling, fancy promises and run up a new set of debts.

Some day the American people are going to reject that Democratic cotton-candy and leave the fiscally responsible party in office long enough to restore true prosperity without inflation and war.

I've given you an exemple of how the Democrats look at spending for National priorities and how we look at spending for National priorities. And the example I've given points out that our approach to government is quite different from theirs. We believe that we have a good flexible system in America. It has worked well for almost 200 years, and we believe that we should not tamper with it too much. Yet, if we took into the hands of the Federal Government all of the money that the Democrats would need for the programs that they propose, we would no longer have a free economy. We would have socialism.

And if you think that I exaggerate, listen to these statistics: Senator Alan Cranston—I trust that this audience will know who he is—Senator Cranston, as a member of the Senate Labor and Public Welfare Committee, sponsored or co-sponsored 13 bills in the present Congress that had specific, limited appropriations. If all of these bills were to be passed by Congress, they would cost the American taxpayer $37 billion, $824 million, $250 thousand dollars *per year*.

But that is not all, Senator Cranston also sponsored or co-sponsored 18 equal additional bills that had *no* ceilings on their appropriations. In those bills, limit on appropriations was to be sent after the bill was passed.

Senator Kennedy of Massachusetts, as a member of that same Senate committee, has sponsored or co-sponsored 24 bills, which if enacted, would cost the American taxpayer $44 billion, $128 million, $672 thousand dollars *per year*. And these are only the bills with set appropriations. Senator Kennedy has sponsored 45 bills that do not have any appropriations ceilings.

What these two senators have proposed are staggering sums. Yet these are but *two* of the ten Democrats on the Senate Labor and Public Welfare Committee, and if we take the appropriations proposed by all the Democrats on the committee—let me name them here: Cranston, Kennedy, Eagleton, Hughes, Mondale, Nelson, Pell, Randolph, Williams and Yarborough—if we take the appropriations proposed by these Democrats on that one committee alone, and add them up in such a way as to have no overlap and no duplication, we shall find that in this Congress alone they have proposed spending $440 billion, $963 million, $30 thousand, $600 hundred dollars of public money *per year. That is over two times our present Federal Budget and more than one-half the Gross National Product of our country!* And remember, that does not include the bills that were open-ended and had no limit on their appropriations. And remember also, there are the expenditures proposed by only *ten senators on one committee of Congress* and that these Senators also sit on many other committees.

Ladies and gentlemen, in view of these statistics, I have absolutely no hesitation in saying that if we accepted all these proposals, the American private enterprise system would be taxed beyond its capability and collapse.

And that is the reason why we Republicans have always felt that solutions to our national problems should come as much as possible from the private sector, at times prodded by public law, but nevertheless funded by the productivity of the free enterprise system.

And that is why I am here tonight at a dinner for George Murphy. I want you and the people of California to know that he is a Republican in the best sense of that word. I want you to know that the President needs him, and that we want to see him reelected.

He has accepted his responsibility as a Senator to deal with the problems that face our nation, and he has tried to do this in a way that is both effective and yet preserves the power in the private sector.

Let me give you an example. In 1967 the famous "Murphy Amendment" was added to the Air Quality Act. This amendment allowed California to set its own auto emission standards above the Federal levels, because this state was already requiring auto emission control in 1967. This was an extremely important bill and, though at the time the Murphy Amendment may have seemed strict to some, there is hardly a person today who will not praise Senator Murphy for his foresight.

Yet the significance of this legislation will not show up in the Federal Budget, because the cost of this emission control is borne by the automobile producers. How much money is spent because of this one bill is impossible to determine, but the best estimates place the amount in the millions.

Similarly Senator Murphy has encouraged home ownership here in California through "Sweat Equity." There has been some Federal money involved, but the basis of the program has been the farmer's own efforts. He builds his own home. Yet the equity that he puts into his own house will not show up in the Federal Budget, because that man's labor was never converted into tax dollars that had to pass through the Federal bureaucracy.

The same is true of jobs. After the Watts riots of 1965, Senator Murphy supported your own Chad McClelland in his efforts to provide jobs to the unemployed through private business. This type of program has now attained national scope through the National Alliance of Businessmen and is a major part of the Administration's Manpower Program.

In 1967 George Murphy authored the outstanding dropout prevention program that is based on performance contracts farmed out by the Federal Government to private industry.

In 1967 he co-sponsored the Bilingual Educational Act that is so important to the Spanish-speaking and the Chinese, and Japanese-Americans right here in California.

What about George Murphy's contributions to education? In 1969 he introduced the Urban and Rural Education Act. And in general Senator Murphy has offered his support to so many important bills concerning education that he has been given the distinguished service award by the National Education Association.

In the area of pollution control, apart from his recognized accomplishments of the past, Senator Murphy has co-sponsored seven separate bills that are pending in the Congress presently.

In the area of crime control, he supported the Organized Crime Bill, the D.C. Crime Bill, and the Controlled Dangerous Substances Act.

In 1968 he introduced an amendment to the Manpower and Training Act extension which would have granted to the states a certain amount of control over this program. And in 1969, he was co-sponsor of the Revenue Sharing Bill, which is the cornerstone of President Nixon's New Federalism.

This is what Senator Murphy has done. I am here tonight to praise this man who has tried to solve the problems of our nation in a way that is compatible with our American system. He has sought to involve the private sector and he has sought to decentralize the governmental effort. He has done this out of the clear realization that our system as it now functions is the most efficient in the world for devising and producing solutions to its own problems. It is efficient because it's free.

But our efficiency and our freedom depend on leadership. George Murphy has supplied and will continue to supply that leadership.

The real story in my speech tonight is the accomplishments of a great Senator—George Murphy of California. However, you will probably not see much of that reported tomorrow. It will probably be "Agnew assails Mansfield and O'Brien." So I guess I'll have to depend on you to carry the word to the California voters—ladies and gentlemen. The Murphy record is outstanding and worth repeating to your friends and associates.

Let me close with a few brief personal observations about George Murphy. I have not known him very long, but he has qualities that strike you immediately—an obvious human decency and an honest candor that he doesn't have to overstate. Murphy is the kind of man you can trust completely. He has been the kind of man you can trust to represent you well in the Senate, and he will represent you well in the years to come. It is inevitable, because you won't let him lose. The loss would be the country's loss.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from New York is recognized.

Mr. JAVITS. Mr. President, I ask that the Chair advise me when 5 minutes of my time remain.

THE FAMILY ASSISTANCE ACT OF 1970—AMENDMENTS

AMENDMENT NO. 854

Mr. JAVITS. Mr. President, I rise for two purposes this morning: First, to submit an amendment to the Family Assistance Act of 1970; and second, to make some analysis of the trade bill which has been reported out of the other body and which will be coming over here in due course. Due to the fact that they are under the rule, it is likely that we will get the bill without amendment.

Mr. President, I submit my amendment to the Family Assistance Act of 1970 (H.R. 16311), to mandate the inclusion of the so-called "working poor" for purposes of State supplementation under the act and ask that it be printed under the rule and referred to the Finance Committee and that the text thereof be printed in the RECORD.

The ACTING PRESIDENT pro tempore (Mr. METCALF). The amendment will be received and printed; and, without objection, the amendment will be printed in the RECORD and referred to the Finance Committee.

The amendment, No. 854, was referred to the Committee on Finance, by unanimous consent, as follows:

AMENDMENT No. 854

On page 23, beginning with the word "other" on line 16, strike out all before the period on line 18.

On page 27, beginning with the word "other" on line 15, strike out all through "unemployed" on line 18.

Mr. JAVITS. The term "working poor" applies to families headed by full-time working males with incomes below the poverty line—$3,720 for a family of four. In 1968, 39 percent of poor families with children came within this category, yet under the current program known as aid to families with dependent children—AFDC—such families have not been eligible for welfare payments. There are approximately 1½ million families in this category, consisting of about 7.8 million persons.

The administration's proposed Family Assistance Act eliminates this exclusion in respect to the Federal eligibility-payment standard; and under the proposed act, working families headed by males as well as those headed by females are eligible for a family assistance payment of $1,600 for a family of four. For the purposes of the Federal benefit payment, the family's net income is determined by deducting the first $720 in earnings plus one-half of the remainder—other deductions are allowed for costs of child care and for income earned by a student; and, as a general matter, the family then receives the difference between $1,600 and its net income.

Since the Federal floor of $1,600 is less than the payment standard under AFDC in 42 States, the proposed Family Assistance Act requires the States to supplement the Federal payment for such recipients up to the payment level in effect in the State as of January 1970, or up to the poverty level, whichever is lower. The House-passed bill provides for 30-percent Federal sharing in the cost of these supplementary payments.

However, no matching is available for supplementary benefits paid to the "working poor" nor is there any requirement in the act for the States to pay such benefits to the "working poor." The proposed Family Assistance Act provides, as passed by the House, that supplementation must apply to:

> Any family other than a family in which both parents of the child or children are present, neither parent is incapacitated, and the male parent is not unemployed.

When he appeared before the Committee on Finance on July 21, 1970, Secretary of Health, Education, and Welfare Elliot L. Richardson noted three undesirable social consequences of the exclusion under current law.

First, the exclusion constitutes a basic inequity, since working poor families may have financial need equal to that of families in which there is no full-time working male, yet they are unable to receive Federal public assistance under current law. As the Secretary noted:

> This unwise and unjust public policy has had predictable results in terms of social tensions. First, an understandable discontent has been generated among those who are excluded and who see others no worse off than they being assisted. Second, ominous racial overtones have developed since current AFDC recipients—those who are helped—are about 50 percent nonwhite, while the working poor—those who are excluded—are about 70 percent white. This country can no longer afford to have one of its most important and needed anti-poverty efforts viewed by many of its citizens as a divisive, unfair and arbitrary failure. Such a view does not help to bring us together, does not promote understanding among people, and does not help to restore public confidence in the wisdom of our social policies.

Second, the exclusion produces an incentive for male heads of households to work less, rather than more. The current welfare program includes, in a number of States the "AFDC unemployed fathers" program under which families headed by father working no more than 30 hours per week—for 35 hours, at each State's option—are eligible. Thus a father who is on welfare is better off working no more than 30 hours a week. If he works more than that, he is suddenly no longer "unemployed" and he loses assistance. I ask unanimous consent that a table indicating the States with AFDC–UF programs be printed in the RECORD at the conclusion of my remarks.

Third, the exclusion of the working poor has provided encouragement for families to dissolve or for couples never to marry. In situations in which a full-time workingman is not making as much as the mother of his children could receive in welfare benefits, the couple is financially better off if the man leaves home. Over 70 percent of the fathers of families currently on AFDC are "absent from the home."

Mr. President, the considerations which have prompted the administration to include the "working poor" under the basic Federal payment apply equally in respect to the supplemental payments. For example, in States that now provide a total AFDC payment of $2,000 or more, a mother and her three children would receive a payment of $2,000 under the

present AFDC program. Under the Family Assistance Act, she would also receive $2,000—consisting of the $1,600 Federal family assistance payment and a $400 State supplementary payment. However, the same family of four, consisting of a mother, a father, and two children would receive $1,600 and no State supplementation.

There are more than 35 States in which the total payment exceeds $2,000 and, in fact, 22 States in which it exceeds $2,500 providing, in effect, an even greater incentive not to work and greater encouragement for the male to leave the home. I ask unanimous consent that there be included in the RECORD at the conclusion of my remarks a table prepared by the Department of Health, Education, and Welfare, indicating the expected levels of supplementation for each State above the Federal payment.

Mr. President, the Department of Health, Education, and Welfare has indicated that, if the working poor were supplemented, as proposed under my amendment, 1,473,300 families would be included; under the act, as passed by the House, only 924,600 working poor families would be covered for purposes of the $1,600 payment only. I ask unanimous consent that a chart entitled "1971 Estimated Caseloads of Working Poor Under H.R. 16311," prepared by the Department of Health, Education, and Welfare, be included in the RECORD at the conclusion of my remarks.

Mr. President, my amendment would also eliminate a provision in the House-passed bill submitted by the administration to the Finance Committee on June 11, 1970. During the spring hearings, the committee had noted that under the House-passed bill, a work disincentive and an equity issue was left in the AFDC–UF category. As I indicated earlier, under the program which is in effect in 23 States, families headed by fathers working no more than 30 hours per week—or 35 hours, at each State's option—are eligible for State supplemental benefits. The committee pointed out that this was inequitable to a family headed by a full-time, working male. In commenting on this discrepancy in his testimony on July 21, 1970, Secretary Richardson stated:

> The Administration has proposed eliminating this problem by abolishing the federal matching assistance for recipients in the Unemployed Fathers category—about 90,000 families out of a total AFDC caseload of almost 2-million families. As a result, all male-headed families would be treated alike, and an unbroken set of incentives would apply.

He indicated that although one means of eliminating the discrepancy was mandating the extension of State supplementation to the working poor, it was considered too costly; he estimated that such inclusion could cost approximately $1 billion in fiscal year 1971.

Experience in the six States which now provide assistance to the working poor—Pennsylvania, Massachusetts, Illinois, New Jersey, Rhode Island, and New York—indicates that such programs are underutilized even in States that have a high rate of utilization of all other categories of aid.

Moreover, as noted by Assistant Secretary of Labor Jerome M. Rosow in the Wall Street Journal, March 30, 1970:

> One fact to bear in mind about the working poor is that they are not likely to become long-term recipients of assistance payments. Because of rising wage scales due to increased productivity, about 200,000 of the working poor rise above the poverty line each year. Upgrading efforts on the part of the manpower agency will increase this movement to self-sufficiency.

In fact, inclusion of the working poor in the State supplementary benefit program should eventually reduce the costs of welfare as a whole as individuals move off welfare as a result of increased earnings.

With respect to the ability of the States to assume any additional costs arising from the inclusion of the working poor, I wish to indicate that this amendment is offered in conjunction with Amendment No. 802 to H.R. 16311, which I introduced with a number of other amendments on July 31, 1970. This latter amendment would provide for Federal sharing in State supplementary payments on a variable basis ranging from 50 to 83 percent depending upon State fiscal capacity, rather than on the 30 percent basis prescribed for all States under the House-passed bill.

As President Nixon emphasized in commenting on the scope of his welfare reform proposals on August 11, 1969:

> These are far reaching effects . . . they cannot be purchased cheaply or by piecemeal efforts.

The administration deserves credit for understanding the long-overdue overall reform of our welfare system and for including the working poor under the Federal benefit portion of the Family Assistance Act, but we must be assured that we begin with a consistent approach, and that we do not perpetuate in the new law the inequities which we hope to eliminate from the AFDC program.

When we review this legislation as a whole I consider the matter of including the working poor in these supplemental payments as one of high priority, along with the inclusion of single persons and childless couples, increases in the basic level, and in Federal sharing in the interim.

Mr. President, the amendment I have submitted is designed to correct a very serious inequity which appears in the administration's proposed Family Assistance Act. This inequity inures in the fact that if a welfare eligible family is headed by a fully employed male that family is penalized by not being the beneficiary of State supplementation, required for female headed families, amounting to the difference between the $1,600 Federal base which will be established for a family of four, and whatever amount the State pays.

Hence, those male heads of poor households in the working pool will be discriminated against and yet the interesting thing is that it is these poor who are the most quickly working themselves off the welfare rolls.

About 200,000 of the working poor rise above the poverty level every year. This, hence, is the area where we should be in a position to give this final little shove which will get these people above the poverty level. Yet, it is precisely these persons whom the House bill discriminates against.

Accordingly, I am presenting this amendment. I hope very much that it will be included in the bill as passed. I would like to enlist the aid and assistance of my colleagues in the matter.

I have noted recent reports that Secretary Richardson testified that the estimated cost of this amendment is $1 billion. That is a figure which is based upon the worst possible capabilities which adhere in the situation, rather than what would be normal and expected on the record.

We are not figuring the cost of a potential atomic bomb in this matter. We are trying to get a reasonable figure for the families who will require this kind of assistance. The figure of the Health, Education, and Welfare Department must be regarded as inflated, and I shall demonstrate that as I go along.

We are still up against the hard rock of dealing with a clear and blatant discrimination against the most deserving families rather than the least deserving, mandating the supplementation which States pay and which will not be required for families in which the father is doing his job and working full time and not making the grade.

I think that this is most unfair. I believe that the Senate will give its sympathetic consideration to so obvious an inequity. I hope very much that the Finance Committee in its effort to turn this bill into a "workfare" bill, will do something about this. I am sure that they will give their attention to the problem. I urge them not to be scared off by the HEW figure, but to break it down and see what it reasonably may be.

I shall point out two reductions in the figure: First, the fact that so many of these families escape poverty which is a very refreshing experience in welfare; in addition, because of the characteristics of the people we are dealing with, this is one of the materially underutilized elements of welfare in every State in which it exists. Many working poor families have tremendous pride and dignity and do not want anything to do with a welfare existence if they can avoid it.

Mr. President, I ask unanimous consent that certain charts showing the States that provide aid in the various categories to which I have been referring, the nature of the supplemental aid by State, and the estimated caseload by State be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TWENTY-THREE STATES WHICH PROVIDE AID TO FAMILIES WITH DEPENDENT CHILDREN OF UNEMPLOYED FATHERS

California, Colorado, Delaware, Hawaii, Illinois, Kansas, Maine, Maryland, Massachusetts, Michigan, Missouri, Nebraska, New Jersey, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, Utah, Vermont, Washington, West Virginia.

1971 ESTIMATED CASELOADS OF WORKING POOR UNDER H.R. 16311—Continued

[In thousands]

THE TRADE BILL

Mr. JAVITS. Mr. President, I speak this morning because the Senate has really been very little heard from in respect to the trade legislation presently before the Congress.

A very admirable initiative was undertaken by a bipartisan group in the other body. They expressed their opposition to what is taking place by means of this trade bill. I think it is time that those of us here who feel relatively the same way express ourselves.

The trade legislation (H.R. 18970) will come up on the House floor when they return from the recess under a closed rule. It is very unlikely that it will be changed. It will be voted either up or down. My guess is that it will be voted up.

When it comes here, as it inevitably will, the real issue rises. This is where it will be amended and amended substantively as trade legislation always has been.

The principal reasons for being against the bill—and in particular the quota concept of this bill—are based entirely upon the national interest of the United States. It has nothing to do with "hands across the sea" or ideas about international friendship. First, they are based on the fact that quotas will impose an enormous tax on the consumers of the United States. I will give demonstrations of that in a moment. Second, quotas will hurt the total trade of the United States, and this will cost Americans jobs, rather than get them jobs. Yet that is the particular claim made for the quota approach.

On the question of jobs, it is a fact we are now running a growing export surplus, and that is the normal position of the United States. Millions of jobs are at stake on the export side, because it is clear there will be retaliation and serious retaliation if the United States goes into the quota business.

We are no longer "cock of the walk" as we were right after World War II. We have tough competition from Germany and Japan, to name two countries, and every other exporting country. We cannot run this matter as we would like. So this competition, which is causing us trouble already, when buttressed by retaliation action will make it more difficult for the workers in the United States.

Now, Mr. President, the problem as I see it, and the reason for crying out against it—not in any way derogating from the diligence and high degree of expertise of WILBUR MILLS and his committee, who have been the leaders in terms of trade legislation in the other body, Mr. MILLS and his committee faced a situation and not a theory, of serious character.

But the trade legislation (H.R. 18970) that has just been reported out of the Ways and Means Committee, is legislation that has little connection with our national interest or the interests of the American consumer, and will be counter productive in its effect on the United States and the world's economy.

When all the rhetoric is stripped away, we are faced with a quota bill which would turn the clock back on the liberal trade policies that have served us so well since the end of the war. Perhaps even more importantly, the bill raises a critical issue of Presidential power. For, the bill as it presently stands can rightfully be considered the Tonkin Gulf resolution of international trade. I am also deeply concerned about the justifications given by members of the Nixon Cabinet and the Ways and Means Committee for the need for such quota legislation.

If it were not so serious, one could almost be amused by the selection of products to be covered by quotas. The "political clout" of the textile industry, the shoe industry, and the oil industry is well known—but glycene and mink? Perhaps, mink was thrown in to insure that all clothing bills will be higher in the years to come—from dresses to mink coats. As for glycene, it is produced by only one company in the United States and the tariff quotas on this product will not only insure this company's monopolistic position, it will have an impact on prices of buffered aspirin, sugar substitutes, deodorants, and ink.

The following provisions of H.R. 18970 are particularly unfortunate:

Section 301(5)(a) contains what is apparently a completely rigid, mechanical, and arbitrary trigger clause which leaves little room for flexibility and for fair consideration of the various factors that must be involved when a determination of injury from imports is to be made. If the rigid mechanical formula is met, the law then states in section 113(b):

> The President shall proclaim the increase in, or imposition of, any duty or other import restriction on the article concerned . . . unless he determines that such action would not be in the national interest.

This provision places an enormous burden on the President of the United States, and I do not feel this is wise. Furthermore, it raises a myriad of questions concerning the term "national interest." The situation can easily be foreseen where, despite the fact that imports meet the mechanical test set forth in section 301(5)(a) the imposition of duties or other import restrictions would be patently unwise; and the imports in question may be of such marginal importance to our economy that equating these imports with the national interest would be patently absurd. The net result would be that a senseless import restriction could be established. I am encouraged by newspaper reports that Congressman MILLS opposed this arbitrary, mechanical formula. I would hope that the Senate, in its consideration of the bill, would delete such mechanical formulas based on strict percentages which, by their very nature, cannot provide a fair consideration of all the factors involved.

The wording in Section 301(b)(1) also lends itself to abuse. This paragraph says:

> The Tariff Commission shall promptly make an investigation to determine whether an article is being imported into the United States in such increased quantities, either actual or relative, as to *contribute substantially* (whether or not such increased imports are the major factor or the primary factor) towards causing or threatening to cause serious injury to the domestic industry producing articles like or directly competitive with the imported article.

The administration's original trade bill (H.R. 14870) contained the provision of "primary cause" in describing the relationship between increased imports and serious injury. The bill we are considering today is considerably more restrictive of trade. It substitutes "substantial" for "primary" and makes it clear that increased imports do not have to be a major factor in assessing injury. It is possible that the Tariff Commission could interpret this language to open the door to numerous affirmative findings and this could become a tidal wave of protectionism.

Section 301(3) is also a highly significant change in our trade law. Under the new definition contained in this section, a domestic industry would be the aggregate or firms or appropriate subdivisions thereof that produce the domestic article. The part of the plant in which that article is produced would be considered an appropriate division. This language would permit unlimited arbitrary segmentation of an industry to carve out that part that might be injured by imports.

In essence, it incorporates the principle of gerrymandering in our trade policy.

It would return to the segmentation provision of the original 1951 escape clause, which was expressly repealed by the Trade Expansion Act of 1962. Under the new proposed wording, if a number of related products were being made in five plants, and only one plant was being hurt by imports, a basis for higher tariffs or quotas should be established for all the products in all the plants, even though the operation of the other four plants were healthy and profitable. This again is a serious move toward protectionism and again a clear indication of why the quotas aspect of the bill is backward looking, toward discredited past laws, rather than forward-looking.

Finally, it is most interesting that this bill enacts into law the principle of decision by the minority. I refer to section 301(5)(1). I call to my colleagues' attention that this section says:

> If a majority of the Commissioners present and voting makes an affirmative determination under paragraph (1), the Commissioners voting for such affirmative injury determination shall make an additional determination under this paragraph which shall consist of determining (i) whether either criteria in subparagraph (A) or the criteria in subparagraph (B) are met, and if so, (ii) whether the criteria in subparagraph (C) are met.

The determination of whether these criteria are met is of considerable if not key importance since this is the triggering formula for a mandating duty increase or other import restrictions unless the President determines such restrictions are not in the national interest. In essence then, what this law provides is that the majority of the Commissioners make one preliminary determination. For example, 3 out of 5 voting Commissioners could make such a determination. The majority—these three Commissioners—would then vote to determine whether certain additional criteria were met. The net effect of this procedure would be that the vote of two Commissioners—if five were voting—could determine the thrust of our trade policy. This language, which permits the determination of criteria by the majority of the majority, could lead to decision by the minority. This is a sad provision of a law in a democracy.

The fact that this is a backward-looking, protectionist quota bill that turns the trade policy of our Nation around 180 degrees is bad enough, but there is an equally serious issue. The bill gives any President enormous discretion and leeway in imposing quotas and other import restrictions. The question must be asked whether this enormous discretionary power should be given to any President. I find it more than strange that on one hand the Congress is attempting to reassert its constitutional powers as to war; while on the other hand, in the trade field, it is willing to delegate sweeping authority to the President.

Recent events have made it clear that a President can and will use trade policy for domestic political ends. The granting of enormous discretionary powers to any President only confirms this. That is why I call this bill the "Tonkin Golf resolution of international trade."

Finally, Mr. President, oil deserves special mention. Section 104(a) in effect freezes the oil import quota system that has served the Northeast and Midwest so badly. The inequitable working of this system has been brilliantly exposed by a Presidential task force report under the Chairmanship of the then Secretary of Labor George Shultz. The executive director of this Cabinet task force has just written in the New York Times:

> If, furthermore, world prices are so likely to reach and exceed the U.S. domestic price that is artificially propped up by import controls, why insist so strenuously on retaining strict quotas?

The Ways and Means bill would prohibit the President from implementing the policy recommendations put forward by a majority of his own task force. It must be asked whether perpetuation of present policies will meet the needs of our Nation in the 1970's.

I am well aware that the administration has just decided—and this is a decision which I very much regret—that it is "discontinuing consideration of moving to a tariff system of control, but rather continuing our efforts to improve the current program." The current program, of course, is the system of rigid import controls that has been in effect since 1959 and which has increasingly hurt major sections of our Nation.

There is a puzzle here. The day before this decision was announced a prominent story in the Wall Street Journal quoted a key Nixon administration economist who contended that a cut in unrealistically high gasoline prices would help ease the threat of a winter fuel oil shortage. In his view, a lower gasoline price would make it relatively "more profitable for oil companies to divert more of their production into the heavy heating oils." The story went on to say that one of the plans being considered was to offer the bonus of new or bigger quotas to those refiners who had idle capacity and were willing to turn out a higher proportion of the lower-profit heavier fuels from usually cheaper imported foreign crude oil.

I am puzzled, since the oil import quota system has always had the effect of maintaining a high price of gasoline by drastically curtailing imports of cheaper Venezuelan, Canadian, and Middle East crude oil. The quota system has also limited the construction of refineries on the east coast which limits the increase in the production of residual heating oils at the point of demand. Since the inception of the oil import quota program in 1959, no new oil refineries have been built on the east coast. Thus, even if existing east coast refineries upped their residual production to the level of that being produced by refineries elsewhere in the United States—from 2- to 3-percent range to the 6- to 14-percent range—they could not meet the demand for heating oils in the New England and Mid-Atlantic States. Since the heating oil crisis is so near at hand, it is impossible for the Northeast to build new refineries in time to materially affect the rapidly developing crisis, even if oil were to be made available.

Based on these facts, one must pose the question whether maintenance of the rigid oil import system which was in effect during the 1960's is not, therefore, directly responsible for the severe heating oil shortage now facing the Nation. One must further ask whether the maintenance of a similar program in the 1970's—either by administration fiat or legislation—is in the best interests of our Nation or just prejudices the Northeast.

I have stated the rigid quota legislation is not in the interests of the Ameri-

can consumer. Briefly, here is what the quota systems already in effect have cost the consumer.

Oil: The recent report of the President's Cabinet task force on oil import controls estimated that in 1969 alone consumers paid $5 billion more for oil products than they would have paid in the absence of import constriction.

Beef: Governor Rockefeller has informed me that the price of rib roast in one New York City grocery chain increased from $0.99 per pound in 1960 to $1.49 a pound in 1970, an increase of 50 percent. According to the Bureau of Labor statistics, the price of hamburger in the New York/northeastern New Jersey area increased from $0.49 a pound in 1960 to $0.88 a pound in 1970. This was a price rise of 79 percent. The import of second grade beef is strictly controlled and it is clear that the increase in the prices of such beef have increased far more rapidly than has the Consumer Price Index.

Steel: Following the adoption of the "voluntary" restraint agreement, the price per net ton of steel increased to $140.34 on July 3, 1969 and to $156.26 on July 2, 1970. At the end of 1968 finished steel prices per net ton averaged $131.76. The percentage gain in steel prices since the signing of the voluntary agreements is far in excess in the percentage increase in the wholesale price of all commodities.

These are just three examples of the effect of quotas on prices. Additional examples are set forth in a recent study made by Dr. Stephen D. Cohen entitled "Import Quotas and Prices—A Reply." This linkage between import quotas and higher prices underlines the danger of passing rigid quota legislation at the same time inflationary pressures remain high. Such quota legislation could make it more difficult to bring such inflationary pressures under control. In the hearings before the Ways and Means Committee, past trade policies of the United States were characterized as "Uncle Sucker" policies by a Cabinet officer and committee members gloomily speculated about the survival of the American economic system if the United States were to remain the only open market in the world. I can only conclude that this is the economic side of the dangerous trend toward neoisolationism in the United States which has been brought on by dissent from the war in Indochina. But this economic neoisolationism is based on false premises and false analyses.

An editorial in the July 25 edition of Business Week should put some of these false premises to rest. Business Week said:

> The notion that the United States is an open market is pure myth. More than 20 percent of U.S. imports are controlled by quotas (such as those on oil and farm products); the average U.S. tariff level on industrial goods is above the Common Market average.

Rising protectionist sentiment could be better understood, if our trade balance were in the red. But it most decidely is not, despite the fact that the severe inflation our economy has faced over the past 5 years has upped the demand for imports. Now that the inflation shows signs of moderating, our trade surplus is strengthening and moving further into the black. On a seasonally adjusted basis, the export surplus rose to $848 million in the second quarter of this year compared to a $518 million first quarter surplus. A trade surplus for 1970 is likely to approach $3 billion. It is tragic that the Congress is now considering protectionist measures that could adversely affect one of the few plus items on our otherwise bleak balance-of-payments ledger.

Also, what is overlooked is the power under our laws to take substantial action under dumping, countervailing duty, tightened escape clause and adjustment assistance laws which can also be beefed up by nonprotectionist legislation. Certain provisions now in H.R. 18970 do precisely this and should be maintained. These provisions in connection with the DISC proposal could have a highly favorable effect on our trade balance as well as substantially alleviating the serious problems being caused by certain sectors of our domestic industry by the sudden impact of sharply increasing imports.

It also must be recognized that we are not even using the powers now on the books to take care of the individual unitary problems in given items of imports which are troubling us.

It seems to me that this is a very important point for the Committee on Finance to consider when it wrestles with this problem, not to just embrace the quota idea, which has so many disadvantages for the United States.

Again, I beg Senators to remember it is long after 1945; that we face the sternest kind of competition in every market abroad and in the markets represented by the major exporting countries. That is where we do most of our business with the industrialized countries of the world.

Mr. President, another problem of the quotas, as distinguished from the approach that I am suggesting as our best bet in this situation, is that it is across the board. We will find—because it is inevitable in this situation, as it goes for the efficient and efficient alike—that there will be a very serious problem of windfall profits here. It is a fact that many segments of our textile industry, for example, have no need for this kind of regulation at all and whose income will go out of sight because of the restrictions, whereas it will not materially help the inefficient industries. That has always been the history of the quota—I think represents a very deleterious development as far as our country is concerned.

I have as little patience as any Senator does with the intransigent opposition—almost the blind opposition—of the Japanese textile industry to any effort to avoid this very serious world situation by coming to some voluntary agreement with the United States on some aspects of the manmade textiles field.

Even there, the question is, What do we do about it? What is the best way to get such an agreement? In my judgment, the best way to get such an agreement is to use the powers of the President and the Tariff Commission or of a Special Presidential Commission to make clear that where the Japanese are imposing upon us, we will not accept it. That will not involve retaliation. On the contrary, it will be language the Japanese very well understand, and is very likely to produce an agreement; whereas if we give them the objective of quotas and a complete reversal of the policy of the United States we put them, both economically and politically, in a position where they can do nothing else but retaliate against us. So we would guarantee a trade war instead of trying to cure, in an intelligent way, the difficulty between the two countries.

I believe, as we begin to look into this question, as more Members of the Senate begin to learn what is at stake, as more Members of the Senate begin to check into their own States to find out what the effects of imports as compared with exports mean to their own States, they will not be so affrighted that there are so many hundreds of thousands of workers affected. This is especially true of the agricultural States, from which so many Senators come, in which agriculture represents a very important economic base.

Finally, it is an economic truism that our most efficient high-wage industries are also our best export industries. In turn, our least efficient low wage industries are generally protectionist. A move to protect the inefficient sectors of our economy could lead to retaliation against the efficient, high wage sectors. Through the working of this process, protectionism can weaken the domestic economy, maintain inflationary pressures, and be detrimental to our national security.

I thank the Senate.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from North Carolina (Mr. ERVIN) is recognized for 45 minutes.

THE HOUSE-PASSED EQUAL RIGHTS AMENDMENT: A POTENTIALLY DESTRUCTIVE AND SELF-DEFEATING BLUNDERBUSS[1]

UNFAIR LEGAL DISCRIMINATIONS AGAINST WOMEN

Mr. ERVIN. Mr. President, the objective of those who advocate the adoption of the House-passed equal rights amendment is a worthy one. It is to abolish unfair discriminations which society makes against women in certain areas of life. No one believes more strongly than I that discriminations of this character ought to be abolished, and that they ought to be abolished by law in every case where they are created by law.

Any rational consideration of the advisability of adopting the House-passed equal rights amendment raises these questions:

First. What is the character of the unfair discriminations which society makes against women?

Second. Does it require an amendment to the Constitution of the United States to invalidate them?

---

[1] The descriptive phrase "a potentially destructive and self-defeating blunderbuss" is borrowed from the article of Leo Kanowitz, Professor of Law, University of New Mexico, which is entitled "Constitutional Aspects of Sex-Based Discrimination in American Law," which appeared in the Nebraska Law Review, Vol. 48, No. 1 (1968). See page 182.

Third. If so, would the House-passed equal rights amendment constitute an effective means to that end?

It is the better part of wisdom to recognize that discriminations not created by law cannot be abolished by law. They must be abolished by changed attitudes in the society which imposes them.

From the many conversations I have had with advocates of the House-passed equal rights amendment since coming to the Senate, I am convinced that many of their just grievances are founded upon discriminations not created by law, and that for this reason the equal rights amendment will have no effect whatsoever in respect to them.

When I have sought to ascertain from them the specific laws of which they complain, the advocates of the equal rights amendment have cited certain State statutes, such as those which impose weight-lifting restrictions on women, or bar women from operating saloons, or acting as bartenders, or engaging in professional wrestling. Like them, I think these laws ought to be abolished. I respectfully submit, however, that resorting to an amendment to the Constitution to effect this purpose is about as wise as using an atomic bomb to exterminate a few mice.

From the information given me by many advocates of the equal rights amendment and from my study of the discriminations which society makes against women, I am convinced that most of the unfair discrimination against them arise out of the different treatment given men and women in the employment sphere. No one can gainsay the fact that women suffer many discriminations in this sphere, both in respect to the compensation they receive and the promotional opportunities available to them. Some of these discriminations arise out of law and others arise out of the practices of society.

Let me point out that Congress has done much in recent years to abolish discriminations of this character insofar as they can be abolished at the Federal level. It has amended the Fair Labor Standards Act to make it obligatory for employers to pay men and women engaged in interstate commerce or in the production of goods for interstate commerce equal pay for equal work, irrespective of the number of persons they employ.

Congress has also decreed by the equal employment provisions of the Civil Rights Act of 1964 that there can be no discrimination whatever against women in employment in industries employing 25 or more persons, whose business affects interstate commerce, except in those instances where sex is a bona fide occupational qualification reasonably necessary to the normal operation of the enterprise. Furthermore, it is to be noted that the President and virtually all of the departments and agencies of the Federal Government have issued orders prohibiting discrimination against women in Federal employment.

Moreover, State legislatures have adopted many enlightened statutes in recent years prohibiting discrimination against women in employment.

If women are not enjoying the full benefit of this Federal and State legislation and these Executive orders of the Federal Government, it is due to a defect in enforcement rather than a want of fair laws and regulations.

A good case can be made for the proposition that it is not necessary to resort to a constitutional amendment to abolish State laws which make unfair discriminations between men and women in employment or any other sphere of life. This argument rests upon the equal protection clause of the 14th amendment which prohibits States from treating differently persons similarly situated, and is now being interpreted by the courts to invalidate State laws which single out women for different treatment not based on some reasonable classification.

To be sure, the equal protection clause may not satisfy the extreme demands of a few advocates of the equal rights amendment who would convert men and women into beings not only equal but alike, and grant them identical rights and impose upon them identical duties in all the relationships and undertakings of life.

It cannot be gainsaid, however, that the equal protection clause, properly interpreted, nullifies every State law lacking a rational basis which seems to make rights and responsibilities turn upon sex.

My view is shared by legal scholars. Their views on this subject are succinctly expressed by Bernard Schwartz in his recent commentary on the Constitution of the United States which declares "that a law based upon sexual classification will normally be deemed inherently unreasonable unless it is intended for the protection of the female sex."[2]

As I shall point out later, the House-passed equal rights amendment is shrouded in obscurity, and no one has sufficient prophetic power to predict with accuracy what interpretation the Supreme Court will place upon it. One possible interpretation is that it will nullify every existing Federal and State law making any distinction whatever between men and women, no matter how reasonable the distinction may be, and rob Congress and the legislatures of the 50 States of the legislative power to enact any future laws making any distinction between men and women, no matter how reasonable the distinction may be.

If it should be adopted and this interpretation should be placed upon it by the Supreme Court, the House-passed equal rights amendment would produce constitutional and legal chaos, and would not accomplish the objective of any of its advocates. This is so because under this interpretation the equal rights amendment would merely abolish all laws making any distinctions between men and women. It would not bring into existence any new laws giving us a discrimination-free society, and those who desire such a society would have to implore Congress and the legislatures of the 50 States to enact new laws creating the kind of society they seek, insofar as such a society can be established by law.

Consequently, those who seek a discrimination-free society should seek to persuade Congress and the legislatures of the various States initially to enact suitable legislation to accomplish their purpose insofar as such purpose can be accomplished by law without first invalidating all laws making distinctions between men and women and plunging society into constitutional and legal chaos.

For these reasons, the House-passed equal rights amendment represents a potentially destructive and self-defeating blunderbuss approach to the problem of abolishing unfair discriminations against women.

What has been said makes it manifest, I think, that society does make unfair discriminations against women, and that the House-passed equal rights amendment does not constitute a sensible approach to their abolition.

This brings us to the questions whether Congress should consider the submission to the States of a constitutional amendment to deal with the matter, and whether such amendment should permit Congress and the States acting within their respective jurisdictions to make reasonable distinctions between the rights and responsibilities of men and women in appropriate areas of life.

I honestly believe that the equal protection clause, properly interpreted, is sufficient to abolish all unfair legal discriminations made against women by State law.

Nevertheless, I am constrained to favor a constitutional amendment which will abolish all unfair legal discriminations against women without robbing them of necessary legal protections and without imprisoning the legislative powers of Congress and the States in a constitutional straitjacket.

My reasons for so doing are twofold. First, some advocates of the House-passed equal rights amendment do not share my opinion of the efficacy of the equal protection clause; and, second, the equal protection clause does not apply to Congress, and it is problematical whether the Supreme Court will hold in this instance, as it did in *Bolling* v. *Sharp*, 347 U.S. 497, that the due process clause of the fifth amendment imposes the same prohibitions on the Federal Government that the equal protection clause does on the States.

While I believe that any unfair discriminations which the law makes against women should be abolished by law, I have the abiding conviction that the law should make such distinctions between the sexes as are reasonably necessary for the protection of women and the existence and development of the race.

I share completely this recent observation of a legal scholar:

> Use of the law in an attempt to conjure away all the differences which do exist between the sexes is both an insult to the law itself and a complete disregard of fact.[3]

Let us consider for a moment whether there be a rational basis for reasonable distinctions between men and women in any of the relationships or undertakings of life.

[2] Bernard Schwartz: Rights of the Person, Vol. 2, Section 482, Page 534.

[3] Ibid., p. 538.

FUNCTIONAL DIFFERENCES BETWEEN MEN AND WOMEN

When He created them, God made physiological and functional differences between men and women. These differences confer upon men a greater capacity to perform arduous and hazardous physical tasks. Some wise people even profess the belief that there may be psychological differences between men and women. To justify their belief, they assert that women possess an intuitive power to distinguish between wisdom and folly, good and evil.

To say these things is not to imply that either sex is superior to the other. It is simply to state the all-important truth that men and women complement each other in the relationships and undertakings on which the existence and development of the race depend.

The physiological and functional differences between men and women empower men to beget and women to bear children, who enter life in a state of utter helplessness and ignorance, and who must receive nurture, care, and training at the hands of adults throughout their early years if they and the race are to survive, and if they are to grow mentally and spiritually. From time whereof the memory of mankind runneth not to the contrary, custom and law have imposed upon men the primary responsibility for providing a habitation and a livelihood for their wives and children to enable their wives to make the habitations homes, and to furnish nurture, care, and training to their children during their early years.

In this respect, custom and law reflect the wisdom embodied in the ancient Yiddish proverb that God could not be everywhere, so he made mothers.

The physiological and functional differences between men and women constitute earth's important reality. Without them human life could not exist.

For this reason, any country which ignores these differences when it fashions its institutions and makes its law is woefully lacking in rationality.

Our country has not thus far committed this grievous error. As a consequence, it has established by law the institutions of marriage, the home, and the family, and has adopted some laws making rational distinctions between the respective rights and responsibilities of men and women to make these institutions contribute to the existence and advancement of the race.

OBSCURITY OF THE HOUSE-PASSED EQUAL RIGHTS AMENDMENT

In the nature of things, lawmakers use words to express their purpose and courts must ascertain their purpose from their words.

In his famous opinion in *Towne* v. *Eisner*, 245 U.S. 418, 425, Justice Oliver Wendell Holmes made this trenchant observation:

> A word is not a crystal, transparent and unchanged; it is the skin of a living thought and may vary greatly in color and content according to the circumstances and the time in which it is used.

During my many years as a lawyer, a judge, and a legislator, I have discovered that many words have many meanings, and that the purpose they are intended to express must be gathered from the context in which they are used. I have also learned that the most difficult task which ever confronts a court is determining the meaning of imprecise words used in a scrimpy context.

The word "sex" is imprecise in exact meaning, and no proposed constitutional amendment ever drafted exceeds the House-passed equal rights amendment in scrimpiness of context. The amendment contains no language to elucidate its meaning to legislators or to guide courts in interpreting it. When all is said, the House-passed equal rights amendment, if adopted, will place upon the Supreme Court the obligation to sail upon most tumultuous constitutional seas without chart or compass in quest of an undefined and unknown port.

The imprecision of the word "sex" as used in the proposed amendment is clearly revealed by these definitions set forth in the recently published "American Heritage Dictionary of the English Language":

> 1. a. The property or quality by which organisms are classified according to their reproductive functions. b. Either of two divisions, designated male and female, of this classification. 2. Males or females collectively. 3. The condition or character of being male or female; the physiological, functional, and psychological differences that distinguish the male and the female. 4. The sexual urge or instinct as it manifests itself in behavior. 5. Sexual intercourse.

When one undertakes to ascertain the obscure meaning of the ambiguous House-passed equal rights amendment in an impartial, intellectual, and unemotional manner, he is inevitably impelled to the conclusion that it is susceptible of several different and discordant interpretations

If it should accept the fourth and fifth definitions of the term "sex" as set forth in the dictionary, the Supreme Court could reach the conclusion that the House-passed equal rights amendment merely annuls existing and future laws visiting upon the adulterous acts of women different legal consequences from those it visits upon such acts of men.

If it should accept the first, fourth, and fifth definitions of "sex" as set forth in the dictionary, the Supreme Court could reach the conclusion that the amendment is only concerned with sex per se, and has no application whatever to legal distinctions made between men and women on the basis of their respective functions in the relationships and undertakings on which the existence and development of the race depend.

A learned student of the constitutional aspects of sex-based discrimination in American law, Prof. Leo Kanowitz, accepts this interpretation. He had this to say in a Law Review article on the subject:

> It is submitted that the adoption of the Equal Rights Amendment would not fundamentallly change the picture. While the proposed amendment states that equality of rights shall not be abridged on account of sex, sex classification could continue if it can be dmonstrated that though they are expressed in terms of sex, they are in reality based upon function.[4]

If it should accept the third definition of "sex" as set out in the dictionary, the Supreme Court could reach the conclusion that the House-passed equal rights amendment annuls every existing Federal and State law making any distinction between men and women, however reasonable such distinction might be in particular cases, and forever robs Congress and the legislatures of the 50 States of the constitutional power to enact any such laws at any time in the future.

This is the interpretation which I fear the Supreme Court may feel itself obliged to place upon the House-passed equal rights amendment. I am not alone in entertaining this fear.

When the so-called equal rights amendment was under consideration in 1953, Roscoe Pound of the Harvard Law School; Albert J. Harno, of the University of Illinois Law School; Charles Warren, noted constitutional lawyer and author of "The Supreme Court in United States History"; Leon Green, of the University of Texas Law School; Dorothy Kenyon, distinguished lawyer and one-time Judge of Municipal Court of New York City; Monte M. Leman, noted constitutional lawyer; E. Blythe Stason of the University of Michigan Law School; Harry Shulman of the Yale University Law School; William H. Holly, U.S. District Judge; Everett Fraser of the University of Minnesota Law School; Walter Gellhorn of the Columbia University Law School; Glenn A. McCleary of the University of Missouri Law School; and Douglas B. Maggs of the Duke University Law School, joined one of America's greatest legal scholars, Paul A. Freund of the Harvard Law School, in a statement opposing the equal rights amendment upon the ground that they feared that this devastating interpretation might be placed upon it if it should be adopted. This statement made these indisputable observations:

> If anything about this proposed amendment is clear, it is that it would transform every provision of law concerning women into a constitutional issue to be ultimately resolved by the Supreme Court of the United States. Every statutory and common law provision dealing with the manifold relation of women in society would be forced to run the gauntlet of attack on constitutional grounds. The range of such potential litigation is too great to be readily foreseen, but it would certainly embrace such diverse legal provisions as those relating to a widow's allowance, the obligation of family support and grounds for divorce, the age of majority and the right of annulment of marriages, and the maximum hours of labor for women in protected industries.
>
> Not only is the range of the amendment of indefinite extent, but, even more important, the fate of all this varied legislation would be left highly uncertain in the face of judicial review. Presumably, the amendment would set up a constitutional yardstick of absolute equality between men and women in all legal relationships. A more flexible view, permitting reasonable differentiation, can hardly be regarded as the ob-

[4] Leon Kanowitz: "Constitutional Aspects of Sex-Based Discrimination in American Law," Nebraska Law Review, Vol. 48, No. 1 (1968), p. 182.

ject of the proposal, since the Fourteenth Amendment has long provided that no state shall deny to any person the equal protection of the laws, and that Amendment permits reasonable classifications while prohibiting arbitrary legal discrimination. If it were intended to give the courts the authority to pass upon the propriety of distinctions, benefits and duties as between men and women, no new guidance is given to the courts, and this entire subject, one of unusual complexity, would be left to the unpredictable judgments of courts in the form of constitution decisions.

Such decisions could not be changed by act of the legislature. Such a responsibility upon the courts would be doubtless as unwelcome to them as it would be inappropriate. As has been stated, however, the proposal evidently contemplates no flexibility in construction but rather a rule of rigid equality. This branch of the dilemma is as repelling as the other.

After analyzing in some detail the laws whose validity might be jeopardized by the equal rights amendment, the statement concluded with these observations:

The basic fallacy in the proposed Amendment is that it attempts to deal with complicated and highly concrete problems arising out of a diversity of human relationships in terms of a single and simple abstraction. This abstraction is undoubtedly a worthy ideal for mobilizing legislative forces in order to remedy particular deficiencies in the law. But as a constitutional standard, it is hopelessly inept. That the proposed equal rights amendment would open up an era of regrettable consequences for the legal status of women in this country is highly probable. That it would open up a period of extreme confusion in constitutional law is a certainty.

THE DESTRUCTIVE POTENTIALITY OF THE HOUSE-PASSED EQUAL RIGHTS AMENDMENT

Time and space preclude me from an attempt to picture in detail the constitutional and legal chaos which would prevail in our country if the Supreme Court should feel itself compelled to place upon the House-passed equal rights amendment the devastating interpretation feared by these legal scholars.

For this reason, I must content myself with merely suggesting some of the terrifying consequences of such an interpretation.

Congress and the legislatures of the various States have enacted certain laws based upon the conviction that the physiological and functional differences between men and women make it advisable to exempt or exclude women from certain arduous and hazardous activities in order to protect their health and safety.

Among Federal laws of this nature are the Selective Service Act, which confines compulsory military service to men; the acts of Congress governing the voluntary enlistments in the Armed Forces of the Nation which restrict the right to enlist for combat service to men; and the acts establishing and governing the various service academies which provide for the admission and training of men only.

Among the State laws of this kind are laws which limit hours during which women can work, and bar them from engaging in occupations particularly arduous and hazardous such as mining.

If the House-passed equal rights amendment should be interpreted by the Supreme Court to forbid any legal distinctions between men and women, all existing and future laws of this nature would be nullified.

The common law and statutory law of the various States recognize the reality that many women are homemakers and mothers, and by reason of the duties imposed upon them in these capacities, are largely precluded from pursuing gainful occupations or making any provision for their financial security during their declining years. To enable women to do these things and thereby make the existence and development of the race possible, these State laws impose upon husbands the primary responsibility to provide homes and livelihoods for their wives and children, and make them criminally responsible to society and civilly responsible to their wives if they fail to perform this primary responsibility. Moreover, these State laws secure to wives dower and other rights in the property left by their husbands in the event their husbands predecease them in order that they may have some means of support in their declining years.

If the House-passed equal rights amendment should be interpreted by the Supreme Court to forbid any legal distinctions between men and women, it would nullify all existing and all future laws of this kind.

There are laws in many States which undertake to better the economic position of women. I shall cite only one class of them; namely, the laws which secure to women minimum wages in many employments in many States which have no minimum wage laws for men, and no other laws relating to the earnings of women.

If the House-passed equal rights amendment should be interpreted by the Supreme Court to prohibit any legal distinctions between men and women, it would nullify all existing and future laws of this kind.

In addition, there are Federal and State laws and regulations which are designed to protect the privacy of males and females. Among these laws are laws requiring separate restrooms for men and women in public buildings, laws requiring separate restrooms for boys and girls in public schools, and laws requiring the segregation of male and female prisoners in jails and penal institutions.

Moreover, there are some State laws which provide that specified institutions of learning shall be operated for men and other institutions of learning shall be operated for women.

If the House-passed equal rights amendment should be interpreted by the Supreme Court to forbid legal distinctions between men and women, it would annul all existing laws of this nature, and rob Congress and the States of the constitutional power to enact any similar laws at any time in the future.

I do not believe that the advocates of the House-passed equal rights amendment wish to nullify laws which are adopted for the protection of women and for the promotion of the highest interest of society. Moreover, I am unwilling to attribute any such motive to the Representatives who voted for the House-passed equal rights amendment, or to the Senators who have sponsored the Senate version of such amendment. I attribute to all of them the laudable desire of abolishing unfair discriminations against women without destroying laws reasonably designed to protect them, and without robbing Congress and the legislatures of the 50 States of the power to enact similar laws in the future.

MY AMENDMENT

For these reasons, I have drafted a substitute Federal equal rights amendment which will accomplish the undoubted purpose of the advocates of the House-passed equal rights amendment; that is, to invalidate any present or future laws making unfair discriminations against women without nullifying any existing laws reasonably designed to protect the best interest of women and the highest interest of society, and without incapacitating Congress and the legislatures of the 50 States, acting in their respective spheres, to enact similar salutary laws in the future.

My amendment has already been introduced. I ask unanimous consent to have it printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the amendment is as follows:

S.J. RES. —

Joint resolution proposing an amendment to the Constitution of the United States to abolish unfair legal discrimination against women without robbing them of necessary legal protection

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years of the date of its submission by the Congress:

"ARTICLE —

"SECTION 1. Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. This article shall not impair, however, the validity of any law of the United States or any state which exempts women from compulsory military service or which is reasonably designed to promote the health, safety, privacy, education, or economic welfare of women, or to enable them to perform their duties as homemakers or mothers.

"SEC. 2. The Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation.

"SEC. 3. This amendment shall take effect two years after the date of ratification."

Mr. ERVIN. Mr. President, the crucial part of my amendment is section 1, which consists of two sentences. The first sentence is lifted bodily out of the House-passed equal rights amendment, and provides, as it does, that—

Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex.

The second sentence states that—

This article shall not impair, however, the validity of any law of the United States or any State which exempts women from compulsory military service or which is reasonably designed to promote the health, safety, privacy, education, or economic welfare of women, or to enable them to perform their duties as homemakers or mothers.

Candor compels me to confess that I cannot comprehend how any rational being in America can find any objection to this provision.

My amendment differs from the House-passed equal rights amendment in three respects. It preserves existing laws reasonably designed to protect women and retains for Congress and the legislature of the 50 States the power to enact similar laws in the future.

My amendment provides that it will go into effect 2 years after its effective date rather than 1 year after its effective date in order to accord to Congress and the States an opportunity to consider whether it is necessary to amend any existing laws in order to make them conform to the amendment. This 2-year limitation is necessary because the legislatures of some States meet biennially instead of annually.

My amendment also provides that it must be ratified by three-fourths of the States within 7 years after its submission to them in order that it may conform to the provision customarily put in resolutions proposing constitutional amendments.

I respectfully submit that the Senate of the United States ought to act with great deliberation in writing a proposed constitutional amendment for submission to the States. When an amendment is added to the Constitution it has an infinite capacity to bless America if it be wise, and an infinite capacity to curse America if it be unwise.

Before we act, let us meditate upon the warning given by Omar Khayyam ages ago:

The moving finger writes; and having writ,
Moves on; nor all your piety nor wit
Shall lure it back to cancel half a line,
Nor all your tears wash out a word of it.

THE PROSPECT OF RATIFICATION BY THE STATES

It would be an exercise in futility by Congress to submit the House-passed equal rights amendment to the States if there is not a substantial prospect that the States will ratify it.

Even if the Senate should join the House in voting to submit it to the States, the House-passed equal rights amendment would have to receive the affirmative approval of either 75 or 76 separate legislative bodies sitting in 38 of the 50 States before it could become a part of the Constitution. This is so because nothing new can be added to the Constitution without the consent of three-fourths of the States and all the States except Nebraska have bicameral legislatures.

It is scarcely conceivable that State legislators sitting in 75 or 76 separate legislative bodies in 38 States will ever agree that the millions of women whom they represent ought to be denied forever legal protection which their physiological and functional characteristics may reasonably justify. Yet, that is precisely what the House-passed equal rights amendment, if ratified by them, could be interpreted by the Supreme Court to do.

For this reason, sound thinking seems to indicate that there is no substantial prospect that 75 or 76 State legislative bodies sitting in 38 States will ever ratify the House-passed equal rights amendment in its present potentially destructive form. Hence, I suggest that an implacable insistence on the part of its advocates that there be no alteration in its wording is likely to defeat their worthy objective of outlawing unfair legal discriminations against women.

With all deference to them, I express my conviction that it would be the better part of wisdom for them to join me in urging Congress and the States to make my amendment a part of the Constitution. By so doing, they can reasonably anticipate that their worthy objective to abolish unfair legal discriminations against women will meet with success. It seems sound to assume that all legislators, both Federal and State, would welcome the opportunity afforded by my proposed amendment to abolish all unfair legal discriminations against women without depriving them of necessary legal protection and without robbing Congress and the States forever of the power to make legal distinctions in favor of women where reason justifies their so doing.

In yielding the floor, I earnestly urge those who have hitherto supported the potentially destructive and self-defeating House-passed equal rights amendment to aid me in my effort to achieve these objectives.

Mr. President, this completes my prepared speech on this subject. Since my allotted time has not yet been exhausted, I wish to speak on a related subject.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. ERVIN. I yield.

Mr. METCALF. Mr. President, I have been very much impressed by the usual, able and cogent argument that the distinguished Senator has made against this constitutional amendment. I have made a prolonged study of the matter but not nearly as thorough a study as the Senator has made.

I agree and concur that this is a very dangerous sort of amendment to present. It is one that we should carefully study and carefully analyze with the view of actually protecting the women whose rights we are seeking to preserve.

I would like to be associated with the Senator in his constitutional amendment, but heeding the admonition he has given as to the advocacy of any constitutional amendment, I will study the matter carefully and will perhaps join him later in his better, more precise, and more carefully written amendment to the Constitution, if one is really needed, to take care of the rights of women that have been taken care of by State statutes and amendments.

Mr. ERVIN. Mr. President, I thank my friend, the Senator from Montana, for his remarks. I suggest to him that if his study leads him to believe that I have followed a very wise course in offering this amendment, I would be glad to have him join with me.

I have prepared my amendment after a protracted study of the House-passed resolution and its implications. I believe that my proposal would pass the Senate unanimously, be agreed to by the House, speedily be ratified by the States within a very short period of time, and thereby accomplish what I believe to be the objective of the organizations which have endorsed the House-passed amendment.

Mr. METCALF. I am inclined to agree with the Senator from North Carolina. I feel that with a further study of the matter, I will have a more determined agreement.

WHY THE MAJORITY AND MINORITY LEADERS OF THE SENATE OUGHT TO COMPLY WITH THE REQUEST OF THE SENATE JUDICIARY COMMITTEE THAT THE HOUSE-PASSED EQUAL RIGHTS AMENDMENT BE REFERRED TO THE SENATE JUDICIARY COMMITTEE FOR STUDY

Mr. ERVIN. Mr. President, some days ago the Senate Judiciary Committee, with one abstaining vote and one dissenting vote, requested the majority and minority leaders of the Senate to refer the House-passed equal rights amendment to the Senate Judiciary Committee for study with the understanding that the Judiciary Committee should complete its work by September 19, 1970.

On August 12, 1970, the New York Times carried an editorial entitled "The Henpecked House" which made these assertions: First, that the House passed the equal rights amendment "without committee hearings and after only an hour's debate"; second, that in so doing the House engaged in "an exercise of political opportunism"; and, third, that the House-passed equal rights amendment contemplates "a constitutional change of almost mischievous ambiguity."

The editorial further asserts:

The clear responsibility of the Senate is to give the amendment the thorough analysis it never got in the House.

It also said:

The Constitution and the rights of women are both too important for any further playing to the ladies' gallery.

In due deference to all concerned, I respectfully submit that the majority and minority leaders of the Senate should forthwith take the course requested of them by the Senate Judiciary Committee and refer the House-passed equal rights amendment to the committee under circumstances which will give that committee a reasonable opportunity to make an intelligent study and analysis of the implications of this potentially destructive proposal and to enlist the aid of competent constitutional scholars in so doing.

I sincerely hope that the majority and minority leaders of the Senate will take this action forthwith and by so doing make it possible for the Senate Judiciary Committee to make arrangements for brief hearings to elicit opinions with respect to this matter from constitutional experts.

Mr. President, I ask unanimous consent that the editorial of the New York Times be printed at this point in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HENPECKED HOUSE

Equal rights for women is a proposition so unarguable in principle and so long overdue in practice that it is a pity to have it approached by the House of Representatives as an exercise in political opportunism. For 47 years that body regularly rejected out

of hand all proposals for a women's rights amendment to the Constitution. Now it approves, without committee hearings and after only an hour's debate, a constitutional change of almost mischievous ambiguity.

The proposed amendment declares: "Equality of rights under the law shall not be denied or abridged by the United States or by any state on account of sex." The implications and consequences of such language are obscure. There are many laws specifically protecting working women; they cover such subjects as night work, dangerous and heavy work, maximum hours and maternity leave. These laws would be thrown into confusion. So would a great body of law governing divorce, child support, custody, alimony, the age at which a woman reaches her majority, and a widow's rights in her husband's estate.

Prof. Paul Freund of the Harvard Law School has warned: "If anything about this proposed amendment is clear, it is that it would transform every provision of law concerning women into a constitutional issue to be ultimately resolved by the Supreme Court. Every statutory and common law provision dealing with the manifold relations of women in society would be forced to run the gantlet of attack on constitutional grounds. The range of such potential litigation is too great to be readily foreseen."

The prospect of a prolonged and confusing litigation is not necessarily a conclusive argument against the amendment, but it is a powerful argument in favor of holding exhaustive hearings so that an amendment, if one is found necessary, will be carefully drafted and its consequences fully understood by Congress and the states before they act.

It may be perfectly fair to charge that male chauvinism was the only factor that kept the amendment from getting such an assessment through a half-century of total neglect, but that does not wipe out the need for a real evaluation now, no matter how fierce the pressure from the embattled women's lobby.

The clear responsibility of the Senate is to give the amendment the thorough analysis it never got in The House. The Constitution and the rights of women are both too important for any further playing to the ladies' gallery.

ORDER OF BUSINESS

The PRESIDING OFFICER. Pursuant to the previous order, the Senator from Kansas is recognized for 20 minutes.

S. 4274—INTRODUCTION OF A BILL TO AMEND THE FEDERAL REGULATION OF LOBBYING ACT WITH RESPECT TO CERTAIN ACTIVITIES OF MEMBERS OF CONGRESS

Mr. DOLE. Mr. President, today I want to raise some questions about the efforts of some Senators to bring public pressure on their colleagues to support their amendment.

The group involved is the Amendment To End the War Committee, made up entirely of Senators.

I have not, as the junior Senator from Arkansas noted recently, been a Member of this body very long, certainly not as long as some of those attempting to bring pressure upon the junior Senator from Kansas by slick Madison Avenue spots on Kansas television stations. Nevertheless, before coming to this body, I did spend 8 years in the House of Representatives, a place where many sought to persuade me, but none sought to bring outside pressures against me. As a result of this total experience, I am aware of not only the need for a high ethical standard in the Congress of the United States. But also of an equal need for a strict adherence to the laws that govern lobbying, income, and solicitation of funds.

My purpose today is not to accuse anyone of violation of either ethics or laws. It is instead to seek information.

First, Mr. President, I believe the questions raised by the activities of the "Amendment To End the War Committee" deserve replies.

INCOME

As I understand, the Internal Revenue Code defines gross income as "all income from whatever sources derived." Money received for any purpose, therefore, is income unless the recipient can establish that it is a gift. Are the donations received by the Amendment To End the War Committee regarded as income?

The junior Senator from South Dakota (Mr. McGOVERN) on June 29 said that "these funds become earned income of the ultimate recipients," implying that since there are offsetting expenditures to the gross income received, there is no tax liability on the part of the Amendment To End the War Committee. If this is so, then I believe it is incumbent upon him to seek a ruling from the Internal Revenue Service. It would be helpful to know what answer the IRS gives him. It is my understanding that under the 1962 amendment to the Internal Revenue Code, expenses for propaganda are never deductible and expenses incurred in connection with lobbying are only deductible when the taxpayer has a direct economic interest in legislation.

If these funds are regarded as income, then questions of tax liability should be answered.

POLITICAL GIFTS

Second, if the committee does not regard the donations as income, then are they considered "political gifts" or "campaign contributions" under Revenue Procedure 68–19.

If the committee wishes to rely on this revenue ruling, then, of course, it is subject to the Federal election laws and the Federal Corrupt Practices Act. Senator McGOVERN on June 29 indicated that this is the case when he said that the Amendment To End the War Committee is similar to political campaign committees. If the committee chooses to have it this way for tax purposes, then it must also have it this way under the pertinent Federal statutes. The junior Senator from South Dakota is quoted in the August 10, 1970, issue of Broadcasting, on page 10, as saying that the TV spots being used by the Amendment To End the War Committee are "paid political announcements."

For instance, Mr. President, a political committee is required to have a chairman and a treasurer and to accept no contributions and make no expenditures until those officers are chosen.

The obvious question is then, Is there a chairman and a treasurer? If so, were they functioning before contributions were accepted and before expenditures were made?

Again, Mr. President, under the law, the treasurer is required to keep a detailed and exact account of all contributions and the name and address of every person making a contribution. The question: Is this being done?

Under the law, Mr. President, $5,000 is the limit that can be contributed to a political committee or that can be accepted by that committee. I ask especially if this limit has been adhered to, and, if the answer is "Yes," how can the contributions from the Council for a Livable World be explained?

I ask also, Is there a record of all expenditures and a record of the names and addresses of those with whom the money is spent

Has the committee yet filed a quarterly report with the Clerk of the House, including the names and addresses of all persons contributing $100 or more within the calendar year?

REFUNDS

Finally, Mr. President, since the committee has changed its amendment, will it refund donations to those who gave?

LOBBYING

Mr. President, despite all of the foregoing, there is here more than just a matter of income and outgo. There is the question of lobbying, and whether the laws on lobbying are being adhered to.

First, Mr. President, is senatorial participation and collaboration in organized lobbying campaigns proper? Is it proper for Senators to form a committee such as the Amendment To End the War Committee to solicit money from the public for the purpose of persuading citizens and organizations, via TV spots and newspaper ads, to lobby Senators to vote for certain legislative proposals?

Mr. President, over the years lobbying has been a matter of recurrent concern to Congress. While in most instances lobbying is an exercise of the right of petition, the demonstrated potential of lobbying for abuse has at times threatened the integrity of the legislative process. In 1946, Congress recognized this by imposing legal requirements for disclosure on certain lobbying activities. An obvious pre-supposition of this legislation was that the activities being regulated were those of private persons, not elected officials. Prior to that, in at least one instance, the Senate adopted a resolution censuring a Senator for his direct personal involvement in lobbying activities. That was Senator Bingham, of Connecticut, who hired as one of his clerks a lobbyist for manufacturing interests and then brought the man into committee deliberations on pending tariff legislation. The Senate's action set a precedent in condemning the Senator's use of his official position to assist in lobbying. In addition, it strongly suggests that participation by Senators in lobbying activities is highly questionable.

The nature of the legislation involved is not a relevant part of the context for weighing the propriety of senatorial conduct. The real context is the proper functioning of our constitutional system, and particularly what the role of Sen-

ators is in relation to the Senate on the one hand and private persons on the other.

The basic problem is the preservation of the Senate as a deliberative body. To preserve the Senate's deliberative character, no Senator can permit his involvements with outside groups to override his obligations as a Senate Member.

The problem is a complex one requiring careful study and inquiry because there are many ways in which Senators can and should relate to outside groups interested in pending legislation.

But, on the other hand, is it satisfactory to say that a Senator remains a citizen and thus has the rights of all citizens to engage in lobbying? Judges are citizens, military men are citizens, civil servants are citizens, yet all of them must recognize various legal or ethical inhibitions pertaining to their own types of official positions against activities open to the ordinary citizen, inhibitions that must be respected if our system is to function properly.

COLLECTION AGENTS

If it is ethically permissible for Senators to join in collecting and spending money on TV and newspaper advertising aimed at pressuring other Senators, what limits are there? Might not a Senator decide that, in addition to spending money on advertising to get other people to lobby his fellow Senators, the best lobbyist would be the Senator himself, or a Senator with similar views, who should be retained with the collected funds to urge the position in question upon other Senators?

And whether or not a Senator is paid from privately contributed funds, does not the fact that he may be approaching his colleagues as the agent for an outside group undermine the mutual confidence that should exist? Is it proper for a Senator to seek to influence other Senators by drumming up outside pressure on them, or by seeking to influence them himself while acting in the dual capacities of Senator and lobbyist? Does such a dual role depreciate his functioning as a Senator? And does it give him, as a lobbyist, an unfair advantage not enjoyed by spokesmen for opposing views who are not Senators?

No criticism of any Senator is implied by these questions, Mr. President, but they are questions deserving of answers—for the important thing is to protect our system and the role of the Senate as a deliberative body.

Perhaps not directly related to the topic of lobbying is the matter of the involvement of nonprofit foundations in the operations of some of the lose-the-war groups.

I would like to know, for instance, what is the relationship of the Brookings Institution to the Committee for Peace Through Law, a blood kin of the Amendment To Extend the War Committee?

Can a nonprofit foundation retain its tax exemption if it participates in only one side of an issue?

Are research and speechwriting services provided for lobbying groups by a nonprofit foundation regarded as gifts or political donations?

These, too, are questions that must be answered.

LOBBYISTS AND THE COURTS

Mr. President, the Supreme Court's criteria for applying the lobbying law are these: First, the lobbyist must have solicited, collected, or received contributions; second, one of the main purposes of such contributions must be to influence the passage or defeat of legislation by Congress; and third, the intended method of accomplishing this purpose must have been through direct communication with Members of Congress.

It is a fact that Senators involved in the Amendment To End the War Committee have solicited and collected contributions. It is a fact that the main purposes of the contributions has been to influence the vote on the McGovern-Hatfield amendment.

That leaves only one question. Has the method been through direct communication with Members of the Congress? Mr. President, certainly the Amendment To End the War Committee has used indirect communications and members of the committee have used direct communications to lobby for the end the war amendment.

There are the TV and newspaper ads asking the American people to pressure Senators, and members of the committee, when they discuss the issue, are, in effect, lobbyists.

The question then is, Should members of the committee, who are also Members of the Senate, be required to register as lobbyists? Have they done so? Do they intend to do so?

NEW GROUND

Mr. President, regardless of the merits, if any, of the war amendment, there is no doubt that its sponsors have broken new ground in the field of lobbying.

I believe, however, that it is more a quicksand than solid ground. I believe they have inaugurated a practice that is fraught with danger to this body.

I believe that in their eagerness they do a disservice to the Senate and the Congress by lobbying their colleagues and by soliciting money in order to bring pressures against those colleagues.

NEW LEGISLATION

These activities are in a relatively untested and murky legal realm, and one cannot say with any firm authority that statutory provisions have been violated. However, today I am proposing legislation to clarify this area. The public interest demands that firm lines of demarcation be drawn and currently existing loopholes be closed.

Our democracy affords a free and unobstructed opportunity for citizens to petition the Government for redress of their grievances as well as the right to express their views to their elected representatives in the Congress on legislation and issues of importance.

At the same time, however, if the integrity of the legislative function is to be maintained and preserved, identification should be required of parties seeking to influence the passage or defeat of legislation by direct appeals to the Congress or by stimulation of the public intended to produce direct communication with the Congress.

The legislation I propose specifically imposes the full requirements of lobbying disclosure on Members of Congress who engage in these activities.

There is more at stake here than merely the loss of the peace amendment. At stake is whether the Senate is going to remain a deliberative body.

The text of the bill I introduce provides as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 307 of the Federal Regulation of Lobbying Act (2 U.S.C. 266) is amended by adding at the end thereof the following new paragraph:

"The provisions of this title also shall apply to any Member of Congress who directly or indirectly solicits, collects, or receives money or any other thing of value to be used principally to solicit or aid in the solicitation of communications to be made by members of the public to one or more other Members of Congress for any of such purposes.".

The PRESIDING OFFICER (Mr. NELSON). The bill will be received and appropriately referred.

The bill (S. 4274) to amend the Federal Regulation of Lobbying Act with respect to certain activities of Members of Congress, was received, read twice by its title, and referred to the Committee on Rules and Administration.

ORDER OF BUSINESS

The PRESIDING OFFICER. Under the previous order, the Chair recognizes the Senator from Ohio (Mr. YOUNG) for 20 minutes.

THE NIXON RENT-A-TROOP DOCTRINE: TWENTIETH CENTURY HESSIANS

Mr. YOUNG of Ohio. Mr. President, American people should know that officials of our Central Intelligence Agency are spending many millions of dollars of American taxpayers' money to enlist, arm, maintain, and train thousands of Thai "volunteers," so-called, in a continuing effort to maintain the Lon Nol government in power in Cambodia. In addition, generals of our Armed Forces in Vietnam with the assistance of Ambassador Ellsworth Bunker and his staff are continuing all-out efforts to support the Korean forces in Cambodia. Not only CIA officials but AID officials and officers of our Armed Forces are enrolling, equipping, and trying to mold into a fighting force thousands of Cambodians. This, despite the fact that Cambodians historically have been a placid peace-loving people. It is expensive business for American taxpayers to try to make good fighting men of them.

This is evident from today's news reports that the capital city, Phnom Penh, is under attack by the Vietcong forces within 6 miles of the Emperor's palace.

In addition, Mr. President, leaders of our Armed Forces are also going all out with our foreign aid money and our military and military advisers to equip more and more Thais to fight as our allies and, in fact, as mercenaries.

We Americans would do well to remember that those patriots who fought and

won our war for independence despised the mercenaries from Hesse-Cassel and other German archdukes who rented troops to King George III. Gen. George Washington captured 2,000 of these mercenaries in his surprise attack on Trenton after crossing the Delaware on Christmas night. This great victory was regarded as the turning point in our Revolutionary War. Later, in General Burgoyne's invasion from Canada, many more Hessians were captured in the surrender at Saratoga.

Now Pentagon officials report that the first installment of this 20th century Hessian fighting force numbers 5,000 troops, secured by agreement with the Government of Thailand. This 5,000 is the first contingent of so-called volunteers who will invade Cambodia. Unfortunately for our generals, at the present time all Cambodia, except a small area around the capital city of Phnom Penh, is controlled by forces opposed to the present rulers of that country. The fact is, Cambodia is not under the control of the government we are supporting.

The Prime Minister of Thailand has announced:

> We have reached an agreement that the United States will help finance Thai troops to be sent to Cambodia. Also, we have reached an agreement that the Cambodian soldiers undergoing military training in Thailand will also be financed by the United States.

Here is a demonstration that President Nixon has expanded and escalated our involvement in Southeast Asia instead of bringing our boys home.

It is also well known that the United States is recruiting more Koreans to add to those already in Vietnam. We have all along paid and maintained the ground troops of South Korea who have been in Vietnam since late 1965, and now we are expanding that force.

Mr. President, we are becoming more and more involved in waging war in Southeast Asia. Buying more and more mercenaries. Engaging in continual bombing in Laos, Cambodia, and Vietnam. And the same generals and policymakers who send our own boys to death in a senseless Asian struggle, now spend your money and mine to buy mercenaries to continue their folly.

The American people want to get our boys and our money out of this endless Asian struggle. The Nixon rent-a-troop doctrine will not accomplish this goal. It is with a feeling of sadness I report this situation.

THE TRADE BILL

Mr. HANSEN. Mr. President, the able and distinguished senior Senator from New York (Mr. JAVITS) in his remarks on the trade bill now pending in the other body made a number of references to the oil import quota system and th; Meat Import Act that I feel should be challenged.

First, the Senator says the trade bill "turns the trade policy of our Nation around 180 degrees" which, I believe would be called a reversal of present policies. But in the case of both oil and meat import quotas have been in effect for several years and have served the Nation well. In the case of oil, the quota program has been in effect for 11 years and in the case of meat about 6 years.

I cannot understand why Senators from the large consuming and manufacturing States such as New York continue their advocacy of unlimited imports of oil, meat, textiles, and all of the other foreign products that can be sold in this country at prices considerably lower than comparable U.S. produced products. Actually that is not the case in oil and oil products now but the Senator is using the same tired old arguments that have now been discredited by events in the Middle East.

Mr. President we have independence of action now in our international policy in the Middle East which would be restricted should we become dependent to any great extent on Middle East and North African oil, all of which is produced by countries alined against the United States-Israeli position.

I might also mention that this "cheap" oil from that area is now costing about 75 cents a barrel more delivered to east coast ports than the delivered price of U.S. crude oil. The "$5 billion" saving to U.S. consumers the Senator speaks of has now evaporated—actually it never existed—and instead that "cheap" oil would be costing in addition to a delivered price of $4.25 to $4.50 a barrel an additional $1.35 per barrel in tariff which adds up to $5.60 to $5.85 per barrel as compared with a delivered price of U.S. crude to New York City of about $3.80 per barrel.

The Senator blames the U.S. oil industry for a shortage of fuel oil refining capacity on the east coast and says the oil import quota system is responsible. But the Senator does not mentiton the fact that 80 percent of the fuel oil now used on the east coast is now imported under this quota program he calls rigid. How rigid can a program be that has lifted all restrictions on the import of residual or industrial fuel oil on the east coast? As an example, just in the last year residual fuel oil imports have increased from 820,000 barrels a day to 1,489,000 barrels a day. But what was "cheap" imported residual fuel oil a year ago—about $2 a barrel—has now doubled in price to $4 and more per barrel.

The $2 price which prevailed until the Middle East situation changed things is the real reason the oil companies did not build the refining capacity to produce this type of fuel oil. Under the U.S. free enterprise system, a business or industry must operate at a profit to stay in business.

The oil companies and a number of us in Congress have warned for several years that increasing dependence on foreign sources was hazardous and that these sources could be cut off or tightened up overnight as they have been.

The Senator speaks of the House trade bill "freezing" the oil import quota system "that has served the Northeast so badly."

First, the President has practically unlimited authority under the quota system to increase imports as he recently did by 100,000 barrels per day of crude and 40,000 barrels per day on home heating oil for New England. In fact the separate views and recommendations of the Secretaries of Interior and Commerce in the Oil Import Task Force report recommended substantial increases over the next 5 years to supplement domestic production and rapidly increasing demand.

The Senator may have noted in the task force's report a recommendation by the Secretary of Defense that the question of residual fuel oil has not been adequately analyzed and believes that the effects of virtually free access to foreign residual oil on U.S. markets and U.S. refining capabilities have been such as to make the continued exemption of residual oil from import quotas open to question.

So the Senator is actually damning the oil industry if it does and damning it if it does not. He questions the President for not adopting the now discredited oil import tariff plan which was designed to open up imports and further reduce the producing and refining capability of the domestic industry and at the same time blames the oil import quota program for limiting the production of residual heating oils on the east coast.

This is a case of being caught in your own trap and I certainly sympathize with the Senator from New York and his constituents who undoubtedly will have to pay higher heating and utility costs this coming winter.

But I know of no ready solution to remedy the situation.

The President is well aware of the crisis and has appointed a high-level committee to make an immediate investigation and recommendations.

Congress now is considering long-term solutions in a national energy policy directed toward self-sufficiency in all minerals including fuel minerals. We have waited too long now in establishing such policies but opening the floodgates to imports of oil that can be cut off or double in price overnight is not the answer.

Why does the Senator from New York and others continue to flay an industry that has actually done a remarkable job in this country's progress and is even now increasing production to what may well be its capacity in an effort to make up the shortages brought on by the Middle East situation and past Federal gas pricing and import policies.

The Senator is right that the oil import program needs revising and I believe it will be. Such exceptions and exemptions as have been allowed to leave our largest population centers on the east coast dependent on imported oil should certainly be corrected.

The oil industry was able through careful planning in cooperation with the Federal and State governments to prevent a fuel crisis in Europe following the 1967 Arab-Israeli war and the Middle East and North African oil embargo. Production was increased by more than a million barrels a day to supply our own east coast with the oil that had been coming from that area, part of Canada's east coast and much of Europe's need, including NATO.

It is doubtful that we have the producing capacity to do so again but the

industry will, I believe, prove that it can take care of our own needs or at least the essential needs.

The Senator's concern for consumer prices including gasoline is certainly to be commended but I believe he should also be concerned about the reliability and dependability of the supply of that gasoline. And inasmuch as the Senator said the oil import quota system has always had the effect of maintaining a high price of gasoline, I would like to ask where in the world—in what country or countries—is the price of gasoline less than the U.S. price?

I have here an article from the Washington Daily News of March 10, 1970, with a compilation of European gasoline prices which shows that the average European price per gallon is 60 cents for regular and 69 cents for premium, which, I believe the Senator will agree, are somewhat higher than even New York prices.

And I am sure the Senator is aware that oil and gas supply 75 percent of our total energy requirements and 99 percent of the energy that motivates our entire transportation system.

As a Nation and world power, we would be as helpless as the giant the Lilliputians tied up in his sleep if we ever allowed ourselves to become dependent on foreign sources of oil and gas. Even so-called friendly sources seem to have a grudge against Uncle Sam as they have demonstrated in Latin America by expropriating U.S.-owned properties after they are developed. Algeria has done the same thing and Libya recently took over all foreign-owned oil marketing facilities.

What kind of a world power would be at the tender mercies of State-controlled oil supplies that could be used for blackmail or price hijacking?

The sleeping giant had better wake up before the Lilliputians take over the oil spigot.

With estimates beyond comprehension of undiscovered oil and gas in addition to vast reserves of coal, oil shale, and uranium and we had better get on with the job of developing them for self-sufficiency in energy rather than criticizing the oil companies for wanting to operate at a profit.

With respect to the price of beef, which also was singled out by the distinguished Senator from New York, I would like to point out that American consumers are, at this time, actually spending a smaller percentage of their total income for food than ever before. And purchases of beef account for only about 15 percent of the total amount spent for food. The average consumer today spends only about 16.5 percent of total disposable income for food, compared to 20 percent in 1960. I think that is a bargain.

Further, I would note for the record that Government statistics show an increase in the average price per pound of beef at the retail level of 20.7 percent during the 10 years between 1960 and February 1970. During that same period, the price paid for choice steers increased only 15.3 percent.

While steer prices increased 15.3 percent over a 10-year period, we find that hourly earnings for construction workers rose 63 percent, consumer services rose 46.3 percent, average nonagricultural hourly earnings rose 50.7 percent, and per capita disposable income rose 63.8 percent.

Beef is a bargain for the American consumer. The average consumer now buys about 110.7 pounds of beef per year, compared with 85 pounds in 1960. The livestock industry has, during the years since 1964 when the meat import quota law was enacted, made it possible for even the poorest families to eat red meat.

It should also be noted that the domestic livestock industry accounts for the consumption of enormous amounts of grain and feed products, which as we all know have been in such surplus as to require a Government management program costing $3 billion annually.

And while I am on the subject of beef, I should like to comment on the charge made by some that there is a shortage of "second grade" or manufacturing beef in this country, thereby necessitating increased imports from abroad.

Mr. President, this is a myth. There is no shortage in this country of the kind of beef referred to as "processing" meat. Over one-half of the domestically produced processing meat comes from fed carcasses, which is proof of my contention that imported meat does compete directly with domestic products. The portion of beef available for processing has been steadily increasing in this country, not only because larger numbers of cattle are being fed, but also because the grade standards were relaxed a few years ago requiring less finish for an animal to reach the good, choice, and even prime grades.

At the risk of repeating myself, I must say again that free trade and fair trade must go together. Free trade advocates argue that the American consumer is entitled to the prices at which foreign producers are able to sell their wares in this country.

But the notion that imports should be given priority over domestic production to the extent of bulldozing the jobs of our workers out of the way and leaving it up to us to pick up the pieces and repair the wreckage of a system of adjustment assistance is a wholly unjustifiable philosophy. I doubt that a New York City textile worker would be willing to trade his job for a relief check in order to buy a cheaper shirt made in Japan.

That foreign producers should be able to pay wages that would be illegal in this country and then build a destructive trade on that basis with the blessing of our Government, seems incredible. This philosophy assumes that if an American producer cannot compete with imports, he is necessarily inefficient. Yet, on a relative efficiency basis, which is to say, output per man-hour or per man-year American industry continues to lead the world.

Mr. President, if all people would renounce war and insist on living in peace, if all people would be equally as concerned for every other human as for themselves, if all people would reject greed and cupidity there is no question but that free trade would best serve humanity.

But this is not the world we live in today.

Americans have been reasonably generous in rebuilding wartorn countries. We have tried to help developing nations. We have shed some blood to insure freedom and self-determination for other people.

But we could not have done these things if we had not been a strong nation. Our total strength will reflect the industry, the jobs, and the services we are capable of sustaining in the United States. America proved long ago that power is the result of brains and energy applied to natural resources.

The competition American business is facing now is not fair. Wages, standards of living, and social responsibility—taxes—place a most unequal burden on us. Free trade and fair trade should go hand in hand.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRIVING IN EUROPE: GASOLINE COSTS MORE BUT YOU USE LESS

[From the Washington Daily News, Mar. 10 1970]

Gasoline prices vary from country to country in Europe because of wide differences in taxes, but they all have one thing in common. They are high by American standards.

The American Automobile Association, which each year plans motor trips abroad for thousands of American travelers, says the average European price per gallon is 60 cents for regular, 69 cents for premium. However, some countries use the imperial gallon measure, which gives the driver about a fifth more fuel than the regular U.S. gallon. These countries include Great Britain and Northern Ireland, Ireland (Eire), Greece, Turkey and Yugoslavia.

Motorists in typically economical European cars will normally spend no more than $3 for 100 miles of driving on gas.

Tourist gasoline discount coupons are available to foreign motorists at border crossings into Italy and Yugoslavia.

Here is the latest information on gasoline prices abroad as compiled by AAA World-Wide Travel experts on the scene:

	In cents	
	Regular	Premium
Austria	55	62
Belgium	64	68
Czechoslovakia	49	60
Denmark	60	63
Finland	70	75
France	75	85
Germany (West)	55	62
Great Britain	70	79
Greece	70	80
Ireland (Eire)	65	70
Italy	75	80
Netherlands	55	60
Norway	55	60
Portugal	76	90
Spain	40	60
Sweden	84	87
Switzerland	54	59
U.S.S.R.	40	47
Yugoslavia	40	49

PENTAGON PUBLIC RELATIONS—"VIETNAMIZATION"

Mr. YOUNG of Ohio. Mr. President, President Nixon and his Defense Secretary say that when Vietnamization is

completed our GI's can be brought home and the Saigon regime of Thieu and Ky will be on their own. Vietnamization commenced more than 12 years ago under President Eisenhower. In January 1961, when he left the White House, we had 685 military advisers in Vietnam—no combat troops. On that sad day in November 1963, when President Kennedy was assassinated we had 16,200 military advisers in Vietnam—no combat troops. Under President Johnson we soon had 500,000 military advisers and combat troops in Vietnam.

How absurd and fantastic that with approximately 54,000 killed in combat and by accidents and incidents, so-called, by Pentagon leaders in waging this undeclared unwinable war in Southeast Asia, more than 300,000 wounded—many-maimed for life—and more than $130 billion spent over the years—our losses should be increased in a now expanded war. Also, more than 280,000 Americans who are Vietnam veterans, now civilians, are suffering from malaria and will probably continue to suffer from this debilitating ailment for as long as they live.

The policies of President Nixon are incompatible with a negotiated settlement. This undeclared war has been escalated into Cambodia and Laos. How many more years does President Nixon claim are needed for Vietnamization? Is this the Nixon prescription for an endless war of aggression in Southeast Asia?

As if American taxpayers are not harassed enough as it is, a recent statement by Senator J. WILLIAM FULBRIGHT revealed that the Department of Defense has been less than candid in reporting the extent of its public relations activities in its own behalf. Senator FULBRIGHT was urging a $10 million ceiling on Pentagon public relations spending. The last such limit, imposed in 1959, set a limitation of $2,755,000 when the total defense budget was $43 billion. In 1970, defense spending was $77 billion, but Defense Department public relations spending was up 1,500 percent to $40,447,000. Spending this vast amount of money in a Pentagon propaganda apparatus of 4,400 public relations men, so-called. In 1969, Pentagon officials claimed that lobbying and public relations spending was almost $28 million. Now, apparently anticipating the possibility of a new legislative ceiling, Pentagon officials have decided to disclose that the 1969 public relations cost was really $44,062,000. Judging from their ability to systematically disguise and distort the extent of public relations expenditures it would appear that Pentagon officials have learned the lessons of Madison Avenue only too well.

WAR AND THE AMERICAN TAXPAYER

Mr. YOUNG of Ohio. Mr. President, in the last 6 years the United States has spent more than $115 billion on waging a ground and air war in Southeast Asia. For 1969 alone, the price tag was $30.4 billion—$600 for every American family. This total did not include economic aid programs to Indochinese nations, CIA funds spent in the area, the cost of reductions in stockpiles of strategic materials or the loss of productivity accompanying war expenditures. In 1969, of each tax dollar 23 cents went to pay for the undeclared war in Vietnam, 13 cents for past wars, and 35 cents in preparation for future wars. The Indochinese war in 1969 cost more than all Federal spending for domestic goods and services, 10 times more than Federal outlays for medical assistance, and 30 times more than Federal grants for urban planning and development. Now it has been expanded and extended into Cambodia and Laos. It costs $500,000 to kill one Vietcong. This sum would support 3,400 youngsters in school, or college, or build at least 50 housing units. One heavy B–52 raid, and these are being made daily, costs about $40 million. This could pay for constructing three 400-bed hospitals, or 27 elementary schools, or about 4,050 housing units.

MORE ABOUT SAIGON CORRUPTION

Mr. YOUNG of Ohio. Mr. President, American taxpayers seem to be on the losing end constantly when it comes to our involvement in Southeast Asia. First, in a civil war in South Vietnam which has been escalated and expanded into a ground and air war not only in Vietnam but also in Cambodia, Laos, and Thailand. This fact is so evident that Nixon administration leaders and Pentagon generals now refer to this as an Indochinese war. Unfortunately, we Americans have been waging an unwinnable war in Southeast Asia since 1963.

Recently, the Defense Minister of the Saigon militarist regime, which is in power due solely to the presence of more than 400,000 Americans fighting in Vietnam against the forces of the National Liberation Front, or Vietcong, and those soldiers who have infiltrated from North Vietnam, offered for sale to the highest bidder 202,887 rifles, a large number of machineguns, and small arms. All of these weapons paid for by American taxpayers were given in recent years to the Saigon militarist regime for use by the army of South Vietnam.

These weapons furnished by the United States from 1963 to 1966 presumably to be used to fight the Vietcong are being sold for a total sum which may amount to several million dollars. Will this money be turned over to representatives of the United States? No indeed. For whose benefit will all this money accrue? Will it be used by a democratic government to aid a people who are constantly shot at, harassed, and brutalized, in the majority of cases, by their own leaders? Will it be used to alleviate the suffering of civilians stuffed into overcrowded, filthy, and dehumanizing refugee camps? If past experience is any guide, this entire amount will go to some corrupt leaders of the Saigon regime in power because of our armed might and the war policies of President Johnson and now President Nixon. How can our government officials in Saigon justify, in good conscience, giving these leaders machineguns and other war materiel, paid for by American taxpayers, to sell in the open international market?

Vice President Ky and a number of South Vietnam generals already have unlisted bank accounts in Hong Kong and in Switzerland. The total sum of money received from the sale of these machineguns and other war materiels will probably go to fatten those accounts.

ORDER FOR ADJOURNMENT UNTIL 10:00 A.M. MONDAY, AUGUST 24, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 10 a.m., on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR PACKWOOD ON MONDAY

Mr. BYRD of West Virginia. I ask unanimous consent that immediately upon disposition of the unobjected-to bills on the Legislative Calendar on Monday morning next, the able Senator from Oregon (Mr. PACKWOOD) be recognized for not to exceed 45 minutes. This is without prejudice to the previous order under which the able Senator from Arkansas (Mr. FULBRIGHT) is to be recognized at approximately 11 a.m. on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE—ENROLLED BILL AND JOINT RESOLUTION SIGNED

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bill and joint resolution, and they were signed by the Acting President pro tempore (Mr. METCALF):

H.R. 15866. An act to repeal the act of August 25, 1959, with respect to the final disposition of the affairs of the Choctaw Tribe; and

H.J. Res. 1194. Joint resolution to authorize the President to designate the period beginning September 20, 1970, and ending September 26, 1970, as "National Machine Tool Week."

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER. Under the previous order, the Chair lays before the Senate the unfinished business, which will be stated.

The legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate proceeded to consider the bill.

The PRESIDING OFFICER. Under previous order, the Chair recognizes the Senator from Illinois.

PRIVILEGE OF THE FLOOR

Mr. PERCY. Mr. President, I ask unanimous consent that my legislative assistant, William Lytton, may have access to the floor to help me during consideration of my amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, will the Senator from Illinois yield to me very briefly, to suggest the absence of a quorum for not more than 1 minute, without losing his right to the floor?

Mr. PERCY. I yield.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 818

Mr. PERCY. Mr. President, I call up my amendment No. 818 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

At the end of the bill add a new section as follows:

"SEC. 507. In order to reduce annual expenditures in connection with permanent change of station assignments of military personnel and in order to help further stabilize the lives of members of the Armed Forces and their dependents, the Secretary of Defense is directed to initiate promptly new procedures with respect to domestic and foreign permanent change of station assignments for military personnel under which the length of permanent change of station assignments will, whenever practicable and consistent with national security, be made for longer periods of time. The Secretary shall achieve not less than a 25 per centum reduction in such expenditures in the fiscal year beginning July 1, 1971, and in each fiscal year thereafter, as compared with expenditures for such purposes in the fiscal year beginning July 1, 1970, taking into account the relative number of men in military service during such fiscal year and other relevant factors. The provisions of this section shall not apply with respect to the assignment of military personnel in combat zones or with respect to so-called fixed expenditures resulting from training, separation, promotion, and similar activities within the Department of Defense."

Mr. PERCY. Mr. President, on August 3, I introduced amendment No. 818 to H.R. 17123. This amendment would direct the Secretary of Defense to initiate promptly new procedures with respect to domestic and foreign permanent change of station—PCS—assignments for military personnel.

The amendment provides that the Secretary of Defense shall achieve a 25 percent reduction in expenditures for PCS moves beginning July 1, 1971. This, of course, does not apply to those who are assigned to combat zones, or to the expenditures that are incurred by normal training, separation, and promotion.

The purpose of this amendment is threefold.

From the point of view of economy, this amendment is especially timely. Because of the urgent need for us to adjust our national priority of spending and achieve a level of fiscal responsibility, I have resolved to identify areas where $4 billion could be saved annually. I am doing this because we face the possibility of a deficit as large as $10 billion for fiscal 1971.

In fiscal 1971, $1.3 billion is earmarked for permanent change of station moves, which is basically the rotation of military personnel from assignment to assignment.

Approximately $460 million of the total will go for rotation of servicemen after 12 months of duty in Southeast Asia.

Another $300 million of the total is to go toward the normal cost of training and separation. But the cost of this amendment does not affect them as long as we are in Indochina. Both of these costs are necessary so long as we have the draft, and this amendment does not affect them.

However, I should like to point out that the $300 million in training, separation, and so forth, might well be reduced as we reduce the level of our forces. And as we reduce, of course, the number of times we rotate, but I am not touching either one of those items.

Approximately $559 million is to be spent for the remainder of PCS moves. By reducing this amount by 25 percent, as this amendment would, a savings of $140 million could be realized. In a time when each of us is looking for areas to cut spending, I know that it is unusual to suggest a savings relatively so small and to many so uncontroversial. However, this is an area where the money can be saved, and I think it should be saved.

The second purpose of this amendment is to try to drag the military services, as some might term it, "kicking and screaming" into the 20th century. Though many procedures and practices of the military are modern and advanced, there are certain officers and procedures that are archaic and outmoded. Some time ago I pointed out how the various services were wasting at least $500 million a year by not following up on the recommendations of the White House Conference on Food, Nutrition, and Health. By keeping the system of feeding men in groups of 200, which was effective in the time of Custer we now have a system where there are, for instance, 110 separate mess halls at Fort Bragg alone. Petty jealousies between the various services and a resistance to change have prevented modernization of this antediluvian practice.

I should like to point out that we do spend about $7 billion on food. A reduction of one-half a billion dollars would be 14 percent, which I think would not affect the quality of any food but would improve the efficiency of its service. We could institute some practices in this area of spending that we have found to be of advantage, and they might even be adopted in other areas.

Likewise, even a quick perusal of the military PCS system reveals a shocking disregard for modern cost-effective procedures. Most organizations in the private sector that rotated personnel as frequently as does the military services would go bankrupt. The practice is overdone, wasteful, and inefficient as now carried out.

Officers are moved from assignment to assignment, trying to give each enough expertise as if every member of the Armed Forces was being trained to become a member of the Joint Chiefs of Staff. Personnel are moved so frequently that job efficiency suffers severely.

With an eye toward a more efficient and more professional Army, the military services should act now to utilize the modern techniques employed successfully in the private sector. Let a man learn his job well and let him stay on the job long enough, using his expertise to the advantage of both the military and himself and let him be transferred only when it will benefit both efficiency and morale.

This, Mr. President, brings me to my third point—morale. The constant moving around that the military subjects many of its men and their dependents to is very disturbing to family life. Though my first two points deal with figures and cost effectiveness, this third point is probably the most important. For here we speak of the human element, a man and his family being shunted from base to base; the children constantly moving away from friends. We have all heard of Navy brats and Army brats, children who were constantly moving, children who never lived in one place long enough to consider it a home—only a house or a trailer or a temporary apartment.

I have talked with many servicemen and I have received many letters on this subject. None commented on how we would save money; all commented on how far this would go toward stabilizing family life and actually reducing the high rate of termination of personnel from the military services.

I speak with some experience, though. My own experience goes back many years to World War II when I served 3 years as a naval officer. I have also had some degree of contact as a defense contractor and as a man interested in working with the military services for some 28 or 29 years. I have firsthand knowledge of the insufficient and wasteful methods of the military services in constantly rotating men between posts.

One of my constituents sent in a copy of an editorial from the Lafayette (Ind.), Journal and Courier which concerns this proposal. I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the editorial

was ordered to be printed in the RECORD, as follows:

UNNECESSARY MOVES

Illinois Senator Charles H. Percy has an idea that makes sense to save money in the military budgets.

He suggests that the military services cut drastically the transfer of military personnel except for the rotation of those in the combat area.

Senator Percy calls the frequent transfer of military personnel "overdone, wasteful and inefficient" and says that lengthening the duration of certain assignments could lower the 1.3 billion earmarked for such purposes.

He says that at least a 25 per cent cut in such moves from base to base would make it easier on military families affected by the "move often" principle. And he said that at least $140 million a year could be saved by even that small curtailment of the moving program.

If organizations in the private sector rotated personnel as frequently as the military services do, they would go bankrupt," Senator Percy declared. "The practice is overdone, wasteful and inefficient as now carried out.

It stands to reason that in addition to increased family stability and the substantial savings that Senator Percy mentioned, job efficiency might be improved by the experience and familiarity with local problems that a longer assignment entails.

With the bulk of manpower not engaged in combat, the military services could be accused of "Mickey Mouse" in making many base-to-base transfers. And as for special training and experience that transfers might provide, some of this could be engineered into programs of posts where the servicemen are now stationed.

The change Senator Percy suggests may go against tradition that has found the services reluctant to give a man time to put down roots. But it wins applause from taxpayers, and doubtless from servicemen's wives, who say, "Try it!"

Mr. PERCY. Mr. President, upon introducing this amendment, I asked the Department of Defense to prepare an analysis of its position concerning the amendment. I have received DOD's reply, and I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

DOD POSITION ON AMENDMENT NUMBER 818 TO H.R. 17123—DOD APPROPRIATIONS FOR FISCAL YEAR 1971

The Department of Defense is in complete agreement with the intent of the proposed Section 507 to be added to H.R. 17123 (Amendment No. 818), i.e., "To reduce annual expenditures in connection with permanent change of station assignments of military personnel and—further stabilize the lives of members of the armed forces and their dependents." The Department, however, is opposed to lengthening overseas tours in general and to any limitation on the number of permanent changes of station that may be ordered within a given time frame. It is recomemnded that Amendment No. 818 not be enacted.

The effect of such restrictive legislation would:

a. Limit the full range of skill selectivity from total resources and void the concept of equity in assignments to both desirable and undesirable overseas areas.

b. Accelerate among personnel resources not directly affected by the restrictions the inevitable chain reaction set up when transfers are made.

c. Reduce turn-around time for those personnel, particularly those in short supply, available for assignment to hostile fire areas, force shortages of critical skills in other overseas areas, or increase tour lengths in undesirable, unaccompanied tour areas.

d. Create far greater inequities in all overseas assignments to include hostile fire areas.

e. Require an increase in accessions and end strength to sustain forces in hostile fire areas.

f. Increase consecutive unaccompanied tours.

g. Lower morale and career satisfaction of the majority and affect adversely the overall force effectiveness at a most critical time.

Overseas tour lengths have been a matter of continuous study within the Department of Defense for many years. In 1957, after nearly two years of intensive research, certain basic policies were adopted to apply to all Services. Fundamental among these policies are that (1) tours will be the same length for personnel of all Services stationed in the same area; (2) tours for unaccompanied personnel will be shorter than when dependents are persent; and (3) the length of tour will contribute to the maximum effectiveness of the forces, giving due consideration to the morale of the individual.

The exact length of duty tour in a particular location is established by the Secretary of Defense, based on recommendation of the military department having the major interest (usually the greatest personnel strength) in the area and in coordination with the other military departments. Determination of tour length is an extremely complex matter, involving consideration of such tangible factors as the effect of tour length on the operational readiness of the overseas forces; the ability of the Services to support short-term rotation within authorized numerical strengths and skill resources; dollar costs of movement; the impact of tour length on the frequency of overseas duty for individuals; loss of productive man-years resulting from an increased personnel pipe-line; collateral movements generated by increased movement of personnel to and from overseas; the turbulence created in CONUS activities which must continually supply personnel for overseas shipment and absorb returning personnel. In addition, a less tangible but nonetheless compelling consideration influencing final decision on the matter is the effect of transfers and family separations on the retention of career personnel.

Personnel are reassigned only to meet valid military requirements and Department of Defense policies governing the assignment of individuals outside the CONUS provide that:

a. Professional qualification to perform the duties required is the paramount consideration in selecting an individual.

b. An equitable distribution of overseas assignments, to both desirable and undesirable areas, is to be maintained within the Service concerned.

c. Periods of forced separation and adverse effects of overseas service encountered by military personnel and their dependents is to be minimized.

d. Personnel having dependents but serving overseas unaccompanied will be permitted a differential in tour length to reduce family separation.

Since the end of World War II the overseas forces of the military services have been of such size that their support has constituted the major problem in personnel assignment. At the present time approximately 33% of the total military strength of the Department of Defense is stationed outside the continental U.S. As of March 31, 1970, approximately 46% of this overseas force was ashore or afloat in Southeast Asia; 20% was assigned to other Far East locations while 29% was stationed in Western Europe. Within each military service, 43% of the Army was overseas, 30% of the Air Force and lesser percentages of the Navy and Marine Corps were stationed ashore overseas. For the careerist—officer or enlisted—the overseas commitments of the U.S. necessitate his spending about ⅓ of his total service on foreign duty, frequently without his family, even in the absence of combat. Continuing support of operations in Southeast Asia is increasing this factor.

Career attractiveness of military service has been recognized as essential in the procurement and retention of personnel in sufficient numbers to maintain a trained, stable defense force. This career attractiveness is directly affected by the length and conditions of foreign service required of military personnel and visual evidence that individuals of like skill and grade are sharing equally in overseas duty in desirable and undesirable areas. Achievement of an all-volunteer force is totally dependent upon career attractiveness. The problem facing management has been, and will continue to be, to strike a balance between the optimum tour to maintain maximum operational capability and readiness, on one hand, and the impact of foreign duty—including duty in hostile fire areas—on the retention of personnel, on the other. The entire overseas rotation plan for military personnel is affected by the length of time an individual is present for duty at an overseas station, the frequency with which he becomes due for foreign service, and whether or not his foreign assignment will separate him from his family. This, in turn, is affected by the personnel turnover within the Services which increases as conditions of service become less desirable.

Areas such as Europe, Hawaii and Japan are considered "desirable" and have a 36 to 48 month tour with dependents and a basic 24 months tour for all others. Conversely, the tour in Vietnam is 12 months. Part of Korea is designated as an unaccompanied 13-month tour area for all personnel. The most current statistics indicate that approximately 64% of Army personnel and 42% of Air Force personnel stationed in foreign overseas areas are serving where dependents are not authorized.

No standard tour for CONUS is established by Department of Defense. It, of course, forms the primary sustaining base for all overseas forces. For example, a new accession into a Service may spend only that amount of time needed to meet training proficiency before proceeding to his first overseas station. On the other hand, personnel assigned to various duties such as Departmental staffs, Service school facilities, ROTC duty and recruiting duty may be stabilized for 24 to 36 months. In connection with support of South East Asia operations, however, all the Services attempt to avoid returning an individual for a repeat tour in Vietnam within 24 months of his previous tour completion. They have not been uniformly successful in all skills and grades simply because the CONUS force structure is not large enough, nor is such a force practicable, to support the rotational requirements of Vietnam and other overseas areas on a skill and grade basis. This fact has caused the Department of the Army, for example, to designate Europe and certain other areas as part of the sustaining base.

Consequently, Vietnam in particular and all undesirable tour areas in general are inextricably related to manpower resources in CONUS and other overseas areas. So long as equity in assignment to duty in hostile fire areas and family separation is to be maintained as a significant contribution to service attractiveness, the concept of share and share alike must prevail. Further, increasing the standard tour length beyond 36 months, for example, in a given area would only serve to stabilize the individual who enjoys that particular area and will re-enlist

to continue his tour or the individual who may be held in place because his remaining term of service is sufficiently long to compiete the tour. In effect, the careerist would be stabilized in the more desirable areas and the share of duty in undesirable areas would be determined increasingly more on the chance basis of remaining service at time of reassignment eligibility. Many proposals are received for shortening overseas tour lengths. Seldom is a proposal received from any source which advocates lengthening the separation from family and friends.

The Department of Defense is keenly aware of the general desirability and necessity to achieve maximum stabilization in personnel assignments. It is also not unmindful of the repeated interest and guidance of the Congress in the area of reducing costs attributable to permanent changes of station. The following actions are indicative of continuing efforts in this regard:

a. Overseas assignments are filled with eligible personnel who are available for reassignment and must be moved (graduates of the various school systems and those completing CONUS tours).

b. Number of overseas levies on CONUS commands has been held to a minimum through the use of voluntary and involuntary consecutive overseas tours.

c. Where feasible and a requirement is forecast, personnel eligible for assignment to Southeast Asia have been restricted from other permanent changes of station.

d. Personnel in long tour areas not eligible for assignment to Southeast Asia have been authorized and encouraged to extend their tours.

e. Qualified overseas returnees are utilized to fill selectively manned activities (reduces CONUS to CONUS moves).

f. Voluntary tour extension program in Vietnam for periods up to six months and under Public Law 91-302 for six months or longer is eminently successful (175,100 have extended for six months or longer).

g. Stringent policies govern the official sponsorship and movement of dependents to and from overseas areas.

It must be pointed out, however, that the time frame in which the restrictions proposed in Amendment No. 818 would become effective is expected to present critical personnel assignment problems. The continuing downward trend in overall force levels, with the accompanying adjustments in force structures and locations of those forces, may demand an increase in permanent change of station funds in relation to total military strength.

Present policies are continuously under study, with the objective of reducing costs, increasing efficiency, and maintaining career patterns which will attract and keep qualified personnel in the Armed Forces. While not opposed to any change of the present system which will contribute to these objectives, the Department of Defense cannot support changes which will significantly lessen the ability of the Armed Forces to perform their defense mission or affect adversely the morale of its fighting forces. Based on 13 years experience and refinement of its standardized tour policies, it is the belief of the Department of Defense that the presently established tours are in the best interest of the Department and the Nation. The permanent change of station travel requirements for FY 1971 are considered minimal for mission accomplishment.

Mr. PERCY. Mr. President, I would read this analysis, but I do not wish to lull anyone to sleep. I assume that the Department of Defense spent a great deal of time preparing the reply, and I appreciate the effort put into it. However, I regard this as a classic of what might be termed military gobbledygook. The language used is repetitive, nearly unintelligible and meaningless as a defense. It does not square with my own personal observations as a naval officer for 3 years any more than as someone who has worked closely with the military services for a quarter century.

Department of Defense, giving its reasons for not supporting the amendment, says the measure would "limit the full range of skill selectivity from total resources." I suppose that someone in the Pentagon understands that phrase and feels that it justifies a $1.3 billion expenditure a year.

Department of Defense says the amendment would "create far greater inequities in all overseas assignments to include hostile fire areas." Now, Mr. President, I assume that "fire areas" are always hostile. But, in this instance, I yield to Department of Defense expertise. But, speaking more to the point, this amendment expressly does not apply to military personnel in combat zones.

DOD says that this amendment would "lower morale and career satisfaction of the majority and affect adversely the overall force effectiveness at a most critical time." Mr. President, I just do not believe this to be the case. Most of our military personnel are in noncombat areas. These are the men this amendment concerns. Allowing them to stay longer at their assignments will, as I have already mentioned, increase both morale and effectiveness. Whoever wrote the DOD analysis would seem to be out of touch with the men and families who are being indiscriminately and too frequently moved around without any apparent reason.

I would like to deal with one last point. The report says that the time frame in which the restrictions proposed in amendment No. 818 would become effective is expected to present critical personnel assignment problems. Mr. President, I for one have faith in the ability of the military to resolve such problems. In August of 1943, at the Quebec Conference, the decision was made to start planning D-Day detail. On June 6, 1944, 11 months later, 10,000 planes, 80 warships, 4,000 other ships, 450,000 tons of vehicles, 4 million tons of equipment, and 100,000 U.S. Army men participated in D-Day. Within the next 100 days, 2.2 million men had been moved to the French coastline.

And in Vietnam on February 7, 1965, the North Vietnamese attacked two of our bases. At the time, our force level in Vietnam was 23,000 men. Eleven months later it was 196,000 men.

The problem posed only a 25-percent reduction of PCS moves is negligible as compared to the preparations required for D-Day and the Vietnam buildup. I assure my colleagues that the military is up to the task even if some of them feel they are not. The amendment gives the Secretary of Defense 11 months to achieve this reduction, and I believe that this is more than adequate time, considering that this is 11 months from the beginning of planning and that they will have another 12 months time.

Mr. President, I do not believe that the Department of Defense has made a convincing case. However, I want this in the RECORD so that every one of my colleagues will have a right to take whatever action they may wish.

I believe this amendment should pass. This is an instance where we can begin to move against outmoded procedures and practices.

Mr. President, I did have printed in the RECORD last night material from the Fitzhugh report. I simply would like at this time to reiterate as of last night what Deputy Secretary of Defense David Packard had to say when he addressed the Armed Services Management Association meeting in Los Angeles.

I have known Mr. Packard for a long time. I consider him to be one of the ablest men in industry that I have ever known. Certainly the President and Secretary Laird were very wise in selecting him to be Deputy Secretary of Defense. We are very fortunate indeed to have men of his intellect, deep experience, knowledge, and forthrightness serving the U.S. Government at this time.

With his usual candor he said at that time:

Frankly, gentlemen, in Defense procurement, we have a real mess on our hands, and the question you and I have to face up to is what are we going to do to clean it up.

He also said that most of the 113 recommendations of the blue ribbon study panel would be implemented.

Certainly when he refers, in this one particular case, to the movement of military personnel, the Fitzhugh report is very clear indeed in this area.

It says:

Officers and enlisted men are rotated among assignments at much too frequent intervals.

It is clear from the evidence that the rotation practices which have been followed result in (a) excessive and wasteful cost, (b) inefficiencies in management, and (c) difficulty in fixing responsibility.

And later it states:

This system of rotation of officers leads inevitably to deficiencies in management. Officers assigned for such limited periods simply cannot acquire a knowledge of the work, become familiar with the qualifications of the people, make plans, set goals and push the work ahead.

Even in the report the Department of Defense sent me, they indicate in several sections of that report that they were very sympathetic with what we were trying to accomplish in this amendment.

They said:

The Department of Defense is in complete agreement with the intent of the proposed Section 507 to be added to H.R. 17123 (Amendment No. 818), i.e., "To reduce annual expenditures in connection with permanent change of station assignments of military personnel.

Mr. STENNIS. Mr. President, would the Senator yield?

Mr. PERCY. I yield.

Mr. STENNIS. Mr. President, who is that communication from?

Mr. PERCY. This communication is from the Department of Defense, and it is signed by Colonel Farlow. I addressed my communication to the Secretary of Defense, and Colonel Farlow answered, I presume on behalf of the Secretary.

Mr. President, the final section I would

like to read from that rather lengthy report states:

The Department of Defense is keenly aware of the general desirability and necessity to achieve maximum stabilization in personnel assignments. It is also not unmindful of the repeated interest and guidance of the Congress in the area of reducing costs attributable to permanent changes of station.

I think for the benefit of all of my colleagues, the one example given in the Fitzhugh report is an exceedingly interesting example. It will just take a moment to read it:

A staff study of Army, Navy and Air Force promotions to General Officer and Flag rank in 1969 revealed this situation: there were 174 officers in the group and their average service was 24 years; these officers had been given 3,695 assignments, or an average of 21 per man: the average duration per assignment was 14 months. Looked at another way, the average officer had spent: 8 years in Operational assignments, 5 years in Service Schools and other educational assignments, and 11 years in Staff assignments.

Although this is a relatively small sample, there is no reason to believe that it is not reasonably typical of the prevailing career pattern of all military officers.

Mr. President, I ask the distinguished Senator, whom we are most fortunate to have heading the Armed Services Committee and who has had such deep experience in this area, if he knows of the time consumed when an officer comes aboard, of the time taken for welcome parties and getting acquainted parties and of the fact that we have an average officer assignment of 14 months.

How can that man really perform that function and duty? It is not just the Army and the Air Force which are involved, but the Navy is also in that position. From the standpoint of efficiency and of morale the ships are hardly ever in a condition of readiness with the rate of turnover we have.

The study states, "Let us do something about it." The services themselves and the Department of Defense say they are in sympathy with the many recommendations made by Members of Congress and the services themselves. The procedure is not only costly but it also affects the morale of the personnel involved.

I urge the Senator to support this amendment which will cause this principle to go forward.

What we are offering is a $140 million reduction in 2 or 3 years. I think the military could double or triple that amount on their own initiative later.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. PERCY. I am happy to yield to the distinguished Senator from Mississippi.

Mr. STENNIS. In the first place I wish to say that this matter of personnel has to be reviewed from many standpoints when the shooting stops in Vietnam. It is a matter that our committee has not gone into very much, not since I have been chairman. These matters are passed on directly by the Committee on Appropriations. As the Senator knows, money for personnel is itemized to a degree and passed on by the Committee on Appropriations.

Frankly, I think most of the military dollar for going-personnel, operation and maintenance, goes for that purpose. I believe 60 cents out of every military dollar goes for that purpose.

There must be a sweeping review of this matter if we are to have a modern, hard-hitting and effective military service in all the groups.

But the Senator has brought up something here that appeals to me some. I think the Senator's percentage of 25 percent is high. I think that is too much to expect in the beginning.

I want to ask a few questions. The Senator has expressly excepted here, in applying the formula, the assignment of military personnel in combat zones. The Senator means by that any personnel sent to South Vietnam. Under this amendment he would classify that as a combat zone. Is that correct?

Mr. PERCY. That is correct. All combat zones are excluded.

Mr. STENNIS. It would take out all activities in combat zones. Then the Senator excepts expenditures resulting from training, separation, promotion, and similar activities within the Department of Defense. That is within all the services and the Department of Defense, such as training down at Lackland Air Force Base where the new men go. That is basic training. Would that be excepted? Then, they go on to another base to technical training; some of them are assigned to one school and some are assigned to another school. Would the Senator except all of their activities in this field of initial training?

Mr. PERCY. I except all of this from that amendment. My feeling is that if we stop this excessive turnover, there will not be a need for all of this training, because not every man will become a member of the Joint Chiefs of Staff.

Mr. STENNIS. But you except those?

Mr. PERCY. Absolutely.

Mr. STENNIS. Let us take the National War College. That is excepted and would not be counted in any way?

Mr. PERCY. That is correct.

Mr. STENNIS. From the bottom to the top is all excepted?

Mr. PERCY. All is excepted.

Mr. STENNIS. That is a good way to get at it.

The starting point is the figure of 25 percent reduction. Line 8 on page 2 of the amendment states: "as compared with expenditures for such purposes in the fiscal year beginning July 1, 1970,".

The Senator's amendment would freeze the situation, so to speak, at July 1, 1970, and use that next period as a starting point.

Again, we have the war going on and we have these troops coming back from South Vietnam, and a lesser number going to Vietnam. That is an abnormal situation. We believe it is going to be better than that. What is the Senator's response to that? That swells the formula. But when you take those items out and apply the Senator's 25 percent it presents another problem.

Mr. PERCY. This gives them an extra kitty because I would not reduce the base they have now, a high base because of the turnover. They have a much higher turnover of personnel now. I do not exclude that. They work on a high base and we are asking them to reduce 25 percent of that high base. They might come in with a substantially lower figure. My concern is that the figure of 25 percent might be too low, but I have taken that into account and what I want to do is to establish the principle because as Secretary Packard said last night, and I think these words are exceedingly important on this very provocative matter:

In my memo I told the Services to select people with the right background and education for management, give them appropriate training, give them recognition, and leave them on the job long enough to get something done.

All four services have accepted my recommendations.

Mr. President, I ask unanimous consent to have printed in the RECORD the entire text of the speech by Secretary Packard.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. DAVID PACKARD, DEPUTY SECRETARY OF DEFENSE, AT ARMED FORCES MANAGEMENT ASSOCIATION DINNER LOS ANGELES, CALIF.

I am delighted to be with you here in Los Angeles tonight. I am sorry I was not able to spend more time at this conference, and particularly sorry not to hear Gil Fitzhugh this noon. He and his Blue Ribbon Panel have done an outstanding job in making recommendations which will improve the operation of the Defense Department.

Secretary Laird and I intend to move ahead as quickly as possible to put most of the 113 recommendations into effect.

I agree in particular with the Committee's recommendation that more decentralization of the Department is necessary. To me that means more decision-making at a lower level and less time-consuming and duplicate second-guessing topside.

This gives me a problem on the recommendation for the three deputies. We do not want to create a structure that adds more top-level involvement in the working man's business. I appreciate the implication that I have to work hard. I do put in long hours. I assure you, however, that much of my time has been spent doing things that lower levels should do. Three deputies would tend to pull even more decision-making up to the top, and we do not want to move in that direction. What we want to do is give a man a job and let him do it.

The report greatly under rates the Joint Chiefs of Staff. I have spent a great deal of time working with the Chiefs during the past year and a half. I found them among the finest, most dedicated, most capable men I have ever known. They have given Secretary Laird and me their complete support and cooperation.

There is no question about civilian control of military operations. Secretary Laird or I approve every operating order; but we do need to streamline the chain of command for operations. This will be done on a careful, step-by-step basis because the problems are complex, and also because we need to assure uninterrupted combat readiness of our forces.

We intend to give the Service Secretaries and the Services more responsibility so that they can do their jobs. Before they can do their jobs right they will have to break down some of the multi-layer staffing that has built up over the years and work together better to avoid unnecessary duplication. In short, the problem is not the people—it's

the system. And now, how does this apply to the procurement problem and this meeting you have been holding this week.

I suppose that some of our critics will call this a meeting of the military-industrial complex. So be it. I am not embarrassed by the fact that we need industry to help the Department of Defense. I am only embarrassed that we haven't done a better job. Many of you, and certainly those *not* in the industry, may expect me to talk about what a grand job we have all done and how necessary we are for one another. I am not going to do that. I am going to talk about the things we do wrong and the things that we have to do better.

Let's face it—the fact is that there has been bad management of many Defense programs in the past. We spend billions of the taxpayers' dollars; sometimes we spend it badly. Part of this is due to basic uncertainties in the Defense business. Some uncertainties will always exist. *However, most of it has been due to bad management, both in the Department of Defense and in the Defense industry. We can and are doing something about that.* I am not talking just about cost over-runs as so many of our critics do. Over-runs are the end product of our mistakes rather than the key issue to be addressed. I am surprised that our critics took so long to discover cost over-runs. They have been around for a long time, and many of the cost over-runs that receive the most publicity were organized by Defense and industry years ago. *We are now paying the price for mistakes in contracting, in development and in management.*

Frankly, gentlemen, in Defense procurement, we have a real mess on our hands, and the question you and I have to face up to is what are we going to do to clean it up.

Let me first mention two things that won't help.

It won't help for Congress to legislate detailed and inflexible rules governing procurement.

Nor will it help to put the General Accounting Office in the process of making management decisions. The GAO deserves the highest marks for auditing, but the talents of a good auditor are not identical with those of a good manager.

The pressures are strong to insert the Congress and its right arm, the GAO, into the details of day to day management decisions in the Department of Defense. Until we in the Department and you in defense industry demonstrate that we can provide capable and efficient management, these pressures will continue.

I have been in this job now for 19 months. Frankly, I am ashamed I have not been able to do very many of the things that need to be done to improve the situation I found here in January 1969. The most frustrating thing is that we know how we ought to manage—you, me, all of us—and we refuse to change based on what we know. Every time we want something done in a hurry and want it done right, we have to take the project out of the system. We give a good man direction and authority and let him go—and it works. When we needed sensors in a hurry for Vietnam, we got the best man we could find—General Starbird—gave him all the authority he needed and told him to produce—and he did. And I don't know why anybody would be surprised. His successor, General Lavelle, has had the same authority, has consistently returned money from his budget, has done all the management things that people say you are supposed to do, and meets every requirement—financial, managerial or operational—that we could want. Industry does the same thing. The "Skunk Works" in Lockheed has had tough, complex, expensive and demanding programs. Kelly Johnson produces.

On the other hand, when we are not in a hurry to get things done right, we over-organize, over-man, over-spend and under-accomplish. The most dramatic contrast is within Lockheed. Kelly Johnson and his programs, and the Air Force and Lockheed on the C–5A. I simply cannot understand why we are unable to change the system to avoid the C–5As and get more Skunk Works. We must find a way to do this job right, and you bear as much responsibility as I do.

We need good people—and by that I mean you—who will step up to their responsibilities. That is what decentralization is all about.

In the hope you would do this, on May 28 I issued a memorandum of guidelines for Major Weapons System Acquisition. There is nothing in this memorandum that you don't already know. As a matter of fact, the management principles in my memorandum are so simple that anyone who could not have written the memorandum himself doesn't belong in management. Again and again I have made a big point about getting the right man in the right job and giving him authority. But it is just not that simple. Admiral Rickover is a good example. The Admiral is a man of considerable capability. He has his own style, but he produces. He got a program, had to fight the system tooth and nail to get it, challenges the system every chance he gets, but is still saddled with the system. I had a long talk with him after the 28 May memorandum was published, and it was clear that I hadn't taught him anything about management. He told me that the principles were great but that if we couldn't get to the system that sits on top of the manager, nothing else mattered. He is right.

I know Secretary Laird and I bear the responsibility for the system in the Department of Defense, and I am going to keep working at it. But you in industry bear a similar responsibility, and I expect you to do the same thing.

In my memo I told the Services to select people with the right background and education for management, give them appropriate training, give them recognition, and leave them on the job long enough to get something done.

All four Services have accepted my recommendations—and their letters say that they agree. But on at least two occasions they have taken actions exactly contrary to those suggested. The Air Force and the Navy are both involved. In one case, a small dedicated Air Force team developed the gunships which have been so successful in Vietnam. The Air Force decided to put this program into its formal system. About a month ago I asked when we would be able to get some more gunships. The answer was in two years. That program is now out of the Air Force system, and we will have more gunships in six months.

In the other case the Navy, shortly after agreeing that a good manager should be kept on the job long enough to get it done right, proceeded to promote a key manager at a critical time from an important program to another assignment. The system wins and the cause of good management loses.

In my memo I talked about policies for development of new weapons spstems. The lesson that comes through loud and clear here is we should buy only what we need—not systems you or anyone else thinks they can develop to do something that doesn't need to be done. The Defense Department has been led down the garden path for years on sophisticated systems that you promised would do all kinds of things for some optimistic cost. Too frequently we have been wrong in listening to you, and more frequently you have been unable to deliver on either of these promises—what it would do or what it would cost. And we in the past have sometimes been guilty of over-optimism on our cost estimates and over-demanding in our requirements. We share the blame together, but the mistakes of the past cannot be repeated if we are to provide for the nation's defenses in today's climate of a critical public and a critical Congress. We are going to buy only things that we need, and we are going to make sure they work before we buy. The same thought carries over into full-scale development and production. We must know what we are going to do and how to do it before we go into production. We are not going to put things into development until we are sure we need them, and we are not going to put things into production until we are sure that they work.

This has been a short speech. I have tried to speak very frankly and directly this evening because the problem is very real. It is you people here tonight and the Department of Defense that must take action to solve these problems. We recognize that these problems cannot be solved overnight and perhaps some of them cannot be solved at all, but it is very clear that it is unacceptable to continue to do business as we have done it in the past.

The things I have had to say tonight and the things I said in my 28 May memorandum are simple. Many times we have done a bad job—we are going to do a better one. We are going to know what we are doing before we do it, and we are going to manage it better. We have a lot of obstacles in front of us and some of them we created ourselves. We have given our critics the opportunity to find us at fault, and we run the danger that their efforts to direct Defense management will just compound the mistakes in the Department. We don't need more supervision and more people in the act. We need fewer people. The system in the Department of Defense is going to change. Secretary Laird and I are going to demand it. I expect you who are here tonight and everyone else who does business with the Department of Defense to do the same. That is all I have to say.

Mr. PERCY. Secretary Packard recognizes, as do other personnel at the top level, that the system of rotation is counter productive.

Mr. President, I ask for the yeas and nays.

Mr. STENNIS. Will the Senator withhold his request? Let us debate this matter a while longer.

Mr. PERCY. Mr. President, I withhold my request.

Mr. STENNIS. The Senator has almost exhausted his time. Does the Senator wish to yield the floor so that I may make a few comments?

Mr. PERCY. I would be glad to do so, but first I wish to ask how much time I have remaining.

The PRESIDING OFFICER (Mr. BAYH). The Senator has 3 minutes remaining.

Mr. PERCY. I thank the Chair.

Mr. STENNIS. The Senator has been speaking on his time and his time is nearly exhausted.

Mr. PERCY. The distinguished Senator means that he also has been speaking on my time, but that is perfectly all right. I have concluded most of my argument.

The PRESIDING OFFICER. The Senator is recognized for 5 minutes.

Mr. STENNIS. Mr. President, we have other members of the committee present and I am not going to take more than a little time.

As I have said, this matter has not been neglected. In other words, the figures show that there was a reduction in the 1971 budget of $88 million on this very item, bringing it down from $524

million, by $88 million in round numbers. Of course, we have a war. That figure is for the Army only. We have the war figured in on this matter, which makes it an exception. This is a matter that is passed on by the Appropriations Committees heretofore with reference to items of this kind.

I think, frankly, the matter of personnel is something that has to be reviewed. Reductions are going to have to be made. I believe we can save some money with reference to the repeated assignments. Perhaps there are too many of them, anyway. Others can pass on that question better than I can, to a degree; but I think we can save some money and stabilize the matter somewhat.

I remember 10 years ago, during consideration of the military construction bill, concerning the matter of messhalls, we authorized battalion messhalls with the very idea of meeting the problem the Senator outlines. I do not know how far that program went, but it was trying to get at the very thing the Senator from Illinois appropriately brought out.

Even though the money is not in the bill, I have been concerned about the personnel cost and about the quality of the men rather than a great number.

I look with some favor on the idea of a more active review of this matter each year, but I have great reservations about the level of reduction embodied in the amendment. If it goes to conference, I hope the Senator will understand that we will do the best we can with it, but that 25-percent level seems mighty high.

I am ready to yield the floor, or will yield to any Senator who wants to speak.

Mr. GOLDWATER. Mr. President, will the Senator yield me some time?

Mr. STENNIS. I yield 5 minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I think the amendment of the Senator from Illinois points up one thing that we probably overlook in this body as we constantly criticize the military for the personnel policy. When we stop and think about it, the military really has not had any time to stop and organize. There was no military to speak of prior to World War II. All of a sudden, overnight, we had to provide forces up into the millions. We followed antiquated methods of personnel policy and deployment of personnel. When World War II was over, we all remember the cry of "Get the boys home by Christmas," and by Christmas we did not have a military establishment to talk about.

Then we had Korea. Then, overnight, we had to organize again. Then Korea sort of petered out, although not completely.

Then Vietnam came, and when it came the President of the United States said, "We are not going to send any boys to Asia." So we did not have the force levels we needed. Consequently, when, the year following, we sent thousands and thousands of men to Southeast Asia, we had to again engage in, we might say, nonlucrative, and almost senseless, personnel procedures. We robbed the NATO forces in the early stages of the Vietnam war, to provide men for Vietnam.

So I do not think we should be so openly critical of the Pentagon, because, really, we have never had enough time, in the last 30 years, for the Pentagon to pause and decide what could be a workable, sensible personnel plan.

I might say to my friend from Illinois that the figures he quoted from the study at first glance are very shocking. I can agree with him, having been in business as he has been, that we would never subject our executives to that intensive type of training. But, again, the Pentagon really has not had enough time to get down to the nub of how it should train men for higher jobs. For example, for a long time—and it still may be—a man was never considered for a top position unless he had had combat experience in the different forces. I remember in the Air Force when a pilot could not fly in combat because he had not been trained by the Air Force, or the Air Corps in those days.

Those things have changed, but the time that the average enlisted man or officer spends in permanent assignment is too short. The only exceptions are the assignments in Washington, where the L and L officers stay for years, and they turn into mighty fine officers for their respective branches.

I do think that some changes have to be made in personnel in all the branches, but, again, until we can get this country into a period of peace, I do not believe we can expect any radical changes in personnel practices.

I know there is great concern about this question in all the branches, but little is known about it and they do need help. Roger Kelley, an expert on personnel, whom the Senator knows, and who was formerly with Caterpillar Tractor, is now heading up personnel in the Pentagon. He and I discussed some changes he is going to make that will be quite radical in their nature.

I am in great sympathy with the Senator's amendment. I am very hopeful my chairman will take the amendment, take it to conference, and argue hard for it.

But the part of his amendment that appeals to me the most is when he talks about morale. This has become, I would say, probably the greatest cause for people dropping out of the service—the fact that they have to be separated from their families, not just for a year or 14 months, but perhaps, in 4 years, half of that time. We know from studies we have made that that has been the great contributing factor to a young officer's saying, "I am not going to continue."

May I have 3 additional minutes?

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Arizona.

Mr. GOLDWATER. If the Senator used no other argument, that argument in itself would convince me of the wisdom of the amendment. We have to do something about it—and it goes past this amendment—and the forces are working on it. For example, I mentioned yesterday that if an able person is sent to the Mediterranean for a year's tour or 2 years' tour, what is wrong with his wife going to Italy, or some other country adjacent to the Mediterranean, so that the family could be together once in awhile? This is one of the greatest factors accounting for losing our atomic submarine commanders. They cannot see their families for long periods. The morale factor involved in this problem is tremendous.

I think the saving to the forces as a result of retaining personnel in the forces because they can see their families once in awhile would more than pay back the cost at the outset.

I may say to my chairman that I think the amendment has merit. I agree it could be a little too high, but I do not think we or the Pentagon can say whether it should be 20 or 25 or 30 percent, because it is very difficult to approach this question from the scientific standpoint and say precisely how much money will affect how much turnover.

Mr. PERCY. Mr. President, will the Senator yield on that point?

Mr. GOLDWATER. I yield.

Mr. PERCY. It is just about 10 percent of the total item of $1.3 billion, when we try to take into account the real savings in both areas. I attach the 25 percent only to this one item; so, overall, it is not much of a reduction.

Mr. GOLDWATER. I might say that 25 percent is a good starting point, and I would hope that my chairman would see fit to accept this amendment and take it to conference, and, in a very persuasive, learned way, argue for it, as he always does.

I know there are times when Members of this body think this particular chairman does not fight for what the Senator has passed. While I have never been a conferee, I have attended conferences, and I can tell you he is a grownup tiger when it comes to fighting for what we pass over here. So I have no fears about what might happen. I happen to be on very friendly terms with the majority on the House Armed Services Committee, and I shall do my conference work in a different way, but it is effective.

Mr. STENNIS. I thank the Senator very much.

Mr. President, I yield 7 minutes to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I think the distinguished Senator from Illinois has made some good points on the amendment he has presented to the Senate. He first mentions economy, and I feel that this amendment would bring about some economy. I have long felt that there have been too frequent transfers in service.

On the other hand, this is a delicate matter, and I think it is one that is very difficult to legislate on. It is my judgment, though, that steps can be taken to improve the present situation.

The second point the distinguished Senator from Illinois made is to try to "drag the military services kicking and screaming into the 20th century," as he expressed it. I would not say I agree with that point, although many times I have felt that the military services have not come abreast of the situation as well as they should.

The thing that hurts me now is to see that so many Senators who probably take that position of "dragging the military services kicking and screaming into the 20th century" are opposing a lot of the

very weapons that the military services are advocating to bring them into the 20th century.

For instance, the MBT–70 armored tank is the most modern tank that has been advocated; and yet we have had sizable sentiment here in the Senate to stop that tank. I presume the Senator from Illinois would favor going ahead with that tank, would he not?

Mr. PERCY. I have taken a position, I believe, in support of that. May I interject just the comment that though the distinguished Senator's remarks are very pertinent, he was not on the floor when I made my comments.

Mr. THURMOND. But the Senator from South Carolina has read the Senator's full speech and is familiar with what he said.

Mr. PERCY. I amplified considerably on the section "though many procedures and practices of the military are modern and advanced," and I wanted to emphasize that, because I pointed out that some of the techniques used by the military services are the most advanced in the world. I am constantly amazed at their aggressiveness and modernity in certain areas.

This is to differentiate between those officers who are modern in their approach, whom I commend and those who are reluctant to modernize, who cling to the past, who do not want to change the procedures, and who are motivated, sometimes, by petty jealousies. I thank the distinguished Senator for permitting me to make that clarification.

Mr. THURMOND. Mr. President, of course, in every organization, you are going to find some with more imagination, more initiative, more drive, and more intelligence than others. The military services, I think, are typical of the American people as a whole.

Another modern weapon we need is the Navy F–14 plane. I think we have some in this body who are opposing that plane. Another weapon system we need is the F–15 supersonic plane. We have some who are opposing that plane.

Those weapon systems are supposed to help to bring us into the 20th century faster than we would otherwise. I presume the distinguished Senator from Illinois would favor the F–14 Navy plane and the F–15 Air Force plane, would he not, to help bring us into the 20th century?

Mr. PERCY. Mr. President, I do not feel that this is an appropriate time for me to commit myself on advanced weapons systems that I have not thoroughly studied.

There is one, though, I am dubious about that I have studied a great deal—the F–111—and I would like to carry on the conversation as to that at an appropriate time. But for the most part, I think the weapons the military have advocated are advanced, and represent a step in progress.

Mr. THURMOND. In the area of the anti-ballistic-missile system, I am sure the Senator is familiar with the tough, hard fight we have had here for 2 years to get an ABM, which is purely a defensive weapon. It does not cross the water, and does not destroy property or people, but would merely destroy the enemy's missiles if they sent them over here to destroy us.

This is a weapon of the 20th century. The Soviets have beat us to it. They have already built and deployed it. In fact, they have had it deployed since 1963.

Mr. PERCY. Would the distinguished Senator permit a comment at that point?

Mr. THURMOND. I would be pleased to yield.

Mr. PERCY. Of course, this is another advanced weapon, but I fully support the Nixon administration position, which is, let us go for zero ABM if we can get a mutuality of agreement with the Soviet Union, and they will desist from production of S–11's and S–9's.

I think the Senator and I both agree that it would be better for us not to spend $40 billion or $50 billion on any weapons system we might not need. I again commend Secretary Packard for his remarkable speech last night, in pointing out that many times we go into these weapons systems that are expensive and time consuming, and never perform the function they are intended to serve.

Mr. THURMOND. I believe the Senator is sufficiently familiar with the ABM to know that the Minuteman point site cost is $11 billion, rather than $40 billion.

Mr. PERCY. It has been estimated by experts that to have an effective area defense as well as point defense, it would cost $40 to $50 billion; and there are people who still feel we ought to build the full system, not the thin system proposed.

Mr. THURMOND. I am not just taking the Defense Department's figures.

Another weapon many have felt we need to bring us into the 20th century is the MIRV, the multiple independently targeted reentry vehicle. We feel this would be a deterrent.

The PRESIDING OFFICER (Mr. BAYH). The Senator's time has expired.

Mr. THURMOND. Mr. President, will the distinguished Senator from Mississippi yield me 10 more minutes?

Mr. STENNIS. How much?

Mr. THURMOND. Ten more minutes.

Mr. STENNIS. That is about all the time we have, I am afraid. Five minutes?

Mr. THURMOND. Five more minutes.

It is important that we go forward with MIRV. I think this is a 20th-century vehicle. Another is the C–5A plane. Some Senators who would bring the military department screaming into the 20th century are opposing the C–5A. I assume the distinguished Senator from Illinois would favor the C–5A, would he not?

Mr. PERCY. In direct reply to that question, I favor advanced cargo planes, of course, but I do not favor this type of procurement, which has been condemned by competent defense authorities probably as much as any other single procurement we have gone into. I trust that the example of the C–5A, in the end, will save us hundreds of billions of dollars. Because of the sloppy procedures used, the cost overruns that we have gone into, the lack of performance against specifications, and the failure of the contractor to really perform as he had originally pledged.

Mr. THURMOND. The Senator feels that we do need the C–5A plane, does he not?

Mr. PERCY. I favor advanced cargo planes adequate to move our equipment and personnel around the world, which I hope will enable us, then, to bring back many of our servicemen from abroad, and rely more upon mobility.

But I think the attack on the C–5A has primarily been on a procedural basis, and I think the Deputy Secretary of Defense, in his remarkable speech last night, accepted in principle the point of those attacks.

Mr. THURMOND. And, of course, we need the C–5A to take equipment and some personnel to other parts of the world in case they are needed in an emergency.

The Cheyenne helicopter is another example of coming into the 20th century. The thing that amuses me, Mr. President, is for someone to make the statement that we have got to drag the military services into the 20th century when, as a matter of fact, they are trying to get into the 20th century, and there is sentiment here, and sizable sentiment, among certain Senators, to keep them from coming into the 20th century.

That is exactly what some of us are trying to do, to bring the military services up to date, to help them to come into the 20th century.

The next point the Senator made in his speech was on the question of morale. I think this is a matter, of course, that cuts both ways.

I think the Defense Department has made too frequent transfers and too many transfers of personnel. On the other hand, we must keep in mind that they must have the power to transfer officers and men in order to train them to provide the necessary leadership. They must be put in positions of leadership and get that training. This is important, and it must be kept in mind.

Mr. President, in my opinion, there is merit in this amendment, but I think it is an intricate matter. I think it would have to be worked out later. The Defense Department should be conferred with and we should get their opinions if we are going to legislate on this question as to some of the things that could be done. I would suggest and hope that the chairman would agree to take the amendment to conference, and then we could work it out.

I do not think it will save the money that the distinguished Senator from Illinois thinks it will, but I do think it will save money if it is properly worked out. I believe the improvement can come in the field and that good can result. For that reason, I would go along with the chairman if he sees fit to accept the amendment and take it to conference.

Mr. STENNIS. Mr. President, I thank the Senator from South Carolina.

It is of value here to have the opinion of the Senator from South Carolina and the Senator from Arizona, who are well versed from actual experience in the practical side of this matter.

I want to emphasize to the Senator from Illinois that all of us on the committee approve the principle he has in his amendment. He sees that all of us think that 25 percent is too high, perhaps. But we are entirely willing that this

be added as an amendment to the bill, and we will take it to conference.

As the Senator from South Carolina has said, the Defense Department and the services will be given a chance to really get down to the nub of this matter and make whatever showing they wish. The conferees on the part of the House will be well versed in this matter. It is a matter that has been handled by appropriations heretofore, and the Appropriations Committee may become concerned about this matter.

Within those lines, we want to make the principle of the Senator's amendment stick, and if we do that, it will be a start.

Under those circumstances, I am glad to support the amendment.

Mr. PASTORE. Mr. President, will the Senator yield me 2 minutes?

Mr. STENNIS. I yield 2 minutes to the distinguished Senator from Rhode Island.

Mr. PASTORE. I congratulate the Senator from Illinois for offering this amendment, because this has been a matter of grave concern even to the Joint Committee on Atomic Energy. We are moving now into a different kind of armament arsenal—thermonuclear weapons, nuclear submarines, and missiles—and a man is just about trained for a specific task, and the next thing we know, he is shifted to another task.

The point is that in the process we are wasting a great deal of money and, secondly, we are actually depriving ourselves of the expertise acquired—the expertise that is essential in these demanding times.

The Joint Committee on Atomic Energy has had very exhaustive hearings on this matter of rotation. We have admonished the Defense Department time and time again. I understand that one cannot get a promotion unless he moves one from one post to another. Because of that, the Government is wasting money that is used to train these people and then the Government is being denied their expertise that is necessary in this complex age. This is because rotation displaces old skills with new hands.

I would hope that this amendment would stick in conference.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield 2 minutes to the distinguished Senator from Iowa.

Mr. MILLER. Mr. President, I understand what the amendment of the Senator from Illinois seeks to do, and I am wholeheartedly in support of it. I think it is a real contribution.

I would just like to suggest, however, that in the provision of his amendment which would exempt from its application the assignment of military personnel in combat zones, we also add the phrase "or hardship areas."

The reason for doing this is that I am quite sure the Senator would not want this to apply in the case of assignments to far-off places such as the DEW line, in Canada, or Thule, in Greenland. There are not many of these, but I think they are very important.

This is just by way of suggestion, based upon a little of my own personal experience.

Mr. PERCY. I understand that the distinguished Senator from Arizona is in accord with the distinguished Senator from Iowa's suggestion. I would also feel that it might meet some of the additional leeway that the distinguished chairman has asked for here, if we accept this amendment, to include hardship areas as well.

So I ask unanimous consent that the modified wording suggested by the distinguished Senator from Iowa be incorporated in the amendment.

Mr. STENNIS. The Senator can modify it. It is modifying language.

I think the Senator should spell out, by illustrations, what he means by those words.

Mr. MILLER. The modification to which the Senator from Illinois refers would come on line 14, page 2, following the word "zones," and it would consist of the words "hardship areas."

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. GOLDWATER. Actually, the language contained in this amendment, "combat zones," would be better served if we called it "hardship areas," but it is too late to change. I am sure we know what we are talking about. The addition of "hardship areas" would take care of the relatively few men who serve on the DEW line, who serve in the Antarctic, who serve in hard-to-live places around the world. They would come under hardship pay and not combat pay. It is all the same thing.

I think the Senator has been very wise in accepting this, and this colloquy should make perfectly clear what we mean and should make it easy for the Secretary of Defense to make up his mind.

Mr. PERCY. I thank the Senators for their contribution to this matter.

Mr. STENNIS. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Illinois has 3 minutes. The time of the Senator from Mississippi has expired.

Mr. PROXMIRE. Mr. President, will the Senator from Illinois yield to me?

Mr. PERCY. I yield 1 minute to the distinguished Senator from Wisconsin.

Mr. PROXMIRE. I, too, commend the distinguished Senator from Illinois for his amendment. I think it is a good amendment, a thoughtful amendment, one which was recommended by the Fitzhugh committee report, so it has had careful consideration. The need for the amendment has been well documented by the Senator from Illinois.

The amendment would save $140 million and at the same time it would improve morale.

I think it is especially important that we reassert again that it would not affect assignment to Vietnam. This would not mean that it would increase the period that troops have to serve in Vietnam. The amendment specifically exempts combat zones.

I think it is a fine amendment, and I congratulate the Senator from Illinois. It is very hard to get amendments adopted to this bill, and he has shown the way to do it, and I congratulate him also on his effectiveness.

Mr. STENNIS. I do not know that it is hard to get an amendment adopted to this bill. It depends on the merit of the amendment.

Mr. PROXMIRE. My point is that the Senator from Mississippi has been pitching a no-hit game here. Any time he opposes an amendment, it goes down. I am congratulating the Senator from Illinois on the effectiveness of this one.

Mr. PERCY. I am glad to have the testimony as to the flexibility and wisdom of the chairman of the committee. He has done a wonderful job in steering this bill through.

In a bill this size, one may think of $140 million as a small amount, but the principle is important. The principle has been established that there are initiatives that Congress must take, not in opposition to the executive branch or the Department of Defense, but to shore up and strengthen the hand of those within the Defense Department who are looking for funds for urgent, vital needs that we are not meeting now because they have had to pare and reduce other expenses. If we can find soft areas and give them that money and restore it to them for other weapons systems where the money can be better spent, I think we are wise in doing so.

Mr. STENNIS. Is the Senator certain that his modification is in the RECORD?

The PRESIDING OFFICER. Would the Senator care to ask unanimous consent to incorporate the requested modification in his amendment?

Mr. PERCY. I ask unanimous consent for that purpose.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, I ask unanimous consent that the names of the Senator from Oregon (Mr. PACKWOOD) and the Senator from Iowa (Mr. MILLER) be added as cosponsors of the amendment.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). Without objection, it is so ordered.

Mr. PERCY. Mr. President, I should like to express my deep appreciation to the members of the Armed Services Committee, on both sides of the aisle, for their patience and the time they have given me and for their acceptance of the amendment.

Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER (Mr. BAYH). All time on the amendment has now expired.

The question is on agreeing to amendment No. 818 of the Senator from Illinois (Mr. PERCY).

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from South Carolina (Mr.

HOLLINGS), the Senator from Iowa (Mr. HUGHES), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Utah (Mr. Moss), the Senator from Maine (Mr. MUSKIE), the Senator from Georgia (Mr. RUSSELL), the Senator from Alabama (Mr. SPARKMAN), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), and the Senator from Texas (Mr. YARBOROUGH) are necessarily absent.

I further announce that the Senator from Tennessee (Mr. GORE), the Senator from Washington (Mr. JACKSON), and the Senator from New Mexico (Mr. MONTOYA) are absent on official business.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON), the Senator from Iowa (Mr. HUGHES), the Senator from Alabama (Mr. SPARKMAN), the Senator from Alaska (Mr. GRAVEL), and the Senator from Washington (Mr. JACKSON) would each vote "yea."

Mr. SCOTT. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from Tennessee (Mr. BAKER), the Senator from Kentucky (Mr. COOK), the Senator from New Hampshire (Mr. COTTON), the Senator from New York (Mr. GOODELL), the Senator from Michigan (Mr. GRIFFIN), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. HATFIELD), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), the Senator from Illinois (Mr. SMITH), and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Colorado (Mr. DOMINICK) is detained on official business.

If present and voting, the Senator from Kentucky (Mr. COOK), the Senator from South Dakota (Mr. MUNDT), the Senator from Oregon (Mr. HATFIELD), the Senator from New York (Mr. GOODELL), the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH), and the Senator from Colorado (Mr. DOMINICK) would each vote "yea."

The result was announced—yeas 69, nays 0, as follows:

[No. 262 Leg.]

Montoya	Smith, Ill.	

So Mr. PERCY's amendment (No. 818), as modified, was agreed to, as follows:

At the end of the bill add a new section as follows:

SEC. 507. In order to reduce annual expenditures in connection with permanent change of station assignments of military personnel and in order to help further stabilize the lives of members of the Armed Forces and their dependents, the Secretary of Defense is directed to initiate promptly new procedures with respect to domestic and foreign permanent change of station assignments for military personnel under which the length of permanent change of station assignments will, whenever practicable and consistent with national security, be made for longer periods of time. The Secretary shall achieve not less than a 25 per centum reduction in such expenditures in the fiscal year beginning July 1, 1971, and in each fiscal year thereafter, as compared with expenditures for such purposes in the fiscal year beginning July 1, 1970, taking into account the relative number of men in military service during such fiscal year and other relevant factors. The provisions of this section shall not apply with respect to the assignment of military personnel in combat zones or hardship areas or with respect to so-called fixed expenditures resulting from training, separation, promotion, and similar activities within the Department of Defense.

Mr. FULBRIGHT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. FULBRIGHT. Mr. President, what is the pending question?

The PRESIDING OFFICER. The pending question is on the amendment of the Senator from Arkansas. It is amendment No. 812.

Mr. FULBRIGHT. Mr. President, I hope that we can dispose of this amendment very soon. I hope that some Senators will remain in the Chamber for at least a brief period of time. The Senator from Mississippi wishes to make a statement. We had a long colloquy of an hour and a half or 2 hours on yesterday.

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. MANSFIELD. Mr. President, it is anticipated that we will take up the pending business, which is the Fulbright amendment, then the Bayh amendment, and that we will then go into the consideration of the Public Works appropriations bill. If we possibly can, we will try to finish the appropriations bill this afternoon. So, everyone is on notice.

Mr. STENNIS. Mr. President, I insist on order. This is an important amendment that is of interest to every Senator.

The PRESIDING OFFICER. The Senate will be in order.

Mr. FULBRIGHT. Mr. President, on yesterday afternoon we had a very interesting and thorough colloquy regarding this amendment.

The Senator from Mississippi and I are very close in our views on this amendment. The amendment seeks to put into law the language of the committee report and add Laos. The Senator and I have discussed an understanding of this amendment and what the committee intended.

I think that we mean to accomplish the same objective. It is primarily a question of whether this language should be in the law and Laos included.

I yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I thank the Senator. It is possible that this matter can be disposed of, if that is the will of the Senate. It is a highly important matter. I think that every Senator here ought to have a chance to be heard. It is a little complex, but we will not rehash it.

I heartily agree with the Senator from Arkansas that we had a colloquy here yesterday that very fully, I think, and clearly stated the position of the Senate Armed Services Committee in this question of certain funds for military aid in South Vietnam and all the Indochina area.

My remarks now relate to amendment 812, the matter now before the Senate. Briefly stated the position of the Senate committee was that we approve the expenditure of these funds over into Cambodia on the sanctuary—the principle of destroying sanctuaries, and forays that had to do directly with the Vietnamization program, the withdrawal of our troops, and the protection of our troops.

Our interpretation was that that language permitted the President even to use this money to go back in on a sanctuary matter, if necessary. We took this up when the battle was going on over there.

The amendment of the Senator from Arkansas places a limitation on clause A, as pointed out by the colloquy that we had. I think it is a part of what was intended as a part of the law.

So I said to the Senator this morning if his amendment goes to conference we will have at the conference table the bill as passed by the House, and that has the language in it "in Vietnam" which we thought was too narrow. We took that out and substituted the language I already described. Then, we will have before us the Senate language and also the Senate report and we will have the Senator's amendment. All of that material will be in conference.

We had a splendid discussion here yesterday which was participated in by the Senator from Arkansas, the Senator from Arizona, the Senator from South Carolina and others. I do not recall the names of all the Senators who participated but the substance of the colloquy was that we are not limiting the sanctuary idea—the destruction of it—limiting the support of the Government—period. That is it.

I feel we could accept this amendment.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. GOLDWATER. I had only one feeling of doubt, as I expressed yesterday, and that would concern the interpretation of our possibly interfering with activities of another government. I

studied this proposal last night. I think the language the Senator proposed would not do that.

We are not saying to South Vietnam, "You cannot attack Laos." We are saying "You cannot expect any help from us if you do it."

I think the language of the Senator from Arkansas is clear on that point. I think the colloquy yesterday established the fact that neither the Senator's language of the committee, nor the language of the House will preclude the use of our tactical air support of the Laotian army when they call for it.

I must say this is a limited time of year, when the monsoons are over there, as the Senator knows. This would include the use of a helicopter drop but it would prevent the use of our ground forces at any time. I would certainly support any move in that direction and would deny funds to South Vietnam for support of any invasion of theirs. If they want to do it on their own, with their own money, it is up to them.

I think the amendment, as the distinguished chairman has said is one we can take to conference. I think, having slept on it overnight, it is better language than we came up with, and we worked a long time on this because we were in the middle of the Cambodian sanctuary move and we were very anxious that the language we reported to the Senate would indicate that the committee did not want to support any government, not only in Southeast Asia, but any place.

I certainly hope, Mr. President, we can take this to conference and that it will prevail.

Mr. STENNIS. I thank the Senator.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from South Carolina.

Mr. THURMOND. It appears that this amendment is in line with the committee report and also from the colloquy yesterday between the distinguished Senator from Mississippi, the chairman of the Committee on Armed Services, and the distinguished Senator from Arkansas (Mr. FULBRIGHT), exactly what it means. It has been interpreted more clearly now, and I think it would be proper and wise for the Committee on Armed Services to go along with this amendment. I would suggest to the chairman that we do go along with it. As far as I am concerned, I am willing to go along with it.

Mr. STENNIS. I thank the Senator.

Mr. FULBRIGHT. The Senator from Mississippi mentioned a number of Senators a while ago. The Senator from Kentucky has been extremely interested in trying to define the limits of the engagement in Southeast Asia. He has made a great contribution to the Senate's consideration of this subject.

I interpret this amendment and the intent of the committee to be quite consistent with the intent of the Cooper-Church amendment, that is, to prevent an expansion of the war. The amendment does not relate to our own activities but to those of countries that could be financed under the authority of this bill.

I again reiterate this pertains to the possibility of our financing military activities by the South Vietnamese or the Thais in support of the governments of Cambodia and Laos. I believe everybody agrees that we should not do that. It seems to me intolerable that we should finance that kind of activity.

I am very pleased the chairman will accept the amendment and take it to conference.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. MILLER. So that we are absolutely clear on this point, the Senator knows the Thais are concerned about possible incursions into Cambodia which, in turn, could pose a threat against Thailand. Does the Senator see anything in his amendment which would preclude some of this support for Thailand forces operating actually in Cambodia but for the purpose of avoiding attack on their own country?

Mr. FULBRIGHT. I am bound to say it would prevent us from financing from these funds Thai forces which might fight for the Lon Nol government. If they want to do it on their own we cannot stop them. But we do not have to pay the bill. This is somewhat like the subject we discussed yesterday. We have been paying these people far more in bonuses than we give in combat pay to our own troops. That is not a good practice and it distorts our whole relationship with these countries.

In this case I would interpret the DOD funds are not to be used to support Thai forces that go into Cambodia to support the Lon Nol government. That is one of the objectives of the amendment.

Mr. MILLER. The Senator from Iowa understands the sentiment is not to allow Thai troops to go into Cambodia in support of the Lon Nol government. But that was not the question.

The question was with respect to the use of these funds to allow Thai troops to go into Cambodia, not to support the Lon Nol government, but to help them protect Thailand from a fairly imminent attack on Thailand from Cambodia. There has been the problem of some incursions coming in from Laos, into the northern areas of Thailand.

Mr. FULBRIGHT. They were not involved. The Senator is expanding the concept into a whole new area.

We are talking about operations by the South Vietnamese in the sanctuaries and for the protection of our troops in Vietnam. That is what the money under this authority is limited to.

My interpretation is that the Senator's example is forbidden by this amendment. We are not going to finance the Thais; they can finance their own operations in Cambodia, if they choose to intervene.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. GOLDWATER. It might better be explained by saying that if the Thai government wants to attack anybody at any place that is their business. They do it on their own but not with our money.

Mr. FULBRIGHT. That is true. We are not trying to tell the Thais they cannot attack Burma or China, but that none of our money will be used to finance their doing it.

Mr. MILLER. I think what I am geting at is that we are so prone to think about privileged sanctuaries along the border of South Vietnam that we overlook the fact that we can have privileged sanctuaries in Laos or the western area of Cambodia, which bases would or could pose a threat to Thailand.

That is the type of situation that I am directing my question to. There is a great deal of difference between taking care of a sanctuary situation in the western part of Cambodia which poses a threat to Thailand and sending a lot of troops into Cambodia and supporting the Lon Nol government. I am trying to bring that situation out because I believe the example I put in the RECORD is not one we would want to cover by this amendment.

Mr. FULBRIGHT. I do not know that I have anything to add to what I have said. That is not the policy of the committee, as I understand it, as expressed in the report.

Mr. MILLER. May I ask the distinguished chairman what the policy of the committee would be on that point?

Mr. STENNIS. Mr. President, this is all reflected in the committee report. I think the best way to get it in proper focus is to read the committee amendment and the committee report.

The House bill and the Senate version of the bill expressly provide that this money can be spent for local forces in Laos and Thailand, so there is no doubt about that, and it is left as it was in the House bill.

Let me read the committee language first, on page 19 of the bill, line 4. It states that the funds are to be made "available for their stated purposes to support: (A) Vietnamese and other free world forces in support of Vietnamese forces, (B) local forces in Laos and Thailand." We took the words "in Vietnam" out because that was too narrow to cover the sanctuaries. We wanted to cover the sanctuaries.

We define that further in the report on page 106:

> The Committee is of the opinion that the use of the authority in section 401 of the fiscal year 1970 act (and its related appropriation act provision) to support South Vietnamese and other free world forces in border sanctuary operations in Cambodia and in protective reaction strikes in these same areas was correct. Such action is in line with the policy of Vietnamization which in turn has and will continue to assist in the reduction of U.S. forces in Vietnam and the protection of such U.S. forces as remain in Vietnam. Doubt has been expressed by some that because of the use of the words "in Vietnam" in this section, as to whether any support for South Vietnamese or free world forces outside of Vietnam in the sanctuaries of Cambodia is authorized. The Committee desires that there be no misunderstanding about the authority for those important actions and has accordingly changed the language of this section to remove all such doubt.
>
> In making this clarification it must be clearly understood that there is no intent to broaden the authorization beyond the support of participation in border sanctuary and related operations in order to protect U.S. forces in Vietnam or to accomplish protective reaction strikes. The purpose of the clarification is to make clear that the use of Defense funds is authorized for support in those areas of Cambodia where for the purposes of

Vietnamization or the protection of U.S. troops military action becomes necessary.

And that means the action we were in when the report was written or any future actions of that kind; and the Senator from Arkansas agrees with that—

There is no intent to permit the use of DOD appropriations under this authority to support Vietnamese and other free world forces in actions designed to provide military support and assistance to the Cambodian Government.

So money from this bill cannot be used for anything that is primarily in support of the Cambodian Government. The money provided in the bill can be used for anything that goes with the Vietnamization program, the withdrawal program, the protection of our troops, the destruction of sanctuaries. We have heartily agreed on that. That is the extent of the amendment. I think it is time we get it clearly understood. I cannot go any further than I have.

Mr. MILLER. Mr. President, will the Senator from Arkansas yield to me so I can ask the Senator a further question?

Mr. FULBRIGHT. I yield.

Mr. MILLER. I appreciate the Senator from Mississippi's explanation.

As I understand it, the last sentence that we read—

There is no intent to permit the use of DOD appropriations under this authority to support Vietnamese and other free world forces in actions designed to provide military support and assistance to the Cambodian Government.

actually is expanded still further by delimiting the type of sanctuary operations to those which are pretty much related to U.S. forces in South Vietnam, and that if there are sanctuary operations that are not so related, then the proscription would apply?

Mr. STENNIS. Generally that is correct; yes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Arkansas.

The amendment (No. 812) was agreed to, as follows:

On page 19, after the period in line 8, insert the following: "Nothing in clause (A) of the first sentence of this paragraph shall be construed as authorizing the use of any such funds to support Vietnamese or other free world forces in actions designed to provide military support and assistance to the Government of Cambodia or Laos."

Mr. STENNIS. Mr. President, the Senator from Indiana (Mr. BAYH) has an amendment.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceed to call the roll.

Mr. BAYH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 828

Mr. BAYH. Mr. President, I call up my amendment No. 828.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. BAYH. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment will be printed in the RECORD.

Mr. BAYH's amendment (No. 828) is as follows:

At the appropriate place in the bill insert a new section as follows:

SEC. —. Section 412 of the Military Construction Act of 1959, as amended, is amended by adding at the end thereof a new subsection as follows:

"(d) (1) Beginning with the fiscal year which begins July 1, 1971, and for each fiscal year thereafter, the Congress shall authorize the active duty personnel strength for each component of the Armed Forces; and no funds may be appropriated for any fiscal year beginning on or after such date to or for the use of the active duty personnel of any component of the Armed Forces unless the active duty personnel strength of such component for such fiscal year has been authorized by law.

"(2) Beginning with the fiscal year ending June 30, 1971, the President shall submit to the Congress a written report not later than January 31 of each fiscal year recommending the active duty strength level for each component of the Armed Forces for the next fiscal year and shall include in such report justification for the strength levels recommended and an explanation of the relationship between the personnel strength levels recommended for such fiscal year and the national security policies of the United States in effect at the time."

The PRESIDING OFFICER. Under the previous order, the time on the amendment is limited to 1 hour. How much time does the Senator yield himself?

Mr. BAYH. Mr. President, I yield myself such time as I may require, not to exceed 30 minutes.

Mr. President, this amendment requires Congress to annually authorize military manpower levels for the components of the Armed Forces.

Section 1 of the amendment, in addition to requiring annual authorizations for the active-duty personnel of each component service, would prohibit the appropriation of funds for military manpower in the absence of such authorizations. The amendment would not become effective, it should be noted, until fiscal 1972, when the present suspension of the old statutory ceilings on manpower levels expires.

Section 2 of the amendment requires the President, in requesting legislation to authorize the active-duty strength of the component forces, to spell out the relationship between the levels requested and our national security policies in effect at that time.

Mr. President, there is a critical need for this amendment, institutionalizing an annual authorization process for manpower, and just how critical will become evident on further examination, if we quickly take a close look at the history of manpower legislation since World War II, the nature of congressional control over the military budget, the relationship between manpower and foreign policy, and the development of the military procurement bill itself.

Mr. President, I favor a strong defense establishment for the United States—a defense establishment in line with congressionally approved policies. At the same time, I see nothing contradictory with that in the provisions of this amendment requiring Congress to set troop levels. The Congress, after all, has the constitutional responsibility to raise and maintain the Armed Forces. That is, to authorize the size of our Defense Establishment. Congress should exercise this vital constitutional function.

It is interesting to note, in this regard, that Congress has in the past authorized troop levels. As part of the Selective Service Act of 1948, for example, the Congress established the following manpower ceilings: for the Army 837,000; for the Navy 540,000; for the Marines 400,000; and for the Air Force 502,000.

These congressionally authorized levels were extended for 1 year by congressional action on July 10, 1950. Later that year, in the face of events in Korea, Congress voted to suspend the previously authorized manpower ceilings until 1951, at which time the Selective Service Act was due to expire. It was argued by those supporting the suspension that Congress would have an adequate opportunity to debate the size of our Armed Forces the following year.

In 1951, with the Korean war in progress, Congress voted to continue the suspension, but this time until 1954. An overall ceiling of 5 million was enacted in lieu of the previously authorized individual ceilings. The suspension was reenacted in 1954, 1957, 1959, 1963, and, most recently, in 1967—each time without so much as a word of debate on how large a standing military force the United States needed and why.

In the absence of statutory authorizations for the components of the Armed Forces, the process of raising an army simply has become an act of appropriating money. It is true that during the period of the suspensions there was an overall ceiling of 5 million. That ceiling, however, as a congressional control on the military, was quite meaningless. Was there ever any prospect of approaching that level in the absence of a declaration of war? I think not, but it was possible to swell the size of the Armed Forces without any congressional control up to 3.4 million men.

It was for that reason that the distinguished Senator from Kentucky (Mr. COOK), and I authored an amendment to the procurement bill last year setting the ceiling at a more realistic 3.285 million level. This amendment, Mr. President, is the logical conclusion to that initial effort. It represents another positive step in the reassumption of congressional responsibility for raising and maintaining the Armed Forces.

Military manpower, Mr. President, is the largest single item in the defense budget. I would repeat that, because I am not too sure that all of us are aware of this. Military manpower is the largest single item in the Defense budget. In fiscal 1970, pay and allowances for military personnel amounted to $22.4 billion—or nearly 30 percent of the total defense outlay. In addition, expenditures for operations and maintenance, which is directly attributable to the size of our forces, amounted to another $21.4 billion—for a total of approximately 57

percent of defense spending. Neither manpower nor operations and maintenance costs, it should be pointed out, is subject to congressional authorizations and scrutiny. Yet together they accounted for the staggering sum of $4 billion.

It can be easily seen, therefore, that manpower costs far exceed spending on the more glamorous hardware items in the procurement bill. Congress should exercise greater legislative control over this vast outlay of tax dollars—and the most logical way to do that is to require authorizations.

Mr. President, military manpower is a key element of American foreign policy. The distinguished chairman of the Armed Services Committee himself (Mr. STENNIS) stated that—

> Congress should be well aware that our defense requirements are based in part on the need to be prepared to help defend other nations with whom we have mutual defense agreements.

This is one of the basic contingencies we have to consider when determining the size of our force level.

Since some of our foreign policy commitments do entail the use of American military personnel, Congress should have an opportunity to relate these strategic considerations to manpower levels, on a regular basis.

This amendment, it seems to me, is the next logical step in the development of the procurement bill itself. Annual authorization for hardware, interestingly enough, is a very recent phenomenon. It is the product of increasing congressional concern over the size of our Defense Establishment. The first procurement bill was not enacted until 1961 and provided for authorizations for aircraft, guided missiles, and naval vessels. In subsequent years the process was expanded to include tracked combat vehicles, almost all weapons systems and, as of next year, torpedoes. Why not authorize military manpower?

Included in the expanded authorization process is the requirement that the force level of the Selected Reserve of each component armed services be set on an annual basis. The requirement was first written into law in 1968, as Congress, in section 6 of Public Law 91–168, provided that:

> Beginning with the fiscal year which begins July 1, 1968, and for each fiscal year thereafter, the Congress shall authorize the personnel strength of the Selective Reserve of each Reserve component of the Armed Forces, and no funds may be appropriated for any fiscal year beginning on or after such date for the pay and allowances of the members of any Reserve component of the Armed Forces, unless the personnel strength of the Selected Reserve of such Reserve component for such fiscal year has been authorized by law.

So, Mr. President, I think it is safe to say my proposal, the amendment I now present to my fellow Senators, is not new. We have been doing this since 1968 for our Reserve forces. It seems to me the time has come to do it for our regular forces as well.

I might summarize very quickly by making three significant summary points:

First, manpower represents a critical component of the costs of the defense establishment. Military pay and allowances alone account for about 28 percent. If we include civilian pay and allowances as well as other operation and maintenance costs, manpower represents nearly 60 percent of the defense budget. As I said earlier, it is the largest single expenditure in our entire defense establishment.

Point number two: Manpower strengths constitute a major index of U.S. diplomats and overseas defense programs. They, therefore, require at least as much explanation and evaluation as procurement and research and development.

Third, and finally, manpower is our most precious asset. It seems to me that it should require at least the same justification that we provide for hardware. In fact, although we now seem to treat manpower as a function of how much hardware we buy, it seems to me that it should be the other way around in many cases, particularly where we have large numbers of forces in the Army and the Marine Corps. Surely, we should not treat military manpower, human life, as almost a free good simply because of the draft. We should demand the same justification in this area, for the recruitment and maintenance of personnel, as we do now for missiles, aircraft, combat vehicles, and ships—and Reserve forces, let me add. Rather than separate the two categories, we should consider them jointly, especially since many of the newer weapons systems will actually involve higher operation and maintenance costs than their predecessors.

What we are doing here, I suggest, is not in any way to limit the ability of this country to defend itself or to pursue a given foreign policy, but to make consistent the type of authorization process we use for manpower with that we now use for Reserve forces and hardware.

Mr. GOLDWATER. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. We do not have controlled time.

The PRESIDING OFFICER. We are under controlled time.

Mr. STENNIS. I yield 5 minutes to the Senator from Arizona.

Mr. GOLDWATER. I think this is a very worthwhile amendment. In fact, I am rather surprised that somebody has not come up with this long before, and I am surprised that I have not.

The way we have determined the size of the Armed Forces has been by the dollar and cents route rather than by the personnel route. I believe that prior to the Reorganization Act of 1947, the Armed Services Committee did determine the force levels. I do not think it is right for the Appropriations Committee to do this, because, as the Senator from Indiana has pointed out, we make the determination in the Armed Services Committee as to how many tanks we are going to buy, how many aircraft we are going to buy, how many ships, and so forth; and the Appropriations Committee now makes a determination, in effect, of how many men we should have.

I think it would be a much better procedure to have the members of the Joint Chiefs of Staff or the separate Chiefs—as they come before our committee every year to argue for their needs—include an argument for the number of men they feel they need. Then the committee can, in discussion with these commanders, relate their own experiences and decisions with weapons, vehicles, and so forth, with what the brass actually are asking for.

I think the military would like this procedure much better, because we can get down to the real nitty-gritty of how many men we need to man the weapons we have authorized.

I think this is a good amendment. It is one that we should have had a long time ago.

I might mention, in connection with the provision in paragraph 2 pertaining to the President, that the President does this already, in effect; but he does not do it in the clear way that the Senator from Indiana suggests; namely, to submit in his report recommendations for the active duty strength level of each component of the Armed Forces. If he will do this, he will do it after consultation with the Joint Chiefs of Staff, the National Security Council and, in all probability, the Secretary of State. As the Senator has very wisely pointed out, the military of this country is a very big stick in our collection of foreign policy sticks; and if we do not have adequate strength, I do not care what kind of foreign policy we talk about, we will never be able to put it across.

I cannot say this with certainty, but I feel that the President would welcome this, also, because it would give him a better hand on the force level of the entire military.

As the Senator has pointed out, this is the biggest single item of expense in the military budget, approaching 50 percent. I might say, parenthetically, that it is also the biggest cost in any enterprise, whether it be the military, Congress, or a plain business. Salaries run close to 50 percent in any business.

To further emphasize this point, every time we can wisely lower the force level by 100,000 men, we save $1 billion. We are aiming at lower force levels in the coming years. I have talked with General Westmoreland. I have inserted in the RECORD two speeches of his which point out his thinking, that we can have a greatly reduced ground Army in the armies of the 1980's.

So we are making headway. I think the Senator's amendment is a step in that progress, in that it returns to the proper committee the job and the responsibility of either agreeing with the force levels recommended by the Chiefs or disagreeing with them.

I am glad that the Senator has offered this amendment. I hope the chairman will look as kindly on it as I do, even though the chairman, with his keen eye for perfection, might find a few little points that need brushing up. I would certainly support the amendment.

Mr. STENNIS. I thank the Senator.

Mr. BAYH. Mr. President, I yield myself 15 seconds to express my deep appre-

ciation to the Senator from Arizona who, of course, has been active in the military regular forces and the Reserves and speaks with great authority. I certainly appreciate the thoughtful remarks he has made.

Mr. THURMOND. Mr. President, will the Senator yield me 2 minutes?

Mr. STENNIS. I yield 2 minutes to the distinguished Senator from South Carolina.

Mr. THURMOND. Mr. President, the Senator from South Carolina feels that this amendment has considerable merit. Until 1948, the Armed Services Committee made authorizations for active duty personnel, and after that, for some reason, it was changed; and now the Appropriations Committee makes the determination in effect by the appropriations it makes for the armed services.

The Armed Services Committee makes authorizations for planes, guns, weapons, ships, missiles, and all types of equipment. The Armed Services Committee fixes levels of Reserves. It would seem logical and natural that the Armed Services Committee would fix the authorization for the active duty personnel.

I see no objection to the amendment. I think it is a helpful amendment, and I believe the amendment should be adopted. I hope the distinguished chairman of the Armed Services Committee will see fit to accept the amendment.

Mr. STENNIS. I thank the Senator very much.

Mr. BAYH. Mr. President, I reiterate what I said earlier with respect to the distinguished Senator from Arizona. The Senator from South Carolina, too, has had a great deal of experience not only on this committee but also personally, in the military, and I think his judgment is excellent and certainly is very helpful. I appreciate his thoughtful remarks.

Mr. STENNIS. I yield myself 5 minutes.

Mr. President, if the Senator from Indiana will refer to his amendment, I have a suggestion to make with respect to some wording. As the Senator from Arizona has said, we always have to change it a little.

I suggest that on line 1, page 2, after the word "the," before "active," the Senator include the words "average annual active duty." That is the way it works. That is to modify the amendment in that particular.

Also, the same modification on line 11, following the word "the," to modify it by having it read "average annual active duty strength," because it would hardly be a certain figure on any particular day.

Mr. BAYH. I would be glad to accept and ask unanimous consent that my amendment be modified according to the suggestions of the distinguished chairman, the Senator from Mississippi.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). The clerk will state the amendment as modified.

The legislative clerk read as follows:

At the appropriate place in the bill insert a new section as follows:

"SEC. . Section 412 of the Military Construction Act of 1959, as amended, is amended by adding at the end thereof a new subsection as follows:

"'(d) (1) Beginning with the fiscal year which begins July 1, 1971, and for each fiscal year thereafter, the Congress shall authorize the average annual active duty personnel strength for each component of the Armed Forces; and no funds may be appropriated for any fiscal year beginning on or after such date to or for the use of the active duty personnel of any component of the Armed Forces unless the active duty personnel strength of such component for such fiscal year has been authorized by law.

"'(2) Beginning with the fiscal year ending June 30, 1971, the President shall submit to the Congress a written report not later than January 31 of each fiscal year recommending the average annual active duty strength level for each component of the Armed Forces for the next fiscal year and shall include in such report justification for the strength levels recommended and an explanation of the relationship between the personnel strength levels recommended for such fiscal year and the national security policies of the United States in effect at the time.'"

The PRESIDING OFFICER. The amendment will be modified accordingly.

Mr. STENNIS. Mr. President, just a few words. This is a matter that the membership has looked into on the committee more than casually. It has been on our minds before. Until the Korean war, the law required not over certain levels and when the war came on, that provision was indefinitely suspended and has never been reenacted. The way it has been working, it has not been neglected by any means, but the actual figure was set by the Appropriations Committee when it set a certain amount of money for the particular items that went to pay personnel. As a member of that committee, I have been over this many times. There is a great deal of logic and commonsense in requiring the Armed Services Committee to make a judgment on these matters.

If this amendment becomes law, we will not have the final say. The President will make his recommendations and then the committees of the two bodies will set the ceiling for each of the component services—the highest number authorized for that calendar year. Then the Appropriations Committees will decide how many within that number they will allow or recommend, at least, and Congress will make the final judgment. So this does not displace the Appropriations Committees by any means. It gives to the Joint Chiefs of Staff the opportunity to come before the Appropriations Committees early in the year and outline the manpower needs to our committee, and also the House committee.

It does not put any additional burden upon the President. Someone said to me in the Chamber a moment ago that the amendment would require the President to file his strength levels too early. I believe that to be in error because that is what he does now. When he submits a budget, he asks for a certain amount of money for the normal strength in each of the services. So the only change in the law is that it will have to be justified before the committees of the two Houses on Armed Services, passed on by the two bodies legislative-wise, and then the Appropriations Committee will set it within those limits.

If anything comes up during the year that the President may want to request more than his January 31 report, he will do the same thing he does on other matters, he will send down a supplemental request, and it would be in order, and it would be allowed. But, anyway, the Armed Services Committee will have the authority to put more in than the President asked for, anyway, if it wishes, or put in less than he asked for.

Mr. THURMOND. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield.

Mr. THURMOND. In view of the long service the distinguished chairman of the Armed Services Committee has had on the Armed Services Committee, and on the Appropriations Committee, too, considering Defense appropriations, does he not feel it would be of benefit and help for the Appropriations Committee to have the advice of counsel of the Armed Services Committee on this particular question, whether they agree with it or not?

Mr. STENNIS. I think that is a good point the Senator has made; yes. It will be of value. In fact, I have heard it said in the Appropriations Committee, "Well, what did the Armed Services Committee recommend?"

This was once a hard law. It was a permanent ceiling at one time, fixed into the law. That was right after World War II. It did not come up every year unless there was a proposal to change the law. This will let it come up every year and be reviewed.

I am pleased to have this amendment and I recommend that we support it and take it to conference. I believe we will make some headway there. I know that we will try.

Mr. President, I yield the floor.

Mr. BAYH. Mr. President, I should like to make an additional observation. First, I thank our distinguished chairman for accepting the amendment and for adding his observations, improvements, and corrections, to the amendment. In addition to giving the Armed Services Committee the opportunity to use their expertise, which I think can be helpful, I think that we are doing two additional things: First, we are making this body and the House—the Congress—realize that there is a direct, absolutely inseparable relationship between our foreign policy and manpower.

As our distinguished chairman, the Senator from Mississippi (Mr. STENNIS), said in an earlier speech, sometimes we get involved in some of the foreign policy agreements that perhaps we do not consider forcefully enough at the time. The fact is that if we had fulfilled the agreements, manpower would be required. Second, we bring a degree of consistency into the authorization process. It will mean that we will look much better if we wipe away this discrimination which has existed in the way we treat manpower. As I said earlier, if we are going to authorize bombers or authorize a missile system, and torpedoes, it seems to me we should treat the most precious commodity in our arsenal of defense, manpower, with equal care.

Mr. President. I yield the floor.

The PRESIDING OFFICER (Mr.

SPONG). Do Senators yield back their time?

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

Mr. BAYH. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back.

The question is on agreeing to the amendment, as modified, of the Senator from Indiana.

The amendment, as modified, was agreed to.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, my understanding now is that no amendments are pending at this time to the military procurement bill and that there is no prospect of anything new being considered on the bill at the present time.

ROUTINE MORNING BUSINESS

By unanimous consent, the following routine morning business was transacted.

COMMUNICATION FROM AN EXECUTIVE DEPARTMENT

The ACTING PRESIDENT pro tempore (Mr. METCALF) laid before the Senate the following letter, which was referred as indicated:

PROPOSED LEGISLATION TO REVISE AND IMPROVE LAWS RELATING TO DOCUMENTATION OF VESSELS

A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to revise and improve the laws relating to documentation of vessels (with accompanying papers); to the Committee on Commerce.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. MAGNUSON, from the Committee on Commerce:

Miles W. Kirkpatrick, of Pennsylvania, to be a Federal Trade Commissioner; and

William Robert McLellan, of California, to be an Assistant Secretary of Commerce.

Mr. MAGNUSON. Mr. President, from the Committee on Commerce, I report favorably sundry nominations in the Environmental Science Services Administration which have previously appeared in the CONGRESSIONAL RECORD and ask unanimous consent, to save the expense of printing them on the Executive Calendar, that they lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER (Mr. DOMINICK). Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Edward M. Gelb, and sundry other persons, for permanent appointment in the Environmental Science Services Administration.

EQUAL EMPLOYMENT OPPORTUNITIES ENFORCEMENT ACT—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (REPT. NO. 91-1137)

Mr. WILLIAMS of New Jersey. Mr. President, from the Committee on Labor and Public Welfare, I report favorably, with an amendment, the bill (S. 2453) to further promote equal employment opportunities for American workers. I ask unanimous consent that the report be printed, together with the individual views of the Senator from Colorado (Mr. DOMINICK), the Senator from California (Mr. MURPHY), and the Senator from Illinois (Mr. SMITH).

The PRESIDING OFFICER (Mr. MATHIAS). The report will be received and the bill will be placed on the calendar; and, without objection, the report and individual views will be printed, as requested by the Senator from New Jersey.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. JORDAN of North Carolina, from the Committee on Agriculture and Forestry, with an amendment:

S. 3070. A bill to encourage the development of novel varieties of sexually reproduced plants to make them available to the public, providing protection available to those who breed, develop, or discover them, and thereby promoting progress in agriculture in the public interest (Rept. No. 91-1138).

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. DOLE:

S. 4274. A bill to amend the Federal Regulation of Lobbying Act with respect to certain activities of Members of Congress; to the Committee on Rules and Administration.

(The remarks of Mr. DOLE when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. PELL:

S. 4275. A bill for the relief of the Welsh Manufacturing Co.; to the Committee on the Judiciary.

(The remarks of Mr. PELL when he introduced the bill appear below under the appropriate heading).

By Mr. FONG:

S. 4276. A bill for the relief of Janet Christine Newman; to the Committee on the Judiciary.

By Mr. HARRIS (for himself and Mr. BELLMON):

S. 4277. A bill to convey certain federally owned land to the Cherokee Tribe of Oklahoma; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. HARRIS when he introduced the bill appear below under the appropriate heading.)

By Mr. HARRIS:

S. 4278. A bill to amend section 378(a) of the Agricultural Adjustment Act of 1938, as amended, to remove certain limitations on the establishment of acreage allotments for other farms owned by persons whose farms have been acquired by any Government agency having the right of eminent domain; to the Committee on Agriculture and Forestry.

(The remarks of Mr. HARRIS when he introduced the bill appear below under the appropriate heading.)

By Mr. MILLER:

S. 4279. A bill to require travel agents to post performance bonds to assure the performance of travel services in interstate or foreign commerce; to the Committee on Commerce.

(The remarks of Mr. MILLER when he introduced the bill appear below under the appropriate heading.)

By Mr. MAGNUSON (for himself, Mr. HATFIELD, and Mr. PACKWOOD) (by request):

S. 4280. A bill to amend the maritime lien provisions of the Ship Mortgage Act of 1920; to the Committee on Commerce.

(The remarks of Mr. MAGNUSON when he introduced the bill appear below under the appropriate heading.)

By Mr. GRAVEL:

S. 4281. A bill for the relief of Allen D. Ray; to the Committee on the Judiciary.

S. 4275—INTRODUCTION OF A BILL FOR THE RELIEF OF THE WELSH MANUFACTURING CO., AND A RESOLUTION RELATING THERETO

Mr. PELL. Mr. President, I ask unanimous consent at this time to introduce a bill for the relief of the Welsh Manufacturing Co. of Providence, R.I., and a resolution of the Senate which will, in effect, refer this bill to the chief commissioner of the U.S. Court of Claims in order that he might report thereon to the Senate at the earliest practical date, giving such findings of facts and conclusions so that the Congress may be informed of the nature and character of the demand of this claim against the United States.

This legislation was necessitated by a decision of the Treasury Department, which established a separation between official monetary and private commodity transactions in gold, causing an increase in the private market price. This increase in the price of gold resulted in the Welsh Manufacturing Co.'s suffering a financial loss on a contract with the Defense Department. To the best of my knowledge, every attempt has been made to resolve this matter administratively; and in general, both Treasury and Defense Department officials have been sympathetic to the plight of the Welsh Manufacturing Co. However, under existing legislation, there would appear to be no relief available for this small business concern.

Therefore, at the request of the Welsh Manufacturing Co., I introduce the bill and submit the resolution.

I ask unanimous consent that the bill and resolution be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. BAYH). The bill and resolution will be received and appropriately referred; and without objection, the bill and resolution will be printed in the RECORD.

The bill (S. 4275) for the relief of the Welsh Manufacturing Co., introduced by Mr. PELL, and the resolution (S. Res. 453) relating thereto, submitted by him, were received; the bill was read twice by its title, both bill and resolution were referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the Welsh Manufacturing Company of Providence, Rhode Island, the sum of $15,939.25 for losses incurred by such company in performing Defense Supply Agency contracts numbered DSA120-68-C-2647, dated January 10, 1968, DSA120-68-C-2692, dated February 1, 1968, and DSA120-68-C-2872, dated February 15, 1968, as the result of a change of policy of the United States in no longer selling gold to domestic industrial users thereby requiring such company to buy gold to perform its Government contracts from private sources at a rate in excess of the rate previously paid to the United States for gold.

SEC. 2. No part of the amount appropriated in this Act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same is unlawful, any contract to the contrary notwithstanding. Violation of the provisions of this section is a misdemeanor punishable by a fine not to exceed $1,000.

S. RES. 453

Resolved, That the bill (S. 4275) entitled "A Bill for the relief of the Welsh Manufacturing Company", now pending in the Senate, together with all accompanying papers, is referred to the chief commissioner of the United States Court of Claims; and the chief commissioner shall proceed with the same in accordance with the provisions of sections 1492 and 2509 of title 28, United States Code, and report thereon to the Senate at the earliest practicable date, giving such findings of fact and conclusions thereon as shall be sufficient to inform the Congress of the nature and character of the demand as a claim, legal or equitable, against the United States, or a gratuity, and the amount, if any, legally or equitably due from the United States to the claimant.

S. 4277—INTRODUCTION OF A BILL TO CONVEY CERTAIN FEDERALLY OWNED LAND TO THE CHEROKEE TRIBE OF OKLAHOMA

Mr. HARRIS. Mr. President, for myself and my distinguished colleague (Mr. BELLMON), I introduce for appropriate reference a bill to convey to the Cherokee Tribe of Oklahoma in fee 38.5 acres of federally owned land in Cherokee County, Okla. The tribe is required under the bill to reimburse the United States in the sum of $2,258.80, which represents the original acquisition costs to the United States.

The land involved is a part of a 93.07-acre tract formerly used by the Sequoyah Indian School. In 1964 a part of this tract was conveyed to the Cherokee Tribe after it was no longer being used for school purposes. This tract was used for an industrial development project which has been expanding at a rapid rate. On the tract a restaurant, arts and crafts shop, service station and a warehouse have already been developed. Other projects are underway and the prospects are good that further development, if additional land is available, will result in more job opportunities for the Cherokees living in the area. The purpose of this bill is to make available the additional land that is needed.

The 38.5-acre tract, which is the subject matter of this bill, is no longer needed for school purposes.

The bill has the approval of the Secretary of the Interior and the Bureau of the Budget. I hope that prompt action can be taken on the bill since the uses for which the Cherokees wish to make of the land will benefit them greatly.

The PRESIDING OFFICER (Mr. MATHIAS). The bill will be received and appropriately referred.

The bill (S. 4277) to convey certain federally owned land to the Cherokee Tribe of Oklahoma, introduced by Mr. HARRIS, for himself and Mr. BELLMON, was received, read twice by its title and referred to the Committee on Interior and Insular Affairs.

S. 4278—INTRODUCTION OF A BILL TO REMOVE CERTAIN LIMITATIONS ON THE ESTABLISHMENT OF ACREAGE ALLOTMENTS

Mr. HARRIS. Mr. President, I have been contacted in recent months by Mr. Harold V. Hunter, State executive director of the Agricultural Stabilization and Conservation Service, in Stillwater, Okla., concerning the transfer of allotments from farms acquired by an agency having the right of eminent domain. As the law presently stands—section 378(a) of the Agricultural Adjustment Act of 1938—when an owner of a farm is displaced he may transfer the allotment for the farm from which he was displaced to another farm owned by him, provided that the allotment for the receiving farm does not exceed comparable allotments for similar farms in the area.

The State ASC committee has considered this limitation very carefully and feels that it is no longer appropriate in view of limitations which have been placed on the transfer of cotton and peanut allotments by sale or lease.

Also, due to past experiences, the State ASC committee felt that in some cases, when land was acquired by an agency having the right of eminent domain, that the displaced owner was not informed of this limitation with respect to similar farms. This has, therefore, caused some confusion.

After having been contacted by Mr. Hunter, I asked the Agriculture and Forestry Committee for comment on this proposed legislation. In response I received a letter from the distinguished chairman (Mr. ELLENDER) which I ask unanimous consent to have printed at this point in the RECORD. And I herewith introduce a bill to carry out the request of the State ASC committee.

The PRESIDING OFFICER (Mr. MATHIAS). The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 4278) to amend section 378(a) of the Agricultural Adjustment Act of 1938, as amended, to remove certain limitations on the establishment of acreage allotments for other farms owned by persons whose farms have been acquired by any government agency having the right of eminent domain; introduced by Mr. HARRIS, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

The letter presented by Mr. HARRIS is as follows:

WASHINGTON, D.C.,
May 8, 1970.

HON. FRED R. HARRIS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: This responds to your letter of May 5, 1970 with which you enclosed a letter of April 29 to you from Mr. Harold V. Hunter, State Executive Director of the State ASC Committee.

Mr. Hunter suggests an amendment to section 378 (a) of the Agricultural Adjustment Act of 1938 which deals with the pooling of allotments on lands acquired by agencies having the right of eminent dommain. Mr. Hunter's amendment would strike out the provision which limits allotments created from the pool to a size not exceeding those for similar farms in the area. Mr. Hunter advises that the State ASC Committee feels that the limitation is no longer appropriate in view of the limitations which have been placed on the transfer of cotton and peanut allotments by sale or lease. At present the transfer of cotton allotment is limited to an amount which will not cause the allotment of the farm receiving the transferred allotment to exceed the 1965 allotment for such farm, plus 100 acres. The Administration has expressed its support for a so-called consensus farm bill which would remove this limitation, and advises informally that there apparently has been no objection to this provision of it. Section 358a (g) of the Agricultural Adjustment Act of 1938 authorizes the Secretary to include reasonable limitations on the size of the resulting allotments on farms to which peanut acreage allotment is transferred, and provides further that the total peanut allotment transferred to any farm by sale or lease shall not exceed 50 acres.

The suggestion of the State ASC Committee does not appear to be unreasonable. If you care to introduce a bill on this subject, the Committee will, in accordance with its standard procedure, obtain the views of the Department of Agriculture and have the matter thoroughly studied, first by the subcommittee, and then by the full Committee. Until this has been done, I cannot, of course, advise you as to what the Committee's recommendations may be.

With kindest personal regards, I am,
Sincerely yours,

ALLEN J. ELLENDER,
Chairman.

S. 4279—INTRODUCTION OF A BILL TO REQUIRE TRAVEL AGENTS TO POST PERFORMANCE BONDS TO ASSURE THE PERFORMANCE OF TRAVEL SERVICES IN INTERSTATE OR FOREIGN COMMERCE

Mr. MILLER. Mr. President, I introduce for appropriate reference a bill to require travel agents to post performance bonds or provide equivalent security to assure the performance of travel services in interstate or foreign commerce. This bill would require travel agents engaged in interstate or foreign commerce to file a performance bond or equivalent security arrangement with the Secretary of Transportation to assure that if travel services are not furnished in accordance with contractual requirements, the travel agent would be in a position to make appropriate compensation to the travelers.

There is an important exception to this requirement. The filing of such a bond could be waived by the Secretary

upon a satisfactory showing by a travel agent that its record of performance or financial condition are such as to make filing an unnecessary requirement. This provision is designed to be administered on a reasonable basis by the Secretary so that reliable travel agencies will not be put to unnecessary expense. The bill is calculated to protect the public from travel agency operations which pose a threat to the good faith of the traveling public.

All of us were, I am sure, shocked and deeply disturbed by the recent bankruptcy of a travel agency and the resultant disappointment and financial loss to the many students and teachers who were in Europe participating in tours sponsored by that company. Many of us have had sons or daughters or other close relatives participate in such tours and can well imagine the anxiety and frustration of the victims of such an inexcusable occurrence. The bill I am introducing today is calculated to prevent such hardship in the future, and I hope the appropriate committee will act expeditiously on this matter.

The PRESIDING OFFICER (Mr. MATHIAS). The bill will be received and appropriately referred.

The bill (S. 4279) to require travel agents to post performance bonds to assure the performance of travel services in interstate or foreign commerce, introduced by Mr. MILLER, was received, read twice by its title and referred to the Committee on Commerce.

S. 4280—INTRODUCTION OF A BILL TO AMEND THE MARITIME LIEN PROVISIONS OF THE SHIP MORTGAGE ACT OF 1920

Mr. MAGNUSON. Mr. President, by request, I introduce for appropriate reference, on behalf of myself and the Senators from Oregon (Mr. HATFIELD and Mr. PACKWOOD), a bill to amend the maritime lien provisions of the Ship Mortgage Act of 1920.

Last year I introduced S. 2817, another bill to amend the maritime lien provisions of the Ship Mortgage Act of 1920.

That bill was requested by the National Association of Port Authorities, to permit them to exercise lien rights against delinquent vessels to collect their charges for certain services rendered such vessels in accordance with tariffs filed with the Federal Maritime Commission, notwithstanding the existence of a "no lien clause" in the charter party or where, for any other reason, the person ordering the services was without authority to bind the vessel therefor and where the furnisher knew, or could have known, of such lack of authority.

S. 2817 has raised a number of problems and has not yet been finally acted upon by the subcommittee to which it was assigned. Other suppliers of services and necessaries to ships believe, as do the port authorities, that the existing maritime lien statutes discriminate against them and they too should have the relief required and requested by the port authorities. Other problems have arisen as well.

The bill I introduce today does not make any item lienable which is not lienable under maritime law today. No new interpretations of what is a "service to the ship" are required. No changes are made in the schedules of priorities between various claims against the ship, all well established in maritime law. It gives no authority to bind the vessel to one tortiously, or unlawfully, in possession or in charge thereof.

The amendment I introduce today simply says that no longer shall owners and charterers—and it is with the foreign flags that the problem primarily exists—by contract between themselves, and perhaps, their bankers—a contract to which the terminal operators, the ship chandlers, the ship repairers, the stevadores, and others supplying necessities to the ship are not parties—be able to deny to those suppliers the lien rights they would otherwise have in the absence of such a contract.

I do not pretend that this bill is the only answer nor do I suggest that arguments may not be advanced against it. The session is late, and I expect no legislative action on this bill this session. It is, however, another approach, a more practical approach and I introduced it in the hopes that hearings thereon, perhaps next year, may ultimately lead us to a solution acceptable and fair to all.

I ask unanimous concent that the bill and an accompanying memorandum in support of amendment to the Federal maritime lien law be printed in the RECORD.

The PRESIDING OFFICER (Mr. DOMINICK). The bill will be received and appropriately referred; and, without objection, the bill and memorandum will be printed in the RECORD.

The bill (S. 4280) to amend the maritime lien provision of the Ship Mortgage Act of 1920, introduced by Mr. MAGNUSON, for himself, and other Senators, by request, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 4280

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

That section 30 of the Ship Mortgage Act of 1920 (46 U.S.C. 971–975) is amended as follows:

(1) by striking from Subsection R thereof (46 U.S.C. 973) the semicolon, substituting a period therefor and deleting all thereafter.

The memorandum presented by Mr. MAGNUSON is as follows:

MEMORANDUM IN SUPPORT OF AMENDMENT TO THE FEDERAL MARITIME LIEN LAW

Under long established principles of maritime law, suppliers of necessaries to vessels have been accorded the right to impose a lien or arrest the vessel in support of their right to collect their proper charges for such necessaries. Over the years priorities between such suppliers have been established with the seaman's rights to his wages at the head of the list. Over the years the question of what services and supplies constitute "necessaries to the ship" have likewise become fairly well defined.

In 1910 there came into the Federal Maritime Law what is now 46 USCA 973. This section takes away these lien rights:

"When the furnisher (of necessaries) knew, or by the exercise of reasonable diligence could have ascertained, that because of the terms of a charter party, agreement for sale of the vessel, or for any other reason, the person ordering the repairs, supplies, or other necessaries was without authority to bind the vessel therefor."

This section of the code was relied upon recently in the case of *The Port of Tacoma vs. S. S. Duval*, 364 F2d 615 (CCA 9th 1968) wherein the Port of Tacoma sought to assert a lien for wharfage or dockage and the court held that because there was a "no lien clause" in the charter party under which the Duval was being operated that the port had no right to a lien.

Stevedores, ship chandlers, ship repairers, as well as ports and marine terminal operators have likewise run into this problem primarily with foreign flag vessels chartered to foreign operators. Stevedores alone in the San Francisco Bay Area have sustained losses over the years in excess of two million dollars. In the Willamette-Columbia River Area in the last five years, losses in excess of $45,000 have been documented, along with a report of at least one company forced into bankruptcy because of such a loss. The losses to ports, ship chandlers and ship repairers doubtless would run into very substantial sums. All of these people report that their problems are not with domestic owners or charterers who for the most part are responsible.

It is difficult for these American businessmen to understand why our law should permit a contract to be made in Athens, for example, between an owner and a charterer, and to which no American supplier is a party, which effectively denies a right to a lien which they would otherwise have in the absence of such a contract provision.

Accordingly, Senator Magnuson of Washington at the request of the National Association of Port Authorities introduced S. 2817 which, as introduced would have given a lien to any person furnishing services to a vessel in accordance with the provisions of tariffs filed with the Federal Maritime Commission in spite of the existence of a "no lien clause" in the charter party. This would have given some, but not complete, relief to a marine terminal operator but none to stevedores, ship chandlers, ship repairers or other persons. This bill ran into problems with the Federal Maritime Commission which really has no interest in the policy question involved here, but is concerned about the administrative responsibilities conceivably created by S. 2817. S. 2817 has had a hearing but no action has been taken on it by the Subcommittee of the Senate Commerce Committee and none is expected.

Interestingly enough Senator Magnuson's remarks at the time he introduced his bill (Congressional Record August 19, 1969) suggested that ". . . the simplest amendment to that (lien) law might be said to be deletion of everything in Section 973 after the semicolon in the fourth line. This would permit the imposition of liens by all persons covered in Section 971, a much broader class than Marine Terminal Operators . . ."

The Senator was absolutely correct and the attached bill proceeds along that very "most practical legislative" road. The attached bill makes no changes in the definition of necessaries, it makes no changes in the priorities of liens, it simply prohibits a clause in a contract to which the supplier was not a party and of which, in a practical sense, he has no knowledge, from being deprived of a lien for his services to which he would otherwise be entitled. It does not give any one tortiously or wrongfully in charge of a vessel the right to incur or permit any such lien to attach.

The theory behind the present law apparently is that the owner, or perhaps the mortgagee, should not have his property or

his security arrested without his consent or knowledge. But this is not the law on land. There is not a piece of property sold or mortgaged where in the documentation thereof, there is not a prohibition against the purchaser for credit, or the mortgagor suffering or permitting liens to attach. Yet this provision in the contract of sale or mortgage does not deny to the plumber, the carpenter or other artisan a lien for his services should they be furnished and not paid for. Nor should it with respect to a vessel.

While a supplier of necessaries might be said to be able to demand and inspect the charter party and refuse to supply necessaries in the face of such a "no lien clause" this is not a practical answer. The vessel is in the harbor, it must be unloaded, serviced or repaired by members of highly competitive industries. Except for such an obscure clause in an involved document they are entitled to a lien. As a practical matter they have no opportunity to advise themselves and protect themselves.

If the owner, or mortgagee, is to be considered an innocent party, certainly so is the supplier of necessaries. And there is a well established principle of law that where one of two innocent parties must suffer a loss, that loss must fall on the one who by his affirmative act makes it possible, or creates the condition under which another suffers the loss. The owner, or mortgagee, by chartering or surrendering possession of the vessel clothes the master thereof with at least apparent authority to bind the vessel. If a loss must be suffered the owner, or mortgagee, should suffer it.

And the fact of the matter is that the owner, or mortgagee, can much more easily protect himself contractually, by bonds, or otherwise, at the time he charters or advances money on the vessel than can the supplier of necessaries to a vessel under great economic pressure to get back to sea.

This attached bill enjoys, at this time, the unqualified support of the West Coast Association of Stevedores, the National Association of Marine Services and the National Ship Builders Association. The National Association of Port Authorities support is expected as is that of a number of other organizations and individuals.

ADDITIONAL COSPONSORS OF A BILL

S. 1362

Mr. COOK. Mr. President, on behalf of the Senator from Delaware (Mr. BOGGS), I ask unanimous consent that, at the next printing, the names of the Senator from New York (Mr. JAVITS) and the Senator from California (Mr. MURPHY) be added as cosponsors of S. 1362, to provide Federal financial assistance to Opportunities Industrialization Centers.

The PRESIDING OFFICER (Mr. DOMINICK). Without objection, it is so ordered.

SENATE RESOLUTION 453—SUBMISSION OF A RESOLUTION TO REFER THE BILL (S. 4275) TO THE U.S. COURT OF CLAIMS

Mr. PELL submitted a resolution (S. Res. 453) to refer the bill (S. 4275) for the relief of the Welsh Manufacturing Co. to the chief commissioner of the United States Court of Claims for a report thereon, which was referred to the Committee on the Judiciary.

(The remarks of Mr. PELL when he submitted the resolution and introduced S. 4275 appear earlier in the RECORD under the appropriate heading.)

THE FAMILY ASSISTANCE ACT OF 1970—AMENDMENTS

AMENDMENT NO. 854

Mr. JAVITS submitted amendments, intended to be proposed by him, to the bill (H.R. 16311) to authorize a family assistance plan providing basic benefits to low-income families with children, to provide incentives for employment and training to improve the capacity for employment of members of such families, to achieve greater uniformity of treatment of recipients under the Federal-State public assistance programs and to otherwise improve such programs, and for other purposes, which were referred to the Committee on Finance, by unanimous consent, and ordered to be printed.

(The remarks of Mr. JAVITS when he submitted the amendments appear earlier in the RECORD under the appropriate heading.)

SOCIAL SECURITY AMENDMENTS OF 1970—AMENDMENT

AMENDMENT NO. 855

Mr. CURTIS submitted an amendment, intended to be proposed by him, to the bill (H.R. 17550) to amend the Social Security Act to provide increases in benefits, to improve computation methods, and to raise the earnings base under the old-age, survivors, and disability insurance system, to make improvements in the medicare, medicaid, and maternal and child health programs with emphasis upon improvements in the operating effectiveness of such programs, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

ADDITIONAL COSPONSORS OF AN AMENDMENT

AMENDMENT NO. 440 TO S. 2838

Mr. COOK. Mr. President, on behalf of the Senator from Delaware (Mr. BOGGS), I ask unanimous consent that, at the next printing, the names of the Senator from New York (Mr. JAVITS) and the Senator from California (Mr. MURPHY), be added as cosponsors of Amendment No. 440 to S. 2838, to establish a comprehensive manpower development program to assist persons in overcoming obstacles to suitable employment and for other purposes.

The PRESIDING OFFICER (Mr. DOMINICK). Without objection, it is so ordered.

NOTICE OF HEARINGS ON DISTRICT OF COLUMBIA LEGISLATION

Mr. SPONG. Mr. President, as chairman of the Subcommittee on Public Health, Education, Welfare, and Safety of the Senate Committee on the District of Columbia, I wish to give notice of a public hearing to be held at 10 a.m. on August 28, 1970, in room 6226, New Senate Office Building. At the hearing, the Subcommittee will hear testimony on the following legislation:

H.R. 18086, a bill to authorize the Commissioner of the District of Columbia to sell or exchange certain real property owned by the District in Prince William County, Va.;

H.R. 9017, to amend the District of Columbia Alcoholic Beverage Control Act;

S. 3010, to authorize in the District of Columbia a program of public day-care services; and to amend the District of Columbia Public Assistance Act of 1962 so as to relieve certain adult children of the requirement of support and to provide public assistance in the form of foster home care to certain dependent children.

H.R. 670, to amend section 19(a) of the District of Columbia Public Assistance Act of 1962;

S. 3944, to authorize the District of Columbia to enter into the Interstate Agreement on Qualification of Educational Personnel; and

H.R. 13307, to amend chapter 3 of title 16 of the District of Columbia Code to change the requirement of consent to the adoption of a person under 21 years of age.

Individuals and representatives of organizations who wish to testify should notify Edward Maeder at 225–4161 prior to August 26, 1970.

Written statements, in lieu of personal appearance, are welcomed and may be submitted to the assistant chief clerk, room 6218, New Senate Office Building, Washington, D.C. 20510, for inclusion in the hearing record.

ADDITIONAL STATEMENTS OF SENATORS

WASTED TECHNICAL TALENT

Mr. ALLEN. Mr. President, like so many others within this body and elsewhere in our great Nation, I have long been concerned with the need for shifting our tremendous technological resources from war to peacetime.

I felt this same concern on the certain knowledge that our vast storehouse of scientists, engineers, and managers within the National Aeronautics and Space Administration would be left without useful tasks as the great crash program to reach the moon peaked and began its decline to a more normal pace.

In February of this year, in a radio message to the people of Alabama during which I discussed the problems of salvaging our environment, I expressed the belief that the President would do well to make use of the reservoir of technical knowledge within the Department of Defense and NASA in helping to win the battle for our environment and other national problem areas.

Mr. President, it is no secret to the world that much of the technical capability to which I refer is located at Huntsville, Ala. That is where Dr. Wernher von Braun directed his magnificent team in developing the massive Saturn boosters which carried the Apollo astronauts to the moon. And the Army's Redstone Arsenal—also at Huntsville—is where a superb management team of civilian and military scientists and en-

gineers developed and continues to develop the missiles and rockets with which the United States discouraged and discourages massive aggression against the free world.

It is from these Alabama headquarters of the George C. Marshall Space Flight Center and the Army Missile Command that the vast aerospace and electronics industries throughout the Nation received their direction and inspiration.

It is also no secret, Mr. President, that the budgetary restrictions placed on NASA and the Army have now dealt a severe blow to these magnificent management teams. The men and women who made up these teams were educated through taxpayer support of their colleges and universities. Most of them received additional specialized training under agency programs. They are on the payroll and are ready, willing, and able to assume new tasks.

Not to make use of the people and the laboratories and other expensive facilities is a criminal waste of precious national resources to say nothing of the loss in taxpayers dollars. Here, within the great but declining aerospace complex, are Government civilian employees who, with minimal additional expense, could contribute immeasurable knowledge and leadership to other programs now needed by our Nation—such as salvage and redemption of our environment, urban problems, transportation, communications, nutrition, housing, and education.

Mr. President, we in Congress and those in the administration owe an obligation to these men and women who have worked so diligently and well for their Nation, only to find themselves without jobs and without a future.

Mr. President, during the past few days, an open letter to the President in the form of an advertisement has appeared in the Wall Street Journal and other metropolitan newspapers dealing with this very problem.

And on Wednesday, July 29, 1970, a news story written by Jack Hartsfield, science editor of the Huntsville Times, one of Alabama's finest daily newspapers, puts into words the plight of these capable government and industry employees whose livelihoods and careers are threatened because of changing priorities and a limited national budget.

Mr. President, these two articles pinpoint the very problems to which I now address myself, and I feel that they would prove informative and suggestive of solution to the Members of the Senate. I therefore ask unanimous consent that these two newspaper items be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Huntsville (Ala.) Times, July 29, 1970]

GOLD MINE OF LOCAL TALENT JUST SITS WAITING

(By Jack Hartsfield)

A multi-million-dollar gold mine, situated in the heart of Huntsville, is up for sale—but as ironic as it seems, bargain hunters are being sheepish about mining the wealth.

The fortune isn't subterranean. It's right on the surface for anyone to scoop up.

The nuggets, scattered throughout the city, come in various sizes, shapes and values. In fact, they're so diverse that there are several thousand to choose from.

The wealth is talent, people. The jobless corps of highly-trained specialists these days spend time waiting for the telephone to ring.

Or writing resumes. Or puttering around their homes doing domestic chores. Or trying to plan new futures because the past seems to have run out.

They pray, they hope. They are keeping the faith and talking of better days ahead.

An estimated 3,000 of them, victims of economic slashes in space, defense and industry, are trying to ride out the storm in Huntsville.

"I'd rather be out of work here in Huntsville than anywhere else," one jobless aerospace executive moaned. "There really aren't many jobs available anywhere in the country.

"So I'll wait. As long as I can or until I see daylight somewhere, somehow."

Few want to leave Huntsville. In essence, they're betting their futures that they can remain and find work with new industries, flirting with ideas of major moves to the city to absorb the multi-talent going unused.

Amazingly, most of the cream of the crop of the city's jobless executives are still here, even after three months, six months, a year without work.

They're playing a waiting game, but it's the kind of game that can become frustrating, discouraging, almost mortifying.

Life savings can hold out only so long. Working wives, part-time jobs, shrinking family money reserves fray the nerves.

The dilemma is no different for an elite 317 seeking the help of the Alabama State Employment Service.

Name the specialty and one of them has the background, the experience—but no job.

The 317 alone amassed salaries of $4.1 million last year. But now they're doing without, not by choice, but by circumstances.

Almost all of them are still here—waiting, hoping.

For William C. Ragsdale, a $24,000-a-year engineering executive with Chrysler until he lost his job last February, the dilemma has meant a nightmare of sending out more than 1,000 resumes to prospective employers.

Not one has resulted in a job offer.

Discouraged but not beaten, the 16-year Chrysler veteran refuses to give up. With no other recourse, Ragsdale, 45, is trying private enterprise on his own.

"When all else seemed useless, we started two companies of our own, using 'displaced engineers'," Ragsdale added. The two firms are Teleconference Inc. and Associated Engineers.

"So far, though, it's been all outgo and no income," he confided, "but we have hopes." The only new income comes from the $75 a week his wife brings in her new job as a social worker with the Career Opportunities Program, irony in itself to say the least.

If the two new firms don't turn a profit and Ragsdale doesn't find a livelihood, then what?

"I guess D-Day would be about the end of September," he said. "I don't have any other place to go . . . there are relatives in Denver, Kansas City, but that's the last resort."

With three grown children, there's his 12-year-old son still at home.

"I heard last night that the economic situation nationwide was easing up," Ragsdale, an expert mechanical engineer, added. "I thought that was real fine—but I haven't noticed."

Willard R. McKewen, caught up in the reduction in force at the Army Missile Command, gets his last paycheck Wednesday from the Army. He was a $20,000 a year logistics analyst. His leave status runs out Wednesday and there's no job for him to return to.

He wants to stay in Huntsville if he can. "We've prayed about it and we have to believe that everything will work out to our own good," the father of two teenagers added.

McKewen, 46, is still holding onto the slim possibility that he'll be recalled to his job at the arsenal. He's spent 28 years in civil service.

If nothing happens, he says, the only answer will be for him to apply for retirement and look for other work. "I'll have to find something, somewhere," he injected.

In some cases, though, there can be no more waiting. Norman W. Levora, 44, father of three, will reluctantly leave Huntsville Saturday.

With no work in sight, he's heading back to Ohio and college to get his doctorate in physiology. His wife, Martha, has been bringing home a small paycheck as a social worker here.

Levora was a physiologist with Chrysler until he lost his job last November.

His luck at finding other work anywhere?

"Terrible!" he admitted. "I've had 50 to 75 resumes floating over the country with not a single response."

Levora would stay in Huntsville if the proper job was available. In fact, the Ohio native has nothing but praise for the city.

"Huntsville has done a magnificent job of keeping up its economy despite the space and defense cutbacks," he said, naming off Dunlop, Automatic Electric, Pittsburg Plate Glass, others.

While there are jobs in Huntsville at such firms, none fit the training, experience or specialized ability of Levora.

For the most part, the jobs at Dunlop, Automatic Electric and others are assembly line work, semi-skilled employment.

A highly trained engineer goes wanting while those of less education and experience fill the assembly line jobs.

Basically, the problem adds up to an engineer losing a job and two assembly line workers making up part of the difference.

It is little solace for the highly-trained technical man who might just as well be living in a tent in the Sahara Desert as far as job openings are concerned.

"But I think Huntsville's economy will continue to move up," Levora added. "The city is in an excellent position." Somehow, through, it has ruled Levora out.

Levora, a $10,000 a year man, simply cannot afford to wait.

"My need is a job right now. Not next week. Not next year," he explained, "so I have to go now." In a couple of years he plans to have his doctorate, aimed at environmental research.

"At least a doctorate will qualify me to teach if nothing else is available then," he added.

At the Alabama State Employment Service, the list of unemployed executives here is rising by 75 to 100 a month.

Many times that number are seeking to find jobs on their own with mostly saddening results.

Some are heroic about their dilemma. One, hoping to get his job back at the arsenal, refuses to equate his job loss with the gearing down of defense.

If the slashes in defense mean an end to the Vietnam War is in sight, he'll never complain.

"To get that war over with, I'd prefer to have to look harder for a job if that's what it takes."

The Nixon administration insists that the economy is on the upswing and job opportunities are slowly becoming available, but the list of 317 top jobless executives wonders.

A survey of their luck in finding work brought responses from 181 of them.

Of the total, only one had been offered a job in another part of the country.

"It's a shame we can't offer them all something in Huntsville right now," one city official confided.

"That much talent . . . that much brainpower—all going to waste."

AN OPEN LETTER TO PRESIDENT RICHARD M. NIXON

DEAR MR. PRESIDENT: I wonder if your advisers have notified you of the urgency that exists today in the field of high technology.

Numerous companies in the United States of America have built our image to a point of technological leadership throughout the the world. These organizations have given birth to new fields for the betterment of mankind in areas of communication, transportation, aerospace, nuclear energy, and oceanography. They have accomplished the landing of the first man on the moon. These scientific achievements have been the result of the efforts of our doctors, engineers, designers and researchers. These same valuable people are in serious trouble due to lay-offs and the closing of plants. Their outlook is bleak. Economic pressures force them to turn elsewhere to earn their basic livelihood.

I find that the unemployment rate of top-ranking scientists, engineers and designers is at an extremely dangerous level for our national well-being. Furthermore, it is rising daily, which trend can only have the subsequent effect of lowering the enrollment rate of the upcoming generation in these fields. Unless immediate action is taken, it will require at least five years to replace this brain power. I am quite sure that you want the United States to remain number one in the field of technology and not have it become a second-rate power.

Therefore, after consultation with leaders of various industries, I suggest that some of the following projects be undertaken for a peacetime economy to prevent technological displacement:

1. The majority of the world population is classified as illiterate. Microwave Communications on a world-wide basis could play an important role in eliminating this blight. The capability for this endeavor has already been developed through out NASA Space Program.

2. In the fight to control pollution of our atmosphere, our Aerospace Industry should be designing and developing computerized electronic transportation systems to eliminate they daily use of automobiles powered by the combustion engine.

3. Oceanography is of prime importance, and more research should be directed here, first to develop a source of food for the world population, and also for making minerals available to all countries.

4. We, as a world leader, should be assisting undeveloped countries to move forward in the development of nuclear power plants in order that they can produce electricity cleanly, efficiently and economically.

5. Our Defense Arsenal should be phased out of the era of the 50's and 60's and be brought up to date with the new technology of the 70's.

6. In the fields of Health and Education, our Health Program could be enhanced by the electronic sensor and computer technology developer for our Astronauts. Our Education System should be brought up to date with new programs that will prepare our youth for the world they must face tomorrow—a world where progress must be pollution control, nuclear power plant development and oceanography.

It is my belief that private industry could not only achieve these peacetime goals, but surpass them if money for such projects were made available, with the assistance of the Government, through long term, low interest rate loans by the United States or International Banks.

Such a program could save our scientists, engineers and our country from technological oblivion. This program would also offer true assistance to underdeveloped countries regardless of their national aspirations, and at the same time set the United States firmly in the position of World Leader in Technology.

I have the honor to remain,
Yours faithfully,
BENJAMIN FRIEDMAN.

THE NATIONAL SCIENCE POLICY

Mr. MANSFIELD. Mr. President, Representative DADDARIO, chairman of the Subcommittee on Science, Research, and Development, has undertaken a long-overdue congressional study on science policy. No Member of Congress is more qualified than Mr. DADDARIO to conduct this investigation. He has long demonstrated an understanding and concern for the scientific and research needs of this country as well as a willingness to expend the great energies of the magnitude required.

He requested that I submit my views to his subcommittee, especially with respect to the relationship of the Defense sponsorship of basic research and the desirability of transferring the emphasis of the sponsorship from Defense to the civilian agencies.

I ask unanimous consent that my testimony before the subcommittee on August 11, 1970, be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MIKE MANSFIELD

RECHANNELING THE PUBLIC RESOURCES FOR BASIC SCIENCE THROUGH THE CIVILIAN AGENCIES: A NEW GOAL FOR NATIONAL SCIENCE POLICY

I have been asked to comment on the government's role regarding the support of research. I appreciate this invitation by the Chairman of the Subcommittee on Science, Research and Development. Specifically, I suppose the question really is whether adequate government support of science can be carried on if there is a permanent shift away from the role of the military in the conduct of research. What must be considered is the relationship of the Department of Defense and other mission agencies to the matter of research; what part research plays in their overall functions and as a related matter, whether strong ties should be continued between the Pentagon and our universities. The answer to these questions by and large will determine this nation's entire science policy for the years ahead.

At the outset I should say that the quality of life on earth tomorrow will be determined in large part by the measure of the scientific research undertaken today. There is thus a significant public responsibility to sponsor research in the various scientific disciplines and to keep the way clear to follow up on new discoveries. Determining the emphasis, however, is a most delicate responsibility. To a great extent the emphasis is determined by the size of the resource devoted to the various disciplines.

Since the end of World War II, the Government's contribution to research, development and the supporting facilities has reached nearly $200 billion. Where and by whom that money was spent has determined not only the science policy of this nation but the entire emphasis in science education and training. During this time well over half of the government's contribution to science has been channeled through the Department of Defense. It must be clearly understood that most of this money purchased research of the highest quality. However, not nearly so clear is the rationale that dictated that the Department of Defense should be the principal sponsoring agency for much of this vital research.

For the past 25 years the Pentagon has sponsored research in almost every scientific discipline imaginable. From the most esoteric examinations of ornithology to the study of broad social movements in foreign countries, the Pentagon has run the gamut in its research endeavors. By necessity, therefore, the Pentagon assumed a significant role in determining the nation's science policy. The desirability of such a large role for this mission agency is the basic issue confronting us.

It is not difficult to understand how we got where we are today. The phenomenon of channeling so much of our research money through the Defense Department developed over the years not only from normal bureaucratic urges to grow but because the science community and the Congress acquiesced in that growth. So the question is not how we got here. It is why. To put it simply: Why should the Defense Department be the principal government agency through which is funded the federal research that has no apparent relationship to the security needs of this nation?

To reply by saying that the research community has found that funds simply were more readily available at the Defense Department rather than at other civilian agencies states a fact. But it is not an answer. Nor is it sufficient to say that Pentagon requests for funds receive less Congressional scrutiny than those requested by non-military agencies. Too often in the past the prevailing attitude has been expressed by the question: Are we giving you enough? Perhaps it should have been: Why do you need so much? In part the historical answer lies in the fact that the cloak of national security lined with the international threat of communism simply prevented a close scrutiny of Defense requests including requests for research and development. In part, the answer is that Defense spending requests became so large that even billions for research and development seemed dwarfed. As a result the scientific community came to rely upon the immunity of Defense funding from close scrutiny and occasional budgeting squeezes. For years Defense funding provided a very stable source of research money. It was the easiest path for the research community to follow.

It wasn't long before many of the most able members of the science community gravitated to this source of funds. It became apparent, too, that although only a relatively small fraction of the federal research dollar was spent on university campuses, that money was very important to those universities in maintaining their status. The salaries paid by the research grant paid in effect the salary of the faculty member and a good share of the institution's overhead as well. The universities were not prepared to accept direct subsidies for fear of losing their autonomy—but they were apparently prepared to accept such a dependence indirectly with no questions asked.

Two years ago during Senate debate on the Defense appropriations bill for fiscal year 1969, I offered an amendment which would have limited the payment of indirect costs for a research grant or project to 25 percent of the direct costs.[1] From my preparation for this measure and subsequent debate, I saw the grave financial difficulties faced by our universities today and noted the disturbingly heavy dependence of virtually all of our leading universities upon hidden subsidy via indirect costs. A total of 620 academic institutions in fiscal year 1968 received federal support for research and development totalling $1.4 billion. Of this the Department of Defense accounted for $243 million and the National Science Foundation, $212 million. This money largely benefited only a few institutions. The top 100 accounted for 87 percent, or $1.2 billion.[2] Even under the limitation of my

---

Footnotes at end of article.

amendment, these top 100 would have received $300 million for indirect costs; money that the individual scientists would never see but which would go into general university funds. Of this, in turn, 20 percent would have come from the military appropriations. And since overhead charges by many institutions were higher than the 25 percent limit I proposed, the Defense Department in 1968 was supplying more than $60 million to the indirect cost accounts of leading universities. Under these circumstances, I concluded that the situation was most unhealthy. To better gauge the ramifications of the federal subsidy to universities through overhead payments, I wrote to Philip Handler, then Chairman of the National Science Board and now President of the National Academy of Sciences. In a frank reply, he pointed out that of $1,671 million of federal funds for research at universities for fiscal year 1967, only about $426 million were utilized to support research in the most immediate sense. The remainder found its way into institutional funds and departmental funds.[3]

Subsequently the National Science Board proposed to the President that this situation of a hidden and unhealthy subsidy be corrected through grants to the universities so that future proposals for research would need cover only the direct and out-of-pocket costs of the work. I hope that the silence which greeted this recommendation within the Executive Branch will not be permanent and that Congress will assess its practicability as a way to establish more honest relations between the universities and the agencies of the federal government that fund on-campus research and higher education.

A contributing reason for the expansion of defense interests into almost each imaginable field of research in my opinion is the past and present inadequate information about what kind of research is being done by whom and where.

It has often occurred to me, and to other Members of Congress, that because many federal departments and agencies fund so many research projects, there is a real possibility of overlap and duplication simply because "the word" does not pass between federal research administrators. Note that I am not speaking of research that one scientist deliberately carries out to confirm or refute the discovery of another, for this is an essential part of the scientific process. Rather, I have been and am still concerned with the probability that needless and unwitting duplication of work occurs which could be minimized if scientists and administrators had a current, reliable and complete source of information about who is doing what research with federal funds. So I asked the agencies to supply me with a list of current research projects. Having little success with the direct request, I arranged for the Bureau of the Budget to ask the agencies to comply.[4] When all of the replies finally trickled in, it was evident that whatever the agency project information systems may be, they are simply incapable of readily providing summary information on research. Eight departments and agencies finally responded. Five separate replies were sent by Defense and six by the Department of Health, Education and Welfare, bringing the total number of project information readouts to 17. Eight replies appeared to be printouts of computer systems, with the rest manually prepared. Two defense agencies submitted computer products and three manual ones. Later it was reported to me informally that project information had been taken from the computer-based systems, edited and put back in before being printed out for transmittal. Three of the agencies of HEW and four other agencies used the science classification system specified by the Bureau of the Budget in its Circular A-46. The remainder employed their own systems for identifying fields of science. The system used by the National Science Foundation, presumably the lead agency for federal information on science and technology, was different from that specified by the Bureau of the Budget.

Parenthetically, considering the many computers and elaborate information systems of government agencies, this simple request should not have produced the administrative convulsions that it did. The administrative entanglement indicated to me that each department goes its own way in research with little attention to that funded by others. There simply does not exist a system capable of quickly and easily informing research administrators in one department of what research of potential interest or use to them is currently funded by another federal agency. While coffee-break exchanges among scientists have their value, they are not an adequate substitute. It is well over a year since I inquired into this matter. Yet the Office of Science and Technology has not decided what current information about research projects should be collected, who should do the collecting, how it should be collected and who can have access to it. Perhaps we need some one to tackle this issue with the vigor of past efforts when the related question of cataloging and making available the results of research already done was exhaustively considered. Perhaps the reorganized Office of Management and Budget can give this a priority among its management functions.

My experience in trying to get current information on research confirmed yet again my observation that bureaucracies must often be kept after to obtain improvements in the administration of government-funded research. These improvements are all the more necessary in a time when the dominant question has changed from: "What can we spend our increasing research appropriations on?" to "How can we best spend the available appropriations for research?"

In this connection, to overcome the inertia, to get out of comfortable, well-worn ruts sometimes require heroic measures.

It was during the Senate's appropriation hearings in 1968 that I asked Dr. Foster of the Defense Department about duplication of research and about the relation of Defense-sponsored research, particularly its basic research, to that of other agencies. It was abundantly clear in his response that the Pentagon then believed all fields of science and technology were open to it, that it saw no inconsistency in funding basic research in fields already funded by civil agencies, and that all research projects it sponsored were somehow relevant to Defense needs. The Defense Department was adamant in its position that it must continue the full spectrum of research then being undertaken, even though by definition the outcome of much such research can neither be predicted nor its possible relevance to military science known. This testimony reinforced the conviction that research funded by the military appropriations had built up an enormous momentum, and that only the most forceful efforts by Congress could effect change in the direction of rechanneling federal responsibility for the funding of basic research. At the time, it seemed clear that there was not a national policy that viewed the nation's long-term interests. What to do about it was another question.

During the floor debate on the military authorization bill (PL 91-121) for fiscal year 1970, I added a rider which appeared as Section 203. It reads as follows:

"None of the funds authorized to be appropriated by this Act may be used to carry out any research project or study unless such project or study has a direct or apparent relationship to a specific military function or operation."

That provision became law and the same provision now appears as Section 204 of the military authorization bill reported to the Senate for fiscal year 1971, but does not appear in the bill reported in the House.

I believe Section 203 is a necessary and practicable step towards the goal of reducing the heavy dependence of American science that has built up since the early 1950's. Properly and imaginatively administered, it can also lead to a strengthening and a rebuilding of the foundation for the future of much of American science.

The intent of the provision is clear. It is a mandate to reduce the research community's dependence on the Defense Department when it appears that the investigation under consideration could be sponsored more reasonably by a civilian agency. After all, the National Science Foundation was created by Congress back in 1950 specifically to channel federal funds into basic research. Since its creation, it has been the orphan child of the federal government's science policy. Since 1955 NSF has been given $2 billion to sponsor basic research. During this same period, Pentagon spending has been $3 billion on this same type of research; it has spent 50% more for the fundamental investigations—in addition to the many billions on advanced research and development of specific military needs—than has the agency set up for this sole purpose.

The addition of Section 203 to the military authorization law thus sought to set in motion a realignment. The language was intentionally imprecise in an effort to afford the Executive Branch an opportunity to start a process that would lead to the transfer of resources from the Defense Department to the civilian agencies—primarily to the National Science Foundation.

Clearly, Congress, does not exist to operate the daily workings of the Executive. By law, however, Congress does have a responsibility together, with the President, to establish broad policies. Congress has a right to assume that policies so established will be followed. Much progress has already been made since Section 203 became law in the face of the resistance that has lingered in some quarters. The authorization for NSF funding for this coming fiscal year has been increased by about $75 million over last year. By comparison, this year the Defense Department's share of basic research funds will be $50 million less than that of the National Science Foundation.

By no means, however, does Section 203 intend to cut off the Defense Department from research that it needs. It is neither anti-military nor anti-research. Whether the language chosen is interpreted strictly or loosely, it is hoped that the ultimate result of this whole endeavor will be a continued high level of basic research funding by the federal goverrment. Hopefully, we will see in the near future that the civilian agencies under the leadership of the National Science Foundation will develop as the primary source for these research funds. The responsibility of the civilian agencies to fund an appropriate share of basic research is in no way diminished by Section 203. The Pentagon will continue to have a responsibility for research—even basic research, one that allows those entrusted with military defense to maintain a full and necessary exchange with the researchers at the frontiers of science. The role of the Defense Department in sponsoring basic research, however, is intended to be incidental rather than predominant.

Turning now to the DoD response to Section 203, I believe that the review of research by DoD could have benefited from guidance and criteria issued by its top management. That did not happen. Instead, all that the Defense Department did was to send a memorandum to its constituent agen-

Footnotes at end of article.

cies informing them of Section 203 and telling them to comply.

When I inquired of DoD about their follow-through on this provision, Deputy Secretary of Defense Packard replied in part that the Department had contacted the National Academy of Sciences and invited them to consider carrying out an examination of all projects which might be affected. I thought this a constructive idea and wrote to Dr. Handler on December 5, 1969, to support this participation by the Academy. To my disappointment, Dr. Handler replied on December 12 that he must decline to involve the National Academy of Sciences directly in the review. He did volunteer to offer the Academy for any follow-up review. More important, he agreed it would be useful for the Academy to do two things. First, to formulate principles which might guide the administration of Section 203. Second, to undertake a projection of the implications and consequences of Section 203 with respect to the future of federal research policy and the national welfare. While I did not ask the Academy to do so then, experience with Section 203 indicates that it should do so now.

To date, there have been differences in application within the Department of Defense. On the one hand, for example, the Advanced Projects Research Agency asserts that none of its projects fail the test of Section 203, even though the General Accounting Office has singled out some as questionable in terms of this legislation and as more properly supportable by the State Department than by military appropriations. On the other hand, the Department of the Air Force has seized upon Section 203 to terminate research funded from appropriations prior to fiscal year 1970, with the excuse that they were carrying out the "Mansfield" philosophy.[5]

Of the 6,600 research projects that were reviewed, 220 were found affected by Section 203 which involved fiscal year 1970 funds totalling $8.8 million. This is about 4 percent of the $223 million that DoD obligated during this fiscal year for research at colleges and universities, and less than 1 percent of the $1,295 million of federal funds for university research and development estimated by the Bureau of the Budget for fiscal year 1970.

By comparison, the general tightening of the Defense research budget for fiscal year 1970 caused a reduction of $64 million, notwithstanding Section 203.

Recently, the Secretary of the Air Force testified that approximately 7 percent of the research projects, representing 3 percent of the Air Force research program, failed to pass Section 203. In comparison, tightening funds required a cut of over 10 percent.

Of course, Section 203 goes beyond the 220 projects immediately affected. Research projects funded from prior years' funds that do not meet the test of this legislation will be affected as they come up for renewal. The Comptroller General was unable to provide us with an estimate of the number of projects in this category or their total funding. Nonetheless, in my judgment, such projects should continue to their normal expiration, which will provide time for coordinated review by the Department of Defense with the civil agencies and for leadership and initiatives from the Office of Science and Technology. Despite its limited reaction to date, I still look to the Office of Science and Technology to provide the leadership necessary so that research affected by Section 203 which should be continued in the national interest will have a fair chance at the available basic research funds.

All that is required under Section 203 is relevance, which is not a dirty word as some critics of the Section sometimes seem to suggest. Relevance does not preclude agencies from funding basic research. Section 203 does not forbid the Defense Department from funding any and all research at colleges and universities. Had that been our purpose, we would have so written this legislation. What Section 203 does is to begin to close out a second and a backdoor National Science Foundation which has grown up in the Department of Defense.

It seems to me that the Defense Department can readily identify and justify many fields of fundamental research about which enough is known to judge their relevance to defense needs now and in the foreseeable future. Research funded in such fields as a result of announcement and publication of such DoD interests should produce proposals for research that would permit scientists to explore aspects of science which add to understanding in fields reasonably related to Defense needs.

The idea of relevance is now new. I should think that the Science Advisor to the President would be well acquainted with the following statements that support the principle of relevance.

First:

"The Foundation shall be increasingly responsible for providing support by the federal government for general-purpose research through contracts and grants. The conduct and support by other federal agencies of basic research *in areas which are closely related to their missions* is recognizable as important and desirable especially in response to current national needs, and shall continue."

Second:

"Mission oriented governmental agencies do and should support much long-range basic research, information from which is calculated *to have a direct bearing on some aspect* of their mission. . . . All mission oriented agencies need to be in close contact with the best and most advanced research which can apply to their problems."

The first is from President Eisenhower's Executive Order No. 10521 of March 15, 1954, on scientific research. This order still stands. It was not rescinded by President Kennedy, by President Johnson or by President Nixon. The second comes from the recent advice to the President by his Task Force on Science Policy.

Section 203 opened to the Administration a unique opportunity to set in motion a rebalancing of the responsibilities of federal agencies for the funding of basic research. The section became law on November 19, 1969. Yet the budget for fiscal year 1971 does not indicate that this opportunity has been taken. There is no indication of a shift of basic research unrelated to defense needs to the National Science Foundation or other agencies and, at the same time, a corresponding reduction in Defense funding.

In short, timely arrangements have not been made for orderly decisions pursuant to Section 203. I wrote last fall to the Director of the Budget Bureau and to the Cabinet officers of Departments and other agencies concerned on that point. The letters have had no appreciable effect. The Research Management Advisory Panel to your Subcommittee recommended that the Section be administered so as to produce an orderly shift in sources of research support. What has happened to that recommendation? In the meantime, where is the contribution of the interdepartmental system for coordination in research to which reference is always made when Congress starts to talk about improving the administration of federal appropriations for research? What has it done?

All that is heard are requests for the abolition of Section 203. Indeed, there seems to be almost a willingness to risk the wreck of the whole DoD basic research program rather than take an innovative and imaginative response to the law. Again, however, what may be involved is the built-in inertia of bureaucracy.

To carry out the intent of Section 203 will require new ventures in interagency coordination. That is the responsibility of the reorganized Bureau of the Budget and the Office of Science and Technology under the President. Thus far, unfortunately, the White House science office apparently sustains the rigid opposition of the agencies to Section 203. That is most unfortunate because if there are to be improvements in coordination and a shift in the emphasis of federal policy with regard to support of basic research, it is going to take a joint effort by the President and the Congress.

To sum it up: We are in dire need of a new national policy on the federal role in science. Whether technological progress depends upon basic research is no longer an issue. That was agreed upon years ago; and I am sure it is the conviction of Congress that maintenance and hopefully growth in scientific activities are essential to the public welfare and the nation's future. But the policies of the 1950's and 1960's are not suitable for the already perplexing 1970's. Too much is at stake to depend upon fortune, upon luck, upon happenstance. Our policies must be soundly and thoughtfully conceived and guided.

If the Executive Branch is thinking about policy in these terms, no evidence of it has yet appeared in the public press despite recent inputs from the President's Task Force on Science Policy and the National Goals research staff.

I hope we can look to the scientific community for advice. Yet I recall that this community speaking through the National Academy of Sciences in 1965 was unable to answer the questions on how much money should be spent for research and how it should be divided up.

Recognizing the risk of oversimplifying, it would be my judgment that we can no longer rely for guidance upon an uncoordinated, unplanned collection of laws, orders, statements, understandings, and traditions. These all have their place. But we must now bring them together, which is what the inquiry of the Subcommittee is all about. I would hope that the Subcommittee on Science, Research and Development will continue its role of Congressional leadership and stimulate enough interest so that our leaders of government and science will sit down together and work out the principal outline and content of the kind of policy that is needed. It is up to Congress to assert its long-neglected responsibility and set forth a national policy for science. It is long overdue.

[5] In his letter to Rep. Daddario of June 5, 1970, Secretary Seamans wrote of Section 203: "We have attempted to meet the intent, as we understood it, rather than merely the letter of Section 203. Accordingly, we made no distinction between FY70 or prior year funded research in our review. . . ."

COMMUNIST OCCUPATION OF CZECHOSLOVAKIA

Mr. CURTIS. Mr. President, on this day 25 years ago Soviet troops completed their occupation of Czechoslo-

vakia. Today, on this anniversary of Czechoslovakian enslavement, I would like to recall briefly the continued devotion of the Czechoslovakian people to freedom.

Even before they united, the Czechs and Slovaks fought autocracy whenever it was imposed. During the First World War the Czechs resisted their oppressors in house-to-house engagements, and great numbers of Czech troops passed over to the Allied cause. The war's end brought unification of the two peoples and a brief taste of freedom.

Their liberty ended in 1939 when the Munich Agreement was signed. Winston Churchill gloomily proclaimed:

> All is over. Silent, mournful, abandoned, broken, Czechoslovakia recedes into the darkness.

Mr. President, the tiny nation was in darkness but she was not broken. During 5 years of Nazi rule, the Czechs again fought their oppressors at every turn. They demonstrated, and the Nazis suppressed all higher and secondary education for Czechs. Gestapo courts condemned hundreds to death. The Czechs killed their cruel overlord, Reinhard Heydrick, and the Nazis obliterated the little village of Lidice.

The war's end brought the fall of one tyrant and the accession of another. By 1945, Russian troops had completely occupied the little state.

In 1948, the Russians precipitated a cabinet crisis, forced the resignation of 12 anti-Communist ministers, and murdered the non-Communist foreign minister, Jan Masaryk. On May 30, 1948, Czech voters were offered the familiar one-slate ballot and the Communists won full control.

Like the Nazis before them, the Communists have been quick to crush the persistent signs of the Czech love for liberty.

The 1968 events—the accession of Alexander Dubcek declaring his intention to make Czechoslovakia democratic, the military invasion by Russia in response, the brutal end of demonstrations and institution of strict censorship, and Dubcek's quick fall from power—are fresh in the minds of every Senator.

So, too, is the Brezhnev doctrine.

Mr. President, these words are not a sufficient tribute to the continued courage of Czechoslovakia in the face of a quarter-century of modern tyranny. The voices, acts of resistance, and tread of troops speak for themselves.

Today, the Czechoslovakian people are temporarily muted, but—judging by their brave and valiant past—we shall not expect them to be long silent.

TRIBUTE TO DR. LEE DuBRIDGE

Mr. MANSFIELD. Mr. President, the White House recently announced that Dr. Lee DuBridge has chosen to resign his duties as Science Adviser to the President and Director of the Office of Science and Technology. Dr. DuBridge brought to this administration a dignity and professional reputation that was unsurpassed. He is one of the leading scientists of our Nation and a man of great honor and esteem.

I was particularly disturbed by a reference in an editorial of the New York Times today that a speech I made last July 10, 1970, taking issue with Dr. DuBridge's attitude with respect to the Defense research and the undue dependence of the scientific community on this source of funding was a personal attack upon Dr. DuBridge. It was not intended to be, nor in rereading that statement today do I think it can be fairly characterized as such.

I disagreed with Dr. DuBridge and expressed that disagreement. Dr. DuBridge had expressed fully and ably his disagreement with my desire for a swift transfer of resources from Defense to the civilian agencies. I believe we both seek the same result. We have viewed the urgency from different perspectives. I am certain that Dr. DuBridge was greatly concerned that a great amount of extraordinarily high quality research would be abandoned in the transfer process. That is a risk—a risk, however, that can be prevented—but a risk in my opinion that must be taken to assure the continued health of the research community and the universities. I believe strongly that it will also inure to the benefit of the Department of Defense.

But these disagreements should never have been interpreted as in any way affecting any great respect for Dr. DuBridge as a man, a scientist, and public official. It is when government attracts men of his caliber to its service that faith can be bolstered that the system can work.

SENATOR RANDOLPH STRESSES VALUE OF AGRICULTURAL CONSERVATION PROGRAM

Mr. RANDOLPH. Mr. President, since the first of the year when the budget for the Department of Agriculture was announced, I have received a number of letters and other communications from farmers in West Virginia, as well as other persons interested in agriculture, protesting the proposed elimination of the agricultural conservation program from the fiscal year 1971 budget.

As Senators know, the appropriations bill recommended by the Senate Subcommittee on Agriculture Appropriations and recently approved by the Senate reinstates funds for this important program. I commend the members of the subcommittee for this action. I hope, however, that when the Senate conferees meet with those from the House they will agree to the $195.5 million approved by the House—the same level of funding as in fiscal year 1970. And I urge the administration to allocate the full authorization to the States rather than withholding part of it as they have for the 1970 program.

President Nixon has called on our Nation's farmers to help restore the quality of our environment by adopting pollution control practices. This is a worthy objective and our farmers have been doing this with the help of the agricultural conservation program since it was authorized by Congress in 1936. Under this program in 1969 permanent cover was seeded on nearly 4 million acres and nearly a million acres of rotation cover were added. And over 5¾ million acres were seeded to keep the soil from washing or blowing during the entire year, over the winter or the summer seasons. Further, the permanent cover on over 4 million acres of range and pastureland was improved for soil protection. Among other practices established to prevent erosion and the silting of streams are tree planting, strip cropping on the contour, establishment of sod waterways and terraces, erosion control dams and other wind control operations.

For the enhancement of natural beauty, conservation programs were carried out on 110,000 acres. Practices to protect and improve wildlife were established to serve about 1 million acres.

Mr. President, in West Virginia over 15,000 farmers participated in the ACP in 1969 and during the last 5 years approximately 30,000 farmers participated for at least 1 year. These figures show that it is not the same farmers who have participated every year. The program is open to every farmer. In 1969, the assistance for conservation practices under the ACP averaged only $104 per farm in my State as compared to a national average of $213. The size of these payments is small and yet they provided the incentive to the operators of over 2.3 million farms to protect, improve and enhance the Nation's soil, water, and wildlife resources.

It is my belief that our Nation derives substantial benefit from the funds expended for this program. Over the history of the ACP, it has been proven that farmers do not carry out the same volume of practices when the funds are reduced. Thus, the elimination or curtailment of funds for this program will endanger the completion of a half billion dollars worth of conservation on our Nation's soils annually. With the incentive provided by the ACP farmers contribute, in time and money, more than the amount allocated through the Federal budget. It is my genuine hope that the agricultural conservation program will be supported at the $195.5 million level this year.

INTERNATIONAL SYMBOL OF ACCESSIBILITY TO AID HANDICAPPED

Mr. DOLE. Mr. President, I invite the attention of Senators to a significant step forward toward the recognition of the problems faced daily by this Nation's millions of handicapped persons and their families.

Too many persons with handicaps lead lives thwarted by inaccessibility to transportation, buildings, and facilities. They cannot use most stores, offices, factories, churches, and other buildings. It is difficult for an able-bodied person to imagine the frustration and hardship this situation presents to the disabled.

Many advances have been made toward the elimination of architectural barriers in the past several years. Recent Federal legislation unanimously passed by the Congress requires that certain public buildings, financed in whole or in part with Federal funds, be accessible and usable by people with physical dis-

abilities. Also, the greatest majority of the States have taken some type of legislative or other official action in recognition of the problems of the handicapped in this regard. However, some of the legislative action taken to date is both vague and weak.

Recently an international symbol of access was adopted by Rehabilitation International and recommended for worldwide use. The symbol consists of a stylized silhouette of a person sitting in a wheelchair. It was designed by the Scandinavian Design Students Organization. The symbol should be used on doorways wide enough to admit a wheelchair, on entrances which are at ground level or have a ramp instead of a stairway, on drinking fountains and telephones that can be reached by a person in a wheelchair, on restrooms that will admit wheelchairs and that have bars to assist disabled users, on parking spaces wide enough to permit transfer from vehicle to chair.

Other places the symbol should be displayed when architectural barriers do not exist are transportation facilities such as airlines, air terminals, railroad stations, buses, subways, public buildings, historical sites, shops, restaurants, schools, theaters, hotels, and motels. It should not be displayed unless the disabled will find the facilities genuinely barrier free.

Copies of the symbol will be made available by Rehabilitation International to the press, and television and to its national secretaries throughout the world who will provide it on request to architects, town planners and all who may be interested in its use and display. The President's Committee on the Employment of the Handicapped, in conjunction with the Easter Seal Society for Crippled Children and Adults, is also working with its Governor's committees throughout the States to make the recognition of these needs of the handicapped an integral part of American life.

Accessible schools and homes, more barrier-free institutions of higher learning, and more accessible buildings and transportation facilities will enable the disabled to learn and work to live useful and productive lives. The adoption of such a symbol is a positive step forward in the worldwide effort to open all doors to the handicapped.

I invite the attention of Senators to the International Symbol of Accessibility and urge them to encourage its use.

NATIONAL JOURNAL STUDIES ROLE OF DRAFTEE IN VIETNAM

Mr. PROXMIRE. Mr. President, on June 30 I submitted the Proxmire-Nelson-Hughes amendment to stop sending draftees to Southeast Asia. At that time I stated:

> To stop sending draftees to Southeast Asia is not only feasible, and urgent, I also believe it is right. Not only is this an undeclared war, but the draftee has borne an unfair proportion of the fighting burden.

In a recent article in National Journal, congressional correspondent Andrew J. Glass supported this statement with the best analysis of the draftee's role in Vietnam to date. In his article, entitled "Draftees Shoulder Burden of Fighting and Dying in Vietnam," Mr. Glass revealed these startling facts:

> Through March 31, 1970, battle deaths among Army enlisted men have totaled 23,890, of whom 13,093, or 54.9 percent, were draftees.
>
> Over the five years in which Americans have been in combat in Vietnam, draftee casualties (killed and wounded) have run 130 per 1,000 per year and non-draftee casualties have run 84 per 1,000 per year.
>
> In 1969, Army draftees were killed in Vietnam at nearly twice the rate of nondraftee enlisted men.
>
> In 1969, the relative chance of a draftee being killed or wounded in Vietnam was 23.4% as compared to the 13.7% of the volunteer.

Mr. President, the reason behind these statistics is relatively simple: The Army has followed a policy throughout the course of the Vietnam war whereby a prospective soldier is guaranteed a noncombat assignment if he agrees to serve for 3 years. In other words, the volunteer has a choice of support assignments, to stay out of combat, and the draftee does not. It is just that simple.

This policy has resulted in the disproportionate use of draftees in the hard-core combat jobs, such as infantry, armor, and artillery. As William K. Brehm, assistant secretary of the Army for manpower and reserve affairs, stated:

> The popular jobs are the ones for which people enlist. They don't enlist for the hard-core combat skills. That is why draftees tend to populate the hard-core combat skills: 70 percent of the infantry, armor and artillery are draftees.

And, as Mr. Glass found in his study:

> In the Army as a whole, 11.4 percent of all personnel are assigned to the rifleman MOS—which Pentagon generals call "11 bravo" but which grunts in Vietnam call "11 bush." Two-thirds of the infantry riflemen trained in fiscal 1970 were draftees.

Mr. President, the National Journal article by Andrew Glass is, I believe, the most convincing statistical argument to date in support of the Proxmire-Nelson-Hughes amendment. This amendment, which has recently been cosponsored by Senators CRANSTON, YOUNG of Ohio, CHURCH, YARBOROUGH, and MCGOVERN, will provide that after the date of enactment of the military authorizations bill, no funds may be expended for the purpose of sending draftees to South Vietnam, Cambodia, or Laos. On behalf of Senators NELSON, HUGHES, and myself, and our additional cosponsors, I hope that this amendment can be brought to the floor for debate, in the near future.

In view of this, I ask unanimous consent that the National Journal article of August 15, 1970, entitled "Draftees Shoulder Burden of Fighting and Dying in Vietnam," written by Andrew J. Glass be printed in the RECORD. I am convinced that the article will prove helpful and informative to all of us in the upcoming debate on the Proxmire-Nelson-Hughes amendment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFENSE REPORT/DRAFTEES SHOULDER BURDEN OF FIGHTING AND DYING IN VIETNAM

(By Andrew J. Glass)

Army draftees were killed in Vietnam last year at nearly double the rate of non-draftee enlisted men.

During 1969, Army draftees were being killed in action or wounded at the rate of 234 per 1,000. Draftee deaths were 31 per 1,000.

By contrast, Army enlisted volunteers were killed or wounded at a rate of 137 per 1,000 and 17 per 1,000 died. Both draftees and volunteers serve 12-month tours of duty in Vietnam.

Draftees comprised 88 per cent of infantry riflemen in Vietnam last year while first-term Regular Army men comprised 10 per cent of the riflemen. The remaining 2 per cent were career Army men.

In the past two or three years, draftees have suffered comparatively higher death rates as their proportion of the Army's combat forces has risen from earlier phases of the Vietnam war.

Battle deaths among Army enlisted men have totaled 23,890 men through March 31, 1970, of whom 13,093, or 54.9 per cent, were draftees.

Previously unavailable draftee casualty statistics reveal that over the five years in which Americans have been engaged in combat in Vietnam, draftee casualties (killed and wounded) have run 130 per 1,000 per year and non-draftee casualties have run 84 per 1,000 per year. The Army General Staff prepared the study at the request of *National Journal*.

How policy is set: Under broad guidelines established by the Defense Department, draftee utilization policies reflect the manpower needs of the service that conscripts the draftee.

Jonas M. Platt, the Defense Department's newly named director of manpower utilization, under the assistant secretary of defense for manpower and reserve affairs, Roger T. Kelley, reported that draftee policy for the Army is formulated within the Army. (The Army has inducted 97.2 per cent of all draftees called to duty during the Vietnam war period.) In an exception to that rule, Platt, a retired Marine Corps major general, noted that since 1967 the Office of the Secretary of Defense has sought to impose a uniform policy of using the skills of college graduates who enter the armed services to the best advantage of the military. Three of five college graduates who enter the Army are draftees.

Draftees in combat: In discussing with *National Journal* the reasons for the disparity between draftee and non-draftee battle deaths, William K. Brehm, assistant secretary of the Army for manpower and reserve affairs, said:

"The popular jobs are the ones for which people enlist. They don't enlist for the hard-core combat skills. That is why draftees tend to populate the hard-core combat skills: 70 per cent of the infantry, armor and artillery are draftees."

Brehm said that President Nixon's Vietnamization policy will have the effect of bringing Army troop replacements below 20,000 a month by May 1971. But he estimated that one-third to one-fourth of the replacements will still have to be combat soldiers.

"That means we'll have to supply somewhere between 5,000 and 6,000 hard-core combat skills a month. My estimate is that we couldn't come anywhere near the 5,000-man level without the draft," Brehm added.

Enlistments vs. inductions: The disparity between draftee and volunteer casualty rates

directly reflects the tasks that the Army assigns each group of soldiers.

Regular Army volunteers may enlist for two or three years. In the first six months of 1970, 16,243 men enlisted for two years. They were placed in the same manpower pool with the 92,750 draftees called to duty for two years by the Army during the same period.

Three-year volunteers, however, have the option of selecting their Army jobs and four out of five make their own choice. In 1970, less than 3 per cent have asked to serve in the infantry.

"As strange as it sounds," Brehm said, "only 800 young men a month out of 200 million Americans are enlisting for combat. If we went to an all-volunteer force in Vietnam, it's quite conceivable that that's all we might get."

Procedures being reviewed: The Army Audit Agency, a semi-autonomous watchdog unit, is currently studying the full range of job classification and assignment procedures within the Army.

However, there are no present plans to withdraw or alter the option to serve in non-combat roles being offered three-year volunteers, Brehm said.

"I think, given the circumstances, the draftee is getting a pretty fair shake from the Army," he added.

Several high-level officers and Pentagon civilians interviewed by *National Journal* agreed with Brehm's analysis of the draftee-combat problem—but not with his judgment of the equities involved.

A Defense Department manpower expert, who asked not to be identified by name, said:

"We've studied this problem very carefully. People don't seem to enlist in the Army to fight. We recognize the inequity this causes in a shooting war but we don't know what to do about it."

An Army general who has served more than two years in Vietnam and who asked anonymity said: "Given the way draftees are used by the Army, it's quite obvious that they'll take the brunt of the casualties.

"It's very sad, really. But the whole g—d— war is very sad."

VIETNAM

In Southeast Asia, "grunt" is GI slang for a frontline soldier. (The term comes from the grunting sound foot soldiers make while carrying heavy field packs.) The vast majority of grunts in Vietnam are draftees.

Fighting force: On July 1, slightly more than 30 per cent of the Army's draftees were serving in Vietnam while 25 per cent of Army volunteers were stationed there.

In Vietnam itself, the ranks of the Army's enlisted and officer force (293,200 men) now include 115,100 draftees, or 39 per cent of the total. (This total is scheduled to drop to about 225,000 Army personnel by May 1971, with a proportional—or better than proportional—drop in grunt-draftees, as more and more combat units are deactivated.)

While the Pentagon keeps no statistics on the chances of a draftee serving in Vietnam during his two years in the Army, a comparison against draft calls reveals that a draftee's chances of going to Vietnam have fluctuated between 50 and 80 per cent. (Currently, draft calls are running at a rate of 10,000 men a month, and draftee replacements are being flown to Vietnam at a rate of 8,000 men a month.)

Killed and wounded: Draftee casualties in Vietnam are a sensitive matter to the Pentagon. While the Defense Department issues weekly summaries of casualties in Southeast Asia, detailed statistics for draftees are difficult to obtain.

Through March 1970, 13,097 draftees (including four who had become officers) had been killed in Vietnam as a result of enemy action. Another 1,545 had died from other causes, such as air crashes or diseases. Separate records are not kept on the number of draftees who are wounded, hospitalized, missing or captured.

Percentage of draftee deaths—Over the course of the Vietnam war—in which some 43,500 American fighting men have died through mid-August—draftees account for about 32 per cent of the total killed in action, 49 per cent of the Army dead and 55 per cent of the dead among Army enlisted men.

Casualties among draftees, and the implications they raise, have been analyzed by the Army General Staff. The studies have been conducted within a unit known as the Equal Rights-Personnel Affairs Army Command Service Branch, Special Affairs and Review Division, Directorate for Military Personnel Policies, under the deputy chief of staff for personnel.

Chances of surviving—By comparing average monthly force levels in Vietnam against actual deaths, and extrapolating the number of draftee-wounded, the Army has been able to compute the statistically valid chance that a draftee or a Regular Army volunteer has of being killed or wounded during his 12-month tour of duty there.

The Army study shows that, for the course of the war, an average enlisted man or Army officer had a 1.96 per cent chance of being killed and an 8.47 per cent chance of being wounded seriously enough to require treatment at a medical facility.

Draftee vs. volunteer—However, for an Army draftee, the chance of being killed was 2.44 per cent and the chance of being wounded was 10.54 per cent—or a total of 12.98 per cent.

For a non-draftee enlisted man, the chance of being killed was 1.58 per cent and of being wounded 6.84 per cent, or a total of 8.42 per cent. Thus, a draftee had about a 54 per cent greater chance of being killed or wounded than did his Regular Army counterpart.

Early airborne influx—These results are influenced, however, by the fact that the initial surge of Americans in Vietnam brought elite (and largely Regular Army) air cavalry and airborne divisions. (While draftees serve in airborne divisions, they do so voluntarily.)

By contrast, in the later phases of the war, when Americans suffered their heaviest loss of life in Vietnam, the fighting was largely in the hands of infantry, armor and artillery units with higher proportions of draftees.

Employing the same statistical procedures as in the Army study, the relative chance of a draftee or a volunteer being killed or wounded in 1968 were calculated by *National Journal* as follows:

	Killed	Wounded	Total
Draftee	3.89	11.79	15.68
Volunteer	2.33	6.63	8.96

Note: For 1969 calculation, see "Survival in Vietnam" chart.

Rating previous wars—In revealing these statistics, the Army notes that draftee death rates in Vietnam—even though higher than total Army enlisted losses—are still significantly lower than death rates sustained by the U.S. Army during both the Korean war and World War II.

(In both those wars, the present enlistment system—under which a prospective soldier is guaranteed a non-combat Army assignment if he agrees to serve for three years—did not exist.)

In Korea, Army killed as a percentage of its forces in the war zone came to 4.32—more than double the 1.96 per cent over-all rate in Vietnam. During World War II, the figure was 5.19 per cent for the European theater in 1944–45.

Vietnam wounds higher—However, wounded rates for draftees in Vietnam in 1968–69 ran at levels comparable to or higher than Korea or World War II. (For Korea, the figure was 12.11 per cent; for World War II, 15.20 per cent.)

The Army study further shows that 72 per cent of enlisted casualties were sustained by personnel in grades E5 (sergeant) or below. Most of these men do not plan on Army careers and serve either two or three years.

Reasons behind statistics: Disparities between draftee and non-draftee casualties in Vietnam stem from two main factors:

Career Regular Army soldiers, counted as enlisted men in the study, tend to serve in rear-echelon units and in non-combat roles.

Enlisted men who arrive in Vietnam in non-combat jobs (selected by themselves before they enlisted) are subject to less hostile fire than draftees, who have no choice in their Army tasks and who consequently fill about 70 per cent of the combat jobs in the Army.

In private conversation, some high-ranking Army officers express surprise that draftee casualties, given the present system of enlistments, are not actually higher than they have been.

In the course of the war (fiscal 1965–70), about 56 per cent of new enlisted personnel entering the Army have been draftees; this is close to the percentage of draftees who have died in Vietnam among total Army enlisted deaths.

The Army tends to assign its draftees to more hazardous combat roles—a fact which should and does yield higher casualty rates. However, a career Army man sometimes must serve several tours in Vietnam, thus exposing himself to a higher over-all risk of being killed or wounded than a single-tour draftee.

Re-enlistment practices: Until very recently, the Army offered a draftee who was serving in Vietnam a chance to terminate his draftee status and re-enlist for three years from the date of his change of status.

Draftees are eligible for this "re-up" provision after serving eight months in the Army. Most draftees arrive in Vietnam after five months of training and leave time in the United States.

Usually, if a draftee in Vietnam elected to "re-up," he was shipped back to the United States for training in a new MOS. In all likelihood, he would return to Vietnam as a Regular Army enlistee, but to serve in a rear area in a combat-support MOS.

Battlefield recruiting—In an article published last Feb. 8 by the New York Times Magazine, entitled "Closeup of a Grunt," James P. Sterba, a Times correspondent in Vietnam, reported that Army re-enlistment sergeants regularly approach draftees in infantry rifle companies just after they have been through combat, seeking to induce them to "re-up" in exchange for not having to serve "out there" any longer.

An Army spokesman said that the Sterba report led to an investigation, but he did not disclose its results. William Brehm, the Army's manpower chief, said, however, that reenlistment rates for draftees, which had been running at about 5 per cent, have more recently fallen off to close to zero.

Infantry MOS frozen—On Aug. 11 the Times reported in a dispatch from Vietnam that new orders were distributed several weeks ago which, in effect, bar draftees with combat MOS's from reenlisting in exchange for immediate transfer from the battlefield.

The Times cited a confidential Army directive, issued by Lt. Gen. Frank T. Mildren, deputy Army commander in South Vietnam. The directive said 1,298 combat soldiers in

the command had changed their MOS's between March 1 and May 1, 1970.

ASSIGNMENTS

Before he receives his first duty assignment, the Army draftee spends, on average, about 19 weeks in what the Pentagon calls the "pipeline."

Draftee pattern: Typically, a draftee's Army career would begin with a day of processing at one of 74 Armed Forces Examination and Entrance Stations throughout the country.

A draftee next spends three or four days at one of 11 Army Reception Stations. From there, he enters a mandatory eight weeks of basic combat training at one of nine Army Training Centers.

On completing basic training, which emphasizes infantry skills, a draftee receives advanced individual training (AIT) in a military occupational skill (MOS). This occurs in one of three ways:

Eight weeks of AIT in such combat MOS's as infantry, armor or artillery at an Army Training Center. (Before they are shipped to Vietnam, infantrymen receive an extra week of training in the combat conditions they may expect to find there.)

Four to 10 weeks of MOS training at one of 71 Army schools. The average school cycle is eight weeks.

On-the-job training or an immediate duty assignment in a civilian-acquired skill (CAS) at an Army installation within the continental United States. Most CAS personnel enter the Army with skills that the Army values highly; scientists, engineers, carpenters, electricians and architects are typical of this group. A draftee outside the CAS program may be given an MOS called "duty soldier" and receive on-the-job training in, say, cutting grass.

After AIT, a typical draftee is granted two weeks leave, plus the time he needs to travel to his first assignment. He arrives there having received about four months of Army training.

Volunteer pattern: A typical Regular Army volunteer begins his Army career in the same fashion as a draftee. But, after basic training, he may spend the rest of his time in the Army in an occupation he has chosen for himself.

In each case, a volunteer makes this choice before he enters the Army. His recruiting sergeant notes his choice and a place is reserved for him at a school for the time that he would be ready to begin AIT.

In the first six months of 1970, 43,706 three-year volunteers exercised their option to receive specialized training of their choice. This group represented 79.3 per cent of the three-year enlistments (55,099 men) in that period.

Computerized selections: Since 1965, the Army has assigned virtually all of its MOS's for combat and for specialized training through a computer program.

(One exception to the rule is the MOS for operating the MOS-selection computer program. These soldiers, who work in the Pentagon and who include draftees, are handpicked.)

Two-tier process—In essence, the Army employs a two-stage formula to assign MOS's to its soldiers. The first stage is relatively simple; the second, highly complex.

In the first stage, the computer matches three-year enlistees with the specialized training berths they have selected. Some coveted MOS's—such as the MOS for optical laboratory specialists—are fully subscribed in this way.

However, less than 5 per cent of the volunteers ask to be trained in a combat-arms specialty. These combat assignments are virtually left open once the "first cut" is completed and must be filled during the second and final "cut."

When the "deck" (as in a deck of cards, the Army's term for prospective MOS holders) is run again, draftees, two-year Regular Army volunteers and three-year volunteers who have not exercised their option are placed in a common manpower pool. (Some volunteers are found to be unqualified for the option they want but enlist anyway and find themselves in the pool.)

Accessions breakdown—In the first six months of 1970, of the 164,092 men who entered the Army, 56 per cent were drafted, 10 per cent enlisted in the Regular Army for two years, 7 per cent enlisted in the Regular Army for three years but failed to exercise their job option and the remaining 27 per cent enlisted for three years with a guarantee from the Army that they would be given the MOS of their choice.

The "second cut" by the computer, therefore, includes the 73 per cent of all new accessions into the Army who are given no choice in picking a military job by the Army or who fail to make a choice.

Shuffling the deck—The computer program attempts to fill each MOS, insofar as vacancies still exist, at what the Army regards as a satisfactory level.

This level is known as "desire" in the computer program. Criteria for what is "desirable" include such factors as the manpower needs of the Army at the time, the qualifications set for a particular MOS, the distance of a soldier from a prospective training site (calculated to minimize transportation costs), the soldier's civilian background, his own preferences as determined during a postinduction interview, and, finally, a detailed profile of the soldier's physical and mental background.

Among the 46 individual bits of information scanned by the computer before it matches a new soldier with an MOS requirement are such factors as his aptitude and intelligence test scores, physical profile, previous education and language proficiency.

"Relax" program—If the computer is unable to fill the quota set for a particular MOS at the "desire" level, it is programmed to "relax" its standards in several successive stages until all the vacancies are filled.

If, after reaching the lowest rung of the "relax" program, the computer has still been unable to fill the quota—known as "the white book requirement"—the machine goes through a final searching sequence.

Down in the pit—This time, the computer is programmed to operate at a "mandatory" level, below which the Army refuses to lower standards for a particular MOS. (For example, the computer is told that it is "mandatory" that no one with a criminal record in civilian life be made a military policeman.)

Sometimes, the program is written in such a way that a set and limited percentage of substandard soldiers is permitted to take a particular MOS. Informally, this is known as a "goofball ceiling."

All combat MOS's now carry a high priority, some of them 100 per cent. Such troop requirements must be filled even if the computer has already scraped the bottom of the barrel and has ceased assigning men. In that event, the quota is filled by hand; Pentagon staff officers use their judgment in further dropping the standards.

These "standards" do not necessarily reflect on the quality of the soldier. For example, the standards the computer follows may prohibit using a college graduate in a menial job or flying a man for training from the East Coast to California.

Operational center—These policies are carried out by the Trainee Assigning Section, Training Input Branch, Requirements Division, Enlisted Personnel Directorate, Office of Personnel Operations of the Army.

Computer vs. draftee—In theory, there is no MOS for which a draftee is ineligible. In practice, however, the computer is programed, often down to the "mandatory" level, to accept only three-year volunteers for MOS's that involve long training periods.

Such MOS's as medical lab processor, which requires a total of 64 weeks' schooling, are virtually free of draftees. Other MOS's for which the Army prefers (because of the training time involved) to shun draftees include the mechanics who service the Army's various tactical missiles as well as the soldiers who repair such devices as radars, television and microwave systems, teletypewriters and code machines.

Special considerations—Apart from receiving a general set of instructions, the computer is also given certain special orders:

No soldier under the age of 17 years, eight months can be assigned to a combat-arms MOS. (Draftees are usually inducted at age 19.)

College graduates cannot be assigned to such jobs as cook, ammunition handler and tent repairman.

But college graduates can be—and often are—selected as infantry riflemen on the Army theory that they would have a full opportunity to exercise what the Army terms their "leadership potential" in such an MOS.

Analyzing the results: In fiscal 1970, 16,362 (9 per cent of the draftees inducted during the period) were handpicked for the civilian-skills (CAS) program and were consequently left out of the "deck." This group was certain to serve its entire two-year tour within the continental United States.

About 80 per cent of the draftees who remained in the pool were put into a group of MOS's in which draftees have comprised 50 per cent or more of the manpower over the course of the Vietnam war.

This group, heavily laden with draftees, includes the basic infantry, armor and artillery MOS's, various radio and telephone communications jobs, light vehicle drivers, cooks, clerks, military policemen and medical corpsmen. (*For number and percentage of draftees and enlistees trained in selected combat-arms MOS's, see table.*)

About 63 per cent of all draftees entering training were given jobs within this cluster during fiscal 1970—with 20 per cent alone being trained as infantry riflemen.

In the Army as a whole, 11.4 per cent of all personnel are assigned to the infantry rifleman MOS—which Pentagon generals call "11 bravo" but which grunts in Vietnam call "11 bush." Two-thirds of the infantry riflemen trained in fiscal 1970 were draftees.

Combat Duty: Only 11 per cent of Regular Army volunteers voluntarily serve in an MOS that is heavily laden (50 per cent or more) with draftees. And even among that 11 per cent, there is a strong statistical tendency to become a clerk, a cook or a telephone operator rather than an infantry rifleman, an armor crewman or an artillery spotter.

Only those Regular Army volunteers who select an option under the guarantee program may escape the possibility of combat-arms duty; remaining volunteers, including two-year Regular Army men, are assigned to combat MOS's in about the same proportion to their over-all numbers as draftees.

College men—A college degree also offers no guarantee of being assigned to non-combat duty in the Army. (About 15 per cent of the men entering the Army graduated from college.)

A study of college graduates who entered the Army during fiscal 1969 shows that 61 per cent of them (23,111 men) were draftees. (No statistics are available, however, on the number or percentage of draftees who are college graduates.)

Of the college graduates who entered the Army in fiscal 1969, 50.5 per cent were assigned to combat-support units and 24 per cent were assigned to combat-arms units, with some 16 per cent entering the infantry.

A separate study released June 18 by Kenne

Peterson, a civilian manpower expert attached to the Office of the Secretary of Defense, revealed that 36.2 per cent of the college graduates who entered the Army in calendar 1969 were given combat MOS's, compared with 43.3 per cent of all enlisted men, including draftees.

Duty stations: Once a soldier is assigned to and trained in an MOS, no distinction is made between draftees and volunteers in the selection of their duty stations.

These decisions are made by Policy Branch, Distribution and Readiness Division, Procurement and Distribution Directorate, under the deputy chief of staff for army personnel, Lt. Gen. W. T. Kerwin Jr.

The Pentagon staff officer under Gen. Kerwin who actually makes the theater assignments shuffles a stack of cards (to break up the computerized alphabetical sequence in which he receives them) without knowing which card represents a draftee and which a Regular Army enlistee.

Personnel just completing their advanced training (AIT) are taken first, as a matter of policy, in meeting the levies of overseas commands. About 60 per cent of AIT graduates are assigned directly to a one-year tour of duty in either Vietnam, Thailand or Korea.

Since 70 per cent of the combat-arms MOS's in the Army are filled with draftees, a higher proportion of draftees serve in Vietnam than elsewhere because combat MOS's are in more urgent demand in Vietnam than elsewhere. (*For comparison of draftee assignments during Vietnam war period, see chart.*)

At any given time, 54 per cent of all draftees are serving within the continental United States, 30 per cent are in Vietnam and the remaining 16 per cent are in other over-seas assignments.

Army manpower statistics

Table below shows numbers of Army personnel on active duty as of the end of each fiscal year from 1965 to 1970 who entered the service through the draft and as volunteers.

	Draftees	Volunteers
1965	233,833	619,792
1966	395,292	682,343
1967	546,264	747,208
1968	549,603	831,782
1969	480,478	836,001
1970	368,965	780,650

Listed below are sources of entry into the Army and the number of men coming from each source between January and June 1970.

Draftees (56 percent)	92,750
Volunteers (44 percent)	71,342
2-year (10 percent)	16,243
3-year (7 percent) (nonoption)	11,393
3-year (27 percent) (using option)	43,393
Total	164,092

Table below shows numbers of enlisted men in Vietnam at end of fiscal years 1965 through 1970 who entered service through draft and as volunteers. Figures for 1965 are for Aug. 31, 1965.

	Draftees	Volunteers
1965	9,865	24,915
1966	44,654	88,542
1967	129,856	128,319
1968	133,400	176,200
1969	144,100	179,100
1970	115,100	154,900

Table below shows numbers of Army personnel killed in Vietnam through March 31, 1970, broken down by source from which the men entered the service. Percentage column indicates number killed per 100 men in each category.

Source	Deaths	Percentage
Draftees	13,093	2.44
Volunteers	10,688	
Reservists	49	1.58
National Guard	60	
Total	23,890	1.96

PRESSURES

The draft utilization issue comes before the Army at a time when it is reacting with extraordinary sensitivity to public criticism.

Westmoreland view: In a speech before the National Exchange Club, delivered July 27 in Atlanta, Gen. William C. Westmoreland, the Army's chief of staff and former over-all commander in Vietnam, said:

"Some of the criticism leveled at us in indeed justified. Some of it is misdirected, emotional tirade . . . Some who undoubtedly are well intentioned are doing the country a disservice by unknowingly undermining the confidence of the public in the Army. Others, I believe, have motives less innocent."

In this climate, the Pentagon is encountering political pressure to stop sending draftees against their will to Southeast Asia.

Congressional initiatives: On both sides of Capitol Hill, there is talk over instituting an all-volunteer policy in Vietnam as an interim step before undertaking a complete American military withdrawal.

House—Rep. Garry Brown, R-Mich., introduced a bill (H.R. 18719) on July 30 under which draftees who are inducted after Jan. 1, 1971, could not be assigned without their consent to Vietnam or any other area where the United States is engaged in an armed conflict.

"Philosophically, my proposal is right; pragmatically, it can be implemented," Brown said. "Especially in view of the reduction in personnel in Vietnam, I am confident the Pentagon can work within this limitation on combat service," he added.

Senate—While the Brown bill is likely to be buried in the House Armed Services Committee, the Senate is virtually certain to hold a test vote on this issue in late August.

The initiative is being pressed jointly by three Democrats—Sens. William Proxmire, Wis., Gaylord Nelson, Wis., and Harold E. Hughes, Iowa—in the form of an amendment to the military procurement bill (H.R. 17123), which is the pending business on the Senate floor.

If adopted, the amendment would prohibit the Defense Department from sending draftees to the war zone after President Nixon signs the procurement measure into law.

In presenting the amendment on June 30, Proxmire said on the Senate floor:

"The connection between campus unrest, the war and the inequities in the present Selective Service system lend an urgency to this proposal."

"To stop sending draftees to Southeast Asia," Proxmire said, "is not only feasible and urgent—I also believe it is right. Not only is this an undeclared war, but the draftee has borne an unfair proportion of the fighting burden."

Pentagon response: Defense Secretary Melvin R. Laird has responded to such pressure by publicly holding out the hope that an all-volunteer policy in Vietnam might begin next year.

Thus, in mid-May, Jerry W. Friedheim, deputy assistant secretary of defense for public affairs, told a Pentagon news briefing: "The Secretary (Laird) has said he feels that when we get down to 200,000–240,000 men, that's the time we can begin seriously to think about that possibility."

Troop withdrawals—Laird's overall timetable calls for turning over the ground combat mission to the South Vietnamese Army by May 1971.

By that time, according to the timetable announced by the President, U.S. troop strength in Vietnam will total 284,000 men—a reduction of 265,500 men since Mr. Nixon took office in January 1969.

Pessimistic estimates—In sharp contrast to the hopeful tone being struck by Secretary Laird and his chief spokesman, Army manpower planners see a continuing need to assign draftees to combat roles—a need that stems directly from the policy of granting three-year volunteers a choice of available support assignments.

In the calculations of the Army manpower planners, the fact that draftees comprise only a quarter of the men who entered the U.S. armed forces during the course of the Vietnam war, and only 12 per cent of the combined services' present total strength has little bearing on the problem.

"Even if we hold to the most optimistic schedule of Vietnamization," Brehm told *National Journal*, "we would still need two or three times what we could supply next year without the draft."

Brehm, however, sees no conflict between the Army's continuing need to draft soldiers for combat duty and Laird's all-volunteer planning.

"The Secretary understands the problem," he said. "He is committed to making the Vietnamization policy work. But he also knows that it would not be possible for us to continue with our present plan if we had to go to an all-volunteer group in Vietnam."

Counterthrust in Senate—In the meantime, the Pentagon is quietly seeking to undermine support in the Senate for the Proxmire-Nelson-Hughes amendment.

On July 9, Leonard Niederlehner, who was serving at the time as acting general counsel of the Defense Department, wrote to Sen. John C. Stennis, D-Miss., chairman of the Senate Armed Services Committee, to express the department's official disapproval of the proposal.

"A great part of the problem," Niederlehner wrote Stennis, "is providing in required numbers personnel who possess the required skills without incurring shortages of these skills in Army units elsewhere.

"Until it is reasonably sure that this problem can be mastered, it would be unwise to restrict the pool of military personnel eligible for service in Vietnam to those who would enter the armed forces voluntarily."

While Niederlehner did not say so, Army manpower experts who echoed his views made it clear that the "skills" to which he referred were infantry, armor and artillery—the hard-core combat group. Niederlehner's letter has not been officially released.

Non-governmental pressures: Peace groups opposed to the American military involvement in Southeast Asia have focused their political efforts on seeking a speedy withdrawal of troops, and have not widely raised the draftee issue.

Draft resistance, however, is tied closely to the Vietnam war.

Court cases—The courts have been reluctant to deal with the issue of whether it is constitutional to send servicemen to fight in Vietnam without a congressional declaration of war. They have ducked the issue by ruling that the question is not justiciable—that it is too broad in scope to be decided in the context of a lawsuit, or that it is a political question.

However, in two recent cases, the courts have addressed the issue. Both cases were brought by volunteers, but the decisions would apply to draftees as well.

Berk v. Laird—Berk contested the Army's right to send him to Vietnam to fight an undeclared war. On June 19, the 2nd Circuit Court of Appeals ruled that the issue was narrow enough to decide, but that it was a political matter. The appeals court remanded the case to the U.S. district court for the Eastern District of New York. The Justice

Department has filed a petition there to dismiss the case, which is being argued by Theodore C. Sorensen for the New York office of the American Civil Liberties Union.

Orlando v. Laird—The U.S. district court for the Eastern District of New York decided the case on the merits; it ruled July 1 that the Army could send Orlando to Vietnam, because Congress, in authorizing and appropriating funds for Vietnam, had acquiesced as if it had actually declared war.

Massachusetts law—The Supreme Court will have an opportunity when it reconvenes in October to consider the legality of sending draftees to fight in Vietnam. On July 22 the state of Massachusetts filed suit in the U.S. Supreme Court contesting the Defense Department's right to draft Massachusetts citizens to fight an undeclared war in Vietnam. The suit was brought under a state law enacted April 2, challenging the legality of the Vietnam war. The Defense Department has until Sept. 22 to file a response to the state's petition.

All-volunteer Army: The problem facing the Pentagon is further compounded by the President's commitment to a policy of reducing draft calls to zero and instituting an all-volunteer Army.

Gates study—In March 1969, Mr. Nixon, fulfilling a campaign pledge, created a 15-member commission headed by Thomas S. Gates Jr., chairman of the executive committee of Morgan Guaranty Trust Co., and a former Secretary of Defense (1959–61), to study the feasibility of an all-volunteer armed force for the United States.

The Commission reported to the President Feb. 21, 1970, unanimously recommending the creation of an all-volunteer force by July 1, 1971, concurrently with the expiration of the present Selective Service Act (81 stat. 100). *(See p. 431; for report on draft issues, see Vol. I p. 223.)*

On April 23, in a special message to the Congress, Mr. Nixon said: "After careful consideration of the factors involved, I support the basic conclusion of the commission. I agree that we should move now toward ending the draft."

Hatfield overture—The initiative for an all-volunteer Army has been taken up in the Senate by Sen. Mark O. Hatfield, R-Ore., who is planning to offer an amendment to the military procurement bill that would implement the Gates Commission's findings. He has attracted 14 cosponsors for his proposal, ranging across the political spectrum from Sen. George S. McGovern, D-S. Dak., to Sen. Barry Goldwater, R-Ariz. (The White House has expressed opposition to the Hatfield bill on grounds that it is premature.)

One feature of the Hatfield bill would compensate servicemen who face enemy fire an extra $200 a month. The measure would also raise the base pay of a first-year enlisted man by $1,700 a year. (Currently, all enlisted men serving in Vietnam, whether or not they are actually in combat assignments, draw an extra $65 a month in "hostile fire pay" and are exempt from federal income taxes.)

Insufficient incentives—Army manpower experts doubt that pay incentives alone, no matter how generous, would bridge the gap between the number of combat soldiers now needed in Vietnam and the number who volunteer for combat duty.

"If I put myself in the position of these young men, money alone wouldn't convince me," Brehm said. "Moreover, it would be a mercenary force. I don't think I like that."

Alternative policy: As a means of giving its draftees and non-draftees a relatively equal chance of surviving in Vietnam, the Army could suspend its enlistment-option system for the duration of the war.

This approach has been followed by the Marine Corps, an elite group whose over-all manpower needs are far smaller than the Army's.

Army manpower experts predict that such a step would increase draft calls sharply as enlistments fell off.

"We've brainstormed this," Brehm said, "and we've discarded this approach because the policy is to keep the number of draftees in the Army as low as possible." (The Army took about 200,000 inductees in fiscal 1970, the lowest number since the 102,555 inductees the Army took in fiscal 1965; and the Pentagon has announced a lower rate of draft calls in the first half of fiscal 1971.)

"It's too bad that the draftees have to do most of the fighting," Brehm added. "Believe me, I don't enjoy signing those draft calls. But, after all, one of the things the Army is all about is combat."

HOW ARMY FILLS COMBAT JOBS

The table below shows the numbers of men from the Army's three manpower pools who performed the major combat military occupation specialities (MOS). Percentage figures indicate the percentage of total manpower in each combat MOS drawn from each of the three pools.

The first pool consists of draftees (US). The second is Regular Army volunteers (RA) who have enlisted for three years and exercised an option to choose their MOS. (About 80 per cent of three-year RA's exercise this option.) The third group, Regular Army, unassigned (RAU), comprises the 20 per cent of RA's who failed to exercise their options and two-year RA enlistees, who have no choice in their assignment. Figures are for fiscal 1970.

Specialty (MOS)	US		RA		RAU		Total
	Men	Percent	Men	Percent	Men	Percent	
Infantry rifleman (11B)	36,599	67.2	1,364	2.5	[1] 16,526	30.3	54,489
Mortarman (11C)	5,953	64.4	292	3.1	3,004	32.5	9,249
Armor intelligence (11D)	4,292	64.9	804	12.2	1,517	22.9	6,613
Armor crewman (11E)	3,791	70.7	645	12.0	929	17.3	5,365
Field artillery (13A)	13,614	72.3	764	4.1	4,442	23.6	18,820
Total	64,249	68.0	3,869	4.1	26,418	27.9	94,536

[1] Includes 3,832 officer candidates.

MARINE CORPS WAY: LOWER DRAFTEE DEATHS

U.S. Marine Corps policy toward draftees differs sharply from that of the Army. As a result, Marine draftees suffered significantly lower casualty rates in Vietnam than their Army counterparts.

Marines make up 8.5 per cent of the armed services, against 43.2 per cent for the Army. Over the course of the war (fiscal 1965–70), the Marines have taken 42,700 draftees, or 2.6 per cent of all men drafted. (In the same period, the Navy took a scant 2,526 draftees, and the Air Force filled its manpower needs through volunteers.)

Small draft component: In fiscal 1970, the Marines took into their ranks 67,600 enlisted volunteers (79.6 per cent) and 7,880 draftees (10.4 per cent).

On June 30, the last day for which figures are available, there were 15,058 draftees serving in the Marines—5.8 per cent of enlisted and officer Marine strength.

On July 23, the Marine force in Vietnam numbered 38,600 men, of whom 3,500 were draftees. Thus, on that date, some 23.2 per cent of all drafted Marines were serving in Vietnam, although only 14.9 per cent of the Marine Corps as a whole was stationed there.

Vietnam deaths: The Marines have lost 14,320 men in Vietnam since their arrival there in 1965. Draftees account for 749 (or 5.2 per cent) of those killed or fatally wounded—considerably below the percentage (9.1) draftees bear to the total Marine manpower now assigned to Vietnam.

Unlike the Army, the Marines place all their enlisted volunteers (who may sign up for two, three or four years) and two-year draftees into a common manpower pool, where individual skills are tested and rated before military jobs are assigned.

A Marine general who declined to be quoted by name told *National Journal:* "I would be willing to wager a month's salary that our average draftee falls into a higher-quality mental group than our average volunteer.

"So the machine (a computer) simply and fairly assigns draftees to billets where their higher-level skills can be put to the best use for the Corps. And that's why so few of them are being killed."

The sole exception to the Marines' policy of assigning jobs to volunteers rather than letting them choose is an aviation program—where a place in the program is guaranteed only to those who agree beforehand to enlist for four years.

Because the training program alone takes a year to complete, the Marine command feels it would get a poor return on its investment if it allowed draftees to enter the ground-support aviation schools.

In fiscal 1970, 8,990 men signed up for the aviation program. The entire remaining pool of Marine volunteers (86.7 per cent) took their job-assignment chances alongside the Marine draftees.

Phasing out draftees: The Marines last inducted draftees in February 1970, when they took 1,200 men into the Corps from the Selective Service System—from a total monthly callup of 19,000 men.

Under present policy, the Marines will be draftee-free by February 1972, when the last draftee group to have entered the Corps is mustered out. By that time, according to current manpower estimates, a small reduction in over-all Marine forces combined with a projected improvement in enlistment and reenlistment rates will permit the Marines to return to their pre-Vietnam status as an all-volunteer force.

Marines move out: Since President Nixon's Vietnamization program took effect last year, Marine withdrawals from Vietnam have occurred at a far swifter pace than the Army pullout.

The Joint Chiefs of Staff have agreed to the accelerated rate of withdrawal for the Marines, under pressure from Marine commanders who have asserted in Pentagon councils that a policy of taking the Marines out first is needed to make sure the Marines will be able to meet their long-standing primary mission as an expeditionary strike force.

LEST WE FORGET

Mr. DOMINICK. Mr. President, today marks the second anniversary of the brutal Soviet-led invasion and occupation of peaceful, freedom-loving Czechoslovakia. On this occasion, we should again remind the rest of the world that the Soviet Union, by this ruthless action, flagrantly violated the principles of in-

ternational law as incorporated in the Charter of the United Nations.

The Soviet aggression and occupation of Czechoslovakia:

First, violated the sovereignty of a member state of the United Nations—article 2, section 1;

Second, violated article 2, section 4, prohibiting the use of military force in the relations between individual members of the United Nations;

Third, violated the principle of self-determination of peoples—article 1, section 2;

Fourth, was in conflict with article 2, section 7, prohibiting outside intervention in matters essentially within the domestic jurisdiction of any state; and

Fifth, was in conflict with a number of resolutions of the General Assembly of the United Nations, particularly resolution 2131—XXI—adopted at the meeting of December 21, 1965, upon the Soviet Union's own motion. This resolution prohibits intervention in the domestic affairs of any state, and guarantees the protection of its independence and sovereignty.

One year ago, on the first anniversary of that humiliating aggression and occupation, Czechoslovak democratic organizations called a protest meeting in Washington, D.C., which was attended by many representatives of other exile and ethnic groups and won strong endorsement by many U.S. Senators, Governors, and Congressmen. That meeting voted, by acclamation: August 21 shall henceforth be called the "Soviet Day of Shame."

On this, the second anniversary of the "Soviet Day of Shame," let us remember that the continued Soviet occupation of Czechoslovakia is another crime against the right of a small country to determine its own destiny and aspirations. The invasion was an intervention by the forces of reactionary communism to prevent the Czechs and Slovaks from establishing their own social order—an order that did not endanger anyone, and sought to contribute to the building of bridges of understanding across the discords of an ideologically divided world while lending aid to better understanding and cooperation among all nations on the basis of true progress and humanity.

During the forthcoming General Assembly of the United Nations, there will be many occasions for denouncing Soviet aggression and repeating demands for the withdrawal of Soviet forces from Czechoslovakia. I hope that representatives of all free nations will not let this opportunity be lost, but will help solve a problem that endangers not only the peace in Europe, but throughout the world.

AGRICULTURAL ACT OF 1970

Mr. MONDALE. Mr. President, as a result of the agricultural bill which passed the House August 5, the wheat and feed grain farmers of Minnesota stand to lose between $40 to $50 million annually in lower price supports. This figure does not include the future loss in income to those raising livestock—which will be an inevitable result of lower feed grain prices.

The House bill does contain a reasonable dairy class I base plan, a needed extension of the Food for Peace Act, and an acceptable extension of the Wool Act—all of which should be retained in any bill passed by the Senate.

But in regard to wheat and feed grain farmers, the House bill does not approach the income stability of the present farm program. The inadequate and unfair provisions of this bill are in part a result of vacillation and lack of leadership by the administration.

Under the guise of giving farmers more flexibility, the bill would instead assure lower wheat prices and lower feed grain prices. Wheat and feed grains are already selling too cheaply, and yet the House passed a bill which will further force down the prices for these commodities.

I have written to the Senator from Louisiana (Mr. ELLENDER), chairman of the Committee on Agriculture and Forestry, urging his committee to report a bill which will meet the needs of Minnesota farmers. I intend to do everything possible in the Senate to assure the passage of a fair and equitable farm bill.

Since farmers have been caught in a terrible cost-price squeeze in recent years—one that has made our farmers the chief victims of both recession and inflation—an improved farm program is essential.

Instead, the House passed a farm bill which can only worsen the plight of wheat and feed grain farmers in America.

For years, Representatives and Senators from predominantly rural States have been told that they must explain to their constituents the problems of America's urban areas—and that they must support programs to improve our decaying cities.

Many of them have done so. Now, it is time for those from predominantly urban States to understand the needs of rural America and to support programs to meet these needs.

For in the long run, it is not just America's farmers who will suffer if the House-passed Farm bill becomes law; this bill will have an adverse impact on our entire society.

When the farmer's income is lowered as a result of reduced prices, more and more farmers will be forced off of farms and will migrate to already overcrowded cities. At a time when we desperately need to revitalize and rejuvenate the rural areas of our country—when we need a policy of rural-urban balance—we will be moving in precisely the opposite direction by enacting this bill. There will be more unemployment, more poverty, and our cities will be further overwhelmed by their problems.

If the legitimate needs of rural America are understood, then I am confident that the Senate will reject the harmful provisions of the House bill and will pass legislation to provide better income protection for the American farmer.

Mr. President, I ask unanimous consent that the text of my letter to Senator ELLENDER be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 13, 1970.

HON. ALLEN J. ELLENDER,
Chairman, Senate Committee on Agriculture and Forestry, Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: I am most concerned about certain provisions of the House-passed Agricultural bill which is pending before your Committee.

First, the House bill does not provide an assured minimum price support level for wheat and feed grains. While approximately 530 million bushels of wheat for domestic food use will be assured parity, the remainder of the crop—which has been running as high as 1.5 billion bushels—can be given loans down to 0% of parity at the Secretary's discretion. The Secretary's intent is reflected in his indication to the House Committee that he believes the loans should be below world prices.

Further, while one-half of the corn crop will be supported the Secretary can, at his discretion, set the other half at 0% to 90% of parity. Since all feed grains are supported in relation to corn, feed grain producers will have no assurance of a minimum over-all return from their crops.

I urge the Committee to adopt a provision ensuring firm minimum price support levels, related to parity, for the entire wheat and feed grain crops.

It is estimated that in Minnesota alone, wheat and feed grain farmers will lose between $40–$50 million annually in lower price supports. This figure does not include future loss in income to those raising livestock—which will be an inevitable result of lower feed grain prices.

Secondly, the House bill authorizes a new production and acreage control system—a system resting on the conserving base. In a letter to the House Agriculture Committee in May, Secretary Hardin described the conserving base approach as having "inequities and weaknesses." There is no requirement or assurance in the bill that the program will not be administered in such a way as to allow millions of acres of cropland to be brought into production.

If positive production controls are not required, we may again face serious surpluses which will depress markets and cause great financial damage to producers.

Finally, I am concerned about the failure of the House bill to provide positive assurance that diverted croplands will not be used to expand and depress the livestock industry. I would recommend that the bill reported by your Committee contain an explicit prohibition against using acreage removed from crops for grazing at any time—except in the case of bona fide emergencies.

If the final Agriculture bill adopted by the Congress does not take care of these problems, I believe that wheat and feed grain producers will be better served by an extension of the present farm programs rather than enactment of the House bill.

Sincerely,

WALTER F. MONDALE.

PROMINENT OHIO CITIZEN REPORTS ON CASTRO'S CUBA

Mr. YOUNG of Ohio. Mr. President, Edward Lamb, of Toledo, is one of the Nation's most highly respected industrialists. He has been my personal friend over many years. In his younger days he became an outstanding lawyer in Ohio, winning renown as a trial lawyer representing labor unions. Edward Lamb, or "Ted" Lamb as he was known to his friends, was a comparatively poor man financially in those days. Now as an industrialist he is known and respected in international business circles and due to his own efforts he has become a multi-

millionaire. His progressive views on all public questions are a part of him now as they were years ago.

Throughout many years Ted Lamb has distinguished himself for his services in behalf of underprivileged. In the course of my many years practicing law in Ohio I was familiar with his achievements as a lawyer and his services as a humanitarian not only in behalf of members of labor unions but in behalf of unemployed and underprivileged men and women.

From time to time Edward Lamb has spoken out vigorously for trade relations between our Nation and the Soviet Union and Communist China and with Cuba. He believes that trade promotes friendships and that the customer-dealer relationship would bring nations closer together just like it does for individuals.

Mr. President, recently Edward "Ted" Lamb returned from 2 weeks in Cuba.

I ask unanimous consent that the report on the trip made by Edward Lamb following his return be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

TOLEDO, OHIO, August 6, 1970.—Edward Lamb, Toledo industrialist, returned today from two weeks in Cuba and told the following anecdote:

On March 22, 1969, Mr. Lamb discussed with Fidel Castro in Camaguay Province the possibility of producing several consumer products, using sophisticated mechanized equipment. He told of his American production of plastic shoes with foreign-made machinery which he had acquired in West Germany and Italy. He gave Prime Minister Castro samples of the shoes and furnished him with brochures and literature of the Italian and German equipment manufacturers. On June 10, Castro sent three engineers to Italy and Germany, and on July 5, the representatives of the shoe machinery manufacturers were in Cuba bidding for the equipment business.

The Cubans purchased the equipment and installed it in a plant in Havana and began production on December 5, 1969. Castro stated in his July 26 speech that "The Cuban plastic shoe production has now reached more than 30,000 pairs a day in a plant with 300 workers operating 10 machines." The plant will shortly produce daily 60,000 pairs of shoes with a few more machines now being installed. Each machine has 10 stations and processes up to 200 pairs of shoes an hour. The equipment is operated 24 hours a day with four 6 hour shifts. The Havana plant presently produces only women's shoes but is has already supplied every woman in Cuba with at least one pair of the new vinyl shoes. Mr. Lamb said the quality of the production, as far as wearability, color retention and even styling, is equal to anything which has been turned out elsewhere. Another plant which will produce men's shoes is under construction in Santiago in Oriente Province. The total plastic shoe production will amount to 30,000,000 pairs a year by mid-1971.

Prime Minister Castro emphasized that this vinyl shoe story provides a remarkable model of the use of technology to satisfy consumer needs with a minimum of human labor. There will soon be twice as many of the new vinyl shoes as are now being turned out in the leather shoe factories. The present production in the leather plants uses 19,000 workers turning out only 18,000,000 pairs of shoes a year. However, the new equipment will produce more than 30,000,000 pairs of vinyl shoes a year with less than 1,200 workers.

Mr. Lamb who sat on the stage in Havana and listened to Castro's account of the attempts to mechanize their fields and factories said that in his opinion, *no country in the world has shown a greater receptivity to technological progress than now exists in Cuba.* He said that "the building of schools, housing, road construction, dams for the irrigation of the fields, and many recreation centers are an inspiring sight and that the United States should not 'kid itself' about the improvements now taking place in the Cuban economy. They have domestic problems, as do we, but the fact is that the Cuban people are seriously attacking those problems and they are not involving themselves in foreign adventures. Like any developing nation, Cuba has need for foreign know-how and Havana University has recruited 185 teaching specialists for the new fall term."

Mr. Lamb attended a luncheon given for foreign industrialists who are doing business with Cuba and these included important Swedish, Italian, Japanese, French, Spanish, Canadian and other businessmen from the non-socialist countries. One guest wisecracked, "This is an open meeting—open to any foreign multi-millionaire with know-how for sale!"

"The American boycott of Cuba is unfortunate," Mr. Lamb said, "and outside of its moral implications merely drives a lot of good business into the arms of foreign producers." This was the third trip Mr. Lamb has made to Cuba within the last 15 months, and he stated that the Cuban people are vigorously improving their social and economic conditions. He expressed the hope that the American people will demand all the facts and the truth about Cuba. We must have an objective look and then determine whether our "national welfare and security couldn't be better advanced by a policy of peace and friendship with our neighboring country."

MARK TRICE

Mr. SAXBE. Mr. President, I should like to add my voice to those that have been raised in the last few days for Mark Trice, an unusual man, indeed. One of the first men I met when I came to the Senate was Mark Trice, a fixture in this body for half a century. Mark was a tremendous help to me in my fledgling days in the Senate. What is even more significant, and typical of the man, however, is that he continues to be a great help—even though the class of '68 supposedly has learned its way around in the last 20 months or so.

At any rate, I want to commend Mark Trice, our distinguished secretary to the minority of this body, on the occasion of 50 years of dedicated service. His wisdom, competence, fairness, and judgment have aided us all at various times. His service has brought honor not only to himself, but that honor extends to this body, his family, and his friends.

Mark Trice has seen many Senators come and go in the last 50 years. In numerous ways, his life has touched theirs. I could continue at length about this man whom I have known a relatively short time. But let me conclude with this observation: Mark Trice has helped me to do my job. I can pay him no higher tribute.

PLIGHT OF CHILDREN OF MIGRANT FARMWORKERS

Mr. MONDALE. Mr. President, in the course of the testimony presented before the Migratory Labor Subcommittee, the Select Committee on Equal Educational Opportunity and the Select Committee on Nutrition and Human Needs, we have heard numerous references to the plight of the migrant farmworker. Recently, this was reported also on a nationally televised documentary by the NBC network.

I have just received a letter from a teacher in Seattle, Wash., which describes in moving detail the conditions under which these children are forced to live. It is an incisive letter, Mr. President, which tells among other things how even a free lunch can be a negative experience for a child when, in order to receive it, he must place his poverty on public display.

I should like to have Senators share Miss Oyler's concern for those she calls "the little children with the dancing eyes and the singing names." I therefore ask unanimous consent that the letter from Miss Elaine Oyler be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 27, 1970.

DEAR SENATOR MONDALE: I am writing to tell you, "Gracias, gracias, gracias". Your probe into the migrant living situation is not only desperately needed but a most humanitarian gesture. My association with the migrant has been in Colorado where the total population is primarily Spanish-American. I am a school teacher and have worked in a Title III school. The locale in which I lived, the Poudre Valley, produces sugar beets which is the major agricultural crop harvested by these people. Let me preface my remarks by saying that your comments on the "Today Show" were quite accurate. Having been deeply involved with these people it is no stretch of the imagination to state that their living conditions are "not to be believed". In many articles and newsbroadcasts I have been familiar with of late, the states of Florida and Texas are pointed out as being particularly bad in terms of housing conditions and labor relations. I do not have a vendetta against Colorado, I simply can't imagine these states being any worse.

After hearing your many investigations I am sure you can empathize with how it feels to be a Spanish-American (many times native born) living in this land of plenty. I ask you though, to please regress for a moment and imagine yourself age six, Spanish-American and away from your family for the first time in your life . . . you are attending a rural public school. To begin the year, more often than not you must enter school six weeks to two months late. This is because your parents have been picking the late summer crops and have not settled down to the five month off-season lull until now. In school everything sounds strange to you. The little children in your room are doing some elementary reading but they are doing so in English. English, this is the language you hear when you go into town to the supermarket or what your parents speak to the "Anglo's". You decide for the time being you will like your teacher. When you came into the room she met you with a warm, friendly smile and pleasantly said, "Hello, I'm Mrs. Brown". She took you by the hand, introduced you to the class and then showed you to your seat. In front of you sat an "Anglo" girl who did not even look up from her book when you sat down. Behind you was a Spanish boy like yourself, but he was different. Boy, were you surprised when you found out that he did not speak Spanish! Mrs. Brown then brought over some books and asked you to step to the back of the room. She began to ask some questions but all you could do was look blankly at her

because everything seemed so strange and foreign. "Juan, have you ever been to school before?" "Juan, do you know your alphabet?" "Juan, how far can you count?" In desperation, Mrs. Brown calls Carlos, another Spanish boy to the back of the room. She asks him some questions and in Spanish he asks if you know how to say your alphabet and count your numbers. "Si, uno, dos, tres, cuatro, cinco, seis, siete, ocho, nueve, diez". "No, no Juan, you are in school now, you *must* speak in English". By this time the room is getting noisy so Mrs. Brown asks you to come to her desk. There she gives you a box of crayons and several pictures to color. At your desk you stare at the crayons for awhile and then gingerly, with all your fingers wrapped around the crayon, make some marks on the paper. Why couldn't Mrs. Brown understand that you have never had a crayon in your hand before and if you make a mess, she will think you dumb and stupid.

Finally a bell rings and you are told that it is lunchtime. Who eats lunch? At home it's cornmeal in the morning and frijoles and tortilla's at night. Carlos comes over to you and together you go down the line to the lunchroom.

There you must stand in another line in which you are given a piece of paper with "FREE" stamped on it. You don't know what it means but if they are going to feed you and you don't have to pay for it, you don't care what it says. Never, in your entire life have you seen so much food. You like the lady who is dishing it out. She looks so clean and friendly and you hope she won't forget you too are coming through the line or the food will not run out before you get there. On your tray you see a paper container and a straw. You ask Carlos if it is "cafe" and he says, "Noh, leche". You think to yourself, leche (milk), that is the stuff they give little babies. I wonder what it tastes like? Carlos then directs you to a small table in the far corner of the room. At this table are several other Spanish children but they are much older than you. You ask Carlos why you don't sit with the other children in your room and he tells you that your table is where the "free lunch" sit. In just a few days you learn what it means to get "free lunch."

On the playground you decide to stick to Carols like glue and he is nice about it. You see the other children playing games and long to be playing with them but no one asks you. Finally while Carlos and you are throwing rocks into a dried-up mud hole one of the boys from your class decides to talk to you. "Hi ya, Mex! Where'd they drag you up from?" About the time you are being asked this you see several other boys closing in on you and the next thing you know, feel yourself being punched all over your body. At this same moment, the dutiful playground supervisor comes around the corner, sees a scrap and before you can believe what is happening to you, you find yourself in the principal's office and she is saying, "Oh those —— Spanish. The first day at school and already a fight. I don't know why but it seems the whole bunch of them are so angry?" Your first experience with the principal is memorable. A great, gigantic man with a mean look in his eyes, who spoke very fast. Too bad you could not understand what he was saying to you. He asked you what happened and Carlos began to speak for you but the principal quickly shut him up by saying, "Let the boy speak for himself". "What was this fight all about Juan?" "Who started it?" "Come on, speak up boy". "Noh, noh comprendo, senor".

Back in your classroom, Mrs. Brown greets you once again with a smile. The children are dancing and singing to a record. Mrs. Brown asks you to join in the circle but several of the children won't break it to let you in. Finally Mrs. Brown gets in the circle herself and brings you in but you can feel the little girl who is holding one of your hands sure wished she wasn't. You know everybody knows this and wished you could run out of the room but Mrs. Brown has a strong grip on your other hand. Later, while the children are getting their afternoon drink you can see the little girls pointing at you and giggling. You ask Carlos what they are saying and you're told they are laughing at your pants and shoes. So what, they were good enough for Manuel and Jose, why not me? And what if your shoes did have cardboard in them. You know you must make them last as there is not enough money in the winter when there are no crops to pick. You were clean though. Mama had washed all of your clothes special because you were going to school and you knew this was a job for Mama who had to carry the water from the big cistern in the camp. You then looked at your hands and knew why the little girl had not wanted to hold yours. Sure they had blisters on top of blisters but that is what you get when you hoe sugar beets. In your family, if you're big enough to hoe beets you work, even if the hoe has a sawed-off handle.

Soon the day ends and you must walk back the way you came to the place where you were told you would be picked up by the man who owns the camp your family is now living in. At this place you must wait and wait and wait. Finally he comes, you climb into the back of the truck and as it pulls into camp never did anything look so good as to see Mama, Papa and the babies in front of your cabin. "Como esta, Juanito" you hear Mama calling. Spanish, it was the best sound in the whole wide world. Now you knew you were really home.

In many schools around this nation where the Spanish-American migrant child attends they are being drastically short-changed. We, as educators, speak of meeting the needs of all the children, of planning behavioral objectives and yet, in many areas, the Spanish-American are a foreign entity and just don't "fit in". Many Spanish-American children are suffering from acute learning disabilities, many of these physiological in nature. You spoke of the conductive hearing loss. This exists but I feel there is a problem far more pressing than this. It is the permanent loss of intellectual capacity due to prenatal and postnatal malnutrition. If these children do not get the proper amount of protein at the optimum time (prenatal period and the first 12 months of life) they can develop permanent learning disabilities. After this period of time, there can still be some damage but not as extensive. This has serious implications as to their ability to integrate material correctly, hence, being able to read and write. I became fascinated with this area because I had a little boy in my room who was severely malnourished in early life and as a result, was totally apathetic (minimal autism) at the age of 5½. I am not working with these children any more but they are still very much on my mind . . . and in my heart. I am trying to help them in another way by working on a M.Ed. specializing in specific learning disabilities children develop because of a lack of early protein in the diet. This is a new and open field, but one that needs to be looked into more severely. There are implications here for why children in "poop-up programs" such as Headstart do not maintain their acceleration, why many people of this lifestyle are so apathetic in attitude and why the cycle of decadence evolves. I choose to feel that it *all* does not depend on the socio-environmental conditions as does Hurley.[1] Research says that there are now definite physiological changes in the biochemical and neurological makeup of individuals subject to early malnutrition. If you are interested in this area there are many competent men who can give you intense detail. May I suggest the work of Dr. Joaquin Cravito of Mexico City, Dr. Fernando Monckeberg of Santiago, Chile and Drs. Delbert Dayton and Merrill Read of the National Institute of Child Health and Development, Growth and Development Branch.

I will close this letter to you by saying, thank you again for your interest. I call these children, "the little children with the dancing eyes and singing names". Please sir, please . . . help them to get their fair break in life.

Most Appreciatively,

ELAINE J. OYLER,
Seattle, Wash.

CIVIL RIGHTS AND THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, statements by organizations dedicated to the advancement of human rights was an integral part of last spring's hearings on the Genocide Convention by a special Subcommittee of the Foreign Relations Committee. Mr. Bayard Rustin, the distinguished chairman of the Executive Committee of the Leadership Conference on Civil Rights and Mrs. Katherine L. Camp, president, U.S. section, of the Women's International League for Peace and Freedom have been strong supporters of the Genocide Convention. Their statements stress the importance of ratifying the convention in order to reaffirm the fundamental U.S. commitment to human rights and human dignity.

Mr. President, I ask unanimous consent that the statements be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF BAYARD RUSTIN, CHAIRMAN OF THE EXECUTIVE COMMITTEE OF THE LEADERSHIP CONFERENCE ON CIVIL RIGHTS

The Executive Committee of the Leadership Conference on Civil Rights, at its meeting on April 29, 1970, unanimously endorsed ratification of the Genocide Convention.

Many of the 125 national civil rights, labor, religious and civil groups that participate in the work of the Leadership Conference have already expressed their individual support of ratification. It is our hope that endorsement by the Leadership Conference will help focus the Senate's attention on ratification of the Genocide Convention as a civil rights issue.

When the United Nations, our own country included, adopted the Genocide Convention in 1948, it was in direct response to the most heinous crime of this century: the murder by Nazi Germany of more than 6 million men, women and children, simply because of religious, ethnic or political minorities. The intervening years have only made ratification of the Convention more imperative and the reluctance of the U.S. Senate to act, in more than 20 years, a matter almost beyond comprehension.

Lately in this country we have heard members of the black minority express the fear that concentration camps and gas chambers may someday be prepared for them. It is a pernicious fear; and it persists in spite of disavowals by the highest officials of government.

One way to demonstrate that the fear is groundless is for the Senate of the United States to ratify the Genocide Convention.

Seventy-five countries have already ratified the Convention. We must, too, if we are to convince our citizens and the world that we mean what we say; that we are ready to go beyond mere professions of high principle and take an unequivocal stand against the monstrous destruction of groups of people because of their birth or their beliefs.

We urge the Senate to take prompt action in ratifying the Convention on the Prevention and Punishment of the Crime of Genocide.

STATEMENT BY KATHERINE L. CAMP, PRESIDENT, U.S. SECTION, WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM

The Women's International League for Peace and Freedom strongly urges ratification of the U.N. Convention on Genocide. This Convention manifests man's striving for a more humanitarian way of life by condemning the organized destruction of any racial or religious group. The U.N. unanimously adopted the Convention on Genocide in 1948 and since that time 75 countries have ratified it. Both the Secretary of State and the Attorney General have stated that there are no Constitutional obstacles to U.S. ratification.

Man's goal of living in a world without war, with freedom and justice for all, can only be realized if we build a firm foundation of international law. The Genocide Convention is a vital part of such a foundation. This Convention embodies the revulsion of all civilized men at the systematic destruction of any group of people because of their racial or religious origin. U.S. ratification of the Genocide Convention would demonstrate our commitment to abide by the decent opinion of mankind everywhere.

Since the U.S. Section of the Women's International League for Peace and Freedom first endorsed the Genocide Convention in 1949, we have repeatedly urged the United States to ratify it. Ratification of the U.N. Convention on Genocide this year would be a particularly fitting manner to celebrate the 25th Anniversary of the founding of the United Nations.

GENEVA PROTOCOL OF 1925 SUBMITTED TO THE SENATE

Mr. FULBRIGHT. Mr. President, I am pleased that the President, in fulfillment of his promise of last November, has today submitted the Geneva Protocol of 1925 to the Senate for its advice and consent. This action, together with the President's previous renunciation of the use and possession of biological warfare agents by the United States, will substantially strengthen the barriers protecting mankind from the horrors of chemical and biological warfare.

The dimensions of the danger posed by the existence of these frightful agents has been amply illustrated during the past few days as a result of the Army's disposal of a shipment of deadly nerve gas. More than anything else, the episode of the nerve gas underscores the potentially suicidal absurdity of producing weapons which are too dangerous even to destroy.

Fortunately, the President's actions over the past few months have had the effect of removing major chemical and biological weapons from their previous place in our military planning. In my opinion they should never have been there in the first place but the President deserves full credit for having initiated a comprehensive review of our chemical and biological programs.

At the same time there is still widespread concern over the erosion of U.S. restraint with regard to the use of agents at the lower end of the spectrum of chemical warfare. I refer specifically to the heavy United States use of harassing gases in Vietnam and to the extensive defoliation operations which we have conducted in Vietnam, including the destruction of food crops.

The administration is reported to have weighed the questions of harassing gases and herbicides very carefully in deciding upon the action it has taken today. Indeed, it is reliably reported that it was the effort to resolve precisely these problems which has delayed submission of the protocol until this late date in the congressional session.

Quite frankly, I would have preferred for the President to have interpreted the protocol in accordance with the position adopted by the U.N. General Assembly in an 80-to-3 vote last December, as prohibiting the use of harassing gases and herbicides. While he did not do so, I am nevertheless pleased that in submitting the protocol he did not formally reserve the U.S. position with regard to those weapons.

There are ways other than action on the protocol by which the Senate can express its views on these issues. One of these ways is by our action on the herbicide amendment to the Defense procurement authorization bill sponsored by Senators NELSON and GOODELL. Passage of their amendment would be an effective means of curtailing the use of herbicidal agents by the military in Vietnam.

Too little is known about the long range effects of these chemicals on the environment or on human beings to justify their continued use at this time. What little we do know about some of the chemicals being used in Vietnam has led to their being prohibited for civilian use in this country. Until these questions are more fully studied, it is in my view unthinkable that we would continue to inflict them upon the long suffering Vietnamese.

I intend to support the ratification of the Geneva protocol. Before taking a final position on all of its interpretations, however, I believe that the Senate should make a careful study of the complicated legal, technical, humanitarian questions involved. While this need not be as lengthy as the executive branch review of these same issues, there are many points of view which deserve to be heard and considered.

Finally, I wish to commend the President again for the decisions which he took last November and for the action which he has taken today. Together they have moved U.S. policy a considerable distance toward conformity with the remainder of the world community.

INDIAN AFFAIRS LEGISLATION

Mr. MONDALE. Mr. President, last month President Nixon sent to the Congress a message on Indian affairs. This was a significant statement by our Nation's Chief Executive. It was a statement deserving of attention and, in many respects, deserving of praise.

It is too early to tell how much of the President's message will be rhetoric and how much will be turned into action. But it is encouraging to note that the administration has submitted to Congress three bills which would implement some of the President's recommendations.

On July 20, the Forum, the newspaper serving Fargo, N. Dak., Moorhead, Minn., and the surrounding areas, published an editorial analyzing the statement. The editorial succinctly summarized the key points of the message and recognized the significance of self-determination if the Indian is to progress beyond the state of poverty in which so many of our Nation's first citizens are forced to dwell.

I ask unanimous consent that the Forum's editorial be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON'S MESSAGE IN INDIAN AFFAIRS CONTAINS PROPOSALS WHICH SHOULD BE ACTED UPON

President Nixon's message to Congress on Indian affairs contained recommendations which we hope are enacted into law.

Mr. Nixon's program can best be described as one of self-determination for the Indian. It condemns both paternalism and neglect in government policies. Mr. Nixon stated that Indians are "the most deprived and most isolated minority group in our nation." The chief executive stated that even the federal programs which are intended to meet the needs of Indians "have frequently proven to be ineffective and demeaning."

One of the nation's leading spokesmen on behalf of the Indian, Democratic Sen. Walter Mondale of Minnesota, had praise for the President's message. Mondale, a member of the Senate subcommittee on Indian education, has long been a champion of many of the reforms Mr. Nixon recommends.

The President asked Congress to renounce its previous endorsement of the "termination" policy which promoted the weakening and ultimate finish of the reservation system. Instead, Mr. Nixon would affirm that "the historic relationship" between Indians and the government cannot be abridged without Indian consent . . .

"Even as we reject the goal of forced termination, so must we reject the suffocating pattern of paternalism. We must assure the Indian that he can assume control of his own life without being separated involuntarily from the tribal group," said the President.

Mr. Nixon proposed that Indian tribes be empowered to take over the control or operation of present federally run programs if they choose without loss of federal funds.

For example, Johnson-O'Malley school aid would go directly to Indian tribes and communities as well as to public schools in order to prevent misuse of these funds. Many school districts, after receiving the Johnson-O'Malley Act federal funds for Indian education, have turned the money into the general fund, with Indians getting little benefit.

President Nixon, in his message, recognized the fact that many Indians are turning from rural to urban life, going to the cities where they are meeting special problems of unemployment and lack of social inaction. Mr. Nixon proposes to expand the operation of urban Indian centers, such as exist on a limited basis in Minneapolis and other large cities.

The President presented an impressive list of other measures which would help the Indian meet social, economic, education and health needs.

Throughout the message, the emphasis was on self-determination, giving the Indian the opportunity to live in dignity whether he chooses the reservation system or wants to enter the mainstream of American life.

The Indian himself has become more and more vocal for self-determination and participation. He wants some of the decision making power which too long has been in the hands of an impersonal bureaucracy.

With favorable action by Congress and new and eager leadership among the Indian population, perhaps we will see some strides which will help both the Indian who chooses to retain his tribal way of life, and the Indian who would rather integrate into the larger society of American life.

TAKING AGRICULTURE FOR GRANTED

Mr. DOLE. Mr. President, sometimes it takes a catastrophe—a near disaster—to bring us to our senses—to bring us back in touch with reality.

Such is the case now with a serious blight affecting cornfields across the Nation.

Although exact figures are not yet available, apparently we are going to lose a substantial portion of the 1970 crop. Estimates of nationwide losses now range from as low as 10 percent to as high as 50 percent. In Illinois, last year's leading corn-producing State, the State department of agriculture estimates that fully one-fourth of the crop has been seriously damaged. We will not know the full extent of the damage until USDA surveys now underway have been completed.

I have discussed this problem with officials of the U.S. Department of Agriculture and the National Educational Institute for Agriculture, a nonprofit organization which seeks better public understanding of farm issues, and I believe enough is known to draw some useful and important conclusions.

First—and this is foremost—American agriculture is being taken for granted; if nothing else, what has happened should alert us to this fact. U.S. agriculture is one of the real miracles of the modern age; farmers have broken record after record; and agriculture has become so dependable that the thought of going without needed food or fiber almost never occurs to anyone in this country any more.

A blight that may well ruin one-half of the largest crop our country produces—the largest both in terms of value and volume—is a very serious matter, yet in the larger sense it tells us just how lucky we really are.

In America even a 50-percent loss—a staggering figure by any standard—is not really a disaster. Anywhere else in the world it would be unthinkable.

In America we have combined research and reserve capacity to prevent the tragedies that occur elsewhere from natural causes.

Our extensive agricultural research facilities, and the people who man them, are the world's best—and given time, they will find a way to prevent damage from the fungus that is causing the current blight. And once the cure is found, our farmers will apply it immediately and effectively, because they know the value of research, and over the years have learned to utilize it well.

In America, the average citizen can afford to be unconcerned that severe shortages of basic products may occur—he does not need to race his neighbors to the nearest grocery store to stockpile staples to guard against an impending emergency—but only because adequate food and fiber reserves protect us all.

These reserves are made possible through our agricultural programs—the price support and acreage control system made available to farmers over the past 37 years. Today we have approximately 1.5 billion bushels of feed grains—corn, grain sorghum, oats, and so forth—in reserve. This is considered an adequate carryover between harvests. It will prevent what could have been a disaster from becoming just that.

I do not lightly dismiss the threat posed by the current corn blight. Obviously, serious disruption will occur as a matter of course in many major segments of American agriculture.

The effect on next year's corn plantings could be most dramatic of all.

But certainly, a sharp reduction in corn supplies will have immediate impact on the beef, poultry, and swine industries.

If feed costs rise—and they most likely will—meat prices will follow and reflect the increase.

I believe we will weather this adversity with a minimum of economic disruption, but only because our agricultural programs make it possible to plan for the unexpected.

These present circumstances also strongly underscore the need for adequate reserves as part of our total national food budget.

If we ignore the lessons of history—if we let supply outstrip demand—then we will plunge ourselves back into a serious oversupply situation. That is why 3 million farmers still need Government farm programs to gear output to meet demand—to maintain a reserve to meet just this type of emergency, yet avoid price depressing surpluses.

We hear many complaints about farm programs, especially from the standpoint of the costs involved. Actually, the costs to taxpayers have been minimal when compared to the benefits brought about as a result of expenditures on farm programs. In effect, these programs have subsidized the consumer to a greater extent than the farmer.

Anyone familiar with basic economics knows that buyers pay more when supplies are short, and that they pay less when there is too much; in agriculture, prices drop even when there is a slight abundance. Farm programs have assured the American consumer an abundance of food and fiber.

The costs have been small indeed—especially if compared to what can happen in a period of short supply.

The corn blight is a serious problem, but one that American agriculture can and will solve. The present situation serves to dramatize the fact that Americans have taken agriculture too much for granted—for too long.

THE SERVICE OF J. MARK TRICE

Mr. CURTIS. Mr. President, it is indeed a privilege to join with many others in congratulating the Honorable J. Mark Trice on this unusual occasion. The fact that everyone calls him "Mark" indicates something about the fine character that he possesses. He is a friendly man. The Senators and Senate employees like him. He is a man of humility. These are all desirable attributes.

We honor Mark at this time not just because he has served for 50 years. This indeed is a remarkable record in public service. A half a century in a particular activity is a long time. We do honor him because he has reached this milestone, but we also honor him because of the quality of the service that he has rendered throughout these years.

Mark has been a source of intelligent and dependable service for everyone who has turned to him. It has been my experience that when a question or request was directed to Mark, he responded with accuracy, thoroughness, and utmost fairness. His sincerity and his personal integrity, plus his competence, made it possible for all of us to totally rely upon him.

So at this time when we are honoring him for his unusual services, it should also be a time when we express our gratitude to him. I personally want to thank Mark for his kindness and help extended to me throughout the years. I am sure that there are many in our offices and employed elsewhere by the Senators who join me in this. This is especially true of the page boys. Mark is respected and admired by them. I know that he has the gratitude of all of them.

Mr. President, I shall leave to others the enumeration of the many events in Mark's life and the writing of the biography for him. I simply want to praise him for his devoted public service. Mrs. Curtis joins me in an expression of congratulations, gratitude, and best wishes to Mark, to Mrs. Trice, and to their daughter.

PROJECT SOC—SUCCESSFUL MDTA PROGRAM

Mr. MONDALE. Mr. President, a very interesting training program here in Washington was described in the August 12, 1970, issue of the Los Angeles Times. This model program, Secretarial Opportunities Consortium or Project SOC, has succeeded in preparing disadvantaged young women, many of them high school dropouts, and many with undeveloped skills, for responsible jobs in the community. This goal is achieved not only by teaching basic clerical skills, but through a process of broadening the individual's total outlook; with an emphasis on providing new opportunities and productive careers.

I should like to bring this unique and highly successful program to the attention of the Senate and ask unanimous consent that the article, entitled "The Saga of Lunch-Hour Tutor," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SAGA OF LUNCH-HOUR TUTOR

(By Marlene Cimons)

WASHINGTON.—Two years ago Mary Wolf was working as a secretary in the White House, and she was bored. So during her lunch hours she began tutoring a young black girl who had dropped out of high school.

It was to be the beginning of a much larger project, although Mary Wolf didn't know it

then. A project which the Department of Health, Education, and Welfare today wants to use as a model for similar programs in other cities.

Pat, the young Negro girl had left school in the 10th grade to get married. When Mary Wolf met her, Pat was a welfare recipient with two children and no husband.

"At first I was going to teach her English and history," Miss Wolf said. "But she said to me, 'Look, these things aren't going to help me get a job.' So I started teaching her shorthand and typing. She was extremely bright and I began to feel that I just couldn't do enough for her with just my lunch hour.

"So I started looking around for a program to put her in—a program at the secretarial level. I found clerk/typist programs and clerk/steno programs, but I felt these would only lock her in. There's so much more to being a secretary than just knowing the basic skills."

So when Mary Wolf, a 30-year-old blonde, couldn't find that kind of a program, she started her own.

Mary Wolf left her White House job—she had been working in the office of an official in charge of recruiting new talent for government executive positions—and began putting together her plan. Miss Wolf managed to cut through bureaucratic red tape to get a $54,783 grant jointly approved by the Department of Labor and HEW's office of education under the Manpower Training Act.

"I'd sit in all those meetings at HEW and I was sure they were all thinking, 'What is this child doing here?'" she said. "But I guess they were listening more to what I was saying instead of thinking about how young I looked."

Soon after, Project SOC—Secretarial Opportunities Consortium—was born.

Mary Wolf, who had never really taught anything before or run anything before, suddenly found herself a teacher and an administrator. She wrote a curriculum and found a local Washington church willing to donate part of its third floor for classroom space.

COST OF UTILITIES

"We just pay $450 a month for utilities," Miss Wolf said. "And that comes to almost $6,000 a year—which isn't bad, considering we'd have to pay something like $15,000 if rent were included." (They aren't able to hold classes on weekends—that's when the church needs the space for Sunday school.)

The program became a cooperative training venture right at the start when the Communications Satellite Corp. (Comsat) agreed, at Miss Wolf's request, to participate. The program, as it is now set up, provides for the girls to spend a specific period of full time classroom training with Miss Wolf, followed by a specified number of weeks studying a half day with Miss Wolf and working a half-day at Comsat.

"At Comsat they are placed in secretarial jobs or jobs that meet their need to learn the atmosphere of an office," she said. "The main reason for this is to ease them gradually into an office situation, while they still know they can come back to the classroom.

"They are also paid for going to school—$51 a week, plus bus fare and $5 for each child they have. The money comes from Comsat and the Washington employment service."

GIRLS STUDY

The girls, all of them black, all of them selected and recommended through the Washington employment service, study a curriculum which, in addition to typing, filing and shorthand, includes black studies, personal dynamics, English, vocabulary, reading (right now they are reading "The Autobiography of Malcolm X") current events, debating and office practices. These categories cover everything from how to answer a telephone to how to fix an Afro hairstyle. "Last week we had a 'bush doctor' come in and teach them how to do their naturals," Miss Wolf said.

According to Timothy Halnon, an education specialist in the office of education (which administers Project SOC), Mary Wolf's program is considered unique by the department of health, education and welfare.

"There are other programs similar to this but none that really address themselves to the total individual, like hers does," he said. "And it also adds the opportunity—through Comsat—to try out on the job and still be able to return to the classroom to work on weak points."

Of the 30 girls who attended the program last year, six dropped out, two were dismissed (one for fighting in class, the other for poor attendance), and 20 girls, out of a graduating class of 22, were placed in jobs.

"One of those who was not placed weighed about 300 pounds and she simply refused to lose weight," Miss Wolf said. "I told her she just wouldn't be hired if she didn't lose, but she didn't believe me. Anyway, we couldn't find her a job. The second girl just wasn't able to get her typing speed above 35 words a minute."

The other results were more encouraging. "One girl who had been working as a waitress in a drugstore when she came to me is now working for a congressman," Miss Wolf said. "Another girl was hired by a radio station here as a secretary and was recently asked by the company's vice president to become his private secretary."

And Pat, the young black girl who started the whole thing, is earning $6,000 a year as a private secretary at Comsat.

PRIVATE SECRETARY

"She finished the course early," Miss Wolf said. "And she changed tremendously. When I first had her she was very overweight, her hair was a mess. She changed her hair to an Afro and went from Size 12 to a Size 7."

The project, now in it's second year, hasn't changed too much. Miss Wolf, who now has two black teaching assistants and a counselor, received a grant of $68,491 this year and was able to raise her own salary from $10,500 to $13,000.

Miss Wolf, a native of Fremont, Ohio, was graduated from Ohio University in 1965. She is the only white person involved in Project SOC, and it really hasn't caused her any problems. "Except, I feel that a program like this one is more effective if its a black teaching blacks—that gets away from the white-in-authority situation." she said.

Miss Wolf would like to see her idea spread to other cities—if not she'll probably do it herself. "I'm now working on a proposal for one in New York City geared to Chinese and Puerto Ricans, with English language training added. After that, I'd like to work in an Indian reservation."

HAWAII MOVES INTO ITS SECOND DECADE UNDER STATEHOOD

Mr. FONG. Mr. President, 11 years ago today, when Hawaii became the 50th State of the Union, it was predicted that the decade following statehood would be the most prosperous that the islands of Hawaii had ever experienced. That prediction turned out to be true.

And now, on this August 21, 1970, as Hawaii enters the second decade of statehood, I predict that the next 10 years will be equally challenging.

As we enter this new decade, we reflect on what has accompanied the acceptance of Hawaii as the 50th State of the Union. Hawaii has demonstrated its willingness to become a full and equal partner with the other States in our Nation's economic and social growth.

The decade just ended saw the transition from an agriculturally based economy to one marked by broad industrial diversification, although Federal spending continues as Hawaii's principal source of income.

Visitor arrivals exploded from 243,000 in 1959 to 1.3 million today. The resident population has grown at twice the national rate—from 622 million to approximately 800 million.

Personal income increased 136 percent versus 95 percent nationally; retail sales increased 120 percent.

We in Hawaii are proud of the good health of our citizens. Hawaii residents are healthier than their mainland counterparts with only 1.9 general hospital patients per 1,000 population compared to 2.9 for the mainland.

In size, Hawaii ranks 47th among all the States. In dollar volume of building permits, Hawaii ranks among the top 10.

Hawaii produces more than a million tons of raw sugar a year—approximately one-fifth of all the sugar grown under the American flag. Hawaii produces more canned pineapple products than the rest of the world combined.

On this statehood anniversary day, we in Hawaii have much to be grateful for. But foremost is the fact that statehood gave Hawaii's people both voice and votes in the Congress.

As a territory, Hawaii had but one nonvoting delegate in the House of Representatives. On August 24, 1959, after Hawaii's first State election, I took my seat in the U.S. Senate, along with my late colleague, Senator Oren E. Long. And at the same time, of course, Hawaii gained voting representation in the House.

During the years of struggle that led to statehood—a struggle in which I was proud to play a role—President Eisenhower expressed the hope that Hawaii, under statehood, would be a "shining example, of the American way to the entire earth."

I believe that the 50th State of the Union has, during these past tumultuous years, lived up to the late President's wish. Despite the pressures of a fast-growing population, despite urbanization and its attendant problems, the people of Hawaii continue to hold firm to the ideal of racial amity and concord.

Mr. President, the people of Hawaii call this the spirit of aloha. It is our most valuable attribute to our most important export.

BOORDY, A MARYLAND VINEYARD

Mr. MATHIAS. Mr. President, scholars and anthropologists debate if and when and where Ralph Waldo Emerson enjoined the ambitious to "make a better mousetrap." But the editors of Emerson's Journals certify that he did say, "I trust a good deal to common fame, as we all must. If a man has good corn, or wood, or boards, or pigs, to sell, or can make better chairs or knives, crucibles, or church organs, than anybody else, you will find a broad, hardbeaten road to his house, though it be in the woods."

Under Emerson's rule, there will be such a road in Maryland, and because it not only represents a better product, but also an entirely new and imaginative

enterprise, I think it should be widely recognized.

An outstanding example of a new way our unique Maryland environment can and should be made productive was brought to my attention by a recent feature in the Washington Post concerning the Boordy winery in Riderville, Md. Boordy was begun by Mr. and Mrs. Philip Wagner as a hobby to produce wine for the family table.

The Wagners' hobby has developed into a thriving business largely as a result of the introduction of a French-developed hybrid grape. Mr. Wagner, formerly editor of the Baltimore Sun papers, feels that the French hybrid embodies all the best qualities of both its American and European ancestors. The demand for the Boordy vintage and widespread success of the plants from his nursery speak for the accuracy of his judgment.

The Wagners' wines are justifiably served with local pride. The Wagners are themselves a source of pride for all of us as their industry and ingenuity is of the essence of the vitality of our great country.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 16, 1970]

VIN ORDINAIRE AS AN ELEGANT AVOCATION

(By Judith Martin)

"Boordy," said Philip Wagner, is "one of those fine old Maryland place names of the future."

Look it up in a wine encyclopedia, and you will find it is a small winery and nursery in Riderville, Md., owned and run by Philip Wagner and his wife, Jocelyn. (Not that people do look it up, Wagner added modestly, but those who find themselves in the B's trying to read about Bordeaux might come across it.)

Boordy, with its fields scattered in what has become expensive suburban Baltimore countryside, sells 5,500 cases of wine a year, and grapevine cuttings to amateur and professional winemakers all over the country. On a hilltop above the winery, in what used to be vast quiet countryside but is rapidly being enclosed by highways, is the informal, gentleman-farmer-ish white clapboard house where the Wagners live.

Both Boordy's success as a supplier of good vin ordinaire and local pride to restaurants and liquor stores in the Washington-Baltimore area, and its inability to meet the demand it has created are due to rules which the Wagners set long ago to keep the winery in proper perspective in their lives.

The first is that the vineyard, in which the original idea was to provide wine for the family table, and the nursery, with which they demonstrated that respectable wine could be produced in country which had been deemed unsuitable, should pay for themselves.

The second is that it should not interfere with the rest of the Wagners' activities.

Boordy, for all its success, is, after all, the rather elegant hobby of people whose lives are concerned first with politics and writing. Wagner says it's his version of another man's sailboat or herd of prize cattle.

In his chief career, he has been a free-lance writer, foreign correspondent, author, editor of both Baltimore Sun papers and now, in semi-retirement, a syndicated political columnist—while his spare time, and much of his wife's time, were devoted to the expanding winery and nursery.

While he was helping build the Sun papers in national stature and international activity, Wagner and his wife built the first small cool shelter for their presses—he digging the hole, and she fashioning the stucco work on the walls. Harvest time meant that after the day's news, the two of them would crush and press grapes until two in the morning.

Now, in semi-retirement, it's a more leisurely pace. Wagner works on his political column at least two days a week, in an office above the original winery, wandering down to work or talk with the winery's three full-time employes as needed. Mrs. Wagner, who does most of the paperwork and correspondence, finds time for her chamber music group, in which she plays the piano.

And they travel a good deal—to California last week, probably to Yugoslavia in the fall and always to upstate New York, to France and Germany, Italy and Spain. "We go where the vine grows," said Mrs. Wagner, but then they entwine it with his work, visiting local wineries and local politicians, observing the grape fields as well as the larger scene. Mrs. Wagner acknowledges that she could stand looking at a cathedral now and then, like everybody else.

It also means they have friends, among winemakers and wine connoisseurs, wherever they go, and he feels that talking about wine has often proved a valuable entree into political circles—in Moscow, for instance—that might not have been open to him just as a journalist.

At home, they try to keep up with the interest of visitors in Boordy, and have set aside Thursdays and Fridays for appointments for winemakers and tourists. Their friends are drawn from a variety of circles which may not have anything directly to do with either of the Wagner careers—but when Wagner was asked to describe his most famous colleague, the late H. L. Mencken on whose literary career Wagner has written a small book, he said, "He was a beer drinker. He made a big pretense of being hardy, but he was really quite abstemious, and never drank until after dinner."

The occasional dinner parties at the Wagners' house up the hill from the winery feature several wines, of course, and bottles and bits of cheese brought to casual visitors on their rolling lawns. But they've learned not to accept the eager offers of friendly help when it's work time at the winery.

"It's pretty grim," said Wagner. "It's not much fun after the first ten minutes, and then we've got all those people on our hands."

Instead, they hire students at vintage time—"starting with the school boys, and then the private school boys because they go back later in the fall, and finally the college boys."

Wagner started in journalism as the editor of the Michigan Daily when he was at college at Ann Arbor, worked on the Philadelphia North American, and, when that paper died, did public relations work for General Electric. Then he started writing "light pieces with a little bite" for magazines, such as Harper's and the Atlantic Monthly and, "jumping the usual reporting apprenticeship," went to Baltimore in 1933 to be associate editor of the Evening Sun.

Boordy started at the same time, just at the end of Prohibition. Neither of the Wagners was much of a gardener, but they read a lot and decided to take advantage of the fact that you could legally make up to 200 gallons of wine for home use then, and that grapes were plentiful because the California wineries were shipping their then-useless grapes east.

But when Prohibition was over, the grapes stopped coming. "Only the cats and dogs" were available then, said Wagner, who was by that time too deeply involved in wine-making to stop over a technicality like Repeal. He had never been that wild about Californian grapes, anyway, and began to investigate hybrids which were being developed then in France.

In the hybrids, he felt he had found the ideal combination of grapes for American growing—"the flavor of the classic European wine grapes, with the hardiness and disease-resistance of the American. They had a certain amount of American blood in them, so I thought they might turn out to be good here." From them, Boordy produces a red wine, a white, a rose and a blumchen.

The hybrids were a success, and the Wagners, who found that they soon made more grapes than they could squeeze, began to sell them. By establishing a large nursery business, they were also able to prove from reports of their customers what they had suspected and hoped—that such grapes could be cultivated in parts of "just about every state except North Dakota."

Independent wineries, said Wagner, "are experimental stations that the government doesn't have to pay for. Official agriculture is dead from here up. If an industry is in trouble, it gets an appropriation, but if anyone has an original idea, he gets no help."

His feeling about university agricultural departments wasn't helped much by a conversation he had with a University of Maryland official who was pinning a blue ribbon on Boordy grapes at a local fair. Wagner inquired why the university wasn't working on grapes in its agriculture department and the response was, "Don't you know? Maryland just isn't good for growing grapes."

Maryland soil was so good for Boordy that the Wagners have had to limit their wine production and restrict their sales to this region to prevent their hobby's overtaking them. "If we let go, it would be five times this size," he said.

They have also formed an association with Seneca Foods, acting as consultants and supervisors for a Seneca-sponsored upstate New York wine which is "a variant of the Boordy label."

Their future will probably be with Seneca, said Mrs. Wanger, because their children—a doctor, a free-lance writer, a businessman and an educator—have scattered and aren't even always close enough to come pick up their Christmas wine cases. But all of them have worked in wine-making and love wine, said Wagner, and the grandchildren have also enthusiastically tasted both the work and the wine.

As for the senior Wagners—"We'll probably keep it up until we drop in our tracks," she sighed. "I used to think I'd sit on the porch and rock in my old age. Not a chance."

And when they count up what it's given them, it's not only more than the original goal of family table wine, but much more than just the distraction of a hobby.

"An enterprise this small still has every single problem—personnel, taxes—of a big enterprise," he said. "It has served as a constant illustration for me, and given me an insight many newspapermen don't have. It's easy to laugh at the Rotarians who say you never had to meet a payroll, but there's a point where that is serious.

"And newspapers keep you worrying over ethical matters and all that business. Here there's no ethical problem involved—except that you've got other worries, like is it going to frost tonight."

THE AMENDMENT TO END THE WAR

Mr. McGOVERN. Mr. President, the junior Senator from Kansas (Mr. DOLE) kindly sent me a copy yesterday of the speech he delivered in the Senate today. Scanning the Senator's remarks last night, I was impressed with the purity of his purpose and his remarkable awareness of the danger of sin in others.

The Senate is fortunate to have a Member with 8 years' experience in the House of Representatives—"a place," in his words, "where many sought to persuade me, but none sought to bring outside pressures against me." The Senator from Kansas has humbly confessed that this pristine experience in the House left him aware of the urgent need for both "a high ethical standard" and "a strict adherence to the laws."

Since I had only 4 years' service in the House of Representatives and have been exposed to the abominations of the Senate for nearly twice that length of time, I should perhaps be grateful that the junior Senator from Kansas has given me the benefit of his close scrutiny and vigorous standards of personal conduct.

In a word, the Senator from Kansas is most fearful than I and other Senators sponsoring the amendment to end the war may have violated the high ethical and legal standards that he brings to the Senate.

A series of questions indicates his fears that we may have violated certain lobbying, accounting, or tax regulations. Personally, I am confident that we have neither violated any laws nor jeopardized a proper sense of ethics and propriety. We have accounted for every penny received or disbursed and have published our reports in the CONGRESSIONAL RECORD. We have also designated two trustees, former Senator Ernest Gruening, a Democrat, and Mr. Edward Burling, a distinguished Washington attorney and a Republican. These trustees are aided by a bonded accountant.

But lest all of this not satisfy the junior Senator from Kansas, may I remind him that the junior Senator from Arizona (Mr. GOLDWATER) has asked the Department of Justice to determine whether or not we have violated any laws. Deputy Attorney General Richard Kleindienst has said that he is looking into the matter. I am sure that even Senator DOLE would not challenge the reliability of an investigation by Mr. Kleindienst, whose standards were so high that he was selected by the Senator from Arizona (Mr. GOLDWATER) to manage his presidential campaign in 1964.

To quiet any remaining fears of the Senator from Kansas, my cosponsors and I are asking the Internal Revenue Service for a ruling on any tax responsibilities we may have as a consequence of the contributions received and expended by the committee for the amendment to end the war.

Perhaps after all these investigations and reports are completed, the Senator from Kansas will be inspired by the discovery that he is not the only Member of the Senate with "a high ethical standard" and "a strict adherence to the laws."

But while the lawyers and tax experts pursue these intricate questions, let us remember that young Americans are still dying in Indochina. Let us remember, too, that wartime inflation is still straining our economy and weakening the value of our stocks and our dollars. Let us remember that a disastrously mistaken venture into Southeast Asian affairs we cannot resolve is still dividing and eroding our society.

These are the issues that we need to keep at the center of our attention in the coming debate on the amendment to end the war.

Let me speak very plainly to my colleagues—the junior Senator from Kansas, the junior Senator from Arizona, and other Senators who may share their approach. I am not going to be diverted from the central question soon to be raised in the Senate: Should the Congress exercise its constitutional power to set a limit on the time American forces are committed to Indochina? Or, is the Congress simply a frail and helpless reed ready to submit to one-man rule on the easy assumption that the burdens of war and peace are the President's alone?

That is the issue raised by the amendment to end the war and that is the issue I intend to pursue above all others until we have resolved it as duly elected representatives sworn to uphold the Constitution of the United States.

I have asked Mr. Gordon Weil, my staff assistant who has been handling the details of the amendment effort for my office, to prepare answers to the specific inquires of Senator DOLE. I ask unanimous consent that those answers as prepared by Mr. Weil be printed in the RECORD:

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

QUESTIONS AND ANSWERS

INCOME?

The Amendment to End the War Committee does not regard its receipts as income under the Internal Revenue Code and has received legal advise that its position is correct.

POLITICAL GIFTS?

The Amendment to End the War Committee regards donations as political gifts. It believes that such gifts are subject to applicable federal legislation. However, a distinction should be drawn between political gifts for candidates in election campaigns and political gifts relating to an issue before the Congress. Second, the situation in the present case, is relatively unprecedented and the exact way in which federal statutes apply will have to be determined by appropriate authorities.

The appellation "paid political announcements" as applied to the short announcements sponsored by the Amendment to End the War Committee was decided upon by the stations which carry these announcements, not by the Amendment to End the War Committee.

The Amendment to End the War Committee had co-chairmen and treasurers designated prior to the receipt of contributions and the disbursement of funds. The funds are under the supervision of outside trustees—one a Democrat and the other a Republican.

The treasurer has kept a detailed and exact account of all contributions, the date of all contributions, and the names and addresses of every person making a contribution.

No contribution has exceeded $5,000. The Council for a Livable World acted as a collection agency for contributions to the Amendment to End the War Committee. It received individual contributions, none of which were in excess of $5,000 and, to the best of our knowledge, it has kept a record of all contributions, the date of such contributions, and the names and addresses of all persons making contributions.

A record of all expenditures and a record of the names and addresses of those with whom money is spent has been kept and a detailed account has been published in the Congressional Record on two occasions.

The Amendment to End the War Committee has not filed a quarterly report with the Clerk of the Senate since it appears that such a report applies to election campaigns. However, the Committee is prepared to make such a report if it is deemed necessary.

REFUNDS?

The Amendment to End the War Committee is of the opinion that although there have been modifications in the Amendment, this does not necessitate a refund of donations since the essential element of the Amendment—a fixed deadline for the withdrawal of United States forces from Indo-China—remains an integral part of the revised text.

LOBBYING?

The activities of the Amendment to End the War Committee have been under the supervision of a bipartisan group of Senators. Because the Committee is composed exclusively of Senators, we have not considered that it is a lobby in the accepted sense of the word. To ask staff members to aid in this effort and to accept the help of volunteers is well within the bounds of legislative activity Senators may undertake in support of their proposals in the Senate.

COLLECTION AGENCIES?

As has been stated previously in the Senate, the sponsors of tne Amendment to End the War did not solicit funds for an extensive television and newspaper campaign and were themselves surprised by the size of the funds received. All contributions were from individuals, so far as can be determined, and not from any outside group.

These funds have been used in an attempt to present to the American public views on the Indo-China war differing from those of the President, who has unlimited and untrammeled access to the public most significantly, free, prime time on the TV networks. The spokesmen for the Amendment to End the War have certainly not had an "unfair" advantage in presenting their case.

There has been absolutely no institutional or fiduciary link between the Amendment to End the War Committee and the Members of Congress for Peace through Law.

ARBOR DAY

Mr. CURTIS. Mr. President, we in Nebraska take special pride in Arbor Day which was celebrated in Nebraska this year for the 98th consecutive year and which for the first year was designated by President Nixon as a national observance.

While Arbor Day had long been celebrated by every State in the Union and many foreign countries, it was my friend and distinguished senior colleague from Nebraska (Mr. HRUSKA) who this past year sponsored legislation permitting the President to elevate the annual tree-planting ceremony to the status of a national observance.

I might also remind Senators that Arbor Day symbolizes Nebraska's concern many years ago for the conservation and replenishment of our natural resources and the environmental control which such conservation promotes.

In the emphatic and proper concern of our citizenry over the pollution of our Nation today, I am proud to point out that such a concern motivated J. Sterling Morton, Nebraska City, Nebr., pioneer and one-time Secretary of Agriculture, to begin the annual conservation

observance back in 1872. If more of our citizens had adopted and practiced his conservation philosophy a number of years ago, our pollution problems might not be as great today as they are.

We are also indebted to Senator HRUSKA for succeeding in attributing to the annual Arbor Day the national importance which the observance so well deserves.

Although Arbor Day has come and gone this year, a reporter for the Lincoln, Nebr., Sunday Journal and Star reported in a most interesting fashion on a recent visit to Arbor Lodge, the State park near Nebraska City which houses the memorabilia of the founder of Arbor Day. I commend this interesting report to the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INEXPENSIVE TOUR CAN BE REWARDING

(By Bob Munger)

NEBRASKA CITY.—It costs 25 cents for an adult to tour Arbor Lodge State Historical Park on the western edge of this city. And it may well be the best 25 cents a person ever spent, in this day and age.

The home of J. Sterling Morton literally reeks with history.

It is filled with stained glass windows, original furniture, pictures, and all the other furnishings that a family of "means" would have had in their home a hundred years ago.

J. Sterling Morton, who was Secretary of Agriculture under President Grover Cleveland, was a nut on trees. According to tour guides he corresponded with people all over the world, and never failed to ask for seedlings of their native trees.

So it is easy to see why, in 1872, he proposed to Nebraska that the state adopt Arbor Day as a day to plant trees. He got it done, and the proclamation was issued in 1874 by Gov. Furnas.

His arboretum (tree study area) at one time contained an official 280 different species of trees, and the grounds on the Morton estate are covered with a jungle of trees and shrubs.

In 1923 the Morton family gave the proptery to the state for a state park, and it became only the second state park in Nebraska. On the property are the gigantic mansion, a nearby carriage house in which horses and buggies were kept, a small picnic area, and the replica of a homesteader's shack . . . plus trees, everywhere the eye hits, trees by the thousands.

A visitor touring the Morton home is told that J. Sterling was at various times a newspaper owner, and a large land investor. He was supposedly a good manager. It is rather obvious, for he founded the fortune that eventually was developed into the Morton Salt Co. of present-day fame.

Supt. Ira Glassser works continually on enhancing the property, refurbishing picture frames to original condition, painting, fixing and cleaning it up. This of course is the reason for the fees of 25 cents for adults, 10 cents for children, and 5 cents for organized groups of children of over 10 youngsters—to maintain the property.

A visitor will remember bits and pieces of information . . . that Mr. Morton preempted land there, 160 acres, in 1854; and that he filed for homestead rights in 1855 after he had had a chance to have it surveyed . . . or that his arboretum was at one time the only one between the Missouri River and the Pacific Coast and is still the oldest in that area . . . or that President Cleveland came out and stayed at the Morton home during his term of office . . . or that Mr. Morton first began plantings in his arboretum in 1858.

Perhaps bits and pieces of 100-year-old history are the best.

It is certain that they are interesting.

MODERN DAY BLADESMITH USES TECHNIQUES OF COLONIAL TIMES

Mr. MATHIAS. Mr. President, 50 miles west of Metropolitan Washington, in the Middletown Valley of western Maryland, lives William Moran, Jr., bladesmith.

Although there are a few other bladesmiths in the United States, Mr. Moran believes that he is the only one who uses authentic 17th-century methods to make knives and ironwork by hand. He rediscovered the ancient technique by trial and error to make anything from a field knife to the Cinquedea, a copy of a Renaissance dagger. In his work Mr. Moran uses tools from past centuries and a few self-styled implements. He is interested in old things and thinks "we are living in an age when things are mass produced and shoddily produced." He also thinks "there is far too little knowledge about our American heritage."

Mr. Moran embodies all the qualities of the free enterprise system, of which he is a strong advocate. He is the type of man Thomas Jefferson would have called "the salt of the earth." He is a businessman, individualist, patriot, but above all, a master craftsman.

On July 30, Penny Kolsrud wrote an article in the Baltimore Sun about Mr. Moran, his method and his beliefs. Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERESTED IN OLD THINGS: MODERN-DAY BLADESMITH USES TECHNIQUES OF COLONIAL TIMES

(By Penny Kolsrud)

Just off Braddock Mountain, nestled in the rolling green patchwork of Middletown Valley, is the small, dusty shop of William Moran, Jr., bladesmith.

His wares range from combat knives with fiercely curved blades, made for men in Vietnam, to colonial chandeliers with graceful spirals. Knives cost between $50 and $500, depending on whether you want a field knife or the Cinquedea, a copy of a Renaissance dagger which takes two weeks to make.

Although there are a few other bladesmiths in the United States, Mr. Moran believes he is the only one who uses authentic Seventeenth Century methods to make knives and ironwork by hand.

Mr. Moran rediscovered the ancient technique by trial and error. "Knives were among the first things mass-produced in this country and the art of making blades had been totally lost," he said. I'd take an old blade and test it to see how it was tempered.

"From the time I can ever remember, I've always loved knives," he said. "Nothing much was written on them. Old bladesmiths handed their techniques down from father to son and made a real big deal of how complicated it was—it wasn't really."

For many years, making knives was hobby for Mr. Moran, who owned a dairy farm. "I got so many orders that I sold the farm," he said. "Right now I'm at least two years behind in my orders, which is kind of frustrating." He said he has been making knives and ironwork for about 27 years.

Each knife takes two or three days to make. The bar of steel is first cut off in one piece with the tang, a thinner piece over which the handle fits. The knife is heated in the fieldstone forge and then hammered into shape on the anvil many times.

"I grind it down to where it's nearly finished and then temper it by heating it and quenching it in oil" which, Mr. Moran explained, cools the steel more slowly than water and changes the molecular structure so that it hardens.

The knife is then "drawn" so that it is hard from the center of the blade to the cutting edge, with the dull edge or back "like a spring. This makes the knife almost impossible to break," he said.

The finished blades have a highly polished reflective surface which comes from 3 h.p. polishing wheels. Early bladesmiths used water wheels to achieve this high gloss, he said.

Utilizing other crafts, Mr. Moran designs and carves the knife handles and their brass fittings and makes the leather sheaths, which are quite thick because of the sharpness of the blades. Handles are usually rosewood, but other materials include curly maple, ebony, ivory, walnut, hickory, lignum vitae and either crown or branch stag.

ABOUT 125 YEARS OLD

Among his tools are an anvil he estimated to be 125 years old and many hand-made implements, such as tongs. When he doesn't know how to make something, Mr. Moran designs a tool to do the job. One tool, described as a bar with a bump in its middle, was made to twist the spirals in the colonial chandeliers.

Mr. Moran's shop is cluttered and hung with dried ears of corn, stag horns, signs of his political affiliations and all kinds of tools and samples of his work. He wears boots and a leather apron over his work clothes.

"I'm really interested in old things," he said. "I think we're living in an age when things are mass-produced and shoddily produced.

"I think there's far too little knowledge about our American heritage," he said. "I like to give talks on the free-enterprise system. I think we have a wonderful system of government and the greatest possible system of wealth."

As a shrewd and independent man who has used free enterprise to build a business from nothing but his own interests, he naturally believes that people should "do it on their own" without help from the federal government.

His work often immerses Mr. Moran in history. Before making a copy of a Bowie knife, he talked to several people who had researched it and looked at between 1,500 and 2,000 different old knives. He has done copies of a crusader's sword and also makes tomahawks and medieval battleaxes.

"I got a crossbow kick once," he said pointing to a ponderous looking instrument on the wall. "There was a lot I didn't know about them. The first one I built was 400 pounds and shot about like a BB gun. I was so disappointed.

"I finally got it down so when we shot it, I couldn't even see the shaft go by."

In addition to his flexible hours ("I can go fishing any time I want to"), his work enables him to deal with exceptionally nice people, Mr. Moran said.

His customers include "hunters who go on African safaris," men serving in the Green Berets, or Special forces, in Vietnam and knife collectors all over the world. One of his knives was presented to a member of Italian royalty. He gets orders from as far away as West Germany and recently got his first from behind the Iron Curtain, Czechoslovakia.

A trip to William Moran's shop is almost like a trip through time. You pass through the Nineteenth Century in Braddock Heights, a town of white frame houses perched precariously close to the road, with a decaying, Gay Nineties-type amusement park nearby.

The atmosphere is altered by only a few suburban brick houses until you reach the Seventeenth Century in Mr. Moran's shop, an anachronism, but perhaps a reminder of a simpler time.

OCEANS AND PLAN NO. 4

Mr. NELSON. Mr. President, one of the most rapidly developing environmental crises of this Nation today is the pollution of the sea. As yet, the American public has only the Santa Barbara and other oil spills and such incidents as the Army's dumping of nerve gas in the Atlantic off the southeastern United States to remind us that the oceans are not the invulnerable resource we had once imagined. But many distinguished marine scientists are convinced that if we continue on the present course, the Santa Barbara tragedy is only a prelude to continued marine disaster—and that in 50 years or less, we could well destroy all productive life in the sea.

As was pointed out recently by marine scientists testifying before the Senate Judiciary Antitrust Subcommittee, it is urgent that this Nation establish as a high priority a national policy to protect our vital ocean resources. Our efforts in this regard are as yet only in their infancy. This is why Reorganization Plan No. 4, which proposes establishing a National Oceanic and Atmospheric Administration in the development-oriented Department of Commerce, is to me a very disturbing step. In all that I have seen to explain and justify this proposal, there is little evidence that NOAA in Commerce will sharply separate Federal programs for development of ocean resources from Federal programs for protection of the coastal and ocean environments. But in my view, such separation is absolutely essential. In proposing the Environmental Protection Agency in plan No. 3, the President said that an important reason for this independent agency is that it would "insulate pollution abatement standard-setting from the promotional interests of other departments." Why should not this same reasoning apply to our coastal and offshore marine programs?

In the meantime, the devastation continues. The scientists testifying before the Senate subcommittee estimated that up to 10 million tons of oil are being dumped into the sea every year—and they pointed out that no Federal agency monitors, or is equipped to monitor the buildup of byproducts of this oil, including hydrocarbons of a kind known to cause cancer in both man and animals.

Then in dramatic demonstration of another serious gap in Federal marine environment policy, the U.S. Army admitted at a Federal court hearing recently that it is not sure what will happen when its shipment of nerve gas hits the bottom of the Atlantic. What Federal agency is responsible for being sure? It is not clear.

In this situation, it is understandable that environmentalists across the country would be and are deeply concerned about the possible consequences of putting the lead agency for Federal oceans policies in the Department of Commerce, as is proposed by plan No. 4. In a telegram to the President on plans Nos. 3 and 4, a large group of environmentally-concerned organizations made clear their support of the plan No. 3's Environmental Protection Agency, but stated their strong opposition to plan No. 4's NOAA in Commerce. Those signing were the American Forestry Association, the American Institute of Biological Sciences, the American Scenic and Historic Preservation Association, the National Association of Conservation Districts, the National Audubon Society, the National Wildlife Federation, the Sport Fishing Institute, Trout Unlimited, and the Wildlife Management Institute. In addition, plan No. 4 is opposed by the Izaak Walton League, the American Fishery Society, and the Wildlife Society.

Despite the environmentalist concern for putting marine environment responsibilities in the same agency with marine development responsibilities, there are very strong indications that such a marriage is exactly the course that is being set. The latest instance of this that has come to my attention is the June-July newsletter of the National Oceanography Association, a strong supporter of NOAA in Commerce. Reporting the association's next objective if plan No. 4 is allowed to go into effect, the newsletter said:

> Additionally, we hope consideration will be given by Congress and the Administration to assignment to NOAA of responsibility for coastal zone management and coastal zone laboratory programs.

There is little doubt in my mind that unless our national ocean policies are put into much better focus now, NOAA in Commerce will quickly acquire the coastal zone management program proposed in legislation now pending before Congress. Yet such a program is perhaps the key to whether our seacoasts and their myriad resources will be managed in such a way as to avoid their complete destruction by hasty development—coastal zone management is one of the most important environmental proposals before this Congress.

Mr. President, I ask unanimous consent that the following items be printed in the RECORD at the end of these remarks: The Washington Post article reporting the shocking testimony by distinguished marine scientists; the Post story reporting the Army's admission in court that it does not know the consequences of dumping its nerve gas in the Atlantic; and the portion of the National Oceanographic Association's June-July newsletter reporting this group's strong support for putting environmental responsibilities in the U.S. Department of Commerce, a step which I strongly oppose.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 14, 1970]

MARINE SCIENTISTS CITE DANGERS OF CANCER BUILDUPS BY OIL SPILLS

(By David Hoffman)

A team of marine scientists charged yesterday that no federal agency monitors, nor is any equipped to monitor, the buildup of cancer-causing petroleum byproducts in the flesh of edible sea creatures.

Testifying before the Senate antitrust subcommittee, the three scientists from Woods Hole Oceanographic Institution recommended that oil at sea be considered a powerful poison. They said perhaps ten million tons are being dumped each year in the ocean and that pollution is on the increase as companies move drill rigs farther out to sea.

Drs. John M. Hunt, Max Blumer and Howard Sanders based their report on first-hand study of a 650-ton oil spill off the southern coast of Cape Cod, a few miles from Woods Hole.

They concluded that the oil killed about 95 per cent of all bottom creatures immediately and that ten months after the spill the oil, though invisible, is still spreading outward. Hydrocarbons of the sort known to cause cancer in man and animals remain, ordorless and invisible, in the tissues of oysters and mussels—even after frying.

As marine scientists see it, dumping nerve gas off the coast of Florida poses a lesser health hazard than spillage of oil.

Hunt points out that nerve gas in liquid form has a 12-hour half life, that 99 per cent of it will decay in five days. By comparison, he said, the half life of hydrocarbons in crude oil, while not precisely known, can be measured in years. Hunt is chairman of the Woods Hole chemistry department.

The scientists also came down hard against the use of chemical detergents or dispersants in dissolving oil slicks.

It was recommended at the hearing that oil companies contribute a percentage of their revenues to a research fund that could study long and short-term effects of petroleum pollution.

Sanders, a senior Woods Hole scientist, called for controlled oil spills "in selected localities where the biology has been carefully monitored beforehand." He grew quite emotional in pleading for a moratorium on deep drilling and dumping of waste below "the thermocline."

Beginning approximately 1,200 feet below the surface, and extending to the bottom, is a layer of water in which temperature changes hardly at all. The fauna below the 1,200-foot thermocline is believed too fragile to survive the stress of waste or petroleum pollution.

[The Washington Post, August 14, 1970]

ARMY CONCEDES RISK IN GAS DUMPING

(By Sanford J. Ungar)

The Army admitted at a court hearing yesterday that it is not sure what will happen when its controversial shipment of obsolete nerve gas hits the bottom of the Atlantic Ocean.

Pressed by a U.S. District Court judge and by representatives of the governor of Florida and leading environmental protectionists, Army spokesmen said that since no specific tests had ever been conducted on concrete at a depth of 16,000 feet, the effects of the dumping cannot be foreseen.

They conceded that the 418 concrete "coffins" containing 66 tons of nerve gas and 10 pounds of the far more lethal liquid nerve agent VX—scheduled to leave from Sunny Point, N.C., this weekend—could break open simultaneously and kill an undetermined amount of life on the seabed.

The new uncertainty over the gas shipment, "Operation Chase," arose during a day-long hearing before federal District Judge June L. Green, who said she had been up all night Wednesday reading documents in the case.

Pleading fatigue, Judge Green postponed until today final arguments and a ruling on a motion to halt the gas shipment pending further investigation of alternatives.

Meanwhile, longshoremen continued to load the gas-laden coffins aboard a rusting 442-foot ship, the LeBaron Russell Briggs, in Sunny Point.

Sen. Ernest Hollings (D-S.C.), accusing the Army of "operating under a veil of secrecy and callous disregard," called for permanent safeguards against such gas disposal plans in the future.

Obviously caught unprepared by the 11th-hour effort of Florida Gov. Claude R. Kirk Jr. and the Environmental Defense Fund, Inc. to stop the gas, and by Judge Green's willingness to hear the case in detail, the Army sought to prove in court that it had safety at heart.

Under intense questioning, however, Kenly Webster, deputy general counsel of the Army, admitted that officials no longer knew in which coffin the VX lies and that some of its scientific advisers who recommended sea dumping never knew that VX was included in the shipment.

VX emerged as one of the chief concerns of Judge Green, who told Webster and Stuart Schiffer, of the Department of Justice, that "we are all here for the same purpose—to see that no tragedy will take place."

Lola S. Lea, a New York lawyer representing EDF, presented several alternative means of disposal in her argument for a temporary restraining order:

That the coffins be shipped to a surplus ICBM silo and immersed in a strong alkaline solution that would neutralize the gas.

That each coffin, before being sent out to sea, be surrounded by an alkali like sodium hydroxide, so that if it should implode at the great depth it would be immediately rendered harmless.

That the entire shipment be detonated underground in "alkaline surroundings," such as those which exist in some parts of Nevada, Texas and the Death Valley in California.

That instead of the chosen site 282 miles east of Cape Kennedy, the gas be dumped in an "anaerobic basin," such as the Cariaco Trench off the coast of Venezuela, where there is little sea life and virtually no movement of water.

Mrs. Lea also argued that the munitions dumping ground near Earle, N.J., where this shipment was originally scheduled to go last year, would be preferable because it is shallower.

Judge Green appeared to be persuaded by the contention that at lesser depths, with lower water pressure, the nerve gas may be less likely to endanger the environment.

Speaking for the EDF and Gov. Kirk, John D. Isaacs, professor of oceanography and director of marine life research at the Scripps Institution of Oceanography in La Jolla, Calif., said many safe alternatives are feasible.

The superintendent of the Ocean Sciences Division at the Naval Research Laboratory here, Dr. Victor Linnenbom, disagreed. He claimed that the existing plan is the best and backed the Army's statement that the gas must not be delayed because the propellant mixed with it could explode soon.

[From the National Oceanography Association News, June-July 1970]

OCEAN PROGRAM TO GROW WITH NOAA

Oceanography is clearly an activity that is going to grow in the coming years. That's the message contained in the long-awaited Nixon Administration decision to reorganize Federal civilian ocean functions.

The statement about the certain growth of ocean activity came from the present Undersecretary of Commerce, Rocco Siciliano, at a June briefing for representatives of the National Oceanography Association and other organizations.

CERTAIN GROWTH

It wouldn't make sense, Siciliano said, to go to the trouble of centralizing ocean activities now scattered in the Government unless the field was going to grow. Visions of immediate outpouring of taxpayers' dollars into the oceans are mistaken; rather, the field can look to steady, increased growth and attention propelled by a mixture of industrial and academic initiatives.

What the Nixon Administration has done by calling for establishment of a National Oceanic and Atmospheric Administration (NOAA) in the Department of Commerce is to insure the Federal Government's rightful share in future oceanographic development will be forthcoming. This alone should serve to spur some new private investments. A number of private activities, such as offshore petroleum and the recreation industry, are growing at present.

NIXON DECIDES

The Administrative decision was announced in a leak on June 7 after having been made the day before by President Nixon. A statement terming the NOAA-in-Commerce recommendation a "workable compromise" with advocates of an independent agency outside of any of the existing departments of Government was issued on behalf of the directors of the National Oceanography Association in June. The Administration appeared ready to forestall one of the main arguments for independence by providing that the head of NOAA would be an undersecretary of the Commerce Department (only the second such official) who would have direct access to the secretary and, through him, the President. This move satisfies those who feared the oceanic function would be buried in a present-day department.

The Administration plan was submitted to Congress on July 9, and will take effect in 60 days (minus any Congressional recess time) unless the House or Senate votes it down. There are a few signs at present of concerted opposition and, on the contrary, evidence of bipartisan support for the NOAA-in-Commerce plan.

BUDGET OF $350 MILLION

The proposal brings together about 13,000 employees with a present budget of $350 million. Most of the personnel would be in the Environmental Science Services Administration (ESSA) already housed in the Department of Commerce; ESSA, with the Weather Bureau and Coast and Geodetic Survey as principal components, thus has the inside track on staffing and internal organization.

Besides ESSA, the National Oceanic and Atmospheric Administration would contain the Sea Grant program (from the National Science Foundation); the Bureau of Commercial Fisheries and marine mining from the Bureau of Mines (both Department of the Interior); the salt water portions of the Bureau of Sport Fisheries and Wildlife (also Interior); the data buoy program (from Coast Guard, Department of Transportation); U.S. Lake Survey (from Army Corps of Engineers), and the National Oceanographic Data and Instrumentation Centers (interagency groups housed in the Navy Department).

STRATTON GENESIS

NOAA had been proposed on Jan. 9, 1969, by the Stratton Commission on Marine Science, Engineering and Resources (named for Chairman Dr. Julius Stratton of the Ford Foundation), to be composed of the above components plus the entire Coast Guard.

While the Nixon Administration plan kept the Coast Guard (minus the data buoy program) in the Department of Transportation, the tug of war between Commerce and Transportation is already on. Transportation wants the Maritime Administration now in Commerce for its jurisdiction; Commerce, in turn, would like to see the Coast Guard transferred over to go with its new maritime program (30 ships a year for 10 years) and NOAA.

COASTAL PROGRAM

However, the first fight after NOAA's expected approval will involve the assignment of coastal zone management within the Federal apparatus. Originally this program, recommended by the Stratton Commission for NOAA, was placed in the Department of the Interior by the Administration. However, that decision was made when everybody expected whatever oceanography organization was put together would go to the Interior Department or a successor organization.

COMMERCE SURPRISE

In fact, Interior (or more likely, a Department of Natural Resources) was felt to have the nod as late as May. One story making the rounds in Washington has it that a last-minute decision by the President overturned previous planning along this line.

The National Oceanography Association has been in the forefront during the past year-and-a-half on the NOAA reorganization issue. The association's board of directors endorsed the concept of an NOAA in January, 1969; the association presented testimony on three occasions that year for a centralized reorganization of civilian oceanographic functions; distributed public education materials on the subject; worked with executive branch and legislative officials as well as with other organizations to develop support for an NOAA reorganization, and strived to keep members posted on progress of the issue during the past 18 months.

NOA STATEMENT

The association's next job was set out in the NOA statement on reorganization issued June 22 in which it was stated in part:

"We hope Congress will approve the Administration's reorganization proposal when submitted. We hope Congress will consider—and the private oceanographic community will support—establishment of an industry-academic National Advisory Committee on the Oceans and along the lines of the proposal of the (Stratton Commission), either by legislation of the reorganization proposal. NOA has supported this concept as one of the essential features of a successful oceanographic program.

"Additionally, we hope consideration will be given by Congress and the Administration to assignment to NOAA of responsibility for coastal zone management and coastal zone laboratory programs. These two programs are the top-priority oceanography efforts of the Nixon Administration and should be assigned to the Administration's oceanography organization."

ENVIRONMENTAL PRIORITIES

Mr. BROOKE. Mr. President, the Council on Environmental Quality has recently issued an especially timely and helpful report. As President Nixon has said, it is an historic report, and as such it deserves our close attention.

The main value of the report lies not in the facts and figures it contains, but in those that it does not contain. The report points out many dangerous gaps in our information on the environment and in the application of that information. Compiling the information for this report and putting it into written form took many man hours. But the real task is still before us. And that task is ours.

If we are truly serious in our determination to achieve a quality environment—and I believe that we are—then we must act to close our information gaps. It is crucially important, for example, that we develop adequate environmental monitoring systems, that will take much of the guesswork out of determining our environmental needs. We should know, better than we do, what the effects of various changes in the environment are on people. We need to un-

derstand what effects things like crowding, noise, and smog have on human beings, and we need to know where these conditions exist and whether they are increasing or decreasing in severity. To take but one example of how such research can be helpful: The mercury poisoning of our water would not have reached such grave proportions if we had adequate monitoring systems.

Other critical areas discussed in the report include the need to find more practical and less expensive methods of recycling solid wastes, and the need to develop economic incentives that will discourage waste and pollution by industries, communities, and private citizens alike.

It is my sincere hope that this report by the Council on Environmental Quality will motivate the Congress to pass some strong environmental legislation. The report makes it clear that we cannot, with good conscience, avoid this responsibility any longer.

AN ENLARGED AND STRENGTHENED EUROPEAN COMMUNITY

Mr. PERCY. Mr. President, I have learned of a speech given by our new U.S. Ambassador to France, Arthur K. Watson on the occasion of his recent visit to Strasbourg. The original speech was delivered in French, but I have obtained an English translation.

I commend this speech to Senators because it offers the vision of an enlarged and strengthened European community with a more integrated large-scale economy, with a common currency, interrelated social laws, and possibly even much more. It takes into account the U.S. encouragement of a larger Common Market but also points out the legitimate interest the United States has in world trade and our intention to maintain this position of leadership.

I commend Ambassador Watson on this speech as evidence of how an American Ambassador, with a strong business background, augmented by 2 years experience as president of the International Chamber of Commerce can make a unique and valuable contribution to our foreign service.

I ask unanimous consent that the speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS OF AMBASSADOR ARTHUR K. WATSON

I am delighted to be here and, based on brief observation, I will begin with a prediction. The day will come when Paris will be known as the Strasbourg of the West.

Well, that may be a little rash, but I do think this is one of the great cities of Europe . . . and great cities, and great women, I've always thought have similar qualities.

They are beautiful, they are efficient and they are ageless.

I'm not reacting from a first love. I've been here before. Many times. I've known your city in times that were not so good. Perhaps that is why it is so gratifying to me to see it flourishing now.

Apparently a lot of my countrymen agree with me. They tell me there are nineteen businesses here with American connections. That is wonderful. It is good for Strasbourg and it is good for my country.

There is even an initiative, I understand, to start a branch of the American Chamber of Commerce in France—it would be associated with your Chambre de Commerce et d'Industrie de Strasbourg.

I hope that you do it. I spent two years as President of the International Chamber of Commerce so I am a partisan for chambers of commerce. They achieve a lot of constructive work.

For what it's worth, the idea has my Ambassadorial blessing. Let me warn you, I'm new with blessing things so I don't know how they turn out.

A couple of weeks ago, when I was thinking about my trip here, I asked my staff what I ought to talk about today.

They said the only thing to talk about was Europe.

I told them that sounded like going to Detroit to give a lecture on automobiles. To say the least, it is a familiar topic.

They convinced me otherwise when I saw a number of stories in the press questioning, once again, my country's attitude towards an enlarged Europe.

It reminds me, in fact, of an English story about an elderly woman who was taken before a judge. She was charged with public drunkenness. It wasn't the first time.

"Madam," said the judge, "How old are you?"

"Twenty nine years old, your Honor."

"But Madam, you have stood before this same bench not ten years ago and you told me then that you were twenty-nine years old."

"Your Honor," she said, "I'm not the kind of woman who tells a man one thing one time and another the next."

(You know, I had trouble with that. The story is supposed to be told in a cockney accent. How do you do that in French?)

There is, to put aside any confusion, the same consistency about my country's attitude towards the European community—an expanded Europe, a more integrated Europe, a stronger Europe.

Through five Administrators in Washington, we have told the same story.

And I will tell it here today.

We are for an enlarged and strengthened European Community. We support it. We want the negotiations to succeed in Brussels.

We're not the sort that tells a man one thing one day and another the next.

Why then the doubts?

And there have been doubts.

I think it is because we have to concern ourselves, the United States, a lot more carefully with the economic impact.

There was a time when the United States could afford to sacrifice some of its economic interests to encourage European integration. That time is past, as Europe's central bankers regularly remind us. My country has been runing substantial balance of payments deficits since 1958.

I think, with inflation coming under control at home, we'll do better than we have in recent years.

But it is hard to see anything that can happen in the near future that will swing us back into a surplus—or even an acceptable level of deficit.

I'll just divert, for a moment, from the subject of Europe to make a point. We Americans make our living overseas primarily in two ways—we normally export more than we import—a lot more. And we remit profits and royalties from our business holdings abroad.

That is fine. But it isn't enough.

We are inveterate travelers. Nearly a million Americans will visit France this year—and most of them will visit their Embassy twice.

Our deficits on tourism are enormous.

So are our deficits on overseas government commitments—these are primarily military.

Plus my salary.

Said too simply, that is the story.

And that is why we've got to be concerned with the trading implications of the negotiations in Brussels.

Our endorsement shouldn't be construed as a kind of endorsement in principle but opposition in practice.

It is endorsement in principle and to the degree we have anything to say about it—every willingness to accommodate ourselves to the enlargement and strengthening of Europe.

And it is Europe's show. I am just very grateful, as a man who believes strongly in the European idea, that the long hiatus, seven years, seems to be over and Europe is moving forward once again.

The world is fickle, I've decided, and there is a sad tendency to become bored with success and indifferent to it.

I was afraid that was what was happening here.

The Common Market is an incredibly successful venture. To illustrate let me pose a "what if" question.

What if the Treaty of Rome hadn't been signed in 1957 and each of the six had decided to go it alone.

I won't try to trace the political or the military consequences.

Let me just touch the economic.

During the 1960s, the economies of the six have grown at an average rate of 5.3 percent—compounded.

That is an important word—compounded—as the bankers here will privately testify.

Without economic integration, without the efficiencies a bigger Europe has given to your industry and agriculture—what would Europe's economy look like today?

Let me play with a few numbers. Nothing very profound, just a lowered growth rate.

Let us assume for this purpose that France, in the absence of the EEC, would have realized an average rate of growth during the past 10 years equivalent to that of a country of roughly the same size and level of development which was not part of the Community during that time.

The average real growth rate of that country during the 60s worked out to 2.5 percent annually; that of France was 5.8 percent, a difference of over 3 percent per year.

Now, just what would this mean for the average Frenchman? Instead of a per capita GNP of almost 14,500 francs which he produced in 1969, the figure would drop to only 11,000.

While not all of the difference I just mentioned can be attributed to France's decision to join the EEC, it is not wholly unfair to say that, to some extent, that difference has been the economic gift of the EEC to France during the 1960s.

Europe, and the statesman over in Luxembourg last week, must build one brick at a time and they must go through the exasperating detail of balancing one interest against another. It is an unglamorous chore. It is often enough a frustrating chore.

It is important, over the coming months, to remember why it is being done.

From this process, I think everyone understands, can emerge a new kind of Europe. Not a United States of Europe in the sense someone like me understands it. But an enlarged and strengthened European Community can emerge with integrated, large-scale economies, with a common currency, perhaps, with interrelated social laws and perhaps, over time, much more.

What then has been accomplished?

Let me tell you one thing that has been accomplished. The first half of this century saw two ghastly wars start in western Europe. We remember this very well—people of my generation.

From the bad comes good—sometimes.

From the horror of that experience came the European idea. Anyone who would tell us to go back to the old way has a heavy burden of proof. He must first prove that

the same old way would not reproduce the same old result.

President Nixon has recently reconfirmed that the U.S. considers the possible economic price of a truly unified Europe is outweighed by the gain in the political vitality of the West as a whole. Moving toward this unified Europe will inevitably bring changes inside the growing European Community.

It is a positive and sympathetic sense that I state that we do not believe that the problems arising from these changes should be solved at the expense of third countries, including the U.S.

As for the non-economic implications, we countries are inextricably bound up with economic and political forces all over the globe. In Brussels, decisions on levels of agricultural price levels have immediate repercussions in the U.S. mid-West, in Canada, Australia and Argentina. With the anticipated enlargement of the Community, I can see how lower prices and the control of surpluses can help us all, the Community, the applicants and third countries.

The United States accepts and encourages the deepening and strengthening of an enlarged Common Market, but we do have legitimate interests in world trade, and we are anxious that they be recognized.

As for the non-economic implications, we are totally calm. It worries no one that there may eventually be another huge nation in the world—a third super power if you like?

We are not only calm. We are immensely pleased. The burden, particularly the military burden, has been heavy and we have carried a major part of it for a long time.

Beyond that, we now have an expanding Europe that is as wedded to democratic government as we are.

This promises to be a stable force in the world, with the potential for enormous good.

As for my country—I said it earlier—we're not the sort to tell you one thing one day and another the next. We were saying again what we have said nearly a quarter of a century ago.

I've said it, as unambiguously as I know how, again today.

The months will drag on now as the statesmen try to reconcile the costs and the prices of shoes and ships and sealing wax. That is part of the process.

Let's just understand, at the outset, what a great good can come from this tedious process and what it means to the longer run.

Not every generation can leave the world a better place than it found it. I think we are lucky, we can.

Let us give our good wishes, our prayers and our public support to the men who must now work out the details of a new, larger Europe.

ANNIVERSARY OF SOVIET INVASION OF CZECHOSLOVAKIA

Mr. MILLER. Mr. President, August 20 marked the anniversary of what the Soviet news agency Tass termed an effort to put down "counterrevolutionary forces who had entered into a plot with external forces hostile to socialism."

We use another word to describe what happened on August 20, 1968: Invasion of Czechoslovakia by the Soviet Union and other Iron Curtain bloc nations.

The Czech sin was to dare to want the liberalization of their Government and its policies and to permit the press more freedom to comment and criticize.

The Soviets stifled the rumblings of independence but I am sure that these feelings still beat in the hearts of the people of that nation.

That 1968 invasion is a lesson of history none of us should ever forget. Nor should we fail to continue to hope and pray that freedom will be restored to Czechoslovakia and the other nations subject to Soviet domination.

A TRIBUTE TO THE PEOPLE OF CZECHOSLOVAKIA

Mr. PERCY. Mr. President, on this August 21 it is fitting that we pause and pay tribute to the people of Czechoslovakia; for it was 2 years ago today that the Soviet-led forces of the Warsaw Pact occupied Czechoslovakia and proceeded to bring to an end the Czechoslovakia experiment in liberalization.

Much has been written about this latest tragedy for Czechoslovakia. Carefully recorded in the press, in periodical literature, and in books are the developments of these past 2 years during which the Soviets have succeeded in undoing the work of the reformers and returning the country to its former path of rigid orthodoxy. Symbolically, this task was completed by Prague's acceptance of the "Brezhnev Doctrine" as formulated within the recently concluded Soviet-Czechoslovak treaty.

An important point about the events prior to the Soviet intervention was the dramatic manifestation of the Czechoslovak desire for freedom. The pressure for reform came from below, from the people, and was translated into political action ironically by a Communist leadership that itself could not escape its awesome influence.

What was taking place during the few months prior to the intervention was the resurgence of the irrepressible spirit of freedom that is deeply rooted in the peoples of Czechoslovakia.

On this anniversary, therefore, let us turn our thoughts to the people of Czechoslovakia and once more dedicate ourselves to the proposition that one day they will regain their freedom.

FLIGHT SERVICE STATIONS OBSERVE GOLDEN ANNIVERSARY—AIR TRAFFIC SPECIALISTS PROVIDE VITAL SAFETY EFFORT

Mr. RANDOLPH. Mr. President, this week marks the golden anniversary of flight service stations, a far-reaching network of 340 facilities operated by the Federal Aviation Administration to provide a wide range of aeronautical services.

Originally established by the Post Office on August 20, 1920, to support the early airmail service, these facilities have phased from bonfires to beacons to broadcasts. From wireless to computers they have bridged civil aviation's communications and navigations gap—from the primitive "spark" and "arc" transmitting devices to solid state and remote control equipment.

The original string of 17 airway radio stations, for the most part, stretched over desolate wilderness and high mountain passes. Some stations were accessible only by mule train; others by skis and sleds. The one room shacks were drab and drafty, generally manned by a lone operator who worked 7 days a week on a split shift. His communications equipment was sketchy and primitive. Four of the original stations have been in continuous operation since 1920: Elko, Nev.; Rock Springs, Wyo.; Salt Lake City, Utah; and Washington, D.C.

Like the first airmail pilots and other pioneers of flight, the men and women who kept them flying—the ground support specialists, the airway radio operators—were equally intrigued by aviation. They had a mission and they provided a service. Their work began before dawn and it ended after dark. Quite literally, they laid the foundation for today's airway network.

The Federal Aviation Administration this week is commemorating the first 50 years of flight service stations, with a series of national events including open houses, radio and television programs, and other community festivities.

But amid the visitors and public attention, the quiet, resolute work of FAA's 4,600 air traffic specialists continues. Over the counter, over the phone, or over the radio flight service specialists are providing assistance around the clock to safeguard our Nation's pilots. Specialists offer thorough preflight briefings and weather forecasts; alert airborne pilots by radio of expected weather conditions and assist them in charting alternative courses; and broadcast information about special airport conditions and navigational aides that might be temporarily out of commission. And if a pilot runs low on fuel or gets lost, the calm, steadying voice of the air traffic specialist is with him in the cockpit to guide him out of danger. Help is just the push of a microphone button away.

I congratulate FAA Administrator John H. Shaffer, and the employees of FAA, particularly the flight service station personnel, on this 50th anniversary of Flight Service Stations.

Mr. President, I ask unanimous consent that my congratulatory telegram to the West Virginia Flight service stations be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

AUGUST 20, 1970.

To Mr. Clyde E. Brown, Chief, Federal Aviation Administration Flight Service Station, Wood County, Airport, Parkersburg, W. Va.; Mr. Louis C. Rech, Jr., Chief, Federal Aviation Administration Flight Service Station, Wheeling-Ohio County Airport, Wheeling, W. Va.; Mr. Richard Johnson, Chief, Federal Aviation Administration Flight Service Station, Mercer County Airport, Bluefield, W. Va.; Mr. Goodwin Glassman, Chief, Federal Aviation Administration Flight Station, Kanawha County Airport, Charleston, W. Va.; Mr. Maurice J. Genthon, Chief, Federal Aviation Administration Flight Service Station, Elkins-Randolph County Airport, Elkins, W. Va.; Mr. R. T. Underwood, Chief, Federal Aviation Administration Flight Service Station, Tri-State Airport, Huntington, W. Va.; Mr. James Coleman, Chief, Federal Aviation Administration Flight Service Station, Morgantown Municipal Airport, Morgantown, W. Va.; Mr. Brooke E. Ettinger, Chief, Federal Aviation Administration Flight Service Station, Martinsburg Airport, Martinsburg, W. Va.:

My congratulations and commendation are extended to you and through you to per-

sonnel of your station on fiftieth anniversary of flight service stations. FSS activities are vital to the safe and efficient operation of our airport/airways system. Being a constant traveler in both commercial and private aircraft, I am keenly aware of your responsibilities and the outstanding performance and dedication of FSS personnel.

JENNINGS RANDOLPH,
U.S. Senator.

THE IMPORTANCE OF LAND REFORM IN SOUTH VIETNAM

Mr. MAGNUSON. Mr. President, this year, an event of fundamental significance has taken place: the National Assembly of South Vietnam has passed, and President Thieu has signed, what the New York Times has termed "the most ambitious and progressive non-Communist land reform program of the 20th century."

There can be no doubt that this action should have taken place long ago—I have been attempting to persuade the State Department on this point for many years. But there can also be no question that past failure to enact a land reform program in South Vietnam should not dissuade us from taking action to speed up implementation of the "Land to the Tiller Act," while land reform is possible and still important. The benefits of rapid implementation of land reform could be considerable, both in terms of American lives saved and in terms of the future stability of South Vietnam.

Land reform is not a simple issue; many people who would support it if they fully understood its significance are uncertain about many facets of the program. The questions that land reform poses can and should be answered, because understanding the importance of land reform is critical to understanding the nature of the forces at work in South Vietnam and in modernizing nations throughout the world.

My remarks today have this aim: to explain the significance of land reform in modernizing nations generally; to recapitulate briefly the history and prospects of land reform in South Vietnam particularly; to explain why land reform can and should be carried out there irrespective of the time table for American troop withdrawal; and to demonstrate that such reform is truly in the best and expressed iterests of the people of South Vietnam, regardless of the government that is in power there at the present time and regardless of the nature of any government that may come to power in the future.

My earnest hope is that Senators and their staffs will take the time to review these remarks, and to see how land reform in South Vietnam is compatible with each of the many views about the war in South Vietnam held by members of this body. This is not a partisan issue, nor an issue that will divide supporters and opponents of the President's war policies—something that a glance at the list of supporters will indicate immediately. At the very least, the Senate should ponder the importance of land reform so that conflicts like that in Vietnam can be avoided or minimized in the future.

One member of my staff suggested that this speech should be entitled, "What You Always Wanted To Know About Land Reform, But Were Afraid To Ask." I wish that I could profess such complete knowledge of this highly complex subject. I cannot, however, and what follows is only a very brief and simplified description of land reform and its importance. I shall be happy to refer Senators or their staffs to a more complete list of studies upon request. I must mention and thank Prof. Roy Prosterman from the University of Washington who has helped me and many other Senators understand the importance of land reform as a concept and as a means of providing political and economic stability for many countries in the world, including South Vietnam.

I. THE CONCEPT OF LAND REFORM: ITS SIGNIFICANCE IN MODERNIZING NATIONS GENERALLY

Whether we refer to the nations of the Third World as "modernizing," "emerging," or "developing," we can easily recognize that the types of change a nation experiences on the road from tradition to modernity are difficult ones that may cause tremendous political instability. The process of change involves the disruption of traditional institutions and relationships that provided continuity and stability in the past. It is during this transition phase from traditional institutions to more modern ones that a developing nation is most prone to violence, insurrection, and revolution.

In the urban sector of modernizing nations, important new political groups emerge during the process of modernization and make demands upon the government and the political system. These groups include a proletariat, industrialists, merchants and financiers, students, intellectuals and a military establishment. The competing demands and varying strengths of these urban groups frequently lead to urban unrest or rebellion, which in turn may lead to a succession in governments or ruling elites. Because most modernizing nations are predominantly rural, however, and because the impact of the central government on these rural areas is generally slight, such disruptions or rebellions rarely change the fundamental character of the nation. Governments can and do change without affecting the way of life that the great mass of the country's populace have followed for centuries. Because the countryside remains passive during the early stages of modernization, urban uprisings or unrest are seen as minor and unavoidable by most students of development.

It is in the countryside, not the city, that the future course of a modernizing nation is determined. Rural or agrarian disruption, unlike urban disruption, is avoidable—in a manner I will discuss shortly—but the relative dominance of the rural elements in a modernizing nation makes the impact of such disruption massive if it should occur.

The rural sector, like the urban sector, must undergo fundamental changes during modernization. Unlike the urban sector, however, the rural sector is characterized by only one traditional institution of major importance: the pattern of landownership. In almost all traditional societies, the bulk of the land is owned by a small class of wealthy landlords, while the vast majority of those who actually till the soil do not own the land they work. As the modernizing influence spreads to the countryside, and as the desire for change accompanies it, it is this traditional landlord-tenant relationship that becomes the focus of peasant unrest and revolutionary efforts.

The peasant has a simple goal: to gain control of the land he tills. This simple redistributive aim of the peasant becomes a powerful force as the burden of rents, taxes and labor, and the uncertainty of tenure with which the tenant lives, become intolerable.

It is this universal objective of the peasantry, combined with its great numbers, that makes the peasant a most volatile and critical element. The peasant's allegiance will belong to the party that gives him his land; as Mao Tse-tung writes:

> Who ever solves the land question will win the peasant.

The crucial question for a modernizing nation is whether the peasant is promised his land by the government or by those whose aim is to overthrow the government.

It is this battle for the allegiance of the rural population that distinguishes contemporary guerrilla warfare in modernizing nations from traditional warfare between two sovereign nations. Rather than being faced with a military threat from foreign troops, the governments of many modernizing nations find themselves facing what is primarily a political/military threat from native guerrillas. These guerrillas do not initially attack government troops—they are far too weak and far too few in number to dissipate their resources at this stage. Instead, the guerrillas seek to build a political base of support in the countryside, among the peasants who are increasingly dissatisfied with the central government and its failure to bring about agrarian reform. As one expert has written:

> Current guerrilla warfare is the logical and planned result of building upon a foundation of peasant discontent over land tenure and the society shaped by it.

This antigovernment guerrilla warfare takes the form of convincing the peasantry that the revolutionaries, rather than the government, can best respond to the peasant's needs. One of these needs is the need for protection, and the terrorist activities of the guerrillas during the early years of the conflict—including the assassination of village headmen and even some peasants—are designed to demonstrate that the government cannot or will not defend the peasantry, and that it is useless for the peasant to look to the government for protection or control.

A less publicized, but much more significant, element of antigovernment warfare is the promise of the guerrillas to turn the land over to the peasants. This has been a central theme of every major revolution or revolutionary attempt in the 20th century. The revolutionaries promise, and often carry out

even during the conflict, land reform on a large scale. In contrast to the pledge and performance of the revolutionaries, the central government frequently uses its force to continue the hated institution of tenancy and the domination of the despised landowning classes.

Communist revolutionaries, from Lenin to Mao Tse-tung and Fidel Castro, have recognized the ability of the peasantry to be mobilized as a force for revolution through the land tenure issue. Lenin also recognized the ability of the central government to command the peasant's loyalty through land reform, and so undermine the revolution—that is why, in prerevolution days, he despaired of the revolution's success in the face of the redistributive Stolypin Reforms. Had Stolypin not been assassinated in 1911, the course of the Russian Revolution might have been a very different one.

Mao and Castro made effective use of the land reform issue to build a powerful base of support in the countryside, allowing the revolutionaries to receive supplies, information, and hiding when necessary. In Mexico and Bolivia, however, where land reform had been carried out by non-Communist revolutions, the immunity of the peasantry to Communist revolutionary fervor has been recognized by Communist and non-Communist leaders alike. Che Guevara himself bemoaned the conservative orientation of the Bolivian peasants, and attributed that orientation directly to the land reforms that had been carried out.

Mexico and Bolivia are the exceptions, however. In many other nations, the revolutionary forces have not only promised land reform, but have carried it out in the areas within their control. Unfortunately for the peasantry, however, the aftermath of successful Communist revolutions has always been the brutal and bloody collectivization of peasant-held agricultural lands. This was true in the Soviet Union, in China, in Cuba, in North Korea, and in North Vietnam. This collectivization process not only deprives the peasants of the land they held briefly, but invariably results in wholesale slaughter of those who resist. Nonetheless, because "few peasants are historians," the appeal of the revolutionary slogans guarantees substantial peasant support for anti-government forces, particularly where the government has failed to undertake a competitive land reform program of its own.

Nowhere has the appeal of land reform promised by the antigovernment forces been greater than in South Vietnam, where landownership is blatantly inequitable. The Vietcong, and the Vietminh before them, have actually given land over to the peasants in those provinces where they have control. Not only does this drastically reduce whatever incentive the peasantry may have had to support the government, but it has made possible a high level of recruitment for the Vietcong. As one American military official has written, the Vietcong recruitment effort is simple: "The movement gave you your land; now give us your son."

A government faced with a revolutionary threat during the early stages of modernization is thus faced with a battle for the support and allegiance of the peasantry. The alternative to allowing the peasants to become revolutionaries is, in theory at least, a simple one: the government must carry out reforms that give the land to the peasants. By doing so, the government gives the peasants a stake in the defense of the country, and insures that they will be an antirevolutionary force. As Samuel P. Huntington, a distinguished student of developing nations and the past chairman of the Government Department at Harvard University has written:

> The peasantry . . . may be the bulwark of the status quo of the shock troops of revolution. Which role the peasant plays is determined by the extent to which the existing system meets his immediate economic and material needs as he sees them. These needs normally focus on land tenure and tenancy, taxes, and prices. Where conditions of land-ownership are equitable and provide a viable living for the peasant, revolution is unlikely. Where they are inequitable and where the peasant lives in poverty and suffering, revolution is likely, if not inevitable, unless the government takes prompt measures to remedy these conditions. No social group is more conservative than a landowning peasantry, and none is more revolutionary than a peasantry which owns too little land or pays too high a rental. The stability of government in modernizing countries is thus, in some measure, dependent upon its ability to promote reform in the countryside.

II. OBSTACLES TO GOVERNMENT-INITIATED LAND FORM

As Huntington has written, in the absence of land reform, the peasants may be the key to revolution—or with land reform—the key to stability. Given the crucial "swing role" of the peasant, land reform is thus the most important nonmilitary activity that a government of a modernizing nation can undertake. Why then is government-initiated land reform so rare a phenomenon in the 20th century?

The answer to this question is not that government leaders, as a group, have failed to perceive the importance of land reform—in fact, the opposite is true. But understanding the need for land reform and carrying it out are two separate issues. History is replete with examples of leaders who have tried valiantly to bring about land reform, but who have been unable to surmount the obstacles in the path of this reform and who have consequently been overthrown or deposed.

The reasons why governments fail to carry out land reform even when they understand its importance are both political and financial. In most traditional or transitional societies, the landowning classes are a powerful political force with substantial bases of support in the cabinet, the assembly, or the court. Land reform is impossible without the acquiescence—voluntary or compelled—of the landowning class. Compulsion is rarely possible, because of the landowning class' political strength, and "voluntary" acquiescence to land reform hinges on the government's ability to compensate the landlords for the lands to be distributed.

Persuasion of the landlords to accept land reform has thus been possible primarily in those nations—notably the oil-producing nations of the Middle East—where the government has sufficient revenues to make land reform attractive to the landowners and peasants alike. Sometimes the recognition that the alternative to land reform is revolution, and that revolution means the confiscation of land without compensation, has made landlords more receptive to the government's program. As Prime Minister Amini told the landowners of Iran:

> Divide your lands or face revolution—or die.

Land reform has traditionally foundered, therefore, when the government of the modernizing nation has been too weak to confiscate the land and too poor to pay for it. This has meant, unfortunately, that the two conditions under which land reform has been most successfully carried out are revolution and foreign occupation. Communist revolution has betrayed land reform in the end, as we have seen, although non-Communist revolutions such as those in Mexico and Bolivia have achieved more lasting results. Foreign occupation has produced results—in Japan, Korea, and Taiwan—for the simple reason that the occupying power is not committed to the landowning class and that an occupying power generally has the financial capability to carry out a land reform program of sweeping proportions.

Fortunately, however, a willingness to provide financial assistance can be just as effective as occupation, and a good deal less repugnant to both the foreign power and the country in which the reforms are to be carried out. The United States has recognized this periodically, as when we offered $60 million to the government of Peru to implement land reform there.

Land reform assistance from the United States is a route that can and should be followed in South Vietnam. It is now consistent with the aims of the South Vietnamese Government, the desire of the peasantry, the position of the landlords, and the goal of this Nation to end our military involvement in South Vietnam as quickly as possible. The reasons for this will be explored in the next section of my remarks.

In summary, land reform is the single most important nonmilitary activity of a developing nation faced with a revolutionary threat. The success of the land reform effort will determine whether or not the peasants become a force for political stability or a force for revolution—and the peasantry is generally the most crucial force in determining the future of a modernizing nation. Leaders of modernizing nations, as well as their revolutionary opponents, have generally recognized the importance of land reform, but few governments have been able to finance such reform through their own revenues, and fewer still have been able to induce the landowning classes to accept land reform in the absence of adequate compensation. Foreign assistance, whether through military occupation or financial aid, has been the single most effective agent for the implementation of land reform, short of revolution. Such land reform has been

instrumental in bringing political stability to otherwise unstable societies. Land reform made possible by foreign assistance or by non-Communist revolution has been a form of "preventive medicine" for revolution—cheaper by far than subsequent attempts to "cure" revolution by military means. In short, land reform determines, in Huntington's words, whether the peasants will be the bulwark of the status quo or the shock troops of revolution.

III. LAND REFORM IN SOUTH VIETNAM: PAST AND PRESENT

I recognize that for many people it is a long step between supporting land reform in principle and supporting land reform in South Vietnam, particularly land reform that is to be partially financed with American funds. I would be the first to admit that the major impact of land reform in South Vietnam would have been 10 years ago, if it had been carried out at that time, rather than today, when the conflict is advanced.

There remain many reasons why the United States should help implement such reform today, however. Later on in my remarks, I will point out that by so doing, we not only will not prolong our military involvement in South Vietnam, but instead may hasten our departure and reduce our casualties substantially. And the price of land reform in Vietnam, will be less than the price paid by the United States in two days of combat.

Circumstances are now such that the only remaining obstacle to successful land reform in South Vietnam is the potential lack of capital on the part of the government there, and all relevant parties—the peasantry, the landowners, the government of South Vietnam, and American AID officials—are prepared to implement a sound program, already passed into law, as funds are made available.

The peasants of South Vietnam have a proverb that is filled with meaning for the situation today:

He should own the land who rubs it each season between his hands.

This centuries' old feeling helps explain why the peasantry has always been the key element of the indigenous anti-government forces in South Vietnam—since historically the land has not been owned by those who till it, and since the government of South Vietnam in the past has made no effort to redress this wrong the peasants feel.

In two areas of Vietnam where the Vietcong are particularly strong—the Mekong Delta and the Central Lowlands—statistics demonstrate vividly the basis of peasant discontent. In its percentage of landlessness, the Mekong Delta is one of the five worst areas in the world: 73 percent of the peasants are substantially dependent on tenant farming. They pay, on the average, 34 percent of their income in rent to the landlord, who provides few or no inputs. They exist on the land without any assurance that they will be "allowed" to remain on the land the following year. If the crop should fail, the rent is still due. Virtually no disposable surplus remains of the crop, even in years of bumper harvests, after the landlord has been paid. Conditions in the Central Lowlands, where rents may exceed 50 percent of the crop, are no better. Because of these and similar conditions, the Vietnamese peasants in the Stanford Research Institute field survey named land ownership five times more often than physical security as a matter of chief concern to them.

Despite these incendiary conditions, until recently neither the Government of South Vietnam nor USAID officials have undertaken serious attempts to bring land reform to South Vietnam. The contrast with the Communists could not be more vivid. As Robert Sansom wrote:

The Americans offered the peasant a constitution; the Viet Cong offered him his land and with it, the right to survive.

The result, of course, has been that native guerrillas have always made up a huge percentage of the forces working for the overthrow of the South Vietnamese Government.

The Vietcong, like the Vietminh before them, have skillfully manipulated the peasantry by promising and carrying out land reform in those areas under VC control. The peasantry, in return, have supplied the bulk of the Vietcong fighting force, and have actively aided the Vietcong by providing and caching supplies. These same peasant guerrillas have been responsible for the laying of mines and boobytraps that have resulted in more than half of the American casualties since the Tet offensive. These casualties, of course, have been greatly increased because peasants hostile to the American and ARVN forces have failed to warn our troops as they entered areas in which the land mines and boobytraps were placed.

The Communists seized the initiative in the battle for the peasant's allegiance soon after World War II. The Vietminh carried out land reform on a massive basis at a time when they controlled 60 to 90 percent of South Vietnam. In the North, the Vietminh land reforms were cruelly and brutally reversed in the collectivization process that began after North Vietnam was constituted in 1954. In the south, however, the peasants in Vietnimh territory were allowed to hold on to their lands—until the Diem government of South Vietnam began to reassert control. As Diem's troops regained province after province from the Vietminh, the landlords were restored to power and the peasantry resubjugated to the yoke of tenancy that the Communists had lifted from them years earlier.

For this reason, the Communists have remained identified in the south as the agents of land reform, while the government has long been known as the authority responsible for keeping the landlords in power. With the government enforcing the rural status quo, and with the Communists promising—and delivering—land to the peasants, it is no great wonder that the peasants have harbored, aided, and fought on behalf of the Vietcong.

Although President Diem and President Eisenhower initially make token statements about the importance of land reform, both Saigon and the American command lapsed into the belief that this was a more or less traditional military struggle to be settled by traditional military means; the fallacy of this approach has been amply demonstrated by the elusiveness of that "light at the end of the tunnel." When "pacification" has meant landlords following triumphant American troops back into villages "liberated" from Vietcong control, it is no wonder that the pacification program has not realized our expectations for it.

The first real indication that Saigon had become aware of the importance of land reform did not come until January of 1968. At that time, President Thieu undertook a massive land reform effort to win back the support of the peasantry. Former French lands, held by Diem in the immediate past, were distributed to the peasants at an impressive rate. The following table demonstrates the dramatic progress made by this program, once it was aggressively undertaken:

Land distribution in South Vietnam: 1968–69

[Acres distributed]

January–June 1968	20,000
July–December 1968	40,000
January–August 1969	90,000
September–December 1969	90,000

Not only did Thieu distribute the former French lands, but he decreed that landlords should no longer be restored in areas that came under the control of ARVN forces. To insure that landlords whose properties had already been restored did not evict tenants in anticipation of future land reforms, Thieu also decreed an occupancy "freeze" to keep all tenants on the land he hoped—and still hopes—to give to them. Although there were some reversals in this program, by late 1969 it was obvious that Thieu intended to make good on his new-found pledge to give the lands to the peasantry and to win their support for the struggle against the Vietcong.

The most significant among these many significant changes of attitude in Saigon was the passage, in March of this year, of a sweeping land reform program. President Thieu personally rallied support in the National Assembly of South Vietnam, and the result, as I stated at the outset, was one of the most dramatic and thorough land reform programs of the twentieth century. This plan, if fully implemented, will put ownership of all land directly into the hands of the peasants tilling it, at no cost whatsoever to the peasant. The "land to the tiller" program can be substantially implemented within the coming year and in time for the next harvest, if financial support from the United States is forthcoming.

Because of the importance of this "land to the tiller" program, and because rapid implementation of the program will be the goal of all Senators interested in this program, I ask unanimous consent to insert at this point in the RECORD a description of the various titles of this act, prepared by Prof. Roy Prosterman of the University of Washington Law School. A review of these sections will allow the Members of the Senate to familiarize themselves with the sections of the "land to the tiller" program, and to see that it is a practical plan with promise of being highly effective.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

SECTION REVIEW

Articles 1 and 2 establish the operating principles, including an initial recognition of the priority, as beneficiaries, of "those people actually cultivating"; the intent to affect, without any limitation by way of retained acreage, "lands which are not directly cultivated by landowners"; the resolution to "(e)liminate tenancy" which, like the actual-cultivator and zero-retention principles, underlines the universal application of the program to both secure and insecure areas; the principle of "distribution free of charge" and that of "fair compensation" to landlords; and the inclusion of "communal ricelands" further underlining the universality of the distribution.

Article 3 confirms that not only "riceland" but also "secondary cropland" will be affected. The exclusions in Article 5 make it clear that this means substantially all land not used for industrial crops or orchards. Again, Article 3 underlines that both public and private lands are affected.

Article 4 takes care of some of the administrative problems experienced under the Diem law, notably by requiring that a transfer to be given effect must be *registered* (not just dated in the parties' own documentation) "prior to the promulgation date of this law." This becomes most important in conjunction with the exclusion from the law, in *Article 5*, of up to 5 hectares per family of "ancestral worship land." While there is some ambiguity, the intent of the drafters was pretty clearly to exclude from consideration any "ancestral worship" land not *registered as such* prior to March 26, 1970. Otherwise, a vast administrative snarl would open up as landlords pushed fraudulent claims for exemption of five hectares. (Faced with such a snarl under the 15 hectare "ancestor worship" lands exemption in Diem's Ordinance 57, which did not require a previously *registered* claim, the administrators ultimately decided that *all* claims would be allowed across-the-board, effectively increasing the 100 hectare retention limit to 115 hectares.)

The other significant exemptions of *Article 5* are lands "presently directly cultivated by landowners" (and under the occupancy-freeze decree, there should have been no change in who "presently" cultivates since April 1969), up to a maximum of 15 hectares, and religious-organization-owned lands, a minor concession economically but a major one in Thieu's effort to get the Vietnamese senate to approve the bill.

Article 6 sets the principle that changes in use will not suffice to invoke the Article 5 exemptions.

Articles 7 through 11 establish the principles of landlord compensation, basic provision to be for compensation at 2½ times the annual paddy yield, paid 20% in cash and 80% in bonds maturing over eight years and bearing 10% interest. (In the legislative process the bonds were deprived of an inflation-proofing feature, but given a higher interest rate.) Bonds are transferrable, but will probably be sharply discounted at least until significant U.S. funding support has been voted.

Article 12 introduces 3-hectare and 1-hectare limits on the amounts of land that can be received by families in the Delta and Central Lowlands, respectively. This is a reduction from 5 and 3 hectare limits in Thieu's original bill, and would pose a massive administrative problem if literally enforced (since administrators would then have to measure, and change the size and shape, of many presently occupied tracts). But the miserable state of the cadastral records allows indulging the present presumption—in the absence of a new, uniform and thorough cadastral survey, which must come years in the future, if at all—that *all* tracts are in fact less than the limits: To use such a simplifying presumption is well within the parameters for administering Vietnamese land laws, and use of the presumption or something like it is essential to the overriding purpose of the legislation. It appears that something close to this will in fact be done.

Article 13 underlines that the "present tiller" is number one in order of priority. There may be occasional departures from this at village level, but any departures that were sure to happen probably happened as soon as a given village was administratively reoccupied by daylight, and the guidelines from Saigon should be firm on the legislative standard. (Incidentally, it is the general consensus that there are very few soldiers who have been totally separated from their former lands. Most already occupy land through proxies in the immediate family, so that someone already is on the land to make their claim under the "present tiller" category.)

Article 14 cuts off all taxes on the recipients, including property tax during the first year. The purpose of this was to give the new owners the simplest possible message: you don't pay anything to anybody.

Article 15 tracks other nations' land-reform laws in providing for direct cultivation and a ban on transfer (for 15 years) by the new owners. *Article 16* confirms existing decrees in ending payment on former French and Ordinance 57 lands.

Articles 17 through 20 set a credible scale of penalties, including fines up to 200,000 piastres for landlords' efforts to interfere with implementation, and a special penalty of expropriation wholly without compensation for any landlord who makes a false claim of self-cultivation to attempt to invoke Article 5.

Article 21 provides broad power to regulate implementation by decree, and *Article 22* cancels all contrary provisions of law.

After concluding this analysis of the "Land to the Tiller" program, Professor Prosterman noted:

Considering the pressures against a viable bill which came from many quarters in the legislature (including both the landlord-related interests and politicians who feared the program would give too broad a base of popular support to President Thieu), the result is a remarkable tribute to Thieu's persistence and to the strength of his recognition of just how important this program can be to the survival of a non-communist Vietnamese government.

The bipartisan group in the Senate that has urged greater American assistance for this program shares a similar recognition of just how important this program can be. Flexibility will be provided both to our Government and to the South Vietnamese in settling upon an effective payment mechanism.

The details of the payment mechanism will be discussed at a later date. The aim of my remarks in this section has been to demonstrate that, whatever our views of the present government in Saigon, land reform is a worthwhile program that American assistance can make possible—and the price of that assistance is almost insignificant in comparison with the price of continued combat. Land reform is obviously in the best interests of the peasantry of South Vietnam, regardless of the fate of the South Vietnamese government. Land reform is also in the best interests of the United States, which seeks to end its involvement in South Vietnam and at the same time provide for some small measure of stability in that war-torn nation following the departure of American troops.

V. WILL LAND REFORM IN SOUTH VIETNAM PROLONG AMERICAN TROOP INVOLVEMENT?

It is entirely conceivable that someone who understands the importance of land reform in modernizing countries, and who recognizes the potential for land reform in South Vietnam, still might oppose American assistance to implement this plan. Such a position is commonly advanced by those who fear that land reform in South Vietnam will prolong American involvement there and delay the date when all American troops can be brought home safely.

Let me state flatly that if I believed land reform would in fact prolong or deepen our involvement in Vietnam, I would oppose it. I would like to see all of our men home as quickly as possible. The facts simply do not bear out the contention that land reform will cause any delay in American troop withdrawal, however, even under the terms of the most ambitious plans.

The land in South Vietnam can be given to the peasantry before next summer, and in fact should be carried out by this winter for maximum effectiveness. Admittedly, registration of the lands given to the peasants will take a bit longer, but neither this nor the transfer of the land to the peasants requires the presence of American troops. Not only would successful implementation of this plan not delay the departure of American troops, but it could cut our casualties from land mines and booby-traps, and even reduce dramatically the recruitment ability of the troops we have been fighting. The Vietcong obviously fear this, and they have undertaken a major campaign to try to persuade the expectant villagers that the land reform plan will not be carried out as promised.

There are several reasons why the land reform program will not delay our withdrawal.

First, American troops will not be needed in order to implement it—this can be performed by Saigon officials in concert with the USAID mission in Saigon.

Second, the upcoming harvest season is from December to March. It is during this period that the peasants, who now anticipate receiving their land from the government, should have their desires realized. American financial assistance on the order of $100 million—to be paid only as the program is implemented, and not all at once—can make possible successful land reform for the majority of peasants within areas of ARVN and American control.

Third, the result of these reforms should be a reduction in the Vietcong recruitment rate, and a corollary increase in the support and loyalty that ARVN troops can command in the countryside. Reform is essential if the Vietnamese are ever really to bear the burden of maintaining the independence and stability of their own nation.

Fourth, as I mentioned earlier, more than half our casualties since the spring of 1968 have come from such essentially local activities as the placement of mines and booby traps. Land reform, by

winning the support of the peasants, will cut down on peasant participation in such activities and increase ARVN and American knowledge of where traps have been laid; this will reduce the deaths and maimings that such traps have produced in tragic numbers.

For all of these reasons, then, those who want to increase dramatically the rate of American troop withdrawal—and I am one—will find that land reform is in concert with this objective. Those who favor a more gradual timetable will find that land reform improves the "Vietnamization" program and leads to reduced American casualties. Land reform, then, is one program that everyone can agree upon, if we discard the fears and misconceptions that surround this vital program.

VI. IS LAND REFORM "IMPERIALISTIC"?

It seems appropriate to close by looking at land reform from the perspective of American foreign policy as a whole. Our young people today, and many millions of their elders, are justly concerned about America "imposing" her will and her ideas about "democracy" on the peoples of the world. These critics have argued—none more ardently than the Senator from Arkansas (Mr. FULBRIGHT) in his book—that America should not seek to make over the rest of the world in her own image. From this general position, many specific criticisms of our actions in Vietnam may be drawn.

To this I can only respond that I am no great admirer of the Thieu-Ky government or its domestic policies—I have recently written President Thieu to express my strong objections to the "tiger cages" of Con Son Island and other violations of personal and political liberty. Yet land reform is not meant primarily to benefit Thieu and Ky—it is meant to benefit the peasantry of South Vietnam, the people on whose behalf we undertook this costly war.

These people make up 60 percent of the population of South Vietnam, and they want land reform. The landlords are willing to accept land reform under the conditions of the "land to the tiller" program. Even the enemies of the Government have promised land reform, although we have ample reason to believe the promise is a deceitful one.

In short, land reform is truly desired by the people of South Vietnam—there can be no doubt about that—and in helping to implement land reform, the United States is not "imposing" any unwanted social reform on the people of South Vietnam. To help a nation fulfill domestic policies demonstrably favored by virtually all elements of that nation's population is not imperialistic, but rather a responsible form of international assistance.

I will go one step further and suggest that helping implement land reform is the type of activity that the United States should engage in throughout the world. We cannot and should not be the "world's policeman," but we can and we must be a constructive force in the world community of nations. Every student of the developing nations knows that they will not develop without substantial assistance from the industrialized nations. The leaders of the developing nations recognize this, too. The issue America faces in the latter portion of this century is not whether we should have a role in international affairs, but rather what form that role should take.

In the past, the major "assistance" the United States has provided has come in the form of warfare and military aid. If the tragedy of Vietnam has taught us anything—and I pray that it has—it is that an over-reliance on military "solutions" is an inadequate substitute for aiding a nation in making the economic, social, and political reforms that will enable it to make the transition to modernity. This transition may not be peaceful—although we can always work and hope for peaceful change. But the transition may not take place at all, either peacefully or with localized disruption, if the United States and the other industrialized nations abdicate the role of cooperative assistance.

The United States must not react to the Vietnam morass by abandoning its efforts to be of assistance to the nations of the Third World. We cannot remain aloof from the problems, the deprivation, or the aspirations of these people. Our foreign policy must attempt to find nonmilitary means to assist these nations, preferably in concert with other members of the international community. By looking ahead, by dealing with the causes of violence rather than the symptoms, we can make our foreign policy more responsible. Land reform—not alone in South Vietnam, but in Latin America and elsewhere in the Third World—can be a useful, appropriate, relatively inexpensive, and nondestructive method of assisting the modernizing nations.

Finally, and most importantly, unless we broaden our conception of foreign policy to include land reform, we may risk more Vietnams in the years to come. The consequences of such continued ignorance and intransigence will therefore be the same as the consequences, both international and domestic, of this hateful war. Our Nation, and the nations of the world, cannot afford such a perilous future. The first step toward avoiding other Vietnams, belated as this step may be, is land reform in South Vietnam. I earnestly hope that the Senate will recognize this fact, and act swiftly to make the "land to the tiller" program a success.

Mr. PACKWOOD. Mr. President, I support the statement of the distinguished senior Senator from Washington (Mr. MAGNUSON) concerning land reform in South Vietnam.

I am a strong support of the South Vietnamese land of the tiller program. For the past decade and a half, a number of Americans, beginning with the late President Eisenhower, have spoken of the need for such a program.

The land of the tiller program is designed to transfer the ownership of approximately 2½ to 3 million acres of land to some 1 million tenant and refugee families. I am convinced that this will give the tenant farmers—who comprise one-third of the total population of South Vietnam—a lasting stake in their Government.

But this program must be speedily implemented. By giving the peasants a stake in the preservation of their country, rapid implementation of land reform offers the possibility of a significant shift in peasant allegiance toward the Central Government.

Mr. President, I ask unanimous consent to have printed in the RECORD an article I wrote last year for the Ripon Society Forum, outlining the urgent need for land reform not only in South Vietnam, but in other quarters of the world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAND REFORM: THE PEACEFUL REVOLUTION

Over the past 60 years, four great civil wars have erupted and claimed over a million lives apiece—in Mexico, beginning in 1910; in Russia, starting in 1917; in China, beginning in the 1920's; and in Vietnam starting in 1945—with an even more virulent phase beginning about 1960. Each of these was essentially a peasant revolt.

The Mexican Revolution was reformist but largely nonideological, and it created one of Latin America's most politically stable and economically progressive regimes. The other three uprisings occurred under Communist banners, and brought into play successively greater degrees of American involvement—culminating in the tragedy of Vietnam, which has thus far cost nearly 40,000 American lives and more than 100 billion American dollars.

But for all our knowledge about these peasant revolutions, we have not fully understood what has happened and why. And I fear that until we do, we are doomed to repeat our Vietnam experience again and again.

RURAL REVOLT

Let us first be sure that we understand the largely agrarian nature of these revolutions:

Mexico, in 1910, was two-thirds rural, with 95 percent of its rural population living as landless peons or as sharecroppers. The spark of revolution came after the Indians' last remaining lands had been seized by speculators, when a presidential candidate offered to give back the land. Zapata accepted the offer.

Russia, in 1917, was 80 percent rural. Roughly three out of every five rural families were landless. And, though Karl Marx had written in the *Communist Manifesto* of the "idiocy of rural life," one of Lenin's two great decrees in the first week of the October Revolution vested immediate ownership of all land in those who actually tilled it. Without the peasants' support of the revolution the ensuing civil war would have had a different result.

China, beginning in 1927, was the scene of Mao's explicit break with the Marxist concept of revolution based on the urban industrial proletariat, and of his effort to fashion a peasant revolt. With an 80 percent rural population, three-quarters of which was landless, China was ripe for revolution. Chiang Kai-shek's efforts to fight Mao's land reform with military hardware lost a nation of half a billion people in two decades.

Vietnam, from 1945 on, saw an application of much the same tactics that had succeeded in China. In the Viet Minh stage, the promise of land-to-the-tiller was effectively tied to a nationalist revolution. Here again, 80 percent of the population was rural, and the bulk of that segment was substantially landless (tenant farming accounted for around 50 percent in the central and northern reaches, and for nearly 75 percent in the populous Mekong Delta). The prognosis for revolution was again excellent.

A DOZEN VIETNAMS

Today there are dozens of Mexicos and Russias and Chinas and Vietnams in the

making. Three-fifths of the total population of the developing nations is rural, and a staggering percentage of these people are landless laborers or tenant farmers. In places like Vietnam, these farmers may pay one-third to one-half of their tiny crop in rent every year to an absentee landlord. In return, they are granted no security or tenure whatever. Or, if their situation is like that of laborers on Latin American plantations, they may make $15.00 a month to feed and clothe a whole family.

These discontented peasants are searching for a better life—and wherever the Communists offer it, they rush to the Communist banner.

A paradox arises, however, when one considers further our four great revolutions. The Mexicans kept their promise; they redistributed half the crop land in the country, so that 75 percent of the rural families now own their own land. The pleased peasants not only have refrained from overthrowing a Mexican government for half a century, but they have also more than tripled their agricultural production since the 1930's; and their higher incomes have fueled the growth of urban industry to supply consumer goods and agricultural inputs. A similar promise was made and kept in Bolivia—with less bloodshed—and made and kept without any revolution at all in Japan, Taiwan (ten years too late), South Korea, and Iran. Such a promise has recently been made in Peru.

UNKEPT PROMISES

But the Russians, Chinese, and North Vietnamese didn't keep their promises; once the revolution had succeeded, they launched into a second stage of "land reform," which involved the collectivization of holdings under the state as a kind of super-landlord. The Russian "land reform" killed or deported millions; the Chinese killed 800,000 or more; the North Vietnamese, 50,000 to 100,000. This was the "land reform" path also followed by the Cubans.

And the peasants' unhappiness with the arrangements in these countries could be detected in their drastically reduced productivity. Russia took until 1953 to return to its 1928 (pre-collectivization) level of agricultural production. China is about even now. Taiwan, by contrast, has doubled its rice production since the land-to-the-family-farmer reform has begun. Cuba is still behind the pre-Castro level.

Thus, we have a rather strange set of facts:

1. Mexico, Japan and other countries have carried out massive land reform basically on the family-farm pattern and have reaped the twin benefits of long-term political stability and a sustained increase in production.

2. Russia, North Vietnam, and other countries that have ruthlessly collectivized the land have secured a consistently miserable production record from their sullen peasants.

3. Nonetheless, those who call themselves Communists have been able in much of the developing world—including Vietnam and Latin America—to hold themselves out as the genuine agrarian reformers.

AN EFFECTIVE ALTERNATIVE

The problem, it seems to me, is that the United States has not effectively offered an alternative; and until we do, we will be faced with a continuous series of Vietnam-type crises built on peasant unrest around the world.

Our alternative is land reform—broad land reform, with fair compensation to the landowners, that gives the great mass of peasants a stake in their society and an incentive to produce. Land reform eradicates the key appeal that has been used in starting "wars of national liberation"; and it can "revolution-proof" the developing world against such enticements, as it has most notably done for the Bolivian peasant against the call of Che Guevara and for the South Korean peasant against the efforts of the North to start a behind-the-lines "people's war."

There is no sounder, higher-priority use of our foreign aid dollar than in the reform of land tenure. We must think in terms of four related ideas in order to use that land reform dollar most effectively and with maximum leverage:

1. *Information.* We are woefully short of detailed data on the land-reform problem around the world. Too many political officers in overseas embassies send back their assessments of rural unrest based on what they have heard at English-speaking, urban cocktail parties—instead of on what they have observed while bounding along back roads in a jeep.

In Latin America, a preliminary assessment based on non-government scholarship indicates that countries on the "critical list," as prime candidates for peasant-based revolutions over the next decade or so, include Brazil, Ecuador, Paraguay, and most of Central America. In Asia, the list includes the Philippines, Indochina, India, Pakistan, and Nepal. Systematic gathering of comparative data on tenancy, agricultural labor, land values, credit needs, and related matters in these and other developing countries should be initiated at once.

2. *Compensation.* In most nations, politically viable, non-revolutionary land reform programs must first assuage the landlords' doubts that the bonds they receive for their property will ever be paid off. To resolve these doubts, a central element in our land-reform strategy should be the creation of a multilateral agency to act as guarantor of land reform bonds issued by individual countries. Under such a plan, the U.S. could pledge one dollar to the capital of such an agency for every dollar (or two dollars) put up by other developed countries and for corresponding, though lesser, amounts put up by the developing nation.

E.G., NORTHEAST BRAZIL.

Brazil, for example, badly needs a land reform program in its teeming Northeast, where 70 percent of the 30 million population is rural and 70 percent of that element is landless. According to a preliminary estimate, it would cost about $1 billion to carry out such a program over a period of seven to ten years. If the Brazilians wanted help—and most of the nations in Brazil's position are desperate to find a way out consistent with not bringing their governments crashing down—they would enter into an agreement with the insuring fund. For an approved plan (one giving the bulk of its benefits to the landless tenant and plantation worker), the fund would guarantee the principal and interest of the land reform bonds to be issued.

The chief source of bond retirement would be a sinking fund established under agreed-upon rules, into which the peasants would make payments for their land over a period of perhaps 15 years. Meanwhile, the original landowners would know that the international community stood behind the bonds (which, however, they would be allowed and encouraged to transform into needed non-inflationary capital goods from the start).

Very preliminary calculations suggest that $1 billion of land reform in Brazil could be bought at a net outlay by the U.S.—through the international fund—of only $100 to $200 million. For the above-named "critical" countries as a group, preliminary data suggest that land reform with a gross cost of some $6 to $8 billion would likely "revolution-proof" most of the developing world for the next couple of decades, and that the net cost to the U.S.—through the fund—would probably be less than $2 billion, or what it costs us to fight in Vietnam for a month.

3. *Credit.* The fund should also be a vehicle for credit and supporting services to the smallest farmers. Too much U.S. agriculture credit assistance—including that for the "miracle" rice and wheat programs—appears to be going to the solid, traditionally creditworthy farmer, and not to be benefiting the masses of rural poor in any way. (Even if more rice is produced, they still can't afford to buy it.) Credit might be generated partly by fund guarantees to commercial banks, and partly by direct establishment of a revolving fund to be replenished by peasant repayments. For the "critical" countries, this package of supporting services might come to a further $3 to $4 billion with a net U.S. outlay of less than $1 billion.

4. *Bilateral aid.* In a few spots, notably Vietnam, our support for land reform will have to be quick and bilateral. The failure to carry out land reform sooner is perhaps the greatest tragedy of the whole Vietnam involvement. Fortunately, the Vietnamese at least seem to be moving strongly on a radically simplified, sweeping land reform program, with a total cost of $400 to $500 million (no peasant repayment, since we are competing with a purportedly "free" Viet Cong program). The U.S. should bear as much of this as needed—the whole amount is a week's cost of the war—to keep the program moving *fast*.

AVOIDING NEW TRAGEDIES

In certain proximate countries, like Panama or the Dominican Republic, a few tens of millions for land reform now may help avoid tragedy in the 1970's; and strategic considerations may suggest immediate bilateral assistance.

In summary, with the right priorities and with imaginative programs, and at a total cost of perhaps $3 billion spread over a decade or more, the U.S. can become the "champion" of land reform; help bring about markedly increased political stability in the developing world; and help motivate a marked increase in agricultural production.

For a tiny fraction of what it has cost us in Vietnam, the United States can buy insurance against future Vietnams, and can bring a higher standard of living and a more meaningful existence to millions of people whose lives are now more reminiscent of the Middle Ages than the 20th Century.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that there be printed in the RECORD a statement prepared by the Senator from Maine (Mr. MUSKIE) and the article entitled, "Real Land Reform Comes to Vietnam," as requested by Senator MUSKIE.

There being no objection, the Statement and article were ordered to be printed in the RECORD, as follows:

REAL LAND REFORM COMES TO VIETNAM

Mr. MUSKIE. Mr. President, during the past year I have spoken several times on the great importance of United States support for a comprehensive program of land reform in South Vietnam. I join today with Senators Magnuson and Packwood in reemphasizing the broad implications which such a program can have for termination of the conflict in Vietnam.

It is clear that whatever policy the United States pursues in disengaging from this war, an increasing burden and responsibility must fall upon the South Vietnamese themselves. It is also clear that this responsibility must include broadening the base of support for the central government, whoever may be at the head of that government.

The fighting and killing in Vietnam can never be brought to an end without a political settlement of some sort. That settlement must necessarily be based on winning the support of the Vietnamese peasant, who today has little stake in the future of his country.

A successful land reform program offers a unique possibility for winning this support. It could provide the incentive neces-

sary to stabilize the political situation in South Vietnam. As Senator Magnuson and Senator Packwood have pointed out in their remarks, the promise of land tenure has been a key weapon in revolutionary movements during this century. Vietnam is no exception.

In the August 9 edition of the Baltimore Sun there was an article on land reform by Professor Roy Prosterman, who has been very influential in the development of the land to the Tiller Bill signed into law in March, 1970, by President Thieu. Professor Prosterman has provided a thoughtful and concise analysis of the historical background leading up to the present program of land reform, which President Thieu initiated. In commenting on the significance of this program and the failure of the Diem regime to carry out land reform in the 1950's, Professor Prosterman states that, "indeed, if the Communists had been deprived of their chief selling point in the South Vietnamese countryside through effective land reform, it is probably true that there never would have been a war."

Turning to the possible impact of a successful land reform effort, Professor Prosterman further states that for the first time, Saigon has the opportunity to "come to grips with the focal issue in the countryside, the one that has supplied the chief Viet Cong appeal to the peasantry."

I urge my colleagues to consider the arguments presented in this article. Land reform in Vietnam is long overdue. The United States must provide its full encouragement and support for implementation of this program as rapidly as possible, if the impact of land reform is to be fully realized.

REAL LAND REFORM COMES TO VIETNAM

(By Roy L. Prosterman)

An editorial in a major daily in late March called the new South Vietnamese land reform law "the most important news to come out of Vietnam since the end of the Japanese occupation." They may not have exaggerated.

Lack of landownership among the peasantry formed a basic part of the Communist appeal in Russia, China and Cuba, so it should be no surprise that it has performed a parallel function in Vietnam in the hands both of the Viet Minh and the Viet Cong.

Tenant farming is the biggest occupation in South Vietnam, with close to a million Vietnamese families, or about 6 million people in a population of 17 million, dependent on it. The Mekong Delta, where about 70 per cent of the farm families are primarily dependent on farming tenanted land, has one of the highest proportions of tenant farmers in the world. The typical delta family lives on 3½ acres, pays a third of its crop to the landlord (who supplies no inputs of any description), rarely has any surplus beyond its immediate nutritional needs, is evictable at will and is held for the rent even in the case of crop failure. In Central Vietnam, the typical tract is 2 acres and the rent averages half the crop.

For years the Viet Minh and then the Viet Cong were allowed to hold themselves out to these people as land reformers, who would drive away their landlords and give them their land, while the successive Saigon governments were identified as pro-landlord.

DIEM'S DISASTER

In retrospect, the most disastrous of all Ngo Dinh Diem's policies in the late 1950's was probably that which promoted return to the landlords of the extensive lands purportedly distributed by the Viet Minh to the peasantry in the 1945–1954 period and reassertion of the landlords' traditional rights over their former tenants. The promotion of this worse-than-useless program—with the co-operation of American advisers who were unwilling to push for the major land reform that our top policy-makers wanted—was surely one of the pre-eminent disasters of postwar American foreign aid.

Diem's failure to act was doubly tragic because the Communists in the North were carrying out their usual second-stage land reform—collectivization, as in Russia, China and later Cuba—which defeated most of the expectations that had led peasants to support the revolution. As elsewhere, collectivization was violent, unpopular and disastrous for production.

Diem might have looked, as an alternative for the South, toward any of the massive democratic land reforms that had already been carried out in the Twentieth Century in Mexico, Bolivia, Japan, South Korea and Taiwan. But Diem failed to profit by example. He stood with the landlords and we stood with Diem and as we moved into the 1960's the revived Communist movement was once more offering land to a population whose entire security and livelihood were bound up with their relation to the soil.

Little wonder that the common recruiting appeal in wide areas where Viet Cong land reform was in effect was "the movement has given you land, give us your son," as it was put by Marine Lt. Col. William Corson in "The Betrayal."

Or that the late Bernard Fall called land reform "as essential to success as ammunition for howitzers—in fact, more so."

Or that Douglas Pike, probably our leading authority on the Viet Cong, describes their indoctrination system as "based on vested interests in land."

Or that field interviewers in a 1967 Stanford Research Institute study found that Vietnamese tenant farmers named landownership five times as frequently as physical security as a thing of crucial concern to them.

Or that over half of those bearing arms against us in Vietnam, main force and guerrilla units taken together, are still today native South Vietnamese.

Or that over half of all American casualties in the last two years have been due to such essentially local guerrilla activities as planting mines and booby traps—the villagers then standing silent as we walk into them.

Or that virtually no main force activities could take place without the essential advance work done by the local villagers in carrying in and burying supplies and ammunition at intervals along the line of march toward the military objective.

Indeed, if the Communists had been deprived of their chief selling point in the South Vietnamese countryside through effective land reform, it is probably true that there never would have been a war. President Nguyen Van Thieu himself made substantially that observation in a speech given January 18, 1968.

The failure from 1955 well into 1968 to come to grips with this problem is so complete and so numbing that one must mentally prepare to receive the pleasant shock of the facts from recent months.

Now, at long last, the South Vietnamese government, under strong pressure from President Thieu and with newly firm American support, is preparing to offer the peasants as much as the Viet Cong have seemed to offer. Much more, in fact, for the Saigon land reform program is not meant to be followed by collectivization. Since coming to grips with the fundamental need for land reform in early 1968, President Thieu has successfully pushed through five critical land reform measures:

FIVE MEASURES

1. At the end of 1968, he ended the incredible, self-defeating practice by which landlords had been returning to reassert their "rights" to land, often riding into newly secured villages in South Vietnamese Army jeeps.

2. In April, 1969, he put a freeze on all rights to land occupancy, pending passage of new land reform legislation. Preliminary field observations have indicated this freeze to be well-publicized and quite effective.

3. In June, 1969, he began an accelerated distribution of government-owned lands free of charge. Since then, over 300,000 acres have been distributed to the benefit of nearly 100,000 former tenant-farmer families.

4. In July, 1969, he presented the land-to-the-tiller bill to the National Assembly. After a desperate fight against landlord interests and political opponents, the bill was passed in March. This measure, which the New York *Times* has editorially called "probably the most ambitious and progressive non-Communist land reform of the Twentieth Century," is the keystone of Mr. Thieu's efforts. It embodies a drastically simplified program which will distribute virtually all tenanted land in the country to the present tillers free of charge and with fair payment by the government to the landlords. Ownership of over half the cultivated land in the country will change hands and a million tenant-farmer families—a third of the nation's population—will become full owners.

The total price tag of about $400 million is equivalent to around five days' cost of the war. U.S. support—in the form of productive commodities to generate piasters—for somewhere between a quarter and a half this amount will be asked from Congress in the coming months and it is to my mind undoubtedly the biggest bargain of the Vietnam War; preliminary measures have already been introduced in both houses with extremely broad bipartisan support.

5. Last June, he further simplified the program's administration by decreeing an immediate end to all rents without formalities, such as Western-style land titles.

A number of factors have combined with the program's enormous simplicity and the major results already achieved to give even the most jaded observers real hope that this package of measures will be largely effective by the next main harvest from December through February.

EXCELLENT PROSPECTS

There are excellent prospects that the great majority of South Vietnam's million tenant-farmer families will be free of rents they would otherwise pay and will regard themselves as definitely on the road to full ownership under policies sponsored by Saigon. Those living in Viet Cong-controlled areas will consider themselves definitely freed from the prospect that Saigon's control means the landlords' return and confirmed in possession of the land they are tilling.

If Saigon can carry it off, what consequences can be expected? There would appear to be several, each of potentially far-reaching importance:

For the first time, Saigon will have successfully come to grips with the focal issue in the countryside, the one that has supplied the chief Viet Cong appeal to the peasantry. A significant spectrum shift in allegiance among Vietnam's 6 million tenant-farmer people can be expected in Saigon's direction.

This shift will have not only a political dimension, but a significant military dimension. Notably, tenant farmers and sons of tenant-farmers, who are the largest rank-and-file group in the South Vietnamese Army and in the local militia, are more likely to be motivated to fight if they have a stake in their society, which is probably of more fundamental importance to the success of "Vietnamization" than whether the recruit gets an M–16 to replace his M–1. Moreover, peasants who regard Saigon as the source of their land-ownership are more likely to take the risk of supplying intelligence. At the same time, the root of peasant motivation to support the Viet Cong in a variety of ways will be significantly weakened.

MIGHT HELP PARIS TALKS

The prospect of such a massive, grassroots shift in peasant support is one of the few things that can be visualized which might supply enough bargaining leverage to get the Paris talks moving again. Indeed, former Paris negotiator Cyrus Vance suggested last fall that the offer to hold back on implementation of the land reform in historically Viet Cong-controlled areas could become a powerful bargaining lever, once the land-to-the-tiller bill had been passed.

Land reform, at last, and tragically late, appears to have come to Vietnam. But even at this date it is, without exaggeration, one of the major events of the war.

ORDER FOR ADJOURNMENT UNTIL 10 A.M. ON MONDAY, AUGUST 24, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, instead of coming in at 11 o'clock on Monday next, the Senate, when it completes its business tonight, stand in adjournment until 10 o'clock on Monday morning next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR PACKWOOD ON MONDAY NEXT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that immediately after the disposition of the Journal and the unobjected to items on the Calendar on Monday next, the distinguished Senator from Oregon (Mr. PACKWOOD) be recognized for not to exceed 1 hour. He in turn will be followed by the Senator from Arkansas (Mr. FULBRIGHT).

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS ON MONDAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that on Monday next, at the conclusion of the remarks of the Senator from Arkansas (Mr. FULBRIGHT), there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WORKS APPROPRIATIONS, 1971

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be laid aside temporarily and that the Senate proceed to the consideration of Calendar No. 1129, H.R. 18127 and that it be laid down and made the pending business.

The PRESIDING OFFICER (Mr. SPONG). The bill will be stated by title.

The legislative clerk read as follows:

H.R. 18127, an act making appropriations for public works for water, pollution control, and power development, including the Corps of Engineers—Civil, the Panama Canal, the Federal Water Quality Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1971, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ELLENDER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ELLENDER. Mr. President, before proceeding with the pending measure, I would like to make the usual unanimous-consent request that the committee amendments be considered and agreed to en bloc, and that the bill as thus amended be regarded as original text for the purpose of amendment, provided that no point of order shall be considered to have been waived by reason thereof.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The amendments agreed to en bloc are as follows:

On page 2, line 18, after the word "vehicles", strike out "$1,965,500,000" and insert "$1,900,300,000".

On page 4, line 6, after the word "aircraft", strike out "$360,100,000" and insert "$336,100,000".

On page 5, line 25, after the word "construction", strike out "$38,559,000" and insert "$41,616,000".

On page 6, line 17, after the word "construction", strike out "$825,689,000" and insert "$871,808,000".

On page 8, line 5, after "(33 U.S.C. 702a, 702g–1)", strike out "$79,578,000" and insert "$91,004,000".

On page 9, line 4, after the word "navigation", strike out "$290,000,000" and insert "$292,600,000".

On page 9, line 18, after the word "investigations", strike out "$25,350,000" and insert "$25,800,000".

On page 10, line 9, after the word "exceed", strike out "$178,500,000" and insert "$181,000,000".

On page 11, line 19, after the word "use", strike out "$43,800,000" and insert "$44,129,000".

On page 12, line 1, after the word "vehicles", insert "of which fourteen are"; in line 2, after the word "only", strike out "of which" and insert "including"; and, in line 7, after the word "assets", strike out "$1,500,000" and insert "$1,850,000".

On page 13, at the beginning of line 7, strike out "twenty-three" and insert "twenty-five"; and, at the beginning of line 8, strike out "twenty-six" and insert "twenty-four".

On page 14, line 8, after the word "Act", strike out "$98,018,000" and insert "$98,618,000".

On page 14, line 22, after the word "Act", insert a colon and *"Provided further*, That funds appropriated for fiscal year 1970 and allocated to States shall not be reallotted in accordance with section 8(c) of the Federal Water Pollution Control Act, as amended, until June 30, 1971."

On page 15, line 15, after the word "expended", strike out "$19,000,000" and insert "$19,100,000".

On page 16, line 7, after the word "expended", strike out "$181,810,000" and insert "$187,931,000"; on page 17, line 9, after the word "Oregon", insert a comma and "and $5,000 for the Cascade Irrigation District, Ellenberg, Washington"; and, in line 13, after the word "Interior", insert a colon and "Provided further, That of the amount herein appropriated not to exceed $140,000 may be used for archeological salvage of the cargo of the steamboat Bertrand in the Missouri River Basin."

On page 17, line 21, after the word "expended", strike out "$21,260,000" and insert "$22,675,000"; in line 22, after the word "which", strike out "$20,455,000" and insert "$21,530,000"; and in line 24, after the word "and", strike out "$805,000" and insert "$1,145,000".

On page 18, line 15, after the word "expended", strike out "$7,698,000" and insert "$6,498,000".

On page 24, at the beginning of line 24, strike out "$90,500,000" and insert "$91,600,000".

On page 27, line 7, after the word "transmission", strike out "$750,000" and insert "$1,000,000".

On page 30, line 1, after the word "vehicles", strike out "$54,180,000" and insert "$56,180,000".

On page 30, line 9, after the word "vehicles", strike out "$4,550,000" and insert "$5,550,000"; and, in line 14, after the word "and", strike out "$3,000,000" and insert "$4,000,000".

Mr. ELLENDER. Mr. President, we have before us a very, very important bill. It affects many departments in our Government. As I shall point out later, the Appropriations Subcommittee for Public Works held hearings on the programs funded in this bill from March 4 through June 30. Of course, we did not sit every day, for, as acting chairman of the Appropriations Committee, it was my privilege to hold hearings for defense as well as the civil functions of the Corps of Engineers, the Atomic Energy Commission, the water pollution control agency, and other activities. I did the best I could in trying to handle both sets of hearings—one in the afternoon and the other in the morning.

The hearings, as I shall point out later, were so voluminous that we did not put copies of them on the tops of Senators' desks, but they are available for all Senators.

I would simply like to say at the outset that the Nation is very fortunate that past sessions of the Congress provided the funds necessary for the planning and construction of many navigation projects that are of great importance to our economy today.

I can well remember over 20 years ago when we started to reconstruct or rebuild the various locks along the Ohio River in order to provide navigation from Pittsburgh clear down to the gulf. I would say that over half of the projects required to modernize that great navigable waterway were put in without budget estimates. The amount of traffic on that river had quadrupled over the estimates of the engineers. In other words, the traffic is four times more than the amount that the engineers said would justify construction of the waterway.

The same goes for the Intercoastal Canal, which, as we all know, starts on the Mexican border and goes clear up to Trenton, N.J. In that case, barge transportation on the gulf intercoastal waterway has increased over 20 times what

the engineers said would justify the project.

We have the Arkansas River, with navigation authorized to Tulsa, Okla.; and that program will be operational to Tulsa this December. In that case we started many of the projects without budget estimates.

I wonder what would have happened to our transportation system in this country had we not done that, in view of the fact that many of our railroads are breaking down, and those that are operating are experiencing a shortage of rolling stock.

Rivers like the Illinois and the Missouri with their tributaries, the Arkansas, the Ohio, now form an inland water transportation system comprising some 23,000 miles which is unsurpassed for the carrying of bulk goods.

I can well remember the opposition by the railroads based on the belief that it would interfere with their own business. There is no doubt in my own mind that transportation by water is much lower in cost than transportation by railroad. But today, because of the fact that we constructed many locks along the Ohio River, the pools of water forming behind those locks attracted industry to the point where in the last 22 years in excess of $25 billion of new business was established along the Ohio River. Finished goods have been produced from raw materials, and this increased production has enured to the benefit of the railroads.

So that it strikes me the Congress acted wisely in past years in providing the funds necessary to construct those great projects.

Take the Intercoastal Canal. That has been in the works for many, many years. We have a program in the bill to perfect and complete that great intercoastal waterway. I refer to the Florida Barge Canal, which, in my opinion, is a must. We have been going along with that project now for about 12 years. We have spent over $50 million on that project so far including funds to provide several locks there.

It is over one-third complete. I understand that an amendment is going to be offered to delay the obligation of additional funds because it may affect the ecology of that section of our country. I am very hopeful that Senators will be present to listen to the arguments on both sides, and will vote against the elimination of funds to complete that great project.

Mr. President, we have under consideration H.R. 18127, a bill making appropriations for public works for water, pollution control, and power development, including the Corps of Engineers—Civil, the Panama Canal, the Federal Water Quality Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1971, and for other purposes.

Mr. President, the hearings on the bill started on March 4 and continued through June 30. The subcommittee held 42 sessions for the purpose of taking testimony, and two executive sessions for the purpose of marking up the bill. The subcommittee heard 914 witnesses, which included representatives of various organizations and local communities.

The hearings comprise eight volumes. The volumes are so voluminous we could not put them on each Senator's desk, so we have stacked them under each Senator's desk and they are there for reference. The hearings contain 7,981 pages of testimony. I hope Senators will refer to them.

In recent years, there has developed a greater public awareness of the deteriorating quality of our environment. Although not identified by the term "environmental considerations" the water resources program has made and is continuing to make important contributions to the quality of our environment.

Following the enactment of the National Environmental Policy Act of 1969, the construction agencies have formalized and strengthened their planning staffs to insure greater emphasis on the impact of their projects on the ecology and the environment. For instance, the Corps of Engineers has established a new Institute of Water Resources to develop environmental guidelines and evaluation criteria for use of field planners. The Bureau of Reclamation has named an ecologist as an assistant to the Commissioner with primary responsibility as an adviser on environmental and ecological affairs. Even the Tennessee Valley Authority has created an Office of Health and Environmental Science to better supervise its expanded environmental quality program.

The cost of pollution control measures is staggering, not only in dollars but in the changes we are going to have to make in our daily routine. I have been told many times that the American people are willing to pay the cost. I hope they are. Practically every product we purchase contributes in some manner to air and water pollution or to the growing problem of solid waste disposal. The costs of antipollution measures will, of necessity, be reflected in the products we purchase. If we then ask for increased wages to meet these increased costs, obviously, we are not willing to pay the costs for improving our environment.

One of the pressing problems affecting the quality of our lakes and rivers is the phosphate and nitrate content of household detergents. Pending development of new formulas which are acceptable to the housewives and the Federal Water Quality Administration, the ladies can make their contribution by using the detergents which contain the least amounts of these nutrients. The clothes may not be quite as white or bright—but that may be the price we must pay for improving the quality of our environment. If the manufacturers of the detergents which have the highest concentrations of nutrients find that their sales are dropping off, undoubtedly they will redouble their research efforts toward the development of an acceptable product.

Are we willing to purchase our soft drinks in returnable bottles? I note that even in the Senate Restaurant on Saturdays use is made of plastic dishes and plastic utensils which contribute to our solid waste disposal problems. During the week days they use china, but on Saturdays, for some reason, they use these plastics; I do not know why. But that adds to our trouble. There are undoubtedly hundreds of similar conveniences and labor-saving practices which we accept today that must be changed if we are willing to pay the price of improving our environment.

POWER CRISIS

The demands of our society for increased power are continuing to grow. Either we must forego some of the comforts we now enjoy, such as air conditioning, elevator service, improvement of street lighting to reduce crime in the streets, or permit the construction of additional powerplants. In many sections of the country which are now facing brownouts or blackouts, efforts of the public utilities to provide new facilities are being thwarted by citizen groups opposing the projects: First, fossil fuel plants are opposed from the standpoint of air and thermal pollution; second, nuclear plants are opposed from the standpoint of radiation and thermal pollution; and, third, hydro projects are opposed from the standpoint of their effect on the environment and ecology. Fortunately, many political subdivisions are now giving more consideration than ever before to the siting of powerplants so as to reduce to the minimum their impact on the surrounding environment and ecology.

Mr. Ellis L. Armstrong, Commissioner of the Bureau of Reclamation, in an address before the National Society of Professional Engineers in Salt Lake City, on August 13, 1970, stated the problem this way:

> Concerned conservationists come out of a smokefilled room to warn of air pollution. Concerned citizens who look upon the marvel of plentiful light and power as a God-given right, object to a thermal plant which may pollute air and water or a dam to supply power and water which will alter the natural regime of a river or create a lake in a canyon. But they still expect their lights to go on when they turn a switch and they expect pure clean water to flow from their taps.

BILL AS REPORTED

The bill as reported provides new obligational authority of $5,258,195,000, which is $5,238,000 below the budget and $21,387,000 above the amount approved by the House.

TITLE I—ATOMIC ENERGY COMMISSION

Mr. President, this is only the second year for which I have had the responsibility of handling the AEC program. Frankly, it is very complex and difficult to fully grasp the problems posed in such a short time. I have devoted a great deal of time to this program and intend to continue this effort until I have satisfied myself that I have a far better understanding of the various programs than I now have.

For operating expenses the committee has approved a program of $2,147,027,000, of which $1,919,070,000 is the appropriation recommended in the bill. The balance of $227,957,000 is derived from sales and services rendered which, under the law, is applied to operating

expenses, thereby reducing the appropriation required to carry out the approved program.

In other words, under the law, when any sales are made by the Atomic Energy Commission of its products, they simply account to Congress for the amount sold and deduct that from their entire need in determining the amount of new appropriation required to operate the Commission. The receipts do not have to go to the Treasury. The AEC is one of the few commissions that have that privilege.

The principal programs under operating expenses are:

RAW MATERIALS

The bill provides $18,016,000 for completion of the procurement program in uranium concentrates and for the continuation of uranium resource production evaluation activities.

SPECIAL NUCLEAR MATERIALS PROGRAM

The committee recommends $343,518,000. Under this program uranium concentrates are processed into feed materials from which plutonium and other products are produced in the reactors at Richland, Wash., and Savannah, Ga., and the isotope uranium-235 is extracted in plants at Oak Ridge, Tenn.; Paducah, Ky.; and Portsmouth, Ohio. The cost of enrichment service of feed supplied the private sector is fully recovered by the AEC. Now, this is one of the programs which I intend to explore further. I want to reconcile the appropriation of $343,518,000 with revenues of $186 million. In view of the fact that we have all of the U-235 we need for the weapons program, I want a better explanation than I have received so far as to the need for the difference. Certainly, I have no intention of damaging this program in any way. On the other hand, I want to assure myself and the Senate that the funds provided are actually required, and that the cost of the enriching service is fully recovered.

I want to say in passing that during my entire tenure in the Senate of almost 34 years, I have never been confronted with witnesses who had done a better job of preparing themselves to appear before the committee. The Atomic Energy Commission program has become so complicated that it is very difficult for anyone to explore the individual projects in order to grasp all the implications involved in the production of the products for which we make allowance.

I want to say this, also, Mr. President: Some of the products are found by chance; and after those products are found, it is necessary for the Atomic Energy Commission to spend a good deal of research money to determine how those products can be used. Then they must spend a great deal of money to determine what effect the use of these products will have on the environment. So that the work of the Commission is almost a continuous process.

As we all know, our scientists are very inquisitive. I have noticed many of the programs which were truly shots in the dark by most of the people dealing with these problems. I can see the difficulties confronting them. But, I repeat, it is something that will need a good deal of study by Members of the Senate in order to be able to grasp all the implications involved.

I repeat that since this is more or less a continuous process, it is difficult for those who handle this bill or those who hold the hearings to find where to make a cut. I do not believe this appropriation can be subjected to, let us say, a meat-ax approach of 5 percent on the entire amount.

To illustrate what I have in mind, at the beginning of the hearings, I indicated that we ought to come out with this bill with a reduction of at least $115 million to $125 million. When the subcommittee made its report, we were able to cut back $110 million in operating expenses. When the bill was submitted to the full committee, the distinguished Senator from Rhode Island, who serves on the Joint Committee on Atomic Energy, said he thought some of the cuts we made should be restored, and he justified his position. He said that the Commission itself had made studies, that certain programs should be put in, and that he felt some of the amount should be restored.

I stated to him that, so far as I was concerned, if they were that important, I would tell the Atomic Energy Commission that I would gladly restore the full amount appropriated by the House, if they could get a budget estimate. The amount of money involved in that estimate, I think, was approximately $26 million in both operating expenses and plant and capital equipment. After a few days, I was told that they could not get a budget estimate but the amount should be put back in the bill. I finally consented to it because I came to believe it was necessary.

When we submitted to the Atomic Energy Commission the figures that were suggested by the Senator from Rhode Island, together with some other suggested reductions, they looked them over; and, instead of reducing the amount by $110 million that the subcommittee had recommended as a cutback, they came up with a reduction of $118 million under operating expenses. How they reached that figure, I do not know. But I point this out to show the complications of such a program.

When we got that information later, I suggested—in fact, it was suggested by members of the committee—that we set a figure for total reductions under operating expenses of $72 million to $75 million. We asked the Atomic Energy Commission to help accomplish that, but they could not come up with a cut of $72 million to $75 million. They came up after making adjustments in selected resources with a reduction of $92 million. So that the bill—so far as the Atomic Energy Commission is concerned, the operating expenses—is cut by $92 million, and I hope that amount will remain as we recommended it.

I merely cite this to show how difficult it is to take a bill of that kind and just cut here and cut there, without affecting other programs handled by the AEC. It is a difficult task. The members of the committee, including particularly my good friend here from North Dakota (Mr. YOUNG), have worked hard in trying to get the proper amounts; but I am sure the Senator will back me up in saying it was a terribly difficult process.

In passing, I wish to say that I talked to Dr. Seaborg who heads the Commission and told him that next year, when he presents his program, I hoped he would be a little more specific in the programs, so that we could follow them better and advise the Senate as to how much is being spent for what. Under the programs as now being managed, it seems we find money in one area that is actually vital to another area in the bill. It is rather difficult to separate what is being done, and I hope that the Senate will sustain the committee action.

WEAPONS PROGRAM

For the weapons program, the committee recommends $821,260,000 which is $20,500,000 below the budget estimate. Of this reduction $15 million is applied to the nuclear testing program—principally against the supplemental test site program. A major portion of this reduction in the test program results from a delay of several months in the tests at Amchitka. This will permit conducting the experiment at a more favorable season to assure maximum protection to the environment.

I may say, the moneys we cut back do not give assurance that the tests will not be tried but provide that more research might be done prior to the testing at the proper time. That is about the only relief we could get on that subject.

This is another program which I plan to investigate in greater depth with both the AEC and the Department of Defense. I am talking about weapons programs now, Mr. President. We are assured that we are not increasing our stockpile of weapons, that they are only reworking the existing weapons and adapting them to fit the new missiles. The appropriations have remained at approximately the $800 million level for some years.

That figure puzzles me, because we have been told by Dr. Seaborg that we have enough uranium already in hand for our weapons systems to last for an indefinite period. Thus, why do they need $800 million, which has been about the same amount appropriated over the years, remains constant, I cannot easily justify.

It strikes me that since we have on hand all of the uranium-235 necessary in order to construct the missiles, I am wondering why such a large amount of money should be continually spent on the other materials and in reworking the stockpile. In the past a good deal of the $800 million was used to obtain a sufficient supply of the uranium as well as the other necessary material, and now that we have a sufficient supply of uranium for an indefinite period, as the record shows, it strikes me, in that area, we might make some reduction. I want to give assurance to the Senate again, that next year we shall look very closely into that, and get a better view of it.

I need additional information to support this level of appropriations in future years. I intend to secure the evidence before I report the bill next year or recommend a substantial cut in this program.

REACTOR DEVELOPMENT PROGRAM

The bill provides $433,594,000 for the reactor development program which includes an increase of $4,800,000 over the budget estimate for the naval propulsion reactors recommended by the Joint Committee on Atomic Energy and approved by the House.

This is a large program, Mr. President. We had quite a lot of discussion about it. It deals with the research and development of equipment and technology as well as the production of material that could be used to generate electricity in the future. It is a complicated program. It will take from 12 to 15 years to complete the development of the fast breeder reactor. But yet we are told that, unless we do it now, tomorrow will be too late, that we may run out of the nuclear material used in the present type of reactor. The program envisions the use of tailings obtained from the raw material, uranium-235 as fuel for the breeder reactor.

Under this program, emphasis will be placed on the advancing power reactor technology. The Commission is giving priority to the liquid metal fast breeder reactor. Under this program, funds in the amount of $10 million are provided for the demonstration plant. It is expected that industry will invest large sums in the demonstration plant. It was on this basis the committee supported both the demonstration plant and the research required for the liquid metal fast breeder. Next year, I expect industry will have made its commitment to this program; if not, I am certain the committee will reconsider the extent of the Federal support of this program: That is one of the unobjected to items I referred to a while ago.

The committee has also approved the $600,000 for the gas-cooled high-gain breeder reactor contained in the authorization act for fiscal year 1971 and included in the bill as passed by the House of Representatives.

This is one program that was highly recommended by the Joint Committee on Atomic Energy. For that reason, the committee saw fit to provide the funds necessary in order to go on with this research.

By the way, in this program, they use helium gas as a coolant.

PHYSICAL RESEARCH PROGRAM

For this program, the committee has recommended $271,430,000, a reduction of $3 million below the budget estimate. This program consists of theoretical and experimental investigations in support of the Commission's immediate and long-range research objectives. I have always supported funds for research; however, I plan to examine this program further to be certain that there is no duplication of the research being conducted by the National Science Foundation.

Mr. President, as I stated a while ago, in the process of research and experiment, a new element was accidentally found, called hahnium. I asked Dr. Seaborg and other witnesses what the discovery could be used for, and they said they did not know. They said that it has a half life of one and six-tenths of a second. In other words, one-half of the hahnium produced deteriorates in one and six-tenths seconds. I was told that in order to find what use could be made of this new element, or what effect it could have on the environment, many millions of dollars would be required.

This illustrates that this process seems to be unending. New elements are discovered and it is unknown how to use them or what use can be made of them. But, we must follow through with research to find out whether they can be used, or what effect they will have on the environment. That is why, I repeat, it is rather difficult for Senators on the committee, including its chairman, to be able to make cuts or increases here and there without hurting or retarding some of these experiments and some of this research.

We all know that the Atomic Energy Commission and its predecessor has done a great job in the past in providing us with the Manhattan Project which saved hundreds of thousands of Americans by developing the atomic bomb.

It is true that the cost was great. But imagine what the cost would have been without that investment. Because of that success, the AEC has been set-aside as being almost one of the most important agencies for us to maintain and provide funds with which to continue these experiments.

As far as I am concerned, I want this to go on. The only thing I am concerned about is whether we should continue all of the programs that are now underway.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. MAGNUSON. Mr. President, I think this is apropos. Mr. President, what the Senator from Louisiana says is so right. It is confusing. There is no way to know where it will lead.

Dr. Seaborg was doing some of this. He was the fellow who found plutonium.

Mr. ELLENDER. He found it by chance.

Mr. MAGNUSON. The Senator is correct. He won the Nobel Prize. He was the founder. He did not know at that time, I heard him say many times, and he still does not know, all of the ramifications of the element plutonium.

Mr. ELLENDER. Since the Senator from Washington raised the question, plutonium was found as a byproduct of the reactor. When a uranium isotope was used as the energy source for a ship, it produced plutonium.

Mr. MAGNUSON. That is exactly what the Senator says.

Mr. ELLENDER. Those are the things that we are providing funds for, and I think necessarily so. It should be done. I am most hopeful that it will be used wisely.

Mr. President, I go back to the proposition that it is rather difficult at times to satisfy the curiosity of our scientists. They have a good idea and they go in one direction to find out whether they are correct. What they want to do is to satisfy their curiosity.

It strikes me that in time we will have to put a little damper on that phase of this work.

BIOLOGY AND MEDICINE

Another program which is very important, I think, is to justify civilian uses for these expenditures. The committee recommends $88,300,000, the amount of the budget estimate, for this program. Emphasis will continue to be placed on the assessment, evaluation, and control of radiation exposure to man and his environment.

ISOTOPES DEVELOPMENT PROGRAM

This program consists of research and development activities to accelerate realization of the potentially vast uses of radioisotopes and radiation technology. Included in this program is the radiation preservation of foods; thermal applications—including fuels development for a circulatory support system; and life support units and component heaters for space flight use. For this program the committee recommends $6,530,000 which is $530,000 over the budget estimate.

CIVILIAN APPLICATIONS OF NUCLEAR EXPLOSIVES

The committee recommends $7,400,000 for this program—a reduction of $600,000 from the budget, and $100,000 below the House. The funds will be used to continue research aimed at a fundamental understanding of nuclear explosive design and explosion phenomenology and its application to peaceful uses.

Mr. President, that concludes my remarks on the Atomic Energy Commission. I now come to title II, Department of the Army, rivers and harbors and flood control which is, as I said in my opening remarks, a very important title. It is one in which we should not be niggardly in providing sufficient funds with which to protect and preserve our most important resources—land and water.

I am proud of the fact that I am in a position now to carry out programs that I was thinking about as a teenager, living on the farm behind the Mississippi River levees. I thought at that time that water was inexhaustable, that we would have water forever. But in the last few decades I found out how important it is for us to retain what we have and to try to make better use of it and to try to reuse it.

In my book, the two important resources that we must protect and preserve are land and water. We can have all of the diamonds, gold, and any other valuable possessions, but unless we have land and water with which to produce food and fiber to sustain our population, everything else will go for naught.

It strikes me that there should be no hesitancy on the part of this administration and future administrations to provide all the moneys necessary with which to carry on these programs.

I am sure many of us have read in the press how they criticize these expenditures, referring to them as a pork-barrel.

I go back to the proposition I mentioned awhile ago, that we must use the waters we have for navigation, reclamation, power generation, and at the same time protect ourselves from floods. I know of no better way in which to spend money than to provide ways and means of utilizing these two great resources.

I would not be disappointed if I were to read some editorials in some of the newspapers and magazines saying that those who advocate the expenditure of these funds are voting for a pork-barrel, that they will get something out of it for their constituents. I want to confess that I do get something for my constituents and not only for my constituents but also for all the people throughout the United States. If we had neglected these programs, I do not know what would have happened to our country.

It has been my privilege to travel all over this world a good deal. I have found out what it has meant to many countries when they neglect the proper use of their water to preserve and protect the use of land and water.

I can well remember that old Persia had enough land and enough water to grow food and fiber and sustain the life of over 100 million people. One can go there today and see the area; I have seen it. What was known as Persia cannot now sustain life for more than 11 to 12 million people, and the reason for it all is that the rulers there failed to preserve these two great resources, land and water. I do not want that to happen in our country.

Mr. BIBLE. Mr. President, will the Senator yield to me at this point?

Mr. ELLENDER. Yes, indeed. I yield to the Senator from Nevada.

Mr. BIBLE. I am wondering if the Senator who has had such a distinguished career in this area of appropriations has any idea of the number of lives or the amount of property damage that has been saved as a result of these flood control projects. I know property damage has been reduced materially and this is of benefit to all mankind.

Mr. ELLENDER. We had floods on the Missouri River. The Senator knows about that. The most recent floods were 4 or 5 years ago. The cost of protecting that area, as I recall the figures, was about one and one-half billion dollars for flood control, navigation and power development. The flood losses prevented by that program exceeded $2 billion. There is no way of estimating the number of lives that would have been lost without this program.

In California 2 years ago the projects completed at a cost of $800 million prevented losses of over $1.5 billion.

I shall have printed in the RECORD figures to show the losses that have been prevented in areas where projects have been placed in operation, and the cost of constructing those facilities.

Mr. President, I ask unanimous consent to place that information in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

[In billions]

Cost of flood control facilities	$5.7
Damages prevented	19.

Mr. ELLENDER. Mr. President, I did not anticipate the question was going to be asked but it is interesting for us to have this material in the RECORD to show the contrast with the estimates of the Water Resources Council that flood losses averaged $1.7 billion in 1966 and will increase to $5 billion by 2020 if additional projects are not built. It shows what will happen if we are slow in constructing the facilities necessary to protect those areas.

Mr. President, I hope members of the press of the Nation, and particularly those persons who write articles for magazines, read the statistics and publish articles to show the importance of all these projects in order to protect and preserve not only the lives of the people on the scene, but also the future generations—to provide for them a good place to live, and a place where they can have all the food and fiber necessary.

Mr. BIBLE. Mr. President, I commend the distinguished chairman of the Public Works Subcommittee. This has been my own experience, although we do not have the large rivers in my part of the State that they have in California and Mississippi.

I can testify of my own knowledge of the millions of dollars that have been saved by flood control projects that have been constructed on our streams and rivers. This should be told time and time again. It could be called "pork barrel" but it is "pork barrel" in a good sense because it saves lives and it saves millions and millions of dollars in property damage. There is no doubt about it.

Mr. ELLENDER. Mr. President, I have been chairman of this subcommittee for about 18 years. During my tenure we have been able to harness practically every tributary to the Mississippi River. Prior to that time a period of 3 months was required for the floodwater to go down the Mississippi River, drowning out a good many people, and carrying out tons of silt. But since that time we have been able to harness tributaries of the Mississippi River so that today all the engineers have to do is press a little switch and the water is allowed to flow down gradually. Instead of water going down the Mississippi River in 3 months, it now goes down gradually over a longer period. That provides fresh water the year round in the Mississippi River so that we have today, all along the valley, factories that have been constructed, and industries that have been constructed because a constant supply of water is available. In addition, by holding back this water, ponds and lakes are created, and it is also better for navigation.

As I pointed out, when we started out with the Arkansas River, it was stated by the engineers that if we could get so many river tons of freight over a period of so many months or years, the program would be justified. Now this project has been completed to Little Rock, just a little over a third of the way, and the tonnage that came down that river the first year from Little Rock is more than the tonnage that the engineers estimated would come the first year that the waterway was completed to Tulsa. It shows the importance of using that water for navigation.

In addition, we have had ports established along the Arkansas River and the Mississippi River; and businesses have been established there, and they use the water to establish and expand our economy. It is also important to note that the out migration from the Arkansas Basin has been reversed as a result of the new industries that have located in the valley.

Mr. BIBLE. I thank the Senator. In addition, it occurs to me there is not one of our 50 States where projects of this type have not been cash register items. They certainly return more to the Federal, State, and local treasuries than they cost.

Mr. ELLENDER. There is no question about it.

Mr. BIBLE. That fact can be documented A, B, C, and D if persons who are interested will look at the record.

Mr. ELLENDER. There is no doubt about it, but few people take the trouble; many of them would rather criticize.

Mr. BIBLE. I think the facts answer the criticisms. I know the great work the Senator has done over the years in this particular area alone.

I have one further observation I wish to make. I would like to include commendations for a late, dear friend of all of us, Mike Kirwan, who was the counterpart in the House of Representatives of the distinguished Senator. Mike Kirwan recently passed away. He likewise made real contributions in this area.

I thank the Senator for yielding to me.

Mr. ELLENDER. I am glad that the distinguished Senator from Nevada has paid this tribute to Mike Kirwan. He has made a great contribution to the development of our natural resources.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield to the Senator from Florida.

Mr. HOLLAND. Mr. President, I certainly agree with the remarks of my distinguished friend from Nevada and the remarks of the distinguished chairman.

I call attention to the fact that the saving of life has not been confined to the great river areas. In 1926 a hurricane destroyed something over 300 lives in the Moore Haven vicinity, along the southwest coast of Lake Okeechobee, because the hurricane winds in that instance came from the east or northeast. Two years later, in 1928, during another hurricane the winds came from the west and destroyed 2,200 precious human lives in the vicinity of Belle Glade. The Senator will remember that. The dikes and structures that have since been built around Lake Okeechobee, and the structures in the south Florida flood control program, in which the Senator has had such a leading part, have prevented many losses of life. I would not know how to estimate the immense savings in terms of dollars. The Engineers have estimated these savings at $120,600,000 since 1953.

I am sure that is an underestimate. But now those areas are safe for human habitation and the population there has greatly increased and the economy there has greatly increased because the people can live there in safety.

I thank the Senator for almost a lifetime of interest in this matter. I want these remarks to show that the saving

of life and property is not confined to the areas of great rivers in the Nation.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. MAGNUSON. I want to add my comments to what has been said. I know of instances where the reduction of floods in one given year—referring only to normal floods in the river—paid for the whole cost of the installation that stopped the flood, if we assume that every year the same flood condition is going to take place that took place for the preceding 40 years.

The Columbia River, of course, is involved with power development, but we had one flood on that river which resulted in losses greater than the cost of all the projects on that river. The Senator probably remembers when there was such great loss of life and property, amounting to billions of dollars, at Portland.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. YOUNG of North Dakota. The Senator from Louisiana mentioned the Mississippi River and its tributaries and what had been done to control floods in recent years. I can speak with firsthand knowledge of what happened on the Missouri River. Almost every year we had devastating floods for almost the full reach of the river.

Mr. MAGNUSON. And the Red River.

Mr. YOUNG of North Dakota. Yes. Now floods on the Missouri River are unknown. We have dams producing somewhere around 2 billion kilowatts of power each year. We have great reservoirs that are of benefit to everyone. Along with that, navigation downstream provides great benefits.

If it were not for the Senator from Louisiana, we would not have had many of these projects. I want to give him great credit for the progress that has been had.

While we are on that subject, the name of the late Michael Kirwan, a Member of the Congress from the State of Ohio, was mentioned. He was a great friend of water projects and had a heart as big as a washtub when it came to helping other areas of the United States.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. RANDOLPH. Mr. President, as chairman of the Senate Public Works Committee, I think perhaps I am in an appropriate position to know of the tremendous amount of time and energy that our able colleague from Louisiana (Mr. ELLENDER) has given to the appropriating process for the projects which have been authorized by our committee.

All of us on the Public Works Committee in the Senate, Republicans as well as Democrats, are grateful for the energy and the vision exemplified on so many, many occasions, over so many, many years. The chairman of the Appropriations Subcommittee on Public Works has made notable contributions, which, as has been said earlier this afternoon, have encompassed leadership in worthwhile projects in all the States of the Union.

It is a misnomer, Mr. President, which continues to be used in the press, and on radio and television, and in other forms of publication and communication, which designates public works projects, as are contained in the appropriations that the Senator brings before us this afternoon, under the designation of "pork barrell." I had hoped that such ill-advised language would go out of usage. The benefits of these projects are shown year after year and there should not be a continuing use of the term "pork barrel," which is unfounded in fact. Yet, we continue to hear it. We continue to read it. Some of us continue to be, not overly sensitive to it, but we regret very much that a study is not made by those who report these programs so that they can classify those projects as vital projects, other than in the general category of "pork barrel" spending.

I would predict that there will be such "pork barrel" references again in connection with the projects that are before us this afternoon.

I join in the other tributes and express my own to the able and experienced Senator who handles these projects in the Senate of the United States, and then works the collective will of the Senate and the House in the conferences which are held.

I add also to the comments in colloquy by other Senators, as to the value of these projects from the standpoint not only saving lives but also the protection of property. It is highly important to register for the record the fact that these projects are giving recreational facilities to literally tens and tens of millions of Americans who were denied them before.

In West Virginia, for example, the Sutton Lake and the Summersville Lake are two beautiful as well as useful bodies of water in the mountains of West Virginia. Both were public works projects.

They, of course, contribute to flow of quality water at necessary times. This we recognize, but there are now literally hundreds of thousands of persons who before never had the opportunity, as West Virginians, or as visitors to our State, to come into those areas and use those facilities for water skiing, for boating, for swimming, and for fishing. In West Virginia, a mountainous State, where we have no natural lakes, these bodies of water have contributed to the rejuvenating of the State's economy and helped to give our State a rebirth not only of recreation but of business that is generated from use of these recreatioinal facilities.

I just hope, and I believe, that the American people are responsive to such projects. They will continue to support and contribute in the years ahead to the development of the many projects that are now in being and that will come to fruition, hopefully, due in part to the efforts of the Senator from Louisiana.

Mr. MAGNUSON. Mr. President, will the Senator yield at that point?

Mr. ELLENDER. I yield.

Mr. MAGNUSON. I am sure the Senator knows, but I am not sure that others know, which national park had the greatest attendance of any national park, by far.

Mr. RANDOLPH. There are 284 national parks in the United States. The lakes within them are very often great meccas for tourists.

Mr. MAGNUSON. But I mean the greatest attendance by far, by hundreds of thousands of people more. That was the park which contains the lake that was created behind Denison Dam in Texas, where they never had had any recreational facility before.

Mr. RANDOLPH. Yes; and I am sure in many other States——

Mr. MAGNUSON. By far.

Mr. RANDOLPH. This has been a worthwhile development.

Mr. ELLENDER. Mr. President, I yield to the Senator from Kentucky.

Mr. COOK. Mr. President, it was not my intention to say anything in regard to this matter, and I would not speak, except that, since I have been here not quite 2 years, it may be that I can speak more realistically about "pork barrel" than some of the Senators who have been here longer.

I do not pay any attention to it, and I do not think other Senators ought to pay any attention to it.

If you are calling it "pork barrel" that, on the Ohio River there will never again in its history be another 1937 flood, I say that pork barrel is a mighty fine thing to have.

If you are calling it "pork barrel" that, by damming the Ohio River, we can now send through Louisville more freight than goes through the locks of the Panama Canal, then I say that pork barrel is a mighty fine thing.

If the citizens of Kentucky can realize, from Kentucky Lake, Barkley Lake, Rough River, Nolin, Green River, Dale Hollow, Cumberland Lake, Fish Trap, and many others, and that by reason of these dams, the Commonwealth of Kentucky has invested hundreds of millions of its own dollars to build additional facilities—and I ask the attention of the distinguished Senator from Wisconsin for a moment, because he said to me not too long ago that when he was Governor, he went down to Kentucky Lake and saw some of the finest State facilities for vacations and for tourism that he had ever seen in his life—I say again, such pork barrel is a mighty fine thing.

I might suggest here that if this is what the press calls "pork barrel," then maybe we ought to reevaluate the rate on second-class mail for newspapers, because I must say to the distinguished Senator from Louisiana that these are the things the American people want their tax dollars spent on.

I might say that in this bill there is a significant amount of money—and I say this to the Senator because I just brought a family from the Commonwealth of Kentucky into the Agriculture Committee room not too long ago—a substantial amount of money to furnish a study of a floodwall for southwestern Jefferson County. That area will never again have a flood like it had in 1937.

To any person whose house is flooded out, it is as bad as any flood ever was. I can only say, we are finally at the point where the cost ratio justifies the expenditure of substantial sums of money

to furnish a flood control facility around Louisville and Jefferson County. I suggest again, if this is pork barrel, then everyone who lives in that area has got to be a part of it, and I hope all of us will understand, and those in the gallery will understand, that this is what the people want their tax dollars spent for.

Mr. ELLENDER. Mr. President, I thank the Senator very much.

Mr. MAGNUSON. Could I add one more thing?

Mr. ELLENDER. I yield.

Mr. MAGNUSON. I have never thought, when the term "pork barrel" was used—I do not know how many people realize, as the Senator from Kentucky pointed out, that none of these projects are even looked at until there is a strong benefit-to-cost ratio. In other words, they are screened.

Mr. ELLENDER. They all have to be justified.

Mr. MAGNUSON. And the estimated benefits, which invariably I am told—I think in 99.44 percent of the cases, the benefits conservatively have been written down and estimated to be way over the cost, before we even begin on them. And we never even get to all of those.

Mr. ELLENDER. As the Senator knows also that there must be justification of all projects we recommend here.

Mr. MAGNUSON. Surely

Mr. ELLENDER. And unless we get through hearings on those projects, they do not go on the bill.

Mr. MAGNUSON. Of course they do not. Everyone looks at the barrel, and finds out about it.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield to the Senator from Wisconsin.

Mr. NELSON. As the Senator from Louisiana knows, I have an amendment at the desk, No. 852. Three of its cosponsors, Mr. SAXBE, Mr. MUSKIE, and Mr. GRIFFIN, are not in town today, but are anxious to participate in the discussion on that amendment. I would like to say to the Senator that I would be happy to vote on the amendment on Moday and, as far as I am concerned, it could be settled in an hour at that time.

Mr. ELLENDER. I think Senators were notified that this bill was going to be taken up, and I was in hopes we could finish with the bill this afternoon. On the amendment that the Senator refers to, as I understand, there have been no hearings whatever, and there has been no budget estimate. Of course, as to the budget estimate, I would overlook that. I understand, however, that the White House is considering a supplemental request for the funds for which the Senator is now asking, and we expect to get a budget estimate, and it will be considered in a supplemental bill.

As I told the Senator from Washington just now—and I am sure that my good friend, the ranking Republican member, the Senator from North Dakota (Mr. YOUNG) would agree—I do not know of any time that we have ever put any projects in the bill unless we have had hearings on them, so that we can justify them.

I think that before this debate ends, the Senator from Wisconsin should be well satisfied with what the committee did in order to fight pollution. We provided the billion dollars, as I shall point out a little later. We also amended the law, as it were—the House started it—so that the amount of money that is now in the hands of the States, that would otherwise have to be forfeited by them by December 31, can be used up to June 30 of next year. The States will be able to use over $400 million that they have not been able to use heretofore.

The record shows that the amount that we provided is ample for the programs that have been studied and presented to the regional offices throughout the country. I have evidence here to show that, and I am very hopeful that Senators will not delay the action on this bill for the consideration of the amendment to which the Senator refers. As I say, we have no record of hearings on the matter. Personally, as chairman of this committee, I would not like to break the record we have compiled by trying to put into this bill projects on which we have had no hearings whatever.

Mr. NELSON. May I say——

Mr. ELLENDER. I would hate to break the rule, not that I am opposed to what the Senator is trying to do, but we are going to have a supplemental bill, and I am told, without ifs or ands. The Budget Bureau is now considering budget estimates for the very item the Senator is proposing, and I for one will do everything I can to make sure they are considered in the supplemental bill.

Mr. MAGNUSON. And we extended the time.

Mr. ELLENDER. We will hold hearings on those programs.

Mr. NELSON. I just want to make clear that I expect to offer the amendment, though I am not in any way critical of what the committee is doing in the pollution field. I am well aware that a year ago, the Senator put into the bill for pollution control $800 million more.

Mr. ELLENDER. It is $1 billion.

Mr. NELSON. It is $800 million more than was requested.

Mr. ELLENDER. That is right. I recommended $1 billion to the Senate, and we compromised with the House of Representatives for $800 million altogether.

Mr. NELSON. Yes. That, in my judgment, was the first really significant, dramatic step in terms of appropriations of money to deal with the question of water pollution at the municipal level in this country.

The problem here——

Mr. ELLENDER. I would like to point out, while we are on the subject, that of this $800 million we appropriated last year, with the House consenting, we have unspent $435,611,780, which will be usable by the States by virtue of an amendment that we have put into this bill, in order to carry it over from December 31 until June 30 of next year.

Mr. NELSON. That is in addition to the——

Mr. ELLENDER. That is over $435 million plus the $1 billion recommended in the bill.

Mr. NELSON. Yes.

Mr. ELLENDER. I thought that such an amendment as that would certainly help a lot of the smaller States, that have not as yet convened their legislatures so as to be able to use this money.

It strikes me that when we have evidence in the RECORD indicating that this money cannot be spent because the States are not able to use it and we have been able to amend the bill so as to extend the time in which this money can be used, that is more important than if we put $1.25 billion in the bill, because they could not use all of that. It would simply be allocated to them, without their having the ability to use it. By extending it to June 30 of next year, we find that the cities and States of the Northeast——

Mr. MAGNUSON. They will have $1.5 billion to work with.

Mr. ELLENDER. Yes.

In the Northeast we have one big State that wants more money—I do not blame the Senator from New York for wanting it—but I believe the bill that we have presented to the Senate is well balanced, in that we can use not only the billion dollars we have added to the bill but also the unused $435 million of the $800 million we appropriated for fiscal 1970.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. ELLENDER. I yield.

Mr. YOUNG of North Dakota. I may say to the Senator from Wisconsin that probably largely because of his interest, Wisconsin is the only State that used 100 percent of its funds. The Senator has been a great proponent of fighting both air and water pollution, but it would be difficult to accept his amendment now. If one is offered to a supplemental bill, I can assure the Senator that I, for one, would give special consideration to it.

Mr. NELSON. I commend the committee, and I commend the Senator for his leadership. I am not quarreling with that.

These are research and demonstration projects we have been talking about in the Senate—at least, I have—for a half dozen years, together with a number of other Senators. The problem is that S. 7 was passed in April, and the administration has spent 4 months without coming up with any budget recommendation.

We passed the authorization in April. My staff called the Interior Department, made staff contacts in April and early May, and said, "Now will you tell us how much money you need?" We could not get an answer.

Finally, I wrote to the Secretary. The Secretary wrote back and said, "I cannot give you an answer because the Budget Bureau has not done anything." That is May, June, July, and halfway through August.

So the reason why this was not before the committee is that the administration did not make up its mind, even though we passed an authorization in April.

Mr. ELLENDER. Of course, that is a short period of time.

Mr. NELSON. I realize that.

Mr. ELLENDER. I am giving assurance to the Senator from Wisconsin that I am informed that as to those items a budget estimate is coming and will be included

in the next supplemental appropriation. If it is not included, I suggest the Senator appear before the committee and justify it, and I think he will get results. But please do not insist that this committee accept or ask the Senate to vote on programs that have just been authorized and on which we do not have a scintilla of evidence.

I would not like to suspend the rule we have established in the past, as long as I have been a member of this committee, that we have never accepted, to my knowledge, any program that has not been justified. If the Senator had appeared before the committee, the chances are that we might have been able to do something. But there is nothing in the record to justify what is now requested, and I hope that the Senator and his colleagues will wait until the supplemental bill comes. Whether the Senator has a budget estimate or not, he can appear before the committee, and we will give consideration to it. I will be on that committee, and I can give the Senator assurance that we are going to look into it and probably will agree with the Senator in providing the funds.

Mr. NELSON. One of the items to be funded by this amendment, for example, is a provision that I offered to S. 7 and was approved in both Houses. It authorized and directed the administration to do a study of the watersheds of the country and determine the nature, the character, and the amounts of the pesticides that have gotten into those watersheds, and to develop the scientific information that will enable the States to set standards on pesticide pollution to be met in watersheds of the country.

This is a very critical problem, as the Senator knows. It is a 2-year study. It was authorized in April. How many months will it be before we get at the question of setting standards on pesticides in our watersheds? Everyone knows it has to be done. Everybody knows the study needs to be made. Everybody knows that standards need to be set. I do not think there would be a dissenting vote on that.

But the administration, for whatever reasons—I suppose the people involved were very busy. I am not critical about that.

Mr. MAGNUSON. Money will be needed to establish standards.

Mr. NELSON. They have to make a 2-year study.

Mr. MAGNUSON. We have a warehouse full of studies.

Mr. NELSON. There are no studies covering all the watersheds of this country, on the amount of DDT and Dieldrin in all the watersheds of this country. There is a study with respect to Lake Michigan; I know that.

Mr. MAGNUSON. I am pointing out that we could have more studies, but they ought to be parallel to this—more sophistication in the studies. We have plenty of studies on all this. What we should do is tell the Department of the Interior to set the standards now.

Mr. NELSON. That is what we did under the amendment I offered to S. 7.

Mr. MAGNUSON. That requires a little push some place.

Mr. ELLENDER. Imagination, too.

Mr. President, I am hopeful that the Senator will not ask that we delay the passage of this bill.

As the Senator knows, I have worked all this week, until yesterday, on the farm bill, which is most important. I have set hearings for early next week—Monday, Tuesday, and Wednesday—and I hope to keep the feet of the members of the committee under the table so that we will have a bill ready before the Senate recess.

Mr. NELSON. Is the Senator talking about a supplemental?

Mr. ELLENDER. No. I am talking about the farm bill that we are trying to write now. The supplemental bill is going to come before this year is out. As soon as it does, I understand that there will be a budget estimate. I will be on that committee, and I can assure the Senator that if he comes before the committee and makes a case——

Mr. MAGNUSON. I will be on it then, too.

Mr. ELLENDER. We can consider it then and the Senator from Wisconsin can justify it.

Please do not ask the subcommittee, of which I have been chairman for over 18 years, to consider new appropriation items at this point. I do not know how much it amounts to, but I understand it is over $38 million for all three projects.

Another point I wish to emphasize to the Senator from Wisconsin is that we have tried to keep this bill below the budget. We now have it below the budget by approximately $5 million. I hope the Senate will maintain the position of the committee and retain it under the budget.

Mr. MAGNUSON. I will check it and get it for the Senator, but I think it has been almost 2 years since the Committee on Commerce directed and we got money in the Appropriations Committee for a study of the effect of pesticides on fish and wildlife. That is down there. We have testimony with books as thick as the one I have in my hand, and there is sufficient evidence for the Secretary now to set some standards and then go ahead with the study that the Senator is talking about, parallel to this; and they are subject to change. I do not think the appropriation of money is going to help that much down there. I think we have to insist that they do it. They know enough about it.

The Food and Drug Administration has research on this. The Department of Agriculture has had research on it. I think the Senator will find a warehouse of information on it, and I do not think I am exaggerating—at least, enough to set some standards.

Mr. NELSON. I may say to the Senator that I had enough information 7 years ago, because I put in a bill to ban DDT 7 years ago.

Mr. MAGNUSON. Probably in the Senator's office is enough information to set standards.

Mr. NELSON. This involves a watershed study.

Do I correctly understand the distinguished chairman to say that a supplemental will be taken up this year?

Mr. ELLENDER. Yes.

Mr. NELSON. Is it correct that hearings will be held and a supplemental will be taken to the floor?

Mr. ELLENDER. Yes.

Mr. NELSON. And that it is the understanding of the chairman that the administration has under consideration——

Mr. ELLENDER. The budget is considering estimates for this purpose.

Mr. NELSON. The budget estimates on the items I am talking about.

Mr. ELLENDER. Correct. Yes. And now I want to add, whether the budget estimates come to us, the Senator will have an opportunity to make his case. I am sure that the committee will listen with attention and will doubtless give the Senator an opportunity to employ his persuasive talents.

Mr. MAGNUSON. May I go further and say that the committee will be sympathetic.

Mr. ELLENDER. Yes.

Mr. NELSON. May I conclude on this point, Senator, that I have indicated to the other cosponsors I would insist we take this up on Monday next. But, based upon our colloquy here this afternoon, I shall undertake to say that I will not call up the amendment with the assurance of the chairman who will be conducting hearings, and with the knowledge of the cosponsors who are concerned, and myself, that we will have an opportunity to appear before the committee, whether the administration makes a special request or not.

Mr. ELLENDER. Yes.

Mr. NELSON. Then I shall not call up my amendment.

Mr. ELLENDER. I thank the Senator very much.

Mr. MONDALE. Mr. President, we have heard all we should have to hear this year about the enormousness of our crisis in water pollution. The deterioration of our lakes, rivers, and coastlines has reached a point where we can no longer wait to save our precious waters. To delay is not merely to put off that time when our waters are once again safe for swimming, fishing, and boating; a delay, rather, will be to bring us only that much closer to the point where some of our lakes and rivers will be forever lost to man's thoughtless exploitation.

Early this year, the Congress took a momentous step forward in the effort to save our waters by passage of the Water Quality Improvement Act of 1970. This act added five new subsections to the seven already authorized for research and development in water pollution control.

One of those subsections would provide the first explicit authorization of programs directed at the growing crisis of our Nation's over 100,000 inland lakes. Our lakes, one of our Nation's most precious—and fragile—natural resources, are becoming increasingly threatened by siltation, sewage run-off, and other industrial and agricultural waste. Our lakes are dying—choked to death by the uncontrolled growth of green algae. We are in desperate need of research and demonstration projects in order to devise ways of halting and reversing this unique

and frightening kind of environmental disaster.

Mr. President, I have briefly spoken of the inland lakes section because I have so long been interested and involved with this particular provision. But there are the other new research programs added by the Water Quality Improvement Act, authorizing crucial research in oil, vessel, and pesticide pollution. In addition, as the Senator from Wisconsin has pointed out, there is a new section providing demonstration and planning grants for the salvation of our threatened Great Lakes. All of these new provisions reflect the growing awareness that we are, indeed, in crisis, and that our efforts demand vastly greater knowledge and research into the causes and cures of water pollution.

Mr. President, the Senator from Wisconsin (Mr. NELSON) has pointed out the problems which have arisen in the funding of these provisions in the appropriation bill before us now. While this bill represents an able effort to meet the various demands upon our public works budget, the timing of the final passage of the Water Quality Improvement Act prevented the new sections I have cited from being included either in the President's budget requests or in the House-passed bill. I believe this to be the only reason that these vital new programs were excluded from receiving specific budget requests, and I think this puts a special light on the bipartisan amendment now being considered to correct this omission.

Mr. President, the $48,219,000 additional money we are asking for is absolutely essential if we are to move ahead now in developing the knowledge and procedures for the salvation of our lakes and rivers. This figure would fully fund the new research and development subsections put into law after the administration's budget requests, including those provisions dealing with inland lakes, the Great Lakes, and vessel, oil, and pesticide pollution.

There is no economy and no "fiscal responsibility" in failing to fund these provisions. To allow another year to pass while we pay cheap, verbal homage to "our environmental crisis" is both false economy and a betrayal of the "environmental conscience" awakened this year. We would be violating the mandate of a nation to end the deterioration of our environment. We would be magnifying the eventual cost of saving our environment by deferring a small expenditure now, only to pile up a far greater charge in the future as the destruction of our waters goes merrily on. And we would be passing on to the future a legacy, not of a smaller budget, but of dirtier lakes and rivers, and of continuing ignorance of how to tackle the enormous task of preserving some of our most precious and vulnerable resources.

As the Senator from Wisconsin has pointed out, the Appropriations bill now before us, with certain general research funds directed toward the kinds of programs which now have specific authorization in the new act, actually represents a step backward. Without our amendment, there will be even less funds spent this year in inland lakes, Great Lakes, and oil spill pollution than were spent last year. We are not, then, being asked to "hold a line"—we are being asked to take a significant step backward from an already grossly inadequate share of funds going for these research programs.

I think that our water, our economy, and our Federal budgets—not to speak of our environment and our children—demand no less.

Mr. JAVITS. Mr. President, will the Senator from Louisiana yield?

Mr. ELLENDER. I yield.

Mr. JAVITS. I have heard with great interest the Senator discuss the question of the construction grants for waste treatment works. The Senator has made some point of the fact that the proviso extends for 6 months the time when funds appropriated for fiscal 1970 need not be reallocated. The Senator, I think, has made clear the point of view of the States which, for many reasons, were not ready to use their share of the allotment. However, I do not believe the Senator has looked at the other side of the coin.

As I analyze the situation, there are many States—it looks to me from a quick appraisal to be 50–50—which have used the greater part of their allotments, and which have projects like my own State of New York, that amount to twice the present allotment. Now, notwithstanding that this is an ongoing program, they are being asked to stand by and let the laggards catch up.

If it were a one-shot operation, I could understand that, but here we are appropriating another billion dollars for the program. Yet, notwithstanding that, we are also seeking to carry over funds which will not be reallocated for an additional 6 months because certain States were laggard in coming into the new program. This will prejudice many States like mine which have been on the ball and have done the job. My State has authorized $1 billion in State bonds for this purpose, so that we are way ahead of the parade.

As this is nothing but straight legislation on an appropriation bill, it seems to me that certain States, on a 50–50 break, are being caught both ways. Instead of $1.25 billion, which is the authorization, the committee is going along with the House on the $1 billion.

My colleague (Mr. GOODELL), with me as cosponsor, was proposing to move to increase that. Now the manager of the bill would like us to step aside and not do that. My colleague may not be able to be here today, although perhaps he will still arrive, and not delay the bill until Monday; so that we get caught there.

The next point is the 20 percent set aside under the bill in the first proviso, passed by the other body, as available for reimbursement to the States, and so forth, based upon the reallocation provision in the law. A good case could be made, 30 percent, based on the amount of reimbursement money that could be used.

Mr. ELLENDER. If the Senator will yield, let me say that of the 20 percent set aside, New York will get almost one-half.

Mr. JAVITS. I appreciate that.

Mr. ELLENDER. I really believe, Senator, that this bill, if it is thought through, will convince him that, even though New York may lose a little in the long run, it will give impetus to many of the States that have been up before the committee to provide the necessary legislation and the funds to accomplish what New York did. I am here to tell the Senator that the $1 billion—that is the 80 percent—that will be provided for the allocation will be and must be spent within 12 months instead of the 18 months. So that New York may benefit by that, if the States, to whom the $800 million is allocated, do not spend the money. So, by reducing the time from 18 to 12 months, New York will have an opportunity to use quite a bit of the $800 million that will be redistributed under the present appropriation language at the end of 12 months instead of 18 months.

Mr. JAVITS. Nonetheless, it is a fact, is it not, as to the bill, that by the final proviso, which is legislation—I realize the parliamentary situation—there is an amount of over $400 million, the reallocation of which is deferred in order to accommodate many of the States which have dragged behind the parade to the disadvantage of the many States which were out in front. That not only includes my State of New York but it includes Alaska, and, incidentally, interestingly, Florida and Georgia, and other States which have a high percentage of use of these allocated funds. Indeed, quite a few States have percentages very much higher than that of New York. It is interesting to me that Wisconsin used its full allotment, 100 percent.

Mr. ELLENDER. New York has used up 74 percent.

Mr. JAVITS. It is 74 percent, right. Many other States have used more than that. Minnesota, 84 percent. Illinois, 94 percent, and so forth.

Mr. ELLENDER. Well, the State of Louisiana, which I represent, used only 8 percent.

Mr. JAVITS. I say that is——

Mr. ELLENDER. There are many other States, I may say to my good friend from New York, that are anxious to use the money that is available and that was made available last year. As the Senator knows, as chairman of this committee, I recommended to the Senate $1 billion and the Senate agreed to that, but we could not get more than $800 million in compromise with the House. Now, of that $800 million that we provided for the last fiscal year, $435 million have not been allocated, does not the Senator see?

Mr. JAVITS. I understand that.

Mr. ELLENDER. As I said, we extended the date to June 30. We have also provided in the bill, as I have just indicated, that instead of waiting 18 months for the use of the money that we will appropriate this year, we will reallocate it after 12 months. So that New York will benefit a great deal through that change in the law.

Mr. JAVITS. May I ask the Senator, so that we can get the facts straight,

where is the provision which cuts the 18 months to 12 months?

Mr. ELLENDER. On line 20, page 14.

Mr. JAVITS. That is the proviso which states,

That sums not obligated at the end of the fiscal year from the amounts allocated to each State shall be reallotted in accordance with the provisions in the Act.

Mr. ELLENDER. That is right.

Mr. JAVITS. Mr. President, I do not think I need to protest to the Senator from Louisiana (Mr. ELLENDER) my appreciation of the enormous burdens which he bears, the magnificent way in which he bears them and the general attitude of great cooperation which he has always manifested toward all of us, including my State.

Like the Senator from Wisconsin, I take very seriously a plea from him, for reasons which I think are very profound on this part, to try to end consideration of this bill. Therefore, I would like to lay a suggestion before him with regard to the proviso, which is legislation. I could make a point of order against it. That would have to be passed on probably by a majority vote. Undoubtedly because of our situation and the need to discuss it, it might make the bill go over until Monday, which the Senator does not want to do.

I would like to ask the Senator this question. The Senator knows that I am very realistic.

I am concerned that this proviso now takes us to the end of another fiscal year.

There is no real incentive created, because we get into the end of another fiscal year with this proviso. It sort of leads to another appropriation, and we do not get a crispness and finality about the situation.

Would the Senator take kindly the suggestion that we shorten the period and put the burr under all States to move? For example, suppose instead of June 30, it were made March 31. Then it would end at least before the end of the fiscal year. There would be an incentive for those States to get on their horses and do something instead of saying, "We will wait until the end of the fiscal year and get under another resolution."

Mr. ELLENDER. Mr. President, many States will not be able to meet this situation by March 31. We discussed a period of time.

I am very hopeful that the Senator will leave it as it is. Many States are in need of this. I am sure that a good deal of it will be used if they are given an opportunity to pass legislation in the respective States. But even with that, I am confident that a good deal of it will not be used because of lack of interest on the part of many of the States. On the question even of extending it to June 30, they might not be able to pass sufficient legislation by that time.

I emphasize to my good friend, the Senator from New York, that by shortening the length of time, the money provided for in this bill will be used. That is to the advantage of the State of New York in that 18 months will not be required for a reallocation of the money provided in the bill.

Those States unable to use the money we are appropriating now will have that money reallocated at the end of 12 months instead of 18.

Mr. JAVITS. I point out to my friend, the Senator from Louisiana, that I am not trying to seek an advantage. We are trying to be fair to the States which are running their affairs in shipshape fashion as all States should have done. However, we are not rewarding them, but are penalizing them because the very same acceleration which would bring about the use of this money, which is being carried over for 6 months, will bring those States into greater use of the $800 million.

The extended period of time worsens the situation in both respects.

I really came to the floor prepared to raise this question and bring it to issue knowing that it can be voted on.

I felt that we are always among the States which meet the deadline. Those States are always penalized because the laggards do not get on their horses and move.

I must say that I am very deeply moved by the fact that this concerns Louisiana. I do not in any way want to embarrass or complicate the situation of the Senator from Louisiana.

That is why instead of seeking to press the matter to a conclusion, since I know the Senator wants the bill, I suggested some modest curtailment of the time. I had the idea of not making it contemporaneous with the end of the fiscal year which would encourage the laggards to move.

Mr. YOUNG of North Dakota. Mr. President, I think some compromise would be in order. The Senator from Rhode Island (Mr. PASTORE) who had much to do with this amendment is not here at the moment. I believe his legislature will meet early next year so may not object to advancing the date some. Would the Senator from New York be willing to suggest the date of May 30?

Mr. JAVITS. What about April 30?

Mr. ELLENDER. How about May 15?

Mr. JAVITS. May 15 would be satisfactory. I will propose the amendment.

The PRESIDING OFFICER. Does the Senator want to modify his amendment?

Mr. JAVITS. Mr. President, will the Senator yield so that I might offer the amendment.

Mr. ELLENDER. Very well.

Mr. JAVITS. Mr. President, I call up my amendment at the desk.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

On page 15, line 1, strike out June 30, 1971, and insert May 15, 1971.

Mr. JAVITS. Mr. President, one thing I would like to ask the Senator. It is one thing to do this for the first time. And it does have certain elements of fairness in it. This is the first time out.

But equally important to me, and to the amendment, and shortening this time and getting it out of the fiscal phase, is the assurance of the chairman that this is not a precedent, that this is a one-shot matter, because States, perhaps, were not ready, people were slow, and so forth. However, we are not going to have this become a turnstile operation because States are laggard in the use of this money.

Mr. ELLENDER. I agree with my good friend from New York. The reason many States have not moved more quickly is that the appropriations were so small it did not pay them to go along; but now that the program is providing moneys authorized almost to the dollar, I think States will move quickly.

Mr. JAVITS. The Senator agrees that this is not a precedent, does he not?

Mr. ELLENDER. Yes. We have no objection to the amendment.

The PRESIDING OFFICER (Mr. DOMINICK). The question is on agreeing to the amendment of the Senator from New York.

The amendment was agreed to.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. MANSFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TITLE II—DEPARTMENT OF THE ARMY—RIVERS AND HARBORS AND FLOOD CONTROL

GENERAL INVESTIGATIONS

Mr. ELLENDER. The committee recommends $41,616,000, an increase of $2,019,000 over the budget and $3,057,000 over the House.

As in the past, the committee prefers not to make specific allocations of its increases to individual investigations. We do not earmark it, in other words. It desires, however, to call to the attention of the Corps of Engineers the testimony concerning the need for initiating unbudgeted surveys and increases in budgeted studies.

CONSTRUCTION, GENERAL

The bill as reported to the Senate provides $871,808,000, which is $50,410,000 above the budget and $46,119,000 above the House.

The recommended increase provides $4,081,000 for planning—including 21 new planning starts for which $2,389,000 is allotted, and restoration of a House cut of $807,000 for planning on the Dickey-Lincoln project in Maine.

The recommended increases includes $42,038,000 for construction. The major increases are $10,010,000 for 23 new construction starts; $26,945,000 for increased amounts on 21 projects under construction where the committee felt additional amounts were required; and $1,100,000 for new starts on land acquisition.

FLOOD CONTROL, MISSISSIPPI RIVER AND TRIBUTARIES

The committee has recommended $91,004,000, an increase of $11,426,000 over the budget estimate and the amount allowed by the House. The importance of this project can be realized when one considers that the drainage from 41 percent of the area of the United States funnels through the Mississippi River and its tributaries.

OPERATION AND MAINTENANCE, GENERAL

The committee recommended $292,600,000, the amount of the budget estimate and $2,600,000 above the amount allowed by the House.

As I have said, it seems foolish for us

to spend millions of dollars, and then not properly maintain these projects.

Mr. JAVITS. Mr. President, will the Senator yield on that point?

Mr. ELLENDER. I yield.

Mr. JAVITS. What I have to say bears on what the Senator has just said.

We have a situation in New Rochelle, N.Y. I have discussed this matter with the Senator's assistant. We have there probably one of the most used channels in the New York area, especially for small boats, and for pleasure boating. No work has been done there since 1936. A survey as recently as 1967 called for maintenance dredging. The cost at the most is $100,000 and this also takes in contributions. But we understand from the Engineers that the committee has to act on it. The matter has been delayed now for 4 years. Senator GOODELL and I are most anxious that this project go forward.

Mr. ELLENDER. The Senator's project is not the only one in that category. We found situations in the past where because we did not appropriate sufficient moneys to properly maintain these projects there was neglect and they had to start all over again.

I assure the Senator I have personally contacted the Engineers on this matter, and if it comes within the maintenance item, it can be provided for out of the funds included in the bill.

Mr. JAVITS. I thank the Senator.

Mr. ELLENDER. Mr. President, I will continue with my remarks:

FLOOD CONTROL AND COASTAL EMERGENCIES

The bill provides $3,000,000, the amount allowed by the House and $4,000,000 below the budget estimate. The corps testified on June 29 that they had $8 million unobligated. With the appropriation of $3 million, a total of $11 million will be available for this purpose, which should be adequate.

GENERAL EXPENSES

The committee recommends $25,800,000 which is the budget estimate and $450,000 above the amount allowed by the House.

CEMETERIAL EXPENSES

The bill provides $18,184,000. This is the amount allowed by the House and is $750,000 above the budget estimate. The increase is for high priority maintenance at certain national cemeteries.

We have this increase because many of the larger cemeteries require additional funds for proper maintenance because of the war in Southeast Asia.

THE PANAMA CANAL—CANAL ZONE GOVERNMENT

OPERATING EXPENSES

The committee recommends $44,129,000, which is $106,000 under the budget and $329,000 above the amount allowed by the House.

The Canal Zone Government expenses are reimbursed by the Panama Canal Company. We generally went along with the House and the budget, but we did increase the appropriation some. This is more or less a self-sustaining program in that the Panama Canal collects the tolls and from that they pay all expenses incident to operating the Panama Canal and the Canal Zone Government.

CAPITAL OUTLAY

The committee recommends $1,850,000, which is $313,000 below the budget and $350,000 above the House allowance.

TITLE III—DEPARTMENT OF THE INTERIOR—FEDERAL WATER QUALITY ADMINISTRATION

POLLUTION CONTROL OPERATIONS AND RESEARCH

The committee recommends $98,618,000 which is $600,000 over the budget estimate and the House allowance. The increase is for the initiation of the Alaska village safe water facilities demonstration project.

CONSTRUCTION GRANTS FOR WASTE TREATMENT WORKS

The bill provides $1 billion, the amount allowed by the House. The committee has approved the House language which modifies the formula for the allocation of funds for fiscal year 1971 pending review by the Public Works Committees of the House and Senate.

Since the additional $686 million made available for this purpose in fiscal year 1970 was not allocated to the States until February 1970, the committee has included language in the bill permitting funds allocated for fiscal year 1970 to remain available until June 30, 1971, before being reallocated in accordance with the act.

BUREAU OF RECLAMATION

GENERAL INVESTIGATIONS

The committee recommends $19,100,000 which is the amount of the budget estimate and $100,000 above the House allowance. The committee has approved the adjustments made by the House in the general investigations programs, and has added $100,000 of unearmarked funds to be allocated to the most urgent requests made to the committee in the hearings.

CONSTRUCTION AND REHABILITATION

The committee recommends $187,931,000 which is $16,253,000 over the budget and $6,121,000 above the House allowance.

The principal increases recommended by the committee include $4,285,000 for increases on five construction projects and $1,358,000 for six new construction starts.

I have been a strong advocate of Federal programs for the preservation and development of our land and water resources. I have consistently supported the reclamation program in the West. On the basis that the projects were economically justified, I accepted the fact that the costs of irrigation facilities were to be repaid without interest, generally over a 40-year period following a development period of about 10 years. This, in effect, means a 50-year interest-free loan to the irrigator.

This Congress for the first time I had the responsibility of handling the reclamation portion of the public works appropriation bill. I have been astounded by some of the financial arrangements made for the irrigation features. I would like to cite two examples—one in the Columbia Basin and one in the Missouri Basin.

CHIEF JOSEPH DAM PROJECT MANSON UNIT, WASHINGTON

The total estimated cost of this project is $16,624,000. The project will provide an irrigation supply to 5,930 acres, of which 1,935 acres are not now irrigated. The irrigation investment on this project amounts to $2,803 per acre, of which only $637 will be repaid by the irrigator and $2,166 is to be repaid from power revenues from the Federal hydroelectric power projects. Generally, the cost of the power facilities are repaid with interest over a period of 50 years. It is only after the power features of a project have been paid off that the excess revenues over operation and maintenance and major replacements can be applied to repayment of the cost of the irrigation features assigned to power.

I cannot understand how the Bureau of Reclamation can show a benefit-to-cost ratio of 4.3 to 1.0 on this project when the irrigator can afford to pay only about 22.7 percent of the cost of bringing the water to his land. I simply do not see how the Bureau of Reclamation can justify an expenditure of $2,803 per acre to irrigate the land. What crops could possibly be raised on this land to warrant such a large expenditure?

As I understand it, the cost of the Bureau of Reclamation's Columbia River project is estimated at $1,854,686,560, of which $1,201,940,000 is for irrigation and $653,851,000 is for power facilities, and the remaining $48,158,000 is for other purposes—principally flood control. In addition, the Corps of Engineers has completed, or has under construction, multipurpose projects including power estimated to cost $3,102,161,000, of which $2,292,814,000 is allocated to power. After the power features of the Bureau of Reclamation and corps projects have been repaid with interest the power revenues will be used to repay the irrigation costs assigned to power. Under the law the irrigation costs are repaid without interest, regardless of the source of the funds. The Commissioner of the Bureau of Reclamation has assured me that sufficient funds are being allocated to the Bureau by the Bonneville Power Administration to pay all irrigation costs assigned to power and they will be repaid within the 50-year repayment period, or sooner. He stated that power costs of the Columbia Basin project should, therefore, be repaid by fiscal year 2031, or sooner.

NEBRASKA MID-STATE DIVISION, NEBRASKA

The total cost of this project is $106,232,000, of which $76,831,000 is allocated to irrigation; $1,611,000 to power; $3,787,000 to recreation; $11,172,000 to fish and wildlife; and $12,821,000 to flood control. The repayment of these costs is allocated as follows: Amount to be repaid by the irrigators, $44,350,000; by power, $34,092,000; by fish and wildlife, $428,000; recreation, $122,000; and nonreimbursable, $27,240,000. In this case, the project would provide a regulated gravity and well combination water supply for aquifers from which more than 5,200 irrigation wells are pumping ground waters. Provisions are included for initial production of irrigation power for project pumping and for ultimate development of commercial power.

Here, again, we find power revenues from the Missouri Basin hydro projects repaying a substantial portion of the ir-

rigation investment. In this case the irrigation investment amounts to $549 per acre, of which the irrigator will repay $317 and $232 per acre will come from power revenues.

I do not understand the justification for this project which shows a benefit-to-cost ratio of 1.25 to 1.0. As I previously stated, the irrigation investment on this project is $549 per acre. The justification sheet states that the crops presently grown are corn, alfalfa, grain sorghum, soybeans, and small grain; and that it is anticipated the same crops will be produced with project water.

For the Missouri Basin project the repayable investment of the Bureau of Reclamation is $1,351,094,846; and that of the Corps of Engineers for the power features of their projects is $746,908,921; or a total repayable investment of $2,098,003,767. In this case, the Commissioner advised the committee the power features of the project would be repaid by the year 2015 and all irrigation costs for the Missouri Basin project by the year 2068.

I realize that these projects and their repayment features are authorized by law, and I am certain that I voted for most, if not all, of them.

When you serve on the appropriations committee you begin to realize the full import of some of the legislation which has been enacted into law. It is for this reason that I have taken the time of the Senate to discuss what is happening on some of these projects. I hope that in the future the Interior and Insular Affairs Committees of the House and Senate, and the Senate itself, will give greater consideration to the manner in which some of these projects are to be repaid.

UPPER COLORADO RIVER STORAGE PROJECT

The bill provides $22,675,000, which is $1,980,000 above the budget and $1,415,000 above the House.

COLORADO RIVER BASIN PROJECT

The committee recommends $6,498,000 which is the amount of the budget estimate and $1,200,000 below the House allowance. The committee deleted from the bill the $1,200,000 to initiate construction of the central Arizona project.

This will be in conference.

This is a very large project having a total cost of $863,158,000, and for which initial planning funds in the amount of $1,200,000 was appropriated last year. Two hundred thousand dollars of this latter amount were placed in budgetary reserve.

OPERATION AND MAINTENANCE

The bill as reported to the Senate provides $57,800,000, the amount allowed by the House and $600,000 below the budget estimate.

LOAN PROGRAM

The bill provides $8,550,000, the amount allowed by the House and $4,150,000 above the budget estimate The amount allowed provides $950,000 for four new loans; and $3,400,000 for increased amounts on four loans and an undistributed reduction of $200,000.

GENERAL ADMINISTRATIVE EXPENSES

The committee has recommended $13,652,000 which is the budget estimate and the amount allowed by the House.

ALASKA POWER ADMINISTRATION

GENERAL INVESTIGATIONS

The bill provides $600,000, the amount allowed by the House and $100,000 below the budget estimate.

OPERATION AND MAINTENANCE

The committee approved the House allowance of $400,000 which is $20,000 below the budget estimate.

BONNEVILLE POWER ADMINISTRATION

CONSTRUCTION

The committee recommendation is $91,600,000 which is $1,922,000 below the budget and $1,100,000 above the House allowance.

OPERATION AND MAINTENANCE

The bill provides the full budget estimate of $23,600,000.

SOUTHEASTERN POWER ADMINISTRATION

OPERATION AND MAINTENANCE

The committee concurred in the House allowance of $800,000, which is $30,000 below the budget estimate.

SOUTHWESTERN POWER ADMINISTRATION

CONSTRUCTION

The bill provides the full budget estimate of $950,000.

OPERATION AND MAINTENANCE

The committee recommends $5,100,000, the budget estimate.

In this connection, Mr. President, I am hopeful that ways and means can be worked out whereby the Southwestern Power Administration can at least pay for all of the distribution cost of electricity that is handled by that power administration. In the past few years they have been catching up on back payments. I have stated on many occasions that this should be accomplished, even if it meant increasing power rates, so that at least the consumers of the electricity that is developed and distributed in that area will pay for it in full instead of having the Government subsidizes it so heavily.

OFFICE OF THE SECRETARY

UNDERGROUND ELECTRIC POWER TRANSMISSION RESEARCH

The committee recommends the full budget estimate of $1,000,000 which is $250,000 above the amount allowed by the House.

TITLE IV—INDEPENDENT OFFICES

DELAWARE RIVER BASIN COMMISSION

SALARIES AND EXPENSES

The bill provides the budget estimate of $58,000.

CONTRIBUTION TO THE DELAWARE RIVER BASIN COMMISSION

The committee approved the budget estimate of $175,000.

INTERSTATE COMMISSION ON THE POTOMAC RIVER

The bill provides the budget estimate of $5,000.

NATIONAL WATER COMMISSION

The committee recommends $1,840,000 which is the budget estimate and the amount allowed by the House.

TENNESSEE VALLEY AUTHORITY

The committee recommends $56,180,000 which is $6,100,000 above the budget and $2,000,000 above the House. The committee added $3,000,000 for the Mills Reservoir, and took an undistributed reduction of $1,000,000.

WATER RESOURCES COUNCIL

The committee recommends $5,550,000 which is $895,000 above the budget and $1,000,000 above the House. The Senate increase of $1,000,000 is for title III grants to States for strengthening the States' water resources staffs. These funds are allocated to States on a 50 percent matching basis.

Mr. President, that concludes the presentation of all the programs under the bill. I am very hopeful the Senate will agree to them. We have worked hard on the bill. I think it is a very important bill, and I am sure every item recommended in the bill will be of great benefit to our economy.

I yield now to the Senator from North Dakota (Mr. YOUNG).

Mr. YOUNG of North Dakota. Mr. President, I thank the Senator for yielding to me.

A great amount of work has gone into the bill, particularly on funds for the Atomic Energy Commission. The chairman of the subcommittee, the Senator from Louisiana, did a tremendous amount of work on the bill. We have on the staff one of the best of all Senate staff members, Mr. Kenneth Bousquet.

We are below the budget by $5 million. Already this year we have had three appropriation bills vetoed. The House sustained the President on two of those vetoes. If we go over the budget on this bill, as some Members would like to have us do, by a quarter of a billion dollars, we could well have another veto on our hands. In this case I think Congress would again sustain the President's veto.

There are many public works construction funds in this bill for which not only this President but three or four Presidents previous to the present President have held up construction. We have to be in a reasonable position of not going far over the budget if we do not want construction funds again with heed.

I hope, for that reason, and for the sake of economy in Government, that the Senate does not go above the committee recommendations.

This is not a perfect bill. None of them are. I think the committee did a far better than average job on this one, and I think, as a whole, it represents the views of most Members of the Senate, and the entire Congress.

NIXON VETO OF PUBLIC WORKS BILL WOULD SHOW THE PRESIDENT MEANS BUSINESS

Mr. PROXMIRE. Mr. President, the Senator from Louisiana is one of the most diligent Members of this body. He works very hard and ably. I commend him for his hard work on this bill and also commend the Senator from North Dakota, the ranking Republican member on the committee, for his hard work.

Nevertheless, I must say that the public works bill we are considering today includes well over $1.5 billion for the Corps of Engineers and the Bureau of Reclamation—dollars that will not be spent on housing and other vital domestic needs. In fact, these dollars are highly inflationary because they inject fresh de-

mand into competition with housing at the very time when the housing market is suffering because of the high cost of building coupled with soaring interest rates.

As the Senator from North Dakota (Mr. YOUNG) has just stated, President Nixon has vetoed three major appropriation bills because the Congress provided more than he requested for housing, urban renewal, and education. He has also vetoed a hospital construction authorization bill. Yet here is a bill that houses no one, teaches no one, and heals no one, and, with regard to public works projects, exceeds the President's budget by almost $80 million. And the bill itself is almost one-half billion higher than was spent last year.

Mr. President, I must vote against this public works appropriation bill today because I believe that in our system of priorities, at a time of severe budgetary pressures, we must place programs that help to educate and house and heal our people well above the pouring of cement for new dams and canals.

The Oakley Dam and Reservoir project, on the Sangamon River in Illinois, is an example of one of the worst boondoggles in this bill. The project's ostensible purpose is to provide flood control for people living in the Sangamon River Basin. But the farmers who live and till the soil right along the Sangamon have experienced no more than one crop loss in the last 15 to 20 years, and there is no indication that the Oakley Dam can improve on that experience. More significant is the impact the dam will have on biological and ecological study of Illinois' Allerton Park as a unique preserve for unusual flora and fauna; construction of the dam would flood the region and destroy a large part of the unique life in the park.

The real function of this project is to provide an additional water supply for the city of Decatur, Ill., a community 25 miles upstream from the damsite. Underground acquifers in the area could be tapped by Decatur to augment its water supply, but it is much easier to have Uncle Sam kick in $49 million to build a dam to provide the additional water. And the flooding caused by the project will not bother residents of the city—only the farmers living upstream from the dam and the biologists now using Allerton Park will lose out.

Another public works white elephant, of monstrous proportions, is the Trinity River project. It would result in a canal from the Dallas-Fort Worth area to the Gulf of Mexico at an unbelievable cost of more than $1 billion. Some have said that it would be cheaper to move Dallas and Fort Worth to the gulf. Seed money for this project—half a million dollars in planning funds—is included in today's bill.

There are many others that cannot be justified. We spend this public works money wherever the return is 4 percent. To do this, we tax money out of the private sector that is earning 12 percent, on the average, before taxes; and that is the fair comparison. Virtually every competent economist in the country, liberal or conservative, recognizes that this is a gross misallocation of resources.

It is true that there are several significant items in today's bill that should be funded. I do not mean by my vote to signify my disapproval of them. Certainly the activities of the Atomic Energy Commission must continue, the construction of waste treatment works must not be permitted to lag, and the work of the Tennessee Valley Authority has to go on.

But how long are we going to squander Federal dollars on bricks and mortar when crying human needs continue to be unmet? How many dollars will we continue to spend on our jet-set SST's, our glamorous moonshots, our pollution promoting highways, our unneeded, inefficient weapons systems, while slighting medical research, education of the underprivileged, pollution control, housing for American families?

Today I am saying no to bricks and mortar by voting against this bill, and I urge the President to do likewise by vetoing the bill. If he really believes, as I do, that Federal spending must be cut, here is one of the very best places for him to make the incision. By vetoing this bill and resubmitting to the Congress a revised proposal that halts public works construction in this big budget deficit year, President Nixon can show that when the pinch is on it's the "people" programs that count.

I pledge here and now that I will gladly, and with great enthusiasm, vote to sustain such a veto. For it would demonstrate that the Federal Government believes that to educate, to house, to cure the ill is more important than bricks and mortar. The minds and bodies of human beings should come before the steel and concrete of buildings and highways.

Mr. SPONG. Mr. President, on behalf of the people of the Arlandria community of northern Virginia, I wish to thank the committee—and particularly the distinguished chairman of its Public Works Subcommittee (Mr. ELLENDER)—for including in the bill $175,000 for preconstruction planning on a flood control project at Four Mile Run.

I am personally grateful to the subcommittee chairman for having recognizing the urgent need for this improvement. I hope the other body will accept the inclusion of the funds so that the necessary surveys leading toward construction can be quickly initiated.

Members of the Senate are familiar from accounts in the local news media of the several floods that have occurred in Arlandria within the past 13 months. Accordingly, there is no need to recount the suffering that has occurred in the community.

Favorable action on funding for this project will instill in the community a feeling that the Federal Government is both responsive and sympathetic to an acute problem.

Mr. PROUTY. Mr. President, I wonder if I could have the attention of the distinguished Senator from Louisiana.

Am I correct in understanding that the date on page 15 of the bill, June 30, 1971, has now been changed to May 15, 1971?

Mr. ELLENDER. The Senator is correct.

Mr. PROUTY. It seems to me that this provision is clearly legislation on an appropriation act, and would be subject to a point of order.

Mr. ELLENDER. If the Senator will look, on the same page, at line 14, there is language by the House of Representatives that is legislative also; and, of course, the amendment we put in is germane, so that the point of order can be made, but since the language we added is germane to what the House put in, the Senate would have to vote on it up or down.

Mr. PROUTY. I do not propose to raise a point of order, but I hope that this does not establish a precedent, which I think is very dangerous.

Mr. ELLENDER. The Senator is correct. We discussed that, and the Senator from New York made that point, and I agreed with him, that it should not be accepted as a precedent.

The PRESIDING OFFICER (Mr. DOMINICK). The bill is open to further amendment.

Mr. McGOVERN. Mr. President, I have an amendment at the desk, which I call up and ask that it be reported.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 7, line 24, delete period at end of sentence and add the following:

Provided further, that no moneys appropriated by this Act for the Cross-Florida Barge Canal project shall be expended by the Corps of Engineers prior to June 1, 1971, in order to allow a complete ecological and economic review and study of the project by the Department of the Interior, the Council on Environmental Quality, the Water Resources Council, and other affected agencies.

Mr. McGOVERN. Mr. President, because I am disturbed over the possible destructive impact of the cross-Florida barge canal on the environment, I am offering this amendment, which would prevent the expenditure of funds in this bill prior to June 1 of next year.

The purpose of the delay would be to allow a complete ecological and economic review of the project.

A study, under the terms of this amendment, would be conducted by the Department of the Interior, the Council on Environmental Quality, the Water Resources Council, and other affected agencies.

A brief background is essential to realize the full implications of this project. The barge canal was authorized at the height of World War II solely as a means by which Allied shipping could bypass the threat of Nazi submarines in the Caribbean and Atlantic. Nothing was done on the canal for a period of 20 years—until 1962, when Congress first appropriated funds for construction. Construction actually commenced in 1964, and since that time the Corps of Engineers has constructed approximately one-fourth of the project.

Included in that construction was the clearing and inundation of 13,000 acres of virgin hardwood forest along the Oklawaha River behind Rodman Dam, and the utter destruction of the river for a stretch of over 20 miles.

As an indication of the importance of the Oklawaha River, one need only re-

flect that it was seriously considered for inclusion as a wild and scenic river under the Wild and Scenic Rivers Act of 1968. There is no doubt that the Oklawaha qualifies for inclusion in the system. It forms the basis for an ecosystem which is unique in the Western Hemisphere—a lush, semitropical area which supports an amazing variety of fish and wildlife, timber, and wildlife habitat. Aside from its splendor as a natural recreational area, it is one of the great scientific laboratories remaining in North America.

Underlying much of the canal route is the Floridan aquifer—a great torrent of fresh water which supplies domestic, municipal, and industrial water for much of the State of Florida. The present plans of the Corps of Engineers call for cutting into this aquifer to construct the canal, and opening it up to a serious threat of pollution by oil and chemical spills from barges and other vessels. The Corps of Engineers discounts this threat; however, there is reasonable doubt that the corps has fully evaluated this danger as well as the right of all our citizens to enjoy an unspoiled gift of nature.

A considerable stretch of the Oklawaha River remains as it was thousands of years ago—unspoiled and free flowing. Yet over it hangs the threat of ultimate destruction by the further construction of the canal, the cutting, clearing, and crushing of timber and wildlife habitat, and the obliteration of an entire ecosystem.

But this threat has not gone unnoticed by the citizens of Florida. A remarkably dedicated group called the Florida Defenders of the Environment has been fighting the battle of the Oklawaha for many years. For the most part they include environmental scientists, ecologists, biologists, geologists, and economists from the university communities of Florida. In February 1970, 162 of these environmental scientists requested President Nixon to declare a moratorium on further project construction. The Florida Defenders also number among their members many ordinary citizens who are repelled by the destruction of their natural heritage and justly concerned about the imminent threat to their water supply.

Of late, the Florida Defenders of the Environment have been joined by a number of public officials in their questioning of the canal project. Secretary of the Interior Hickel, the President's chief adviser on environmental affairs, recently requested urgently a 15-month moratorium on further construction in order to allow a complete economic and ecological analysis of the barge canal. I agree with the necessity for this thorough study. In the report of the Bureau of Sport Fisheries and Wildlife, which supported the Secretary's recommendation and which I offer in complete version for the record, it was concluded:

> Considering the public interest in this project, a thorough review seems appropriate. Any decision as to the intent of the Federal Government to complete, substantially modify or halt the project should be based on thorough studies of the ecology, geology, hydrology, social factors, and economic evaluations of the alternatives.

Then the Bureau continued:

> Major issues are the effects of the canal on the very important Floridan Aquifer, pollution of the reservoirs and the aquifer, aquatic weed control, doubtful project economic evaluations, and preservation of a stream and flood plain considered for Wild River status. Protection of the aquifer is significant to the Florida citrus industry and to future development of the State south of the canal.

Then one final observation from the Bureau report:

> The public interest would be served by thorough study of all possible alternatives and by making this information available to Congress and the public for their decision.

As yet, no moratorium has been declared.

Other public officials have also questioned the desirability of the project. The Resources and Conservation Committee of the Florida State Senate has passed a resolution by unanimous vote urging a congressional reevaluation of the project. Lt. Gov. Ray Osborne, of Florida, has predicted that the canal may end up as one of the biggest boondoggles in the country. Governor Kirk's principal assistant on environmental matters, Nathaniel P. Reed, has stated that the canal is "outdated, foolish, destructive, and an economic loser which is a product of 19th-century thinking." The Florida Game and Fresh Water Fish Commission has issued a report extremely critical of the canal project. And Lyman E. Rogers, the general chairman of the Governor's natural resources committee, in a letter to President Nixon, stated with respect to the canal project:

> The citizens of Florida are more aroused than our congressional delegation realize. A sizable resentment is building toward the cynical disregard by Department of the Army and others. The result is undermining not only our pocketbooks and our irreplaceable resources but our most essential need, in these times, of a respect of our governmental systems. Therefore, Mr. President, I say to you that this issue is fundamental to our roots of a faith in a system that was created to be responsive to the people. With deep humility I plead with you to use the office of the presidency to support the position of your Secretary of the Interior. Let the proper, in-depth ecosystem study be made and let us, who carry the burden of paying the bill, know the results of this study.

Mr. President, in spite of this very strong recommendation for a moratorium on the project until the review can be completed as requested by Secretary Hickel, that moratorium has not been declared, and the amendment would have the effect of requiring such a delay until June 1 of next year.

The national media have also joined the voices protesting the canal. Time magazine, the Atlantic Monthly, the Reader's Digest, and the Living Wilderness have all published articles extremely critical of the project. NBC and CBS news have run incisive programs deploring the destruction of the Oklawaha River. The St. Petersburg Times has editorially opposed the project.

It is evident that the environment may be wounded, but it is not a dead issue. The Battle of the Oklawaha is a conflict which touches us all, and has called forth the best in the American nature. We cannot fail those who expect this Nation to be responsive to their legitimate claims for a preservation of their heritage. As stated so eloquently by Chief Justice Oliver Wendell Holmes, "a river is more than an amenity, it is a treasure."

As I have stated, in addition to the Secretary of the Interior and other officials of the Government, environmental groups, and important news organs, both in Florida and in other parts of the country, have joined in raising questions about the advisability of this project, and particularly about the hazardous impact it may have on the environment, with special reference to the Oklawaha River, one of the most beautiful rivers in the country, and one which, from everything I have been able to learn, will be seriously disrupted and part of it destroyed, so far as its natural beauty is concerned, by the construction of this project. But it is evident to me, from investigation I have made into this project, that it is one that touches the concern of all of us about the future of our environment.

So I add my concurrence to the recommendation for a construction moratorium on the cross-Florida barge canal in order to allow an adequate study of all the factors involved, with special reference to the environmental considerations. I urge the President to declare such a moratorium, regardless of what the outcome on this amendment might be.

I also wish to emphasize that the further appropriation of funds for the project, should that be the will of Congress, ought not be implied as a waiver of the statutory duties of the Corps of Engineers to comply with relevant environmental legislation such as the National Environmental Policy Act, the Federal Water Pollution Control Act, the Fish and Wildlife Coordination Act, and numerous others with which the corps is supposed to comply.

While Congress may possibly continue the underwriting of this project, it should not be construed as an excuse to the Corps of Engineers not to consider the full environmental consequences of their actions, and there should be no lessening of responsibility on their part to comply with the statutes already on the books with reference to environmental considerations.

Mr. President, I offer this amendment not only on behalf of myself but also on behalf of the junior Senator from Wisconsin (Mr. NELSON), who has long been interested in environmental matters; and

I ask unanimous consent that his name be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McGOVERN. I think the Senate is thoroughly familiar with this project. The issues have been debated over a long period of time. I see no reason for the Senate to go into extended debate on the matter.

I ask unanimous consent to have the report to which I referred, from the Bureau of Sport Fisheries and Wildlife, dated March 30, 1970, and an article published in the St. Petersburg Times of August 2, 1970, which also deals with this project, printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REVIEW AND APPRAISAL OF THE CROSS FLORIDA BARGE CANAL

This report in no way is a full assessment of the environmental impact of the Cross Florida Barge Canal. To assess the full effect of the project on the area traversed would require much more time, more manpower, and certainly more disciplines than are available in this Bureau. The report merely summarizes the general state of knowledge concerning the project and suggests a course of action.

DESCRIPTION OF THE BASIN

The Cross Florida Barge Canal will follow the St. Johns River upstream to the Oklawaha River, cross the State through a series of impoundments and canals, and enter the gulf near the mouth of the Withlacoochee River. The impoundments destroying a large part of the beautiful Oklawaha River and its flood plain have been the center of an environmental crisis. This area therefore receives the greatest attention in this review.

Reports of the Bureau of Sport Fisheries and Wildlife describe a fishery that is marine on the ends of the canal route, grading through a grouping that includes estuarine species near the ends, and fresh water forms, principally largemouth bass, catfishes, and sunfishes in wholly fresh water areas. Striped bass migrate seasonally into the lower Oklawaha River for spawning.

Concerned scientists and others have formed a group called the Florida Defenders of the Environment, and have prepared a report entitled "Environmental Impact of the Cross Florida Barge Canal," dated March 1970, that contains the following description of the Oklawaha River:

"The Oklawaha is one of the principal rivers of Florida. It has its source in a chain of lakes—Griffin, Eustis, Harris, and Dora—in the central peninsular highlands and flows northward and then eastward for some 70 miles, entering the St. Johns River about eight miles below Lake George. The Oklawaha is a sand-bottom stream with clear water stained tan by acids from the bark and leaves of the trees of the broad swamp-forest through which it flows. The river owes much of its character to Silver Springs, which joins it in a short way along its course and is responsible for much of the flow of the river from there on, through most of the year. Silver Springs is one of world's largest springs, famous for the immense volume and great clarity of its water and for the abundance of aquatic life that can be seen by visitors. Twenty miles further along, the river is joined by Orange Creek, which comes down from Orange Lake to the northward. The Oklawaha meanders strongly throughout its course, and its actual length is a third again as long as its heavily forested valley."

The Florida Game and Fresh Water Fish Commisison has further described the Oklawaha Basin in a report entitled "A Brief Assessment of the Ecological Impact of the Cross Florida Barge Canal." It states:

"During its geologic life the river has carved out a mile wide valley through which it now flows. During the annual rainy season, the water flows over its low banks and spreads out on the valley floor. When the water is low the flow from Silver Springs will make the river run crystal clear for miles."

"These rich, fluctuating waters have created the dynamic conditions necessary for the maintenance of a productive sports fishery, including channel catfish, chain pickerel, panfish and largemouth bass.

"The dense stands of hardwoods in the Okalwaha Swamp are adapted to the periodic flooding and drying. They consist for the most part of deciduous trees including tupelor, water-locust, water ash, swamp red bay, water oak, sweet gum, red maple, loblolly bay, water hickory, cabbage palm, and bald cypress. On higher ground along the edges of the valley and on many higher islands within the valley the typical hammock hardwoods such as magnolia, blue beech, hop-hornbean and laurel oak make up the forest.

"This delicately balanced conglomerate of diverse plant communities provides ideal conditions for the survival of many wildlife species. Wood ducks, herons, limpkins, gallinules and rails feed along the river's edge; snakes, turtles, and alligators sun themselves on downed tree trunks and still present also are white-tailed deer, wild turkey, raccoon, otter, bobcat, black bear, and panther."

A report on the full route by the Bureau of Sport Fisheries and Wildlife, February 1963, which evaluated only hunting and fishing stated:

"Wildlife resources along the project alignment consist mainly of small game, fur animals, wading birds, waterfowl, white-tailed deer and wild turkey. Non-game bird species such as herons, limpkins, egrets and other wading birds are common. Game species supporting most hunting activity include deer, wild turkey, squirrels, bobwhite quail, waterfowl and black bear. Bobcat, raccoon, opossum, gray fox, rabbits and other animals are present but their importance as sport species is limited."

In a section of the report by the Florida Defenders of the Environment, Dr. James N. Layne, Director of Research, Archbold Biological Station, Lake Placid, Florida, reported over 300 species of animals in the canal route area. These include 33 species of amphibians, 59 species of reptiles, over 200 species of birds, and 41 species of native mammals. Some species, such as the panther, red cockaded woodpecker, sand-hill crane, bald eagle, and alligator are on the list of rare and endangered species. The American osprey is placed in the status-undetermined category at present.

HISTORY

The Cross Florida Barge Canal was authorized by Congress in 1942. It follows generally the route of the Atlantic to Gulf Ship Canal, partially constructed during the Depression. In 1958 and in 1962, the Corps of Engineers performed economic restudies of the canal. Each time, the canal was found to be economically justified, with benefit cost ratios of 1.05 to 1 and 1.17 to 1, respectively.

CONSTRUCTION STATUS OF THE PROJECT

The Corps of Engineers states that the canal is 30 percent complete at this time in terms of funding. However, in terms of mileage, it is less than one-fourth complete. The canal is complete on the western end from the Gulf of Mexico into the existing Inglis Pool (Lake Rousseau). This includes the Inglis Lock, Inglis Bypass Canal (to maintain water flows in the lower Withlacoochee River), and the access channel to the 12-foot depth contour in the Gulf of Mexico. No stump clearing in preparation for dredging the channel has been done in Inglis Pool.

The canal route utilizes the St. Johns River channel from the mouth near Jacksonville to south of Palatka. A small St. Johns River bend straightening project remains to be done to accommodate barge traffic. However, it is now possible to enter the canal cut by boat and travel through the completed St. Johns Lock and be locked through Rodman Lock and Dam into Rodman Pool. The dug canal extends into Rodman Pool a few miles and ends.

Rodman Pool (about 9,500 acres) is essentially complete. The dam is completed, the timber clearing plan has been implemented, and the pool has been flooded to its operating level of 20 feet mean sea level.

Eureka Pool (about 18,000 acres) is not flooded. The lock and dam are complete, except for closure of the dam at the river channel. The clearing plan must be implemented before flooding is undertaken.

The total cost for the completed project is now estimated by the Corps of Engineers at $185 million, of which $16 million is a non-Federal expenditure for land acquisition.

Although the project was originally conceived to be constructed within a 10-year period, presently the construction rate on the project has greatly slowed compared to the 1967 height of activity. This is a result of ceilings on Federal spending, as well as reduced appropriation rates. No new contracts are being prepared for further work on Eureka Pool at present, although salvage timber cutting is going on. At the present rate of appropriation and construction, it would take approximately 30 years to complete the project.

MAJOR ACTIONS BY INTERIOR AGENCIES

Bureau of Sports Fisheries and Wildlife

The Bureau of Sport Fisheries and Wildlife in 1963 submitted a report to the Corps of Engineers under authority of the Fish and Wildlife Coordination Act. This report included a fish and wildlife benefit evaluation. The report considered only game species of fish and wildlife. It did not provide an appraisal of the ecology of the area, of animals not sought by hunters and fishermen, nor of the esthetic values. The only formal request from the Corps was for the economics of expected fishing vessel use of the canal. The report, completed in about 3 months, concluded that the wildlife in the Oklawaha Valley would be replaced by a low quality but more extensive sport fishery.

In describing the effects of the project on hunting and fishing, the Bureau's 1963 report stated:

"The project would occasion significant wildlife losses. A large part of Rodman and Eureka navigation pools will lie on private and Federal lands, administered for public hunting by the Florida Game and Fresh Water Fish Commission. The lands to be flooded contain oak-hammock type habitats of substantially higher value of wildlife than the pine habitats on the adjacent uplands. Elsewhere, the project would traverse game habitats of relatively low quality and value.

"The two reservoirs should support a significant fishery. Benefits from the new reservoir fishery should exceed the loss of fishery resources caused by dredging in the St. Johns and Withlacoochee Rivers and elsewhere in the project area. However, if the fishery benefits are to be realized, adequate public access to the reservoirs and spillways must be provided."

This report did not anticipate the full extent of the environmental degradation nor the problem with eutrophication in the impoundments. With the information available today, the report would have elaborated more on the environment and possible project effects.

It would also more thoroughly consider access facility needs. Access is now available only at the structures, at the west end of the canal, and at facilities provided by the Forest Service on its lands. The Corps and the local sponsor have not acquired and developed other suitable access sites needed for full realization of claimed recreational benefits.

Since 1963, numerous reports and accompanying recommendations have been submitted to the Corps of Engineers. A summary and digest of the reports is attached. All these reports were based on the assumption that the canal alignment and water levels, etc., were fixed in the congressional authorization, and that the project would be built in a few years as planned. The re-

ports attempted to salvage fish and wildlife values within the set framework of design parameters and with knowledge available at the time.

Bureau of Outdoor Recreation

A task force chaired by the Bureau of Outdoor Recreation studied the Oklawaha River in 1963. They found that the Oklawaha from its junction with the St. Johns River upstream to the Silver River was of sufficient size and unique character that it should be included in any system of wild rivers.

The Bureau of Outdoor Recreation, created in 1962, has not evaluated recreational aspects of the canal, nor participated in any of the recreational planning for the project, nor commented on esthetics of the canal itself. Through the Acting Regional Coordinator, they have opposed permits, in the absence of criteria by the Corps which would guide such development, for a powerline which was constructed across Rodman Pool and for lateral canals.

FEDERAL WATER POLLUTION CONTROL ADMINISTRATION

In 1967, the Federal Water Pollution Control Administration prepared a report entitled "Pre-Impoundment Studies of the Waters of the Cross Florida Barge Canal." In addition to reporting water quality measurements and biological sampling, the report made several recommendations, such as installation of automatic water quality monitoring equipment, provision of the maximum feasible treatment at all waste sources, and the manual removal of hyacinths from the system.

U.S. GEOLOGICAL SURVEY

The U.S. Geological Survey has a hydrologic monitoring network measuring flow rates and water quality in the rivers concerned, and has provided information on well readings throughout the alignment of the canal, under contract with the Corps of Engineers.

They have just released a report prepared by Mr. Glen Faulkner in cooperation with the Corps of Engineers, entitled "Geohydrology of the Cross Florida Barge Canal Area with Special Reference to the Ocala Vicinity." We quote a major point, "The importance of maintenance of high quality surface-water quality standards is emphasized in order that the risks of movement of contaminated surface water from the canal into the aquifer may be minimized."

The report of the Geological Survey further concludes:

"The geohydrologic investigation of the Cross-Florida Barge Canal area reveals that the design of the canal and the plan of operation are consonant with the hydrologic regime. Thus canal operations should not seriously affect the regimen of the economically and ecologically important large springs—the water level, rate of flow, and the quality of water at Rainbow Springs, for example. *Further, if Summit Pool lockage losses are essentially replaced and operating precautions are taken against pollution of Summit Pool waters,* there should be no noticeable adverse effects on the water level, rate of flow, and quality of water of Silver Springs. (Italics added.)

"In the canal reaches below Eureka Lock and Dam, and below Dunnellon Lock, little change in water levels in the Floridan aquifer is expected, and pollutional hazards other than possible lockage of water from the Gulf of Mexico are not considered significant. Also, little exchange of water between the canal and the aquifer is expected in these areas. However, some leakage around Dunnellon Lock and Inglis Lock and Dam is likely to occur, and some ground-water flow into the canal should occur for a mile or two below Dunnellon Lock because of a head differential between the canal's operating stage and the natural potentiometric surface of the Floridan aquifer. Also, farther westward there is a possibility for some direct exchange of water between the Floridan aquifer and Inglis Pool in a few places where the dredged canal channel through the pool is expected to penetrate rocks of the aquifer. The potentiometric surface in most of these places is probably close to the planned operating stage of the Pool, and it is likely any net exchange will be small.

"Minimal locking up of Gulf of Mexico water into Inglis Pool is indicated by past experience at the old Inglis Lock and Dam on the Withlacoochee River, and by the fact that considerable flushing action should result from Withlacoochee River flows augmented by possible increases in fresh water flow to the Gulf from some additional ground-water inflow to the Inglis Pool reach and from lockage releases at Dunnellon Lock. However, if significant lockage of Gulf water is found to occur, special operational procedures may need to be effected to minimize such lockage into the canal pools."

The Florida Defenders of the Environment reported these conclusions. A study by Dr. Martin Mifflin, Associate Professor of Geology, University of Florida, found that:

"1. Water supplies in drought periods may be inadequate for canal operation without extensive additional pumping facilities.

"2. Because the summit pool connects freely with the ground water of the Floridan Aquifer any pollution of the pool will enter the aquifer and flow to natural discharge points.

"3. Some pollution of the summit pool and the Floridan Aquifer is inevitable because of nearby residential or industrial development, leakage from barges, and turbidity resulting from construction.

"4. Major pollution from accidental spills of oil or toxic materials is predictable in the long run of barge operation. These pollutants in the Aquifer may damage water supplies of communities nearby and impair the unique recreational qualities of Silver Springs and of whatever sports fishing the canal impoundments might afford.

"5. Oklawaha River water which will be back-pumped to the summit pool may accelerate solution of limestone in the summit reach because of its different chemical characteristics.

"6. Excessive and possibly uncontrollable leakage of water from the summit pool to the lower pools is a distinct possibility.

"7. There is little doubt that the canal will result in an overall decline in the quality of surface water in the system."

The differences between these reputable authorities may, or may not, lie in the use of the qualifications we underlined in the excerpt from the Geological Survey's report to the Corps of Engineers.

U.S. FOREST SERVICE, DEPARTMENT OF AGRICULTURE

The U.S. Forest Service is a riparian owner to most of the south shoreline of Eureka Pool and some of Rodman Pool. It has been the only contributor to the overall Corps of Engineers Recreation Plan. This entailed construction of boat ramps and large camping areas near Rodman Pool.

The Forest Service plans to request the Corps of Engineers to exclude a portion of Eureka Pool from flooding. The portion to be excluded by a dike and pump station, if possible, would be three lakes within the forest and the surrounding swamp. One of these lakes, Mud Lake, is of particular significance, because a study indicated it may be one of four known lakes in the world presently creating an oil deposit.

STATE AGENCIES

The Florida State Board of Conservation, which is the major part of the reorganized Florida Department of Natural Resources, has always supported and endorsed the canal. The Florida Canal Authority, the local project sponsor, is responsible to the Division of Waterways of the Department of Natural Resources. This division promotes waterway construction.

The Florida Game and Fresh Water Fish Commission endorsed the project in 1965, and has concurred with all Bureau of Sport Fisheries and Wildlife reports on the project.

In November 1969, the Florida Game and Fresh Water Fish Commission released a report entitled "A Brief Assessment of the Ecological Impact of the Cross Florida Barge Canal." The main thrust of this report is stated in the conclusion:

"The Corps of Engineers has re-evaluated this project several times since 1962, yet there has never been a complete ecological re-evaluation. Such an ecological re-evaluation would be merited because of the greatly increased amount of technical knowledge available regarding environmental processes coupled with the continual modification of the project by the Corps. It would appear appropriate that such a re-evaluation be conducted by a task force of environmental scientists from the various governmental bodies involved and other qualified fact finding institutions, both public and private, and initiated at the earliest possible date."

The report was presented at hearings conducted by the Florida House Natural Resources Committee. This committee finally voted 9–4 to support the project.

The Florida Senate Natural Resources Committee conducted hearings March 17 and 18, 1970, on the Cross Florida Barge Canal Project. This committee has not yet (3/3/70) voted. The Florida Game and Fresh Water Fish Commission provided this committee with an addendum to their November report. This report and its addendum explain the eutrophication problem and predict degradation of the impoundments within the project life.

PRIVATE GROUPS AND INDIVIDUALS

The Florida Defenders of the Environment has prepared a detailed report on the Canal Project. The group is composed of scientists in several disciplines, including geology, hydrology, soils, ecology, and economics. We have not completed a detailed appraisal of this report due to time limitations. However, the biological information appears to be sound.

REVIEW

Since our first report on the project, additional information about eutrophication is available that would influence any Bureau or Department evaluation of the project. A decade ago, it was known that reservoirs offer an early peak of fishing and then decline. We can now predict the eventual degradation of a stabilized impoundment in a nutrient-rich watershed in Folrida. This inevitability is inarguable. If we were to re-evaluate the canal, this new knowledge would have to be taken into consideration.

The chain of lakes which forms the headwaters of the Oklawaha River is experiencing serious eutrophication problems. Lake Apopka is the classic example. Agricultural effluent and resultant sedimentation of organic materials have degraded a highly productive sport fishing lake into a problem lake with high gizzard shad and low game fish populations. The other stabilized lakes in the chain, especially Lakes Eustis, Beauclair, Dora, and Griffin, also show signs of this impending problem, and their discharges will flow into Rodman and Eureka Reservoir.

The recent report by the Florida Game and Fresh Water Fish Commission described probable project effects as follows:

"The Oklawaha in its natural state is a cool, highly enriched, densely shaded, fast flowing, neutral pH river. As a river, nutrients in the system do not reach their full potential. However, when flow is obstructed by a dam, full utilization of the available nu-

trients occurs. The entire natural ecological system is drastically disrupted, producing a warm water, highly enriched, unshaded, shallow and high pH system with little or no flow. The ecosystem which formerly supported high quality fishing, hunting and aesthetic values is in jeopardy because the new system is a nutrient trap and functions similar to a sewage treatment polishing pond. Soluble nutrients in a polishing pond are utilized exclusively by algae which are settled out and periodically removed from the pond. In the Barge Canal reservoir system soluble nutrients are utilized by higher aquatic plants or by algae which die and contribute to the organic build-up, but unlike polishing ponds, they are not removed from the system, which is detrimental to aquatic life.

"Utilization of nutrients in a reservoir will generally follow two paths: (1) the nutrients will stimulate both submerged and floating plant growth such as hyacinths and elodea, which can ultimately choke the waterways; (2) the nutrients will be utilized in the production of algae. It is conceivable that both developments may occur simultaneously.

"Watershed fertility and associated cultural practices generally dictate the water quality in a lake system. The near septic conditions which exist in some of the upper Oklawaha Lakes (Lakes Apopka and Dora) indicate the quality of water the Eureka and Rodman Pools will receive. Water quality analysis of Silver River, whose origin is Silver Springs, indicates high concentrations of nitrates, phosphate, and total alkalinity. Nitrates and phosphates are major nutrients which contribute to over-enrichment. The Silver River and Upper Oklawaha contribute almost all of the water to this system with an average flow of 855,000,000 gal./day. The amount of nitrogen contributed from these sources has the capability of producing 75 million tons of algae per year.

"The death of these flora, by natural or chemical methods, will produce heavy sediment build-ups which will ultimately render the bottom unproductive for most sport fish populations. An excellent example of the effects of excessive bottom sedimentation on sport fish populations is quite evident in one of the upper Oklawaha lakes—Lake Apopka. The shallowness of the Barge Canal reservoirs will further magnify many of the problems which will be created in the aquatic environment."

The Federal Water Pollution Control Administration report states:

"It is likely that dense blooms of algae will develop. These blooms already occur in the upstream and sluggish reaches of the Oklawaha River. The waters discharged into the river from Silver Springs contain sufficient phosphorous to increase the concentrations in the river by more than 200 percent. In contrast to phosphorous, the nitrogen concentrations decrease after the addition of Silver Springs water. This combination of fertilizers will give the blue-green algae, which are presently the predominant form in the upstream reaches of the Oklawaha, a competitive advantage because of the capability to utilize atmospheric or gaseous nitrogen as a nutrient. A predominantly blue-green algal community is accompanied by more problems than one composed of other or a variety of forms because of the tendency for blue-greens to form floating mats and windrows that are esthetically unpleasant, produce undesirable taste and odors in the waters, and upon death of accumulations of the algae pig-pen odors are generated by the decomposition of the mass. The increases in aquatic vegetation in the impounded waters will restrict and reduce the potential uses of these waters."

The Florida Game and Fresh Water Fish Commission reported that *Hydrilla*, an exotic relative of *Elodea*, is already present in pest proportions in the Inglis Pool portion of the Barge Canal. Its report further states:

"The Inglis Pool is indeed a nutrient trap and has serious aquatic weed problems. Approximately one-half of the pool is engulfed with the submerged aquatic hydrilla. This is the plant which most aquatic weed specialists believe will be the most difficult to control and therefore has the greatest potential to become a pest in the fresh waters of Florida. From fragments it grows as much as several inches to a foot a day, but most importantly, it grows from bulb-like tubers which are highly resistant to chemicals and can even survive many months on dry land.

"Weed control is an expensive operation. In the Inglis Pool, plans are being prepared by the Corps of Engineers to control hydrilla in a 200 acre test plot. The cost of the chemical alone is $20,000.00."

The canal, if completed, will assure its spread into the new reservoirs and perhaps the Summit Pool. Present control methods are extremely costly; estimates of over $10,000 per mile of canal per year have been made by the late Mr. Weldon, a research agronomist for the Department of Agriculture.

WHAT RESOURCES HAVE BEEN AFFECTED TO DATE

On the western end, some marine grassflats were destroyed by dredging and spoiling. A temporary but very impressive bank fishery developed in the raw canal cut, since public access has been permitted. The plug separating the Withlacoochee River and the canal was removed in January. It is too soon to determine the adjustments that will take place in the Withlacoochee River and the canal to the gulf.

The existing Florida Power Corporation Reservoir, or Inglis Pool, has not yet been affected by the canal.

Timber clearing and flooding has killed or will very soon kill practically all the Oklawaha River Swamp in the approximately 20-mile stretch included in Rodman Pool. This is about one-third the distance that was considered for a wild or scenic river in the Bureau of Outdoor Recreation study. The clearing plan proposed to crush the trees into the bottom mud of Rodman Reservoir by use of a giant tree crusher. Since reservoir filling, floating trees and debris have been a continuous problem, limiting public uses.

The project will most likely eliminate the striped bass from the Oklawaha River. The project will provide an avenue for movement of nuisance aquatic animals and plants.

WHAT MIGHT BE EXPECTED IF THE PROJECT IS HALTED

If the project is stopped now, and if Rodman Pool is drained to normal river levels, some trees would survive, particularly cypress. If, however, the pool is dropped after several years, only the trees remaining at the higher elevations will survive and slow regrowth would occur. Without the pool, there would be no opportunity for the public to take advantage of the initial bloom of sport fishing. However, the expense of weed control and debris removal would be diminished.

Clearing and flooding have destroyed the timber and therefore the habitat for wildlife formerly living in the Rodman Pool area. The former esthetic values, which included wildlife-oriented recreation, associated with a meandering stream, are also gone. If the pool were drained now, regrowth of the timber and restoration of the area's former values would take many years.

In the Eureka Pool area wildlife and esthetic values have been diminished by timber salvaging activities. However, if construction were stopped at this point before this pool is cleared, much of the existing wildlife and esthetic values of this 25-mile reach of the Oklawaha River, an 18,000-acre area, would remain.

CONCLUSIONS

Our 1963 fishing and hunting benefits evaluation was predicated on the availability of a low quality fishery. If the Bureau of Sport Fisheries and Wildlife carefully reevaluated the benefits of the Cross Florida Barge Canal Project, new information would only lead to a reduction of the fishery benefits which were expressed in dollars, and a higher appraisal of the wildlife losses. The latter must be expressed largely in nonmonetary terms but would include attention to rare and endangered species as well as to the role of the flood plains in the overall habitat needs of common game and nongame species.

A reduction in fishing benefits estimated by this Bureau would be insignificant in a reappraisal of this project. However, the increased knowledge of eutrophication quickly brings to mind the effects aquatic weeds and algae can have on navigation, boating, and swimming, water skiing, and other recreational pursuits. The Bureau of Outdoor Recreation, which has never evaluated the recreation aspects of the Barge Canal, could take this into consideration, as well as the previously ignored esthetic values.

If a reappraisal were made, considerable interaction should take place between the various responsibilities of the U.S. Geological Survey and Federal Water Pollution Control Administration in terms of accidental spills and pollution by contaminants; Federal Water Pollution Control Administration and Bureau of Sport Fisheries and Wildlife in terms of water quality in the reservoirs; and the Bureau of Sport Fisheries and Wildlife and the Bureau of Outdoor Recreation in terms of a wild or scenic river and its recreational uses. National Park Service might provide land use planning and the Bureau of Commercial Fisheries might assist in evaluating estuarine effects.

RECOMMENDATIONS

Considering the public interest in this project, a thorough review seems appropriate. Any decision as to the intent of the Federal Government to complete, substantially modify or halt the project should be based on thorough studies of the ecology, geology, hydrology, social factors, and economic evaluations of the alternatives. Such a study is beyond the capability of the Bureau and should include other agencies of the Department of Interior, the Department of Agriculture which administers the Ocala National Forest, and the Corps of Engineers which has the responsibility for constructing the project under the 1942 authorization. These studies should conform to the provisions of the National Environmental Policy Act of 1969 and other appropriate acts, directives, and policies.

Major issues are the effects of the canal on the very important Floridan Aquifer, pollution of the reservoirs and the aquifer, aquatic weed control, doubtful project economic evaluations, and preservation of a stream and flood plain considered for Wild River status. Protection of the aquifer is significant to the Florida citrus industry and to future development of the State south of the canal. These considerations are largely economic and social. Problems of weed control are both monetary, bearing on project operation and justification, and nonmonetary, affecting fish and wildlife, esthetics, and recreation. The desire to preserve a free-flowing stream and related environment and history are largely nonmonetary considerations. Total appraisal of the project is very complex, requiring expertise in many disciplines.

The public interest would be served by thorough study of all possible alternatives and by making this information available to Congress and the public for their decision. Such study should include not only project

benefits, but also very thorough study of the geology, hydrology, and project maintenance costs, including the expense now anticipated for aquatic vegetation control.

SUMMARY

1. The Oklawaha in its natural state is a cool, highly enriched, densely shaded, fast-flowing river. The dense stands of hardwoods in the flood plain are adapted to periodic flooding and drying.

2. There are over 300 species of animals, other than fish and insects, on the canal alignment, five of which are on the rare and endangered list.

3. All of the Oklawaha River valley except the lower 9–10 miles will be drastically altered or destroyed by channelization, timber clearing, construction of locks and dams, and impoundment, all as part of two projects—the Cross Florida Barge Canal and the Four River Basins Flood Control project. The lower 9–10 miles will be altered to some degree, depending on how much the quality and quantity of water entering the river channel from Rodman Pool differ from natural conditions.

4. The canal is approximately 30 percent complete in terms of funding, and less than one-fourth complete in terms of channel mileage. Inglis Lock, Rodman Lock and Dam, and St. Johns Lock are completed and operational. Rodman Pool has been cleared and flooded. The Eureka Pool area has not been cleared, but Eureka Lock and Dam are completed except for stream channel closure.

5. The Bureau of Sport Fisheries and Wildlife has evaluated project effects on game species of fish and wildlife only.

6. Bureau of Outdoor Recreation has not evaluated the project. In 1963, it chaired a task force which found the Oklawaha River suitable for inclusion in the wild rivers system.

7. In 1967, Federal Water Pollution Control Administration prepared a preimpoundment study of the project.

8. U.S. Geological Survey has prepared a report on the geohydrology of the Ocala area.

9. The Florida Defenders of the Environment have prepared a report which is highly critical of the project.

10. The U.S. Forest Service has constructed recreational facilities at Rodman Pool, and is requesting that a portion of the proposed Eureka Pool be deleted to preserve some lakes and swamp area.

11. The Florida Department of Natural Resources supports the project.

12. The Florida Game and Fresh Water Fish Commission is calling for a reevaluation of the project.

13. Both the Florida House and Senate Natural Resources Committees have held hearings on the project. The House Committee voted to support the project. The Senate Committee has not yet voted.

14. Extensive and costly eutrophication problems, including nuisance aquatic growths, are inevitable.

15. If the project is halted, regrowth of timber in the Rodman Pool will be slow. The low quality fishery in the pool will be lost, but the overall environment will be preserved in as yet uncleared areas. The very costly problems of weed and debris control will be avoided.

16. A study of ecology, geology, hydrology, social factors, and economics is required before a decision on the future of the project is made. The several interested Interior agencies, the U.S. Forest Service, and the Corps should take part in any such study.

THE CORPS OF ENGINEERS

(By James Ryan)

"The Corps of Engineers is like . . . that marvelous little creature, the beaver, whose instinct tells him every fall to build a dam wherever he finds a trickle of water

"Like the Corps, this little animal frequently builds dams he doesn't need, but at least he doesn't ask taxpayers to foot the bill." Sen. GAYLORD NELSON, D.-Wis.

There is a story that defines an elephant as a mouse constructed by the Army Corps of Engineers. Since elephants, and mice, are somewhat rounded, this anecdote tends to contradict another that contends all Engineers suffer from the "straight-line syndrome" and do not include a French curve among the tools of their trade.

No matter which tale is correct, assuming that one is, the fact remains that during the past 195 years the Corps of Engineers has evolved from a few ditch diggers who worked for free at Bunker Hill into a force of about 60,000 soldiers and civilians who have spent some $22-billion in what appears to have been an effort to change the natural face of this nation into something akin to what engineering manuals say it should look like.

There is no question that when building bridges, bunkers, battlements and other bastions of war, the U.S. Engineers are without parallel in history. It's when they have turned their military expertise toward such civil works as clearing rivers, dredging canals and building dams that they've gotten into trouble.

On the surface, at least, it seems the Corps has adopted a belligerent attitude toward its non-military pursuits, regarding a river or a flood plain as it would a war-time enemy, something to conquer as quickly, as efficiently and as grandly as possible.

This hasn't been all bad. Corps projects brought jobs during and after construction, they prevented floods, they improved navigation and generally upgraded conditions in the area of "improvement." Those who happened to live in what became the bottom of an impoundment were inconvenienced somewhat, but they were paid for their trouble and so everyone should have lived happily ever after.

But they didn't.

In the past couple of decades some stout-hearted conservationists have had the audacity to question an agency that has become—along with richness and fatness—an American tradition, an agency so politically powerful it has rebuffed presidents who considered placing it under more control.

The bone of contention has been the environment. The Corps, a growing number of critics claimed, had not been giving adequate consideration, if any, to the effects of its projects on natural resources. These cries have been amplified by Army-announced plans to build even bigger elephants out of even smaller mice.

Criticism at first was brushed aside, like a pesky gnat. When the complaints became mosquito-sized, the Army responded with arrogance. Finally the attacks are bringing at least a public effort to placate and cooperate. These three statements, all by ranking Corps officials, illustrate the change:

"Those ignorant, misguided, conceited fools; they know not what they say. We are the nation's leading conservationist group because we have conserved the earth by molding it to suit man." (1965)

"Those silly butterfly chasers and self-serving politicians can't stand in the way of progress." (1967)

". . . In future planning we must ask ourselves some new questions and apply some new yardsticks. First, will a proposed project blend into the total natural environment? Will we detract from, or add to, the potential recreational development of the region? Will we adversely affect, or contribute to, the development of fish and wildlife resources, and marine ecology?" (1970)

So, you say, the Corps is changing its tune and things are going to be more adequately planned in the future. Don't count too heavily on that.

Presidents Franklin D. Roosevelt and Lyndon Johnson made preliminary moves to curtail Corps power, but didn't have a chance. Associate Justice William O. Douglas of the U.S. Supreme Court has called the Engineers "public enemy No. 1," but the name-calling caused scarcely a ripple.

Cabinet members, representatives of other bureaucracies and members of Congress itself have railed against the Corps, with little effect.

The point is, all of these critics have been barking up the wrong tree. The Engineers take their orders from Capitol Hill, particularly from those distinguished gentlemen on public works committees, and until there is a change in direction there, one can expect the Corps to alter its operations only minutely.

Then, too, blaming the entire Corps of Engineers for the problems surrounding construction of a project such as the Cross Florida Barge Canal is like blaming the entire city of St. Petersburg for a missed garbage pickup. In the case of the city, the proper target for complaint is the Sanitation Department. With the Corps, it's Civil Works Division. No one can find fault with the Combat Engineers in Vietnam and elsewhere, until they come home to fight such things as floods and impediments to navigation.

The Civil Works Division is made up of about 28,500 people, of which only some 150 are military men and they all are officers. Any ex-enlisted man, and most of those who wear some sort of hardware on their collars, will tell you that a situation involving all chiefs and no Indians can result in little short of mass confusion.

Add to this the fact military personnel are transferred every three years or so, and you have continuity for Corps projects left in the hands of civilians.

Top this off with an arrangement that results in most civilian salaries being charged against the particular project on which they are working. Naturally, if there are no projects, the white collar guys don't get paid, a situation they normally try to avoid at all costs.

Almost all the Corps' construction is done by private firms under contract. Thus the builders, dredgers, sand and gravel industries, concrete industry and other construction-oriented entities have a pretty solid stake in doing their best to see the Corps' workload increases.

For example, Gregg, Gibson & Gregg, a Leesburg firm, has been awarded more than $14-million in construction contracts on the Cross Florida Barge Canal alone. Obviously, Gregg, Gibson & Gregg does not favor abandoning the canal, which is about 30 per cent complete and could contain several more plums.

Lump the Corps' gainfully-employed civilians with the want-to-be-employed construction industry and the result is a pretty potent force. Add to this force those who stand to reap real financial gains from completion of a project—the barge lines, the land developers, the terminal operators, etc.—and the force becomes nearly overwhelming.

Now throw in politics and the picture becomes complete.

There's nothing like a good ol' public works project back in the home state or district to generate support for a candidate. Some people call it "pork barrel." Congressmen generally decline to complain about a colleague's "pork" because one day it'll be their turn at the barrel and a question today might mean getting slapped down in the future.

The Cross Florida Barge Canal was authorized in 1942, by coincidence an election year. It was unearthed for restudy in 1956 and studied again in 1962, again coincidentally, election years. All public works projects assigned to the Corps are included in omnibus Rivers and Harbors Acts that Congress passes

every other year—the even-numbered years.

Barge Canal construction began in February 1964, providing a solid nine months of campaign ballyhoo for all but one member of Florida's congressional delegation, which just happens to be a sponsor for the project. President Johnson, then planning to keep his job in the White House, made a speech at the ground-breaking, although he later spoke critically of the Corps.

Florida's congressmen, as well as ranking state officials and special interest groups promoting the project, must occasionally sit back and smirk at how the Corps of Engineers is catching most of the blame for the potential environmental dangers further Barge Canal construction could bring. The Army can't really afford to pass the buck upstairs, where it belongs. Congress is that august body whence all monetary blessings flow and one doesn't bite the hand that brings the pork.

Just this year, in the face of growing and apparently well-founded opposition to the Barge Canal, Congress managed to scrape up a half-million dollars more for the project than President Nixon had recommended. Last year's appropriation was 25 per cent more than had been recommended.

This by no means is an attempt to absolve the Corps from fault in public works projects that turn out to be more works than public. But when the Army digs a canal through what was the Oklawaha River, or turns the Everglades into a system of drainage ditches, or contemplates a waterway through the Big Bend, Florida's last remaining pristine shoreline, it is only carrying out a congressional mandate.

The Army will continue to carry out orders unless and until Congress tells it to stop. Conservationists can scream at the Corps about the Barge Canal until they're blue in the face and little will happen. But let this state's senators and representatives and local officials withdraw their sponsorship and we'd soon have the world's most expensive monument to narrow vision.

Perhaps it is a bit unfair to say the Barge Canal is strictly the result of narrow vision. It is more accurate to say there was a lack of environmental consideration in the planning, but at the time plans were drawn, there was no rule, regulation, directive, order or requirement for broad, comprehensive planning. The Army simply was instructed to build a canal, which it is doing.

When it became involved in the Central and Southern Florida Flood Control District, its orders were to prevent flooding, and it has.

When it was authorized to come up with a route for the Gulf Intracoastal Waterway from St. Marks to Anclote Key, that's what it did.

The fact the Barge Canal will ruin a wild river and could detrimentally affect Central Florida's water supply, among other things, was of secondary consideration. The fact the Central and Southern Florida Flood Control District would seriously damage the Kissimmee River, the St. Lucie estuary and threaten the life of Lake Okeechobee was, if it was considered at all, secondary. There's little hope of altering these projects now.

Because of the growing national concern over the environment, however, there's chance the Intracoastal Waterway's "missing link" through the Big Bend will be moved seaward of where the Corps has said it should be—at roughly the one-foot elevation contour in Florida's largest remaining wilderness area. An offshore alignment would do less ecological damage, but, by Army calculations, would result in lower benefits.

These benefits are very important to the Corps, which is required to justify its projects through the use of what is known as a benefit-cost ratio (B/C ratio). Engineers, through a series of complex formulas, arrive at a project's cost each year for 50 years and at the dollar benefits that can be expected over the same period. If expected benefits exceed expected costs, the Engineers tuck their plans under their arms and head for Congress seeking authorization to go ahead.

But before the finger can point at Congress or the Corps, it should swing around and be leveled at those who, in theory at least, get the projects started.

According to Army procedure, a group of citizens gets in touch with its U.S. senators and representatives to propose a project. If the solons favor the proposal, they turn it over to the House public works committee, which authorizes the Corps to investigate and make a report. The engineer in the affected district calls a public hearing, then prepares a survey plan, including estimates of costs and benefits. If all goes well, the approved plan goes back to the public works committee, where it is included in an omnibus Rivers and Harbors Act.

The full House, the Senate and the president rarely quarrel with what comes out of the public works committee, so now the project is included in a Rivers and Harbors Act and becomes reality. If authorization includes an appropriation, work can begin as soon as contracts can be let.

There have been claims that the Corps itself goes out looking for jobs and, once one is located, has little trouble convincing a local group the work is necessary. This falls in line with the self-perpetuation theory and possibly has taken place.

On the other hand, the Engineers are happy to provide figures showing more than 50 per cent of the proposals they study are turned down as not feasible. But these projects are not simply junked. Instead, the Army places the denied projects in an "inactive" file where they gather dust until a local sponsor decides to revive them.

That's what happened to the Cross Florida Barge Canal, on several occasions.

The idea of such a waterway was conceived back in Thomas Jefferson's day, but it wasn't until 1935 that the first spade of sand was scattered in the wind. President Roosevelt saw the project as a means of providing jobs and put about $5.5-million into it. But construction difficulties and concern for the freshwater aquifer that underlies most of the route and furnishes most of Central Florida's water resulted in abandonment after about one year. Remains of what was done then can be seen near Ocala today.

A half-dozen years later German submarines regularly were sinking tankers and cargo vessels off Florida's coast. A canal across the state, it was argued, would shorten the perilous voyage. So Congress, at the urging of Florida's politicians, gave the project approval by the margin of one vote in 1942. This is an important year to keep in mind, for it was then the Corps of Engineers was authorized—ordered, in other words—to build the canal. This is the order being carried out today, 28 years later, with essentially the same construction plans.

The canal did not get off—or into—the ground in 1942 or at anytime during the war years because of greater priorities for men, money and materials elsewhere and the effectiveness of antisubmarine activities. When the war ended, plans were put back on the shelf, to languish for a dozen years.

Jacksonville business interests began a move in the early 1950s that resulted in the Barge Canal returning to attention, but a marginal B/C ratio of $1.05 to $1 failed to generate congressional appropriations and it was back to the shelf with the plans.

In 1960, John Fitzgerald Kennedy had his eye on the White House and needed all the help he could get from Florida. There was an agreement, excellent sources say, that if Democratic leaders in Florida would work in Kennedy's behalf, he would, if elected, promote a start on the Barge Canal. Came election day and Kennedy and the Corps were on their way to a "new frontier," both with the blessing of Floridians.

Canal plans came out for still another study in 1962, which resulted in a B/C ratio that was $1.17 to $1, still marginal, but enough to allow Congress to appropriate the first construction funds with a relatively clear conscience. President Johnson was on hand when ground was broken in February 1964. Standing beside him on the speaker's platform that rainy day was Gov. Farris Bryant, now a Democratic candidate for the U.S. Senate.

Last fall, when the Florida Waterways Association held its annual meeting in Winter Park, Bryant was guest of honor.

On almost every even-numbered day since, there has been a story somewhere about someone who believes construction will result in biological, geological, hydrological, ecological, physiographical, botanical or economical chaos. Odd-numbered days have seen the Corps and canal boosters either replying to the charges or generating a few stories of their own.

The exchange has been enough to drive John Q. Citizen to the Ouija Board in an effort to locate the facts.

The one solid leg opponents have had to stand on so far is an absence of proper public hearings before construction began.

After the time a few good folks gathered in the Dixie Theatre in Ocala on April 23, 1940, the public had no chance to hear what was going on and comment on it until late January of 1966, almost two years after construction got underway. The 1966 hearing, held in Tallahassee, was chaired by Secretary of State Tom Adams, who probably is Florida's No. 1 public waterway booster with Department of Natural Resources Executive Director Randolph Hodges not far behind. Adams is a former president and Hodges a director of the Mississippi Valley Association, a barge-oriented organization which says it has offices "strategically located throughout the Valley and in Washington."

Conservationists went to the hearing—actually only a part of another meeting—with not so much malice toward the Barge Canal itself as to that part of its route through the Oklawaha River Valley. They wanted the Corps to adopt an alternate route that would preserve the river.

What happened at the meeting was recorded on film. That film, with Adams in a starring role, is still being seen around the nation as a classic example of just how unresponsive government can be.

The alternate alignment, needless to say, was not adopted. But canal proponents came to rue the day that non-hearing was held in Tallahassee, more than 150 miles removed from the nearest point on the canal route. It not only heightened bitterness against state and Corps officials, but prompted the defenders of the Oklawaha River to take a close look at *all* aspects of the canal.

When the scrutiny began, it was not by the proverbial little old ladies in tennis shoes. The center of opposition was in Gainesville, and when well-qualified scientists from the University of Florida and elsewhere became concerned, many around the state and the nation began to take notice.

Adams dismissed the criticism as "half-truths" by "pseudo-scientists," charges he has declined to substantiate, and succeeded only in further polarizing opposition, which had formed a non-profit organization called Florida Defenders of the Environment (FDE).

Armed with information supplied by FDE, the Environmental Defense Fund, a New York organization, brought a federal suit last fall against the Corps of Engineers. The suit claims the Corps "has been less than candid" about the Barge Canal and alleges the project violates the Fifth and Ninth Amendments to the U.S. Constitution.

It is the only legal action ever taken against the Corps as a result of one of its projects. It apparently has caused some consternation on judicial levels. Almost a year has passed and the case isn't close to coming to trial.

Meanwhile, construction continues, just as Congress ordered back in 1942.

One of the reasons for abandoning the 1935 canal—which was to be at sea-level—was what the U.S. Geological Survey (USGS) determined was a threat to the underground freshwater aquifer underlying most of the canal route. The Corps contended at the time that a series of locks and dams, which require less severe excavations, would eliminate the threat and still accommodate barge traffic. This is the idea that was brought to fruition during the war.

A later USGS report tended to support the Corps' ideas about the aquifer, but this is a major question today, particularly at Silver Springs and Rainbow Springs, where multi-million-dollar tourist attractions are greatly dependent on the millions of gallons of water that flow from the aquifer each day. Any fluctuation in quality or quantity at either attraction and the State of Florida is practically assured of heading into court to answer a damage suit.

Fears that water flow will be affected are supported by a number of dry springs in the area between the western end of the Barge Canal and the Withlacoochee River in northwest Citrus County. Residents of Inglis and Yankeetown are ready to swear that what now are gaping holes in the earth were gushing springs before the canal was excavated a minimum 12 feet into the earth some four years ago.

William B. Paterson of Yankeetown, a former member of the Game and Freshwater Fish Commission, reported that during an extremely low tide last winter, no fewer than 27 "boils" caused by water escaping from the aquifer were counted in the canal excavation west of the Inglis Lock. "That's where our water went," he said.

Asked about this, officials at the Corps' Jacksonville District Office said they hadn't heard that the springs had dried, but would "look into it."

Paterson was one of the "fishermen" who spotted a partially laden, 350-foot barge apparently aground near the western end of the canal in late June. He, and others, insist the barge spent some 24 hours on the bottom of the channel while tugs worked frantically before freeing it. They have pictures that tend to prove their story.

The Jacksonville Office flatly denied the barge was aground, but admitted it had not investigated before making the statement. The Canal Authority of Florida, a co-sponsor of the project, and the shipper, Dixie Lime and Stone Co. of Ocala, a strong canal supporter, made great overstatements about how things had gone exactly as planned.

What happened, apparently, is that what was planned as a pro-canal promotion backfired and the Corps, the Canal Authority and the shipper were caught with their channel shoaled.

Although no one will admit to an error in the alleged barge grounding, the Corps has owned up to a mistake in construction of a bypass canal that is designed to deliver water to the Withlacoochee River downstream from the Inglis Lock.

The by-pass channel, which carries water around the lock and into the river, was designed to furnish a flow equal to the average amount of water in the river each month for the past 38 years. It doesn't work, at least not to the satisfaction of Inglis and Yankeetown residents.

Paterson, who has a beautiful home on the river, said that flow is far less than formerly, that as a result tidal fluctuations are as much as three feet greater, that turbidity has increased, that salt content of the water is higher and that fishing has diminished.

The Corps admits flow through the bypass canal is not as great as it should be and is altering a culvert that it says will increase volume by at least 300 cubic feet per second. It also has commissioned the USGS to conduct a $193,000 survey and monitoring program on salinity levels in the river.

The first place the USGS tested for salt, incidentally, was in a freshwater spring bubbling from the bottom of the Withlacooche. Paterson said the geologists were red-faced when he questioned the authenticity of data collected at that station.

Just what can and will be done if the survey results are adverse isn't known, and that, generally, is the point of all of the hullabaloo over the entire Barge Canal. If construction continues and the conservationists' fears are realized, what can and will be done to negate the damage?

Obviously, little or nothing can be done to restore the Oklawaha.

That's why there have been consistent demands for a comprehensive ecological study of the entire project. Such a study never really has been attempted. Ecology is more than a popular word these days. More has been learned about this inter-relationship between plant and animal and physical communities in the last two decades than in the previous two centuries.

Even Col. Avery S. Fullerton, the Jacksonville District engineer and man in charge of canal construction, has said he would welcome such a study, if for no other reason than to determine just who's right and who's wrong in all the oratory that's filled the air for the past six years.

Fullerton cited the meteoric rise in building costs and said that because of this he would not favor a moratorium on construction while the study is taking place. However, he said, "I would be glad to see that construction during that period would be on as many projects as possible that would be potentially less ecologically damaging."

So that's the status of the Corps of Engineers, particularly in its relationship with the Barge Canal. The Corps, which is catching merry hell, possibly justifiably and possibly not, for a job it was ordered to do, is just as anxious as anyone to have the controversy resolved, one way or another.

So what's the hangup? Secretary of the Army Stanley R. Resor explained it this way on the occasion of the Corps' 195th birthday in June:

"If in the past the Corps ever was insensitive to certain environmental questions, that insensitivity reflected in large measure the views of political leaders and much of the American population. It took us many years to realize that our natural resources are not unlimited."

From that and other statements, it would seem the Corps has changed its attitudes. Judging from the sudden and widespread interest in the environment, it appears much of the public has changed.

That leaves the political leaders, and in view of past attitudes on the part of some of Florida's state and national officeholders toward the Barge Canal, it will be interesting to listen to their promises between now and November.

Will they change? Or at least proceed on the basis of the best information available?

Politicians have been known to test the pulse of the public occasionally, like in even-numbered years.

Mr. ELLENDER. Mr. President, with respect to the concern the Senator from South Dakota (Mr. McGOVERN) expressed that the appropriation of funds for this project might imply a waiver of the statutory requirements of the National Environmental Policy Act of 1969, I would like to read a portion of the committee report that bears on this point:

> The committee has received objections, based on environmental grounds, to many programs and projects for which funds are included in this bill. The objections are principally based on the failure of the agencies involved to file the five-point statement required by the National Environmental Policy Act of 1969. The agencies were given until June 1, 1970 to prepare their procedures for implementing that act. The committee has been informed that the required statements are in preparation. In most cases, the projects objected to have been under construction for some time. The fact that the committee has recommended funds in this bill does not exempt the construction agencies from complying with the provisions of that act as currently applicable.

This project has been under construction for about 9 years, more than $52 million of Federal funds have been spent on this project. It has the support of the Florida congressional delegation, the entire Cabinet of the State of Florida except the Governor. It is the one remaining link in the great intracoastal waterway extending from the Mexican border to Trenton, N.J. with interconnections with the inland navigation system of the Mississippi, Missouri, and Ohio Rivers and the Great Lakes. It is a very important project, and I hope the amendment will be defeated.

Mr. HOLLAND. Mr. President, I hope the Senate will not adopt the amendment offered by the distinguished Senator from South Dakota and the distinguished Senator from Wisconsin.

I want to say that if there is anyone in the Senate who is interested in Florida, interested in its ecology, and interested in the preservation of Florida, it is the senior Senator from Florida. Without boasting, it is he who, as Governor, signed the deed conveying 850,000 acres of Florida land to the U.S. Government for setting up the Everglades National Park. It is he who has followed every development of that park ever since he has been in the Senate. It is he who has followed every single effort for the preservation of our Florida beauties and nature that seem at all defensible and desirable.

The Senator from Florida has represented his people and also, he thinks, the best interests of the Nation in supporting strongly the Cross Florida Barge Canal. It is the route connecting at last, at long last—and this has been planned ever since Spanish days—the Gulf area, the Mississippi Basin area, and all the other basins that run into the Gulf, with the Atlantic coastal area, thereby saving from 400 to 500 miles of water travel.

It is now a third complete geographically and physically, and more than a third complete insofar as financial commitments are concerned; because, in addition to the money that already has been spent, the Federal Government has recently committed, as the Senator from

South Dakota well knows, more than $12 million—this within the last month—on three additional contracts which are now in force. The State of Florida has, for itself, almost completed the acquisition of rights-of-way and the other lands required, and I believe that the total required in that matter of the State of Florida is $16 million, of which most has been spent in the acquisition of those lands.

Considering both Federal and State money, the project is more than a third paid for, and the project at both ends is largely completed insofar as the digging into the soil of our State is concerned. I do not think it is even reasonable to talk about leaving those great sloughs extending from the St. John's River to the Eureka Dam almost up to Silver Springs, where the park has been largely excavated and the other big areas excavated at the west end of the waterway.

This is not the old sea-level canal. This is a canal which at most will dig into the soil of our State, at the deepest place, 27 feet. It is a canal which will be operated by the fresh waters of our State, which will have to be impounded and kept available to operate the five locks that are involved in this canal.

It is my feeling that to delay or to stop this great effort at this time—which already has been too much delayed—would be a very useless and unwise course. The matter has been fought out twice on the floor of the Senate—once on the motion of the distinguished former Senator from Illinois, Mr. Douglas, and once on the motion of the distinguished Senator from Wisconsin (Mr. PROXMIRE). Both times, by an overwhelming vote, the Senate has upheld the continuation of the construction of this canal.

Mr. President, only in January of this year, this large and voluminous report from the U.S. Geological Survey, which I hold in my hand, was made on this canal, having to do with the hydrological values which have just been mentioned by my distinguished friend, the Senator from South Dakota. This report shows very clearly that there is no thought on the part of the distinguished geologist and reporter, Dr. Faulkner, of discontinuance or delay in construction. He simply says that there are some small chances of pollution which can easily be avoided by corrective action taken as the construction gets underway.

Mr. President, I could say many things about this matter, but, in order to save time, I simply ask unanimous consent to have printed at this point in the RECORD a copy of the letter of June 5 from the Secretary of the Interior to the Secretary of the Army, asking for a 15-month moratorium on construction of the canal, and a copy of my reply to that letter, because I received a copy of it, addressed to Hon. Walter J. Hickel, Secretary of the Interior, on July 15, with various documents attached to that letter. Except for an acknowledgement of it I have received no reply from my letter of June 15.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., June 5, 1970.

Hon. STANLEY R. RESOR,
Secretary of the Army,
Washington, D.C.

DEAR MR. SECRETARY: Enclosed for your information is a copy of a report entitled "Review and Appraisal of the Cross Florida Barge Canal." The report was prepared in an effort to evaluate the claims of many people who have written this Department alleging that insufficient consideration has been given to the scenic, fish and wildlife, and natural beauty aspects in planning the Cross Florida Barge Canal project.

I have reviewed the appraisal report and believe that several items of importance to this Department should be more fully considered in relation to the construction of this project. I am recommending that a thorough ecological and environmental study be undertaken by a Department of the Interior task force. The study would be coordinated with your Department and the involved State agencies. To facilitate the study efforts of the task force, I would suggest that a 15-month moratorium on project construction be effected while the study is being carried out.

In the table on page 117 of the hearings on the Public Works Appropriations for 1970 before the Subcommittee on Public Works of the House Appropriations Committee, amounts of $700,000 and $500,000 are shown for engineering and design and for supervision and administration, respectively, as a part of the total of $6,000,000 included for this project in the budget estimate for 1970 under Construction, General. We presume that the budgetary reserve includes a proportionate share of these amounts.

Since the Department of the Interior does not have adequate funds available to carry out the studies we believe are necessary and the studies are directly related to the future construction program for the project, we request that funds for this purpose be made available to us from that portion of the budgetary reserve assigned to those functions described above. Section 2(e) of the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.) authorizes the transfer of such funds.

In making this request, we recognize that the Public Works Appropriation Act for 1970 did identify $600,000 in the Construction, General appropriation of the Corps of Engineers-Civil for transfer to the Bureau of Sport Fisheries and Wildlife under authority of the Fish and Wildlife Coordination Act. These funds are being used for necessary investigations of a number of authorized Corps of Engineers projects throughout the Nation. The investigations were programmed to meet both the needs of the Corps of Engineers and those of the Bureau of Sport Fisheries and Wildlife in connection with these projects, and should be completed in an orderly manner. Use of funds from this source to carry out the proposed ecological and environmental studies of the Cross Florida Barge Canal would result in an undesirable curtailment of these studies and possible delays in construction of various projects.

If the proposed method of financing is acceptable, we shall be pleased to provide detailed estimates of the studies believed needed and the funds required. We are sending a copy of this letter to the Director of the Bureau of the Budget.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

U.S. SENATE,
Washington, D.C., June 15, 1970.

Hon. WALTER J. HICKEL,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: On June 5, 1970, my office was advised by a telephone call from your department that you planned to make a press release on June 8 announcing that you had written the Secretary of the Army requesting a 15-month moratorium on construction of the Cross-Florida Barge Canal while a special task force composed of agencies of the Department of the Interior would study the ecological, hydrological and other problems involved.

Upon being informed of this press release, I requested your department to furnish me with a copy of your letter of June 5, 1970 to the Secretary of the Army, which I was furnished on June 8, as well as the accompanying report which I have read in detail.

At this time I will not go into the manifest advantages to the nation and the economics involved, including recreational benefits, that were completely omitted from the report. In linking up the 1050-mile Intracoastal Waterway serving the East Coast to Trenton, New Jersey, with the 1070-mile Gulf Intracoastal Waterway serving the Gulf and Mississippi River Basin area, as testified to by many recognized and authoritative groups, numerous benefits have been attested to. These are available should you desire to have them in order that you may make a more objective review of the merits of the Cross-Florida Barge Canal.

Let me say, Mr. Secretary, that I am unalterably opposed to any moratorium being placed on the construction of the Cross-Florida Barge Canal which has already been unduly delayed due to budgetary restrictions and the placing of appropriated funds in budgetary reserve.

I have no objection, of course, to your department's making further studies concurrent with continued construction of the project that you feel may be warranted. However, as one member of the Senate Appropriations Committee and the Subcommittee on Public Works Appropriations, I do not look with favor on allocating for such studies any funds appropriated for the purpose of construction, supervision and administration of the project. I do not know of any project that has been studied and restudied more than this one. As a matter of interest, I am enclosing (Enclosure I) for your information a partial list of the various studies which have been conducted over the years. This list totals 74 studies, a number of which have been conducted by agencies of your department.

I note, also, from the report enclosed with your letter to the Secretary of the Army, that it quotes from a report prepared by the Florida Defenders of the Environment, entitled, "Environmental Impact of the Cross-Florida Barge Canal," dated March 1970. This report was made a part of the record of the hearings on the fiscal year 1971 public works appropriations bill. No mention was made in such report of the rebuttal testimony submitted to the subcommittee by Mr. W. A. McCree, Jr., President of the Florida Waterways Association, formerly the Chairman of the Canal Authority of the State of Florida. For your information I am inclosing (Enclosure II) a copy of his testimony which was made a part of the record of the hearings at my request. I believe you will also be interested in reading a copy of Mr. McCree's letter of January 9, 1970 to the President and Editor-in-Chief of The Reader's Digest. I enclose a copy of this letter for your information. (Enclosure III)

There is no one man whom I know who possesses more background and factual information regarding the history of the Cross-

Florida Barge Canal than does Mr. McCree, and I strongly recommend your reading his comments on the subject. Such information should enable anyone with an open mind to understand the actual facts regarding the canal project rather than to give credence to the great volume of oft-times unsubstantiated information put out by various organizations and the news media.

Let me further point out, Mr. Secretary, that the project is some 31 percent complete. The Congress has appropriated some $52.7 million of a total estimated federal cost of $169.2 million. Some $45.5 million has been expended as of the close of calendar year 1969. Out of the total non-federal costs of $16 million, the State of Florida has expended about $11 million and the cost of work accomplished by local interests in the construction of six barge ports is estimated to be $2 million to $3 million.

Important, also, is the fact that in addition to the above expenditures through calendar year 1969, plus the cost of the first six months of 1970, which is not currently available to me, an additional $5 million to $10 million would be required should the project be deferred, making a total sunken investment of between $65 million to $75 million.

The additional work still required to be constructed or modified in the event of such a deferral would be the Inglis spillway for flood control on the Withlacoochee River; plug the canal west of the Withlacoochee River and remove the barrier dam to restore river openings; provide bank protection from Inglis Lock to the Gulf of Mexico; provide channel in the Eureka Reservoir reach for flood control on the Oklawaha River portion of Four River Basins project; provide bypass at Rodman Dam and plug the canal west of St. Johns Lake.

Considering the work already done and that which must be done if a long deferral is ordered, it can be seen that while the construction of the project is only some 31% complete, the effect such construction would have on the environmental aspects would be 60% to 70%.

In this connection I might state that three of the five lock and dam structures are completed, one reservoir is full and two of the reservoirs remain to be cleared of timber. Extensive progress has been made on relocation of utilities, roads and bridges.

With reference to land acquisition, about 85% of the water storage lands and canal rights-of-way have been acquired by the State agency and those remaining are in process of acquisition.

During the course of consideration of the location of the canal, dating back to 1826, some 29 different routes were studied. Based upon those studies the present alignment was authorized in 1942. At the same time authorization was granted, construction of a pipeline across the State of Florida was undertaken to relieve the oil and fuel shortage on the eastern seaboard as a result of the wartime situation. I mention this since during the testimony of Major General Eugene Reybold, Chief of Engineers, War Department, before the Senate Committee on Commerce. June 30, 1942, he stated in testifying in regard to the canal:

"The value in time of war of an improved through inland waterway from Port Isabel (Texas) to Trenton (New Jersey) with a minimum depth of 12 feet, is believed sufficient to warrant construction of these improvements."

I should add that the pipeline instead of the Canal was constructed at that time due mainly to priorities for materials and the fact that the construction time of the pipeline was estimated to be three months as opposed to three years for the canal.

Mr. Secretary, a great deal has been said with regard to the Oklawaha River. I believe it particularly important to point up the fact that the River and Harbor Acts between 1890 and 1916 authorized projects and funds were appropriated for navigation project works on the Oklawaha River which were completed in 1925. The project consists of a channel six feet deep from the mouth to the head of Silver Springs Run; clearing channel obstructions from Silver Springs Run to Lake Griffin, includiug certain artificial waterways and extensions thereof, and maintaining dikes to obtain a navigable depth of about four feet to Leesburg and Lake Griffin; and construction of a lock and dam at Moss Bluff to maintain the water level on Lake Griffin. Thus, years ago the natural river was altered greatly by these improvements and by timber operations by private interests, especially the cutting of the cypress trees. Further, records of the Corps of Engineers reveal that there was not a year during the 10-year period from 1959 through 1968 in which snagging in the Oklawaha was not performed at an average annual cost of $4,209, the maximum being $9,268. Also, hyacinth control has been performed on a yearly basis, and during the same 10-year period the average annual expenditure on the Oklawaha watershed was $38,754, of which an estimated annual expenditure of $13,000 was for hyacinth control on the lower river.

I believe it also important to point out that on the Oklawaha and the Withlacoochee Rivers certain flood control work authorized by Congress and now under construction under the Four River Basins projects is tied in with the Cross-Florida Barge Canal, to prevent flood damage, averaging some $9.12 million in the Oklawaha River basin and some $2.2 million in the Withlacoochee River Basin. The total cost of improvements in the Oklawaha River basin is estimated at $3.6 million and the Withlacoochee River Basin at some $2.8 million. The Moss Bluff Lock and Dam on the Oklawaha River was reconstructed as a part of the Four River Basins project and was completed in December 1969 at an estimated cost of $1.9 million.

The above facts, as well as the fact that the Withlacoochee River was altered by work accomplished under the River and Harbor Acts of 1881 and 1907, show conclusively that neither of these two river systems is in its natural state, and I am convinced that the work on the Cross-Florida Barge Canal, coupled with work to be accomplished under the Four River Basins project, will ultimately provide a better hydrological and ecological system for the benefit of all the people in that large area.

I realize that this letter is most lengthy; yet I feel it is of paramount importance for you to have all facts at hand in view of your recent request to the Secretary of the Army based on information which could only be oriented in one direction without due consideration to the many other aspects of the problem not fully within the purview of your Department. Should some problems of the nature indicated in the report accompanying your letter arise, they should be more appropriately taken care of during the course of construction.

Let me further say in closing that the report accompanying your letter contains many questionable facts; for example, the statement relative to the 1963 report of the Bureau of Sport Fisheries and Wildlife. If you will refer to the chart on Page 12 of the report, you will find that man days loss in hunting resulting from the project would be 18,150, while fishing would be improved by 78,200 man days. Further, other matters covered in the report such as recreation, pollution and weed control are being considered by the Corps of Engineers along with the planned program of construction as required under law.

I believe, Mr. Secretary, that careful consideration of all the voluminous information available on the construction of the Cross-Florida Barge Canal would convince anyone that the value of this project for the good of the nation as a whole, particularly in its present stage of construction, would far outweigh the questions raised within your single agency having only partial responsibility, and which by careful and fair evaluation and cooperation as the project moves forward can eliminate any fears of great damage to the ecology of the area traversed by the Canal.

By copy of this communication, I wish to indicate to the Secretary of the Army of my complete opposition to any moratorium on the construction of the Cross-Florida Barge Canal and to request that he expedite the completion of the project to the full capabilities of the Engineers and appropriations of the Congress.

With kind regards, I remain,

Yours faithfully,

SPESSARD L. HOLLAND.

PARTIAL LIST OF REPORTS ON CROSS-FLORIDA BARGE CANAL

Name of Report and Date:

First report authorized, 3 Mar 1826.

Waterway across State of Florida, 19 Feb 1829.

Waterway across State of Florida, 26 Jan 1830.

Waterway across State of Florida, 6 Mar 1832.

Waterway across State of Florida (Sanford to Tampa, Fla.) 6 Dec 1838.

Waterway across State of Florida, 1 May 1855.

Waterway Apalachicola Bay to Atlantic Ocean, 29 Sep 1873.

Canal St. Marys River (Ga. & Fla.) to Gulf of Mexico, 6 Apr 1880.

Waterway across State of Florida, 9 Nov 1911.

Waterway across State of Florida, 30 Jul 1913.

Waterway across State of Florida, 10 Oct 1924.

Atlantic Gulf Ship Canal Fla. (Cumberland Sound Fla. to Miss. R.W/W), 1 Dec. 1931.

Atlantic Gulf Ship Canal, Fla. (Fla Ship Canal) (Georgia-Fla. W/W) St. Marys River (Ga. & Fla.) to Gulf, 27 Jan 1932.

Atlantic Gulf Ship Canal, Fla., Geological and Ground Water Conditions, 10 Dec 1935.

Atlantic Gulf Ship Canal, Fla., 1 Nov 1936.

Cross-Florida Barge Canal, 12 Jun 1942.

Definite Project Report, Dec 1943.

Addendum No. 1 to Definite Project Report, Mar 1945.

Economic Restudy of Cross-Fla. Barge Canal, 10 Jan 1958.

Economic Evaluation of Cross Florida Barge Canal (Jacksonville Dist), 13 Mar 1962.

Potential traffic and transportation cost savings of Cross-Florida Barge Canal (A. D. Little, Inc.), Mar 1962.

Traffic analysis and estimated tonnage prospectus of the CFBC (Gee & Jensen), 1956.

Input: Chief of Engineers' evaluation, Jun 1962.

U.S. Fish and Wildlife Report (Concurred in by State Game and Freshwater Fish Comm.), Feb 1963.

Supv: Supplement to Economic Restudy, 16 Aug 1963.

Input: Detail Design Memo No. 1, St. Johns Lock, Oct 1963.

Detail Design Memo No. 2, Relocation of U.S. Route 19, Apr 1964.

Input: Detail Design Memo No. 3, Inglis Lock, 19 May 1964.

Detail Design Memo No. 4, Relocation of S.R. 316, 19 Jun 1964.

Detail Design Memo No. 5, Project Office Building, Aug 1964.

Input: Detail Design Memo No. 6, Rodman Dam, Nov 1964.

Input: Detail Design Memo No. 7, Eureka Lock and Dam, Feb 1965.

Statement of indorsement, Fla. Game and Freshwater Fish Commission, 1965.

Supv: Design Memo No. 7A, Preliminary Master Plan, Part of the Master Plan, 14 Oct. 1965.

Relocation Studies—Railroad Crossings near Dunnellon, Dec. 1965.

Input: Detail Design Memo No. 8, Clearing of Rodman Pool, Jan. 1966.

Supv: Relocation Study, Cross-Florida Barge Canal, Jan 1966.

Detail Design Memo No. 9, Relocation of S.R. 40 (Revised Jan. 1970), May 1966.

Input: Detail Design Memo No. 10, Inglis Spillway and Dam, Sep. 1966.

Input: Detail Design Memo No. 11, Mile 65.5 to Mile 70.6, Job 12 (Part) and Job 14 (Part) Canal Excavation and Erosion Control, Dec. 1966.

Detail Design Memo No. 12, St. Johns, Eureka, and Inglis Locks, Derricks, and Emergency Bulkheads, Jun. 1967.

Detail Design Memo No. 13, Relocation of Railroads near Dunnellon, May 1967.

Detail Design Memo No. 14, State Road S–464 Highway Bridge, Jan. 1968.

Detail Design Memo No. 15, State Road 475 Highway Bridge, May 1967.

Detail Design Memo No. 16, Clearing Eureka Pool (under preparation), Feb. 1967.

Supv: Design Memo No. 7B (C–1), Rodman Reservoir Construction Design Memo, Public-use and Administrative Facilities, Part of the Master Plan, 1 Dec. 1967.

An optimum land use model for a delimited area contiguous to the CFBC (Dr. Edward A. Fernald), 1967.

Input: Detail Design Memo No. 17, Mile 83.5 to Mile 92.6, Job 15, (Part) Dunnellon to Inglis Lock, Aug. 1967.

Pre-impoundment studies of the waters of CFBC (FWPCA), Dec. 1967.

Input: Detail Design Memo No. 19, Mile 20.8 to Mile 35.9, Job 10, (Part) Channel through Rodman Pool, Jan. 1968.

Supv: Detail Design Memo No. 3, Supplement 1, Inglis Lock Bypass Channel, Feb. 1968.

Input: Real Estate Design Memorandum No. 18, CFBC and Recreational Sites, 19 Feb. 1968.

Supv: Design Memo No. 7B (C–2), Inglis Reservoir, Construction Design Memo, Public Use and Administrative Facilities, Part of the Master Plan, Jul. 1968.

Input: Detail Design Memo No. 21, Dunnellon Lock, Nov. 1968.

Supv: Water Quality Data, CFBC (updated annually), Dec. 1967.

Input: Detail Design Memo No. 22, Mile 80.5 to Mile 83.5, Job 15 (Part), Dunnellon Lock to Dunnellon, Aug. 1969.

Report of State Game and Fresh Water Fish Comm., Nov. 1969.

Supv: Report of Corps of Engineers' Biologist, Jan. 1970.

Geohydrology of the Cross-Florida Barge Canal Area with Special Reference to the Ocala Vicinity (By USGS), Jan. 1970.

General Design Memorandum for Florida, Feb. 1969.

ENVIRONMENTAL IMPACT OF THE CROSS FLORIDA BARGE CANAL WITH SPECIAL EMPHASIS ON THE OKLAWAHA REGIONAL ECOSYSTEM

SUMMARY OF FINDINGS

Geology

1. The presence of solution holes and fracture zones near project structures makes it likely that there will be problems of porosity and leakage and that pollution of and hydrologic changes in the aquifer will occur.

Refutation: January 1970 Geohydrology of the Cross Florida Barge Canal Area with Special Reference to the Ocala Vicinity, Prepared by Glen L. Faulkner, United States Geological Survey in Co-operation with the Corps of Engineers, U.S. Army, indicates that such leakage as will occur around locks and dams will not be a problem.

2. The location of the canal locks and the dams on or very near the Oklawaha River fracture zones introduces the risk of earthquake damage to these facilities. The history of Florida earthquakes is not reassuring in this respect.

Refutation: It is inappropriate to compare the shallow reservoirs of the Cross Florida Barge Canal with the Koyna Dam in India. Dr. Robert Vernon, State Geologist states that the Floridan Aquifer in the areas of Rodman and Eureka Pools now is exerting upward pressure on the acquiclude and that the impoundments would help to stabilize the conditions in that area. From a practical Standpoint . . . . The Inglis Pool has been in existence 50 years and Geological maps show fracture zones in this area also—no record of earthquakes. From a practical standpoint the Canal reservoirs would be less dangerous to the underground structure of Florida than the construction of tall buildings in the Orlando area.

3. Mineral resources in the vicinity of the barge canal are meager, being mostly bulk materials for local use. Therefore, it is unlikely that construction of the canal would result in greater utilization of these resources.

Refutation: Dr. Robert A. Vernon, State Geologist, who has spent a lifetime studying the geology and mineral resources of Florida, states that mineral resources in the vicinity of the Canal are plentiful. He cited one customer in North Carolina who could use an 8 million dollar quantity of Dolomite per year provided it could be delivered by barge. He has also pointed out that the hard rock phosphate available in Levy County, and the kaolin available in Putnam County could be marketed, when low cost transportation is available. Already, private interests are venturing capital for the purpose of mining and selling mineral resources along the Canal route.

Hydrology

1. Water supplies in drought periods may be inadequate for canal operation without extensive additional pumping facilities.

Refutation: Report of U.S. Geological Survey by Glen L. Faulkner, January 1970 concludes: "The geohydrologic investigation of the Cross Florida Barge Canal reveals that the design of the Canal and the plan of operation are consonant with the hydrologic regime." Pumping into the Summit section from the Eureka Reservoir near Silver Springs to replace lockage water losses has always been in the plans. Possible pumping from the Inglis Pool into the summit section may also be necessary, but further pumping is not contemplated and studies of the Corps of Engineers indicate such will not be necessary.

2. Because the summit pool connects freely with the ground water of the Floridan Aquifer any pollution of the pool will enter the aquifer and flow to natural discharge points.

3. Some pollution of the summit pool and the Floridan Aquifer is inevitable because of nearby residential or industrial development, leakage from barges, and turbidity resulting from construction.

4. Major pollution from accidental spills of oil or toxic materials is predictable in the long run of barge operation. These pollutants in the Aquifer may damage water supplies of communities nearby and impair the unique recreational qualities of Silver Springs and of whatever sports fishing the canal impoundments might afford.

5. Oklawaha River water which will be back-pumped to the summit pool may accelerate solution of limestone in the summit reach because of its different chemical characteristics.

Refutation: The Corps of Engineers will take adequate steps during construction and operation of the Canal to protect the Summit pool from pollution which might affect Silver Springs or the Ocala water supply. Faulkner's report goes into the requirements thoroughly and recommends additional studies during construction. The Corps plans to follow his recommendations. They expect to control spillages by stringent inspection of barges and vessels below St. Johns Locks and Inglis Locks. In addition they will have portable equipment available to the Summit section for use in time of emergencies. The Faulkner report also states that the limestone and other material through which the small amount of flow from the Summit Pool to Silver Springs, is an excellent filter. Only 8% of the flow of Silver Springs is affected by the water in the Summit section with an estimated 140 days of travel from the Canal to the Springs. Drainage wells in the Ocala area have failed to contaminate the underground water supply of that same area. It is believed that the filtering action of the limestone underlying the area has prevented such contamination. This is a practical application.

The Corps of Engineers will not approve discharge of any water into the Summit section that in any way will pollute the water of this sector. No member of the Florida Waterways Association is willing for the slightest contaminatton of Silver Springs, and we have questioned the Corps of Engineers quite thoroughly on this point. We are satisfied that they can prevent any pollution of the Springs and we will diligently follow the plans of construction and operation on this important matter.

6. Excessive and possibly uncontrollable leakage of water from the summit pool to the lower pools is a distinct possibility.

Refutation: Neither the report of the U.S. Geological Survey of January 1970, nor the studies of the State Geologist will agree on this charge.

7. There is little doubt that the canal will result in an overall decline in the quality of surface water in the system.

Refutaton: The decline or improvement of the surface water in the Oklawaha or Withlacoochee part of the Cross Florida

Barge System depends entirely upon the management of that system during and after construction, just as our total environment depends upon management. Map studies indicate that the Ocala National Forest, prior to Cross-Florida Barge Canal construction, abutted the actual banks of the Oklawaha for about 2¾ miles between Sharpes Ferry and SR–316 (Eureka), about 3¾ miles between Eureka and the Rodman Dam Site, and about 11 miles extending from the Rodman Dam Site to the river mouth at the St. John's. Much of this river channel lay up to a half mile across the river swamp from the generally passable and useable higher ground making up the forest proper. With the completion of Rodman and Eureka Reservoirs, the Ocala National Forest will retain about the same amount of frontage on the Barge Canal Project, except that between Sharpes Ferry and Rodman Dam the frontage will be upon a well planned and managed reservoir, with a useable periphery for public access, rather than being featured by the previous swamp barrier. The site between Rodman Dam and the St. John's will remain unchanged.

8. Flood control benefits claimed for the canal project appear highly dubious.

Refutation: The 1960–61 floods which occurred before the author of these charges arrived in Florida, clearly demonstrated the damages which could be wrought by uncontrolled flood water in the Oklawaha and Withlacoochee Basins. The upper Oklawaha Basin, including Lakes Apopka, Dora, Eustis, Harris and Griffin and various connecting lakes and tributaries, all join with the Silver River to flow down the portion of the Oklawaha through which the Cross Florida Barge Canal is being built. This is one of the four rivers in the Southwest Water Management District. Water management facilities required for the Oklawaha Basin entail canalization of the River from Lake Griffin to its juncture with the Cross-Florida Barge Canal Channel near SR–40. These facilities already are nearing completion. If the Canal is not completed, some arrangements must be made for carrying these waters to the St. Johns River. Canalizing the Oklawaha to handle flood waters would be just as detrimental to the esthetics of the meandering Oklawaha River as the Reservoirs created by the Canal. Controlling Florida floods is a fact of life which cannot be overlooked. All lakes in the upper Oklawaha basins have had to be retained at above the acceptable high water mark during January, February, March and April, 1970 because the Canal is not complete to Silver River.

Ecology

1. Most of the Oklawaha regional ecosystem is still unimpaired, and it is the only large wild area remaining that supports the full spectrum of plant and animal life native to north-central Florida. Destruction of this unique natural region by the proposed canal is unjustified and hopelessly uneconomic in terms of long-run social needs.

Refutation: The principal reasons given by Florida Defenders of the Environment for stopping construction of the Cross Florida Barge Canal given in their fund raising literature are as follows: (1) Saving the Oklawaha ecosystem and (2) Setting a precedent for stopping a project already authorized and under construction.

We will agree that changes in plant life and animal life will occur upon the creation of the Reservoirs. We cannot understand, however, how Scientists and Historians can ignore destruction of the region which is known to have happened in the lifetime of many now living. We refer to the fact that "History of Man in the Oklawaha Region" by Gordon E. Bigelow, Professor of English, University of Florida, fails to mention the fact that man exploited the Oklawaha ecosystem when he cut the cypress trees from the River and the Valley. The cypress trees were resistant to fast flowing water and made the Oklawaha beautiful as well as usable for the steamers that plied its crooks and turns at the turn of the Century. The trees which have grown back are shallow rooted and are continually being undermined by the swift water or blown down by storms; so if the river were left completely alone without any management it would become a morass of fallen trees.

In Ariel Lugo and Archie Carr's description of the "Vegetation of the Oklawaha" a bare mention is made of cypress which was one of the most important timber products in Florida until this slow growing species became practically extinct in the '30's.

These ecologists speak of an unimpaired ecosystem, when perhaps the most important plant life in that system "the cypress tree" was removed 50 to 60 years ago.

None of the "History of Man" mentions the fact that approximately 75% of the lands adjacent to the portion of the Oklawaha River that becomes a reservoir with construction of the Canal were in private ownership and the uncontrolled development along that portion was not conducive to a good environment for either humans or wild life.

2. Experience in Florida has proved conclusively that shallow bodies of impounded water (such as the Rodman and Eureka Pools) trap nutrients and hence are subject to rapid overenrichment and invasion of masses of water weeds which are difficult and costly to control. Crushing forests into the bottom, as was done in the Rodman Pool, merely speeds and compounds enrichment processes. These processes will quickly reduce, and ultimately destroy, most recreational and fisheries values of the impoundments.

Refutation: Experience in Florida, and throughout the Southeast has proven that fishing in Reservoirs immediately after impoundment has improved fantastically for the first five years. There is no reason to expect that this will not happen in the newly created Reservoirs. The Corps of Engineers expect that with proper management in the two Reservoirs of Eureka and Rodman, fishing will increase 100 fold and that with continued good management a high level of fish production will continue beyond, on a permanent basis. They are dedicated to employing the latest techniques known in ensuring continued good fishing.

Originally, the Corps planned on clearing all of the reservoir areas, but Fish and Wild Life experts persuaded them to plan to leave certain areas uncleared for the benefit of fish. This second plan was the one upon which the 1963 study of the U.S. Fish and Wild Life Service gave their approval, forecasting 78,200 man days of fishing upon completion of the Canal, to a loss of 18,150 man days of hunting.

The Florida Game and Fresh Water Fish Commission as late as 1965 were on record as endorsing the Construction of the Cross Florida Barge Canal, but within the last few months have reversed their recommendations and state flatly that they do not believe the 1963 report of the U.S. Fish and Wild Life report is correct. We are at a loss to know why such an important commission of State Government should change its mind in such a short space of time when it should have the records of Reservoirs of Florida for many years.

We acknowledge that aquatic weeds and water hyacinths are a problem in all Florida streams and lakes. We also acknowledge that the State of Florida has done very little to control them through their three State agencies which should be concerned: The Department of Natural Resources, The Game and Fresh Water Fish Commission, and the Department of Air and Water Pollution Conrol. Inquiries brought out the fact that none of the three Agencies have clear cut authority to perform the necessary research to solve the problem, nor have any of them been funded to perform such research. The State's neglect of this problem for all of Florida should not penalize the construction of the Cross Florida Barge Canal when the control of aquatic weeds and hyacinths in that project will be the responsibility of the Federal Government. Presently these plants are being controlled by the Corps of Engineers in the best acceptable manner known today.

The Corps of Engineers, in crushing the forests in the Rodman Pool, concede that they created a debris problem originally. They are currently removing those fallen trees and have 4 barges and draglines removing logs and snags. They have stated publicly that they will require removal of all downed trees in Eureka Pool clearing operation. However, fringes of trees along the Oklawaha River will be retained to the maximum extent possible in order to preserve the esthetic appeal of the original stream.

Recreation and fishing in the Pool areas are important benefits of the Cross Florida Barge Canal. The Corps of Engineers recognize this and are developing the Reservoirs with that in mind

Land-use planning

1. Controversy about the proposed barge canal emphasizes the need for long range regional land-use planning. No such planning has yet been done in this region and no agency now exists to do it. To introduce major environmental changes (such as the barge canal) in the absence of an overall land-use plan is utter folly.

Refutation: We agree that plans should be prepared and put into action along the Canal. Existing legislation permits such action. Proposed legislation requires that action. We heartily support immediate action on this matter and as an Association are taking steps to implement present legislation.

Economics

1. The discount rate used in calculating the cost-benefit ratio of the canal is unrealistic. If realistic interest rates were applied, the supposed benefits of the canal would no longer exceed the cost.

Refutation: The discount rate on this project is the same that is used on all federal projects evaluated by the U.S. Army Corps of Engineers. Consultation with the Corps personnel indicated that for completion of the project the discount rate currently being used could be applied without affecting the cost benefit ratio due to increase in benefits.

2. In calculating the benefits of the canal, both the amount of traffic which it was assumed that the canal would carry and the freight savings per ton mile appear to be unjustifiably inflated.

Refutation: A television debate on April 7, 1970 causes us to believe that the young economist who prepared this part of the report is known not to have seriously conferred with the Corps of Engineers on this project until April 2, 1970. How such a short period of study of the engineer's records could be used to make the above statement. We would suggest that a much greater in-depth study would have to be made to make the above accusation hold up. The Corps of Engineers have been making economic studies for well over a hundred years and are thoroughly experienced in the field. In addition the private consultant, A. D. Little Company's report of 1962 came up with a much higher benefit cost ratio.

3. Little evidence exists to support the view that the canal will actually bring the enhancement of land values shown as one of its benefits.

Refutation: The land enhancement benefits required a thorough study of the lands adjoining the completed canal. Anyone who has been in Florida any length of time knows of the increased value of waterfront property.

4. Results in completed sections of the project suggest impairment rather than enhancement of potential recreational values in the region affected by construction of the canal. There is little evidence to support Corps of Engineers figures on recreational benefits claimed for the proposed canal.

Refutation: Recreational benefits were not included in the benefit cost ratio used when construction was begun. Subsequent federal laws allowed the inclusion of recreational benefits. The Corps has used the formula in computing this benefit as on other projects in the Southeast. There is no reason to believe that other than maximum recreational benefits will occur as do already occur on most of the lakes and rivers of Florida. The comparison of the pools with Lake Apopka is ridiculous. The change in water in Lake Apopka requires 950 days versus a total of 59 days for the two reservoirs along the Oklawaha.

5. If the canal did compete effectively with other forms of transportation, the resulting losses incurred by these transport agencies would necessarily be passed on to the public in higher rates. These represent an additional cost of the canal not considered in computing the cost-benefit ratio.

Refutation: Records throughout the Nation do not substantiate this statement. Freight rates have been traditionally lowered where water transportation is available.

6. Successful operation of the canal depends to a considerable degree upon the completion of the Intracoastal Waterway from St. Marks southward along the northwest coast of Florida. The need for, and cost of, this "missing link" waterway is not considered in calculating the costs of the proposed canal.

Refutation: Successful operation of the Canal does not depend upon the completion of any other waterway. It is true that completion of the St. Marks to Tampa Inland Waterway would make the Cross Florida Barge Canal more profitable, but the present benefit cost ratio was determined for its use without the completion of that waterway. Gulf river barges currently use the open Gulf in this area and would be used for transportation through the Cross Florida Barge Canal permanently unless the West Coast Waterway were completed.

7. In view of these and other facts reported in the economic section of this report, we believe that in spite of the amounts already invested, an impartial economic restudy of the project would result in its rejection as unsound, on a purely economic basis, without any consideration of the environmental values to be lost.

Refutation: A new economic study would increase the benefit cost ratio of the Cross Florida Barge Canal due to the economic growth in the Southeastern part of the United States since the last study was made.

Existing conditions

1. The sections of the canal system already completed have seriously disrupted portions of the natural ecosystems of the lower Oklawaha River and the Withlacoochee River. The river courses and flow have been modified. Natural forests in the flood plains and vicinity have been destroyed over extensive areas. A debris-choked reservoir, heavily invaded by exotic vater weeds, has been created in the Rodman Pool area of the Oklawaha system in particular. Fisheries values have been impaired. The wild quality of the environment in these areas has been drastically reduced. Nevertheless, much of the Oklawaha River and its valley still remain unimpaired.

Refutation: No construction project is pretty during construction. The Corps of Engineers are clearing the Rodman Reservoir and will continue to clear it until the waters are debris free except for those dead and fallen trees desired by the Fish and Wild Life Service. The approach to the water weed problem by "Defenders of the Environment" indicated they believe there can never be a solution to this all important problem. If the many biologists and botantists who are interested in our environment would turn their efforts toward solving the water weed problem instead of fighting a project already ⅓ complete perhaps a solution to the problems could be found. Sooner or later the problem must be solved and it will be solved.

2. With cessation of further construction and expenditures of funds to remove downed timber and other debris from the areas affected, and with proper pollution control measures in the watershed, it is expected that with time even in the damaged areas the natural environments would recover, the wild quality of the area could be regained, and the ability of the region to supply high quality outdoor recreation would be restored.

Refutation: The History of the Cross Florida Barge Canal by William M. Partington is similar to the History by Professor Gordon Bigelow in that it tells only part of the truth. He failed to mention that during its 1961 session, the Florida Legislature created the "Florida Board of Conservation" consisting of the Florida Cabinet, and gave it quantitative control of all surface and underground water in Florida. It further directed that the Florida Board of Conservation would coordinate the request for Public Works funds into a unified program and present the program to the Congress of the United States. This unified Public Works program paid off. The Governor personally pleaded the case for Florida's Public Works program before the appropriate Committees of the Congress. With the support of the unified Water Program by the members of the Florida Delegation, Florida's appropriations for Public Works Projects rose from 14 million dollars anually in fiscal 1961 to 34 million dollars in fiscal 1965.

The same 1961 Florida Legislature endorsed the Cross Florida Barge Canal and created the Canal Authority of the State of Florida to work under the supervision of the Board of Conservation, and with authority to either build or furnish Right of Way for the Federal Government to build the Cross Florida Barge Canal. This project was, and continues to be, part of, the Florida unified Public Works Program. Right of Way funds have been appropriated by succeeding Legislatures on a matching basis with the Canal District consisting of the Counties along the route from Jacksonville to the Gulf. To date, Canal District taxpayers and the State have furnished over 10 million dollars for purchase of Rights of Way. Every Governor, including Farris Bryant, Hayden Burns and Claude Kirk, and the Cabinet, have each year continued to ask the Federal Government for construction funds along with the other Public Works projects. Construction was started in February 1964 by President Johnson in the presence of 13,000 rain soaked Floridians near Palatka. Appropriations have been slow because of the Vietnam war.

In order to get this construction start, the Canal Authority, whose members are chosen from the State at large, carried on a Statewide Public information program. We publicized the project as much as possible in order to let all the citizens of Florida know all about the project.

It's hard to understand why Mr. Partington left out this vital and important part of the Canal History, because without this Statewide effort, construction would not be underway today.

Newspaper publicity was plentiful and Editorial support was given by many Florida newspapers. The strongest newspaper supporter of the project was The Orlando Sentinel-Star, located in the same area with the Florida Audubon Society Headquarters.

When the Chairman of the Canal Authority learned of the opposition of the Florida Audubon Society to the Cross Florida Barge Canal, he personally contacted the President of the Society and asked for a conference in order to cooperate on having a project least objectionable to that group. The Society would not grant such a conference.

In Mr. Partington's history reference is made to the letter to the President of February 6, 1970, signed by 150 environmental specialists. This letter contained several incorrect statements which will be detected by the Staff of the various governmental agencies involved.

Finally, if the State of Florida requests the Congress or the President to STOP the Canal, not only will it have not kept faith with the people of Florida, but it will also not have kept faith with the Congressional Delegation; and the unified Public Works program of Florida will be known for the "State that doesn't know what it wants" so public works would be better off being built in other States. In addition, the flood waters of the upper Oklawaha Basin will have no place to go.

If the President or the Congress stops the project they will not have kept faith with all the people of Florida who have invested millions of dollars of tax funds as well as private funds, in anticipation of the completion of the Canal.

Operation of the canal

The three locks already built are of a size being criticized as antiquated in other barge canals which the Cross Florida Barge Canal is supposed to complement. To replace these locks with larger units in order to accommodate large, unbroken tows of barges would probably prove uneconomic. This barge canal will be too shallow for the newer trans-Gulf barges and for super-vessels carrying numbers of smaller barges.

Refutation: The Canal is designed to meet the known requirements of the Inland and Gulf River barges now in existence and expected to be built. The lock sizes will accommodate the gulf river barges for transportation across the open Gulf between the Western end and Anclote Key on the South and Carrabelle on the North. The standard size of both Inland and Gulf River Barges is 195 x 35 feet (9'–0'' draft when loaded); the difference between Gulf River and Inland Barges is in the construction and the covering—there is no difference in size.

Along the Mississippi and Intra-Coastal Waterways some tanker barges are 295 x 50 feet. These could also be accommodated in the locks of the Canal. It is not intended that the Canal will be used for any seagoing craft such as some of the large seagoing barges used for Oceangoing trade in the Caribbean.

These statistics can be verified with the Corps of Engineers or any reputable Barge Line.

ORLANDO, FLA., *January 9, 1970.*

MR. HOBART LEWIS,
President and Editor in Chief,
The Reader's Digest,
Pleasantville, N.Y.

DEAR MR. LEWIS: As a long-time subscriber and reader of your magazine, I am shocked and severely disappointed at the irresponsible journalism and the half-truths and misinformation contained in the article "Rape of the Oklawaha" written by your Roving Editor, James Nathan Miller, and published in your January, 1970 issue. This kind of unfair and prejudiced reporting is partly responsible for the loss of faith of the American people in our established publications and news media. If you will carefully consider and investigate the following facts, I believe your great magazine will do something to correct the erroneous impressions created in the above article:

1. The Oklawaha River is *not* a primordial wild stream. It was destroyed in the first quarter of this century by the cutting of the

majority of cypress trees from its banks for use as lumber. This fact was brought out by a long time resident of the Oklawaha Valley at the 1966 hearing in Tallahassee. The cypress is a very slow growing tree with large deep roots which grow in water and are able to withstand swift currents as well as the wind and thus protect the banks of a small river like the Oklawaha. We are told that before the cypress were cut, river boats made the trip from Palatka to Silver Springs. The trees which replaced the cypress are shallow-rooted fast-growing varieties which are continually falling across the river undermined by the currents and blown down by the storms. The Corps of Engineers continually removes the fallen trees to permit boating and fishing on the river; if it were left alone, the river would become a morass of fallen trees not useful for anyone.

2. The reservoirs created by the Cross Florida Barge Canal will furnish many, many square miles of water properly controlled and suitable for recreation and fishing as well as navigation.

3. Mr. Miller would have the reader believe that the Corps of Engineers and local commercial interests were primarily responsible for getting the giant project underway. In the first place, the Corps never initiates a Public Works Project. Public works projects are initiated by local interests who convince their representatives in the Congress and the State Legislatures that a given project should be studied and after many years and many studies and 13 long separate steps (including authorization and *finally funding* by the Congress) construction is initiated. If the people of the State of Florida are a local commercial interest, then the author was correct on the second part. Construction on this project was not begun until the whole State wanted the Canal. It is the key to the development of inland water transportation in Florida.

4. The article gives very little history of the project and lists several incorrect dates and facts. Briefly, the first study for a canal across Florida was directed by the Congress in 1826. In 1829, the first survey report by President John Quincy Adams was made to the Congress. Since that time, 29 different routes have been explored including several through Georgia. The route finally chosen was selected because of the natural valley that exists across Florida. This route was selected prior to 1935 when digging for a Sea Level Canal was begun by President Roosevelt as a WPA project. The project was abandoned because of the possibility of damage to Florida's underground water supply by a Sea Level Canal. A barge canal which would not adversely affect the water supply was authorized in 1942 as a defense project. This authorization was a result of the terrific losses sustained by our tankers delivering oil from the Gulf Coast to the Eastern Seaboard. Approximately 40% of all American cargo shipping lost in World War II was sunk on this route.

The project was not built during World War II because the War Department believed that the War would be over before it could be completed.

Efforts of canal proponents continued but no serious headway was made until the 1961 session of the Florida Legislature reorganized the Board of Conservation (composed of the six elected Cabinet Officials of Florida and headed by the Governor) and created a Canal Authority to represent all of Florida. This authority, composed of five business and professional men appointed from the State-at-large was charged with the responsibility of building canals as needed throughout Florida and with the promotion of the Cross Florida Barge Canal. It also was given the task of acquiring rights-of-way for use of the Federal Government in construction of the project. The members of the Authority traveled the entire State telling the benefits of inland waterways and informing the people about the Cross Florida project including the location and the reason for its selection. The people of Florida, being on the tip of the United States and saddled with high freight rates, quickly saw the economic benefits of cheap transportation for bulk products.

Opposition encountered by the Canal Authority prior to the beginning of construction of CFBC consisted principally of some railroads. In 1960 and 1961, the Atlantic Coast Line had a full time attorney on the civic club circuit in Florida speaking against the Canal. He was taken off that assignment in 1962. The Florida East Coast Railway has favored CFBC. It was not until 1964 that the opposition of the Audubon Society of Gainesville and later the Audubon Society of Florida became known. An immediate effort was made by the Canal Authority to meet with officials of the Audubon Society and explain the project, but the Audubon Society refused such a conference and attended the 1966 hearing in force without the benefit of such a conference.

Names of the members of the Canal Authority that successfully led in getting construction underway are:

Henry Toland, Senior Vice President (now President), Exchange National Bank of Tampa.

Harry Saunders (now deceased), Retired General Manager of Port St. Joe Paper Company.

Palmer Van Arsdale—Trucking Executive, Pompano Beach, Florida.

James E. Merrill, President, Jacksonville Shipyards, Inc.

And the writer, who was Chairman.

Mr. Miller states that there were at least 50 lobbyists in Tallahassee for pro-canal interests. Between 1961 and 1965, there were no paid lobbyists in Tallahassee and only one part time lobbyist in Washington. If he is talking about interested citizens who believe in something and let their desires be known to their representatives, I would say the number was more like 500. Would the "Reader's Digest" want our democratic system to work any other way?

The history of the Canal and the sudden and continued opposition to the project by groups primarily interested in preservation of natural wilderness (which the Oklawaha was not) leaves one to believe that the whole campaign to stop the canal is being sponsored by those who have a vested interest in preventing its construction.

Mr. Miller would have the public believe the Corps of Engineers has ruined our country. Yet our nation leads the world in development of its water resources. Together with the Bureau of Reclamation, the Corps has been responsible under the direction of the President and the authorization and funding of the Congress for developing most of these resources. Perhaps the Corps is not perfect, but of a necessity some federal agency must do the job. The Corps is best equipped by 200 years of experience to do the job.

In spite of what Mr. Miller says—The Corps does hold well advertised public hearings on every project. I have attended them. My observation is that very few people appear at these hearings. But a much better forum is that of the honest press, and in publicizing the Cross Florida Barge Canal during the years immediately prior to construction, we have the clippings to show that it was publicized. Where were the Preservationists then?

It is easy to attack the Corps because it cannot fight back, but we who are the private citizens can fight back and we will.

6. During the public information campaign being carried on by the Canal Authority, Governor Farris Bryant and his Cabinet working as the Florida Board of Conservation developed a unified approach to public works requests for all of Florida. Inland Navigation Groups, Water Management Districts, Flood Control Districts and Port Authorities all joined together to present a statewide Public Works Program to the Congress. Governor Bryant personally led this group thus saving time for the Committees as well as the State Agencies. He was complimented on this action by the Congress and rewarded by having the Public Works Appropriations doubled during his term of office. This is the large delegation spoken of by Congressman Boland in Mr. Miller's article. Every representative of every Florida Project backed the program. Teamwork paid off for our rapidly growing State. Construction was started on the CFBC but the benefits to all other projects in the State were much greater. Would you condemn the statewide approach to Water Resource Development?

7. The aforementioned article attacks the benefit Cost Ratio as a method of determining whether a project should be built or not. The B. C. ratio method is recognized in private industry as well as government. What other method could be used in a democratic society? In particular, the B. C. ratio of the Cross Florida Canal was attacked, and the method the Corps used in arriving at it. The Corps is actually very conservative.

The A. D. Little Company was asked to make a study for the Corps and for the Committee of Congress as to the B. C. ratio of the CFBC in 1962. Their report showed a ratio of 4.6 to 1. The Corps reduced it to 1.17 to 1. This was raised in 1968 to 1.5 to 1 when recreation benefits were permitted. Defense benefits have never been permitted as an economic benefit.

Mr. Miller makes much of the 1958 study versus the 1962 study. If he had investigated he would have found that the 1958 study was only an updating of old studies and the 1962 study was a complete new study using newer methods of construction and excavation.

He also states that costs could not have gone down in that period. A little investigation would have revealed that cutter dredges and modern earthmoving equipment developed after World War II greatly reduced the cost of excavation everywhere.

Mr. Miller advocates considering the loss of half the Oklawaha River when considering B. C. Ratio. I agree and it has been considered. The value of the Oklawaha as an already destroyed crooked narrow stream requiring constant maintenance to make it available to a very limited number of people versus the beautiful reservoirs to be enjoyed by thousands of people has enhanced the B. C. Ratio. We in Florida must prepare for the people who are coming here and we need the best recreational facilities possible.

8. The big benefits of CFBC, of course, are the savings in the cost of living afforded by low cost bulk transportation from the Midwest bread and chemical basket to the Eastern Seaboard and in and out of Florida. Here is where the average citizen shares in the benefits. Everywhere that water transportation has been made available, freight rates have dropped. Whole books can be written on the actual savings that have occurred. I will mention one! A barge operator planned to build some small barges (the limited Okeechobee Waterway cannot take standard barges) and ship sugar cane from Lake Okeechobee to Savannah and New Orleans. As a result of his inquiry, the freight rates on sugar cane dropped from 20% to 40%. Would the Reader's Digest deny the people of this nation the benefit of having their cost of living dropped by water transportation through the CFBC? You have gone a long way in this direction by printing "The Rape of the Oklawaha."

9. Mr. Miller said very little about the Flood Control benefits of the CFBC. Had he lived in Central Florida in 1960 during the

floods that caused serious damage to thousands of homes in the area he would have appreciated this benefit. Senator Holland specifically asked that work on the two ends of the canal begin first so that flood control benefits could be realized first. The Oklawaha locks and dams are a definite part of the Flood Control system of all of Central Florida. The narrow stream with falling trees just could not handle the flood waters. Would you deny this benefit to our area?

10. Finally, no matter how we may wish for the old days, our total environment must be managed today. I believe even Mr. Miller would agree on this. Nothing can be left literally alone to let the public do with it as it will. Then the problem resolves itself: "Whatever is best for all our people should be done." But this cannot be determined without exhaustive studies and without the leadership of responsible citizens as well as governmental leadership. I submit this is the method that was followed in promoting the construction of the Cross Florida Barge Canal. And I ask the question—"Why would a publication like the Reader's Digest try to tear down a great economic cultural development which had been dreamed of and worked for so hard by so many well-meaning citizens?"

I do not know how you can compensate for the irreparable damage your magazine has done in creating doubts in the eyes of the American public as to integrity of the Corps of Engineers or the well meaning of the many dedicated citizens who gave of themselves unselfishly to see this great project started, but I believe that if you will check my facts thoroughly you will find a way to correct the impressions given in "Rape of the Oklawaha."

In order that you might know me better, I am enclosing a very brief biography. I invite you to check my sincerity and my knowledge of the subject.

Sincerely,

W. A. McCREE, Jr.

Mr. HOLLAND. I hope that the amendment will be defeated.

Mr. YOUNG of North Dakota. Mr. President, this project is 30 percent complete. The sum of $52.7 million already has been spent on it. I think it would be a serious mistake to hold up funds for the construction of this project now.

In order to save time, I ask unanimous consent to have three paragraphs from the House report, supporting this project, printed at this point in the RECORD as a part of my argument in support of this project.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The project has a very favorable benefit-to-cost ratio of 1.4 to 1. Since authorization, the project has been subject to two special studies to examine the economic justification of its construction, including an independent study by a nationally recognized consulting firm. These studies include comments from other agencies having expertise in the fields of biology, natural esthetics, and environmental matters. The design and construction of the project have been fully coordinated with Federal and State agencies to insure that the environmental aspect of the project area are preserved and enhanced. The U.S. Geological Survey has recently completed a detailed study of the geohydrology of the canal and the Ocala area, which indicated that the proposed canal would not adversely affect the quantity or quality of the water coming from Silver Springs. Its study also disclosed that the impact of the barge canal on ground water supply will be negligible.

In reference to the fish and wildlife, it is realized that with the construction of any new reservoirs, habitats change and some plants and animals are reduced but other plants and animals appear and prosper in the new environment. The new reservoirs will provide many thousands of acres of new habitat for a wide variety of sport and commercial species. The committee believes that studies that have been made support conclusions that while some short term losses will result, the overall effect will be a long term gain in the environmental quality.

Considering therefore, the status of the construction and the need for the project, the committee recommends that the construction work continue and that every effort continue to be made to minimize any adverse effects on the environment, ecology, and fish and wildlife in the area. Any additional studies would appear to be a duplication of previous work and would delay realization of the essential project benefits.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. YOUNG of North Dakota. I yield.

Mr. HOLLAND. I want to advise the Senator that instead of the $52 million committed at the time the Senate committee heard this project—and he is correct in using that figure—the additional amounts that have been committed since that time raise the total to $68 million, either expended or committed, making the project much more than a third completed so far as its financing is concerned.

Mr. NELSON. Mr. President, the Senate Committee on Appropriations has recommended the appropriation of an additional $8 million for the Cross-Florida Barge Canal project. I strenuously oppose the further construction of this project—a project which has been termed by an eminent biologist of the Florida Department of Water Pollution Control as—and I quote—"the most devastating project ever undertaken in Florida."

The folly of the canal project can be fully recognized only when its legislative history is recalled. The canal was authorized in 1942 as a bypass around Nazi submarines for allied shipping. No other reason was advanced by Congress when its authorization was made.

The canal poses a direct threat to the water supply of much of the State of Florida and involves the destruction of a river which has been considered for inclusion in the wild and scenic rivers system. Moreover, the benefit-cost ratio of the canal project is open to serious question. At this point the conclusion is reasonable that the continued construction of the Cross-Florida Barge Canal is a complete waste of the taxpayers' money.

Secretary of the Interior Hickel has requested a 15 month moratorium on further construction of the canal. As yet he has received no reply from the Secretary of the Army. I believe that the moratorium is reasonable and urgent.

If the Congress sees fit to appropriate additional funds for the project, I wish to make it clear that such appropriation is not to be construed as a waiver of the duties of the Corps of Engineers to comply with relevant environmental legislation.

The PRESIDING OFFICER (Mr. DOMINICK). The question is on agreeing to the amendment of the Senator from South Dakota (Mr. McGOVERN).

The amendment was rejected.

Mr. HOLLAND. Mr. President, I move that the vote by which the amendment was rejected be reconsidered.

Mr. MANSFIELD and Mr. ELLENDER moved to lay the motion on the table.

The motion to lay on the table was agreed to.

Mr. HANSEN. Mr. President, it was my understanding that when the committee met to mark up the bill, it intended to include an additional $500,000 for work on the Lyman project in southern Wyoming. The report on the bill does not reflect this in the individual views.

I, therefore, send to the desk an amendment and ask for its immediate consideration, to include the additional fund of $500,000 for the work on the China Meadows Dam of the Lyman project.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 17, line 21, delete the following: "$22,675,000, of which $21,530,000" and insert "$23,175,000 of which $22,030,000."

Mr. HANSEN. Mr. President, let me say that the Lyman project will be served by two small reservoirs, the Meeks Cabin and the China Meadows project. One of the dams is nearly completed and on the other we are hoping to get the additional $500,000 for preconstruction work.

The Bureau of Reclamation has contracted with the ranchers and the farmers in that area for much of the water that would be impounded by the two dams. Repayment for the project will result from the imposition of an ad valorem tax levied on all lands in the broad project.

I want to say that I think it will be clearly in the public interest to permit this preconstruction work to begin, in order to avoid a greater cost later on that will result, if it became necessary to close down the camp that the Bureau of Reclamation has there, move the personnel out and all the equipment, and store the equipment that will have to be stored and then brought back in at a later date and set up again.

I have spoken to the distinguished chairman of the committee and it would be my hope that he will be able to accept the amendment.

Mr. YOUNG of North Dakota. Mr. President, these two projects are really tied together in order to make them viable projects to make possible a favorable benefit-to-cost ratio. Both should proceed together.

I feel somewhat negligent myself that this project was not fully brought to the attention of the committee, and I would therefore ask that the distinguished chairman consider this amendment favorably.

Mr. MANSFIELD. This was an oversight. It was intended to be attended to by the committee. It is just one of those things that slipped by us and before we knew it, it was too late.

Mr. ELLENDER. Mr. President, I shall be glad to take the amendment to conference.

The PRESIDING OFFICER (Mr. DOMINICK). The question is on agreeing

to the amendment of the Senator from Wyoming (Mr. HANSEN).

The amendment was agreed to.

Mr. McGEE. Mr. President, the bill before us contains a key item, representing a moderate allocation in funds but a generous and important benefit for the Little Snake River Valley of Wyoming and adjacent areas of Colorado. This is an increase of $250,000 in the appropriation for the Bureau of Reclamation applying to the Savery-Pot Hook reclamation project. All told, with this increase, the outlay approved for Savery-Pot Hook in this fiscal year will amount to $300,000, when we add in the $50,000 asked by the administration in its budget request to complete advance planning on the project.

Advance planning on Savery-Pot Hook is, in fact, very near completion, and there is no reason why the benefits this project can bring to a very deserving and promising region should be longer delayed. I am very thankful to the committee and to the Public Works Subcommittee and its chairman, Senator ELLENDER, for recognizing this and providing funds in the amount of a quarter of a million dollars as a construction item.

Savery-Pot Hook, which is estimated at an eventual cost of another $14 million, has been long in the planning stage, Mr. President. Before that, it was long in the dreaming stage. It encompasses two dams, on Slater and Savery Creeks in Carbon County, Wyo. These will impound nearly 85,000 acre-feet of water which will be used to irrigate approximately 35,265 acres of land, of which 21,920 acres will be new land and 13,345 acres which are in need of supplemental water.

As one who has lived his 12 years in the Senate with this project always before him, I am overjoyed to see it reach the stage of having construction funds approved. The initial feasibility report on Savery-Pot Hook goes back to 1954, but it was not until a decade later, Mr. President, that the authorization for the project was approved. As the sponsor of the authorization bill, it has been my pleasure to pursue the further development of the project. To this point, we have appropriated $665,146 for that development. But today we reach a real landmark with the inclusion in this bill of these funds earmarked for construction. Seldom has money been better spent.

Savery-Pot Hook, of course, is not the only benefit Wyoming draws from this important bill. All told, more than $9 million is included for outlays in my State, including a major expenditure of $1,943,000 for the Lyman project, $225,000 for the Seedskadee project, $193,000 for the Eden project and $211,000 for the Kendrick project. In addition, we are pleased in Wyoming to see the measure includes outlays to carry on studies essential to the future of the proposed Green River and Corn Creek projects.

I want to thank the Senate for its approval today especially of the added $500,000 for the Lyman project. This addition to the project's funding, which my colleague (Mr. HANSEN) and I both vigorously supported, means work can proceed with the second dam on the Lyman project, the China Meadows Dam. It is an integral part of this ongoing project and the appropriation of funds for it is wise.

This bill, Mr. President, is indeed an important one to States like my own and I want to commend the committee for its attention to the needs of these worthwhile projects.

Mr. COOPER. Mr. President, I know the hard work and faithful attention that Senator ELLENDER, the chairman of the Subcommittee on Public Works Appropriations has given to this bill, as he has every year, and that we are all grateful for his devotion, knowledge, and experience, and conscientious attention to the orderly development of the water resources of the Nation. I serve as a member of the Appropriations Subcommittee on Public Works items, ex officio, as I am the ranking minority member of the Senate Committee on Public Works. I appreciate, as I know do other Members of this body, the long hours and hard work which this bill represents. The Senator from Louisiana has always been gracious and thoroughly attentive to the witnesses from Kentucky and members of the Kentucky delegation, when we appear before him each year, and we recognize again his contribution. The senior Senator from North Dakota (Mr. YOUNG), the ranking Republican member of the subcommittee his always been very helpful, and all the members of the committee deserve great credit for their work in dealing with what are often difficult problems in connection with some of these great projects.

I note also the report of the subcommittee this year opens with comments on the problem of public works and the environment, and commend the chairman and the committee for their attention and recognition of environmental problems which are being raised, and which will be increasingly raised in the future.

I am very glad to note that the bill appropriating funds for public works for fiscal year 1971 includes all of the Kentucky items recommended in the President's budget—which were also approved by the House of Representatives.

The House also provided funds to initiate the construction of Martin's Fork Reservoir, to continue the construction of the Taylorsville Reservoir on the Salt River. I have worked for these projects for years, for it is essential to protect the areas and communities downstream. Earlier this year Congressman TIM LEE CARTER and I secured agreement from the Bureau of the Budget that the funds appropriated last year for Martin Park Reservoir would be released at the beginning of this fiscal year, and we are glad that the House and Senate committees have included the full capability of the Corps of Engineers for the construction of Martin's Fork Reservoir. The Senate bill maintains the House additions.

In addition, I had asked the committee that funds be included to initiate the construction of Paintsville Reservoir in eastern Kentucky and the construction of the Mound City lock and dam—the last of the great replacement locks in the navigation system on the Ohio River where it borders Kentucky from Ashland through Cairo. The committee bill includes $900,000 to begin construction of the Paintsville Reservoir and $1 million to initiate construction of the Mound City lock and dam—and I hope very much that these amounts may be maintained in the conference with the House.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ELLENDER. Mr. President, third reading.

The PRESIDING OFFICER (Mr. DOMINICK). The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 18127) was read the third time.

Mr. ELLENDER. Mr. President, I ask for the yeas and nays on final passage.

The yeas and nays were ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Indiana (Mr. HARTKE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Iowa (Mr. HUGHES), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Utah (Mr. Moss), the Senator from Maine (Mr. MUSKIE), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), the Senator from Texas (Mr. YARBOROUGH), the Senator from North Dakota (Mr. BURDICK), the Senator from Idaho (Mr. CHURCH), the Senator from Missouri (Mr. EAGLETON), the Senator from North Carolina (Mr. JORDAN), the Senator from Alabama (Mr. SPARKMAN), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Montana (Mr. METCALF), the Senator from Minnesota (Mr. MONDALE), the Senators from Rhode Island (Mr. PASTORE and Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from Georgia (Mr. RUSSELL) are necessarily absent.

I also announce that the Senator from Tennessee (Mr. GORE), the Senator from Washington (Mr. JACKSON), and the Senator from New Mexico (Mr. MONTOYA) are absent on official business.

I further announce that, if present and voting, the Senator from Idaho (Mr.

CHURCH), the Senator from Missouri (Mr. EAGLETON), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from North Carolina (Mr. JORDAN), the Senator from Rhode Island (Mr. PASTORE), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from North Dakota (Mr. BURDICK) would each vote "yea."

Mr. HANSEN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from Tennessee (Mr. BAKER), the Senator from New Hampshire (Mr. COTTON), the Senator from New York (Mr. GOODELL), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. HATFIELD), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), the Senator from Illinois (Mr. SMITH), and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Maine (Mrs. SMITH) is absent on official business.

I further announce that the Senator from Colorado (Mr. ALLOTT), the Senator from Utah (Mr. BENNETT), the Senators from Delaware (Mr. BOGGS and Mr. WILLIAMS), the Senator from Massachusetts (Mr. BROOKE), the Senators from Nebraska (Mr. CURTIS and Mr. HRUSKA), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Idaho (Mr. JORDAN), the Senators from Pennsylvania (Mr. SCOTT and Mr. SCHWEIKER), and the Senator from Texas (Mr. TOWER) are necessarily absent.

I announce that, if present and voting, the Senator from Vermont (Mr. AIKEN), the Senator from Colorado (Mr. ALLOTT), the Senator from Utah (Mr. BENNETT), the Senator from Delaware (Mr. BOGGS), the Senator from Massachusetts (Mr. BROOKE), the Senators from Nebraska (Mr. CURTIS and Mr. HRUSKA), the Senator from New York (Mr. GOODELL), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. HATFIELD), the Senator from Idaho (Mr. JORDAN), the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY), the Senator from Pennsylvania (Mr. SCOTT), the Senator from Maine (Mrs. SMITH), the Senator from Illinois (Mr. SMITH), the Senator from Alaska (Mr. STEVENS), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The yeas and nays resulted—yeas 48, nays 1, as follows:

[No. 263 Leg.]

YEAS—48

Allen	Fannin	McGovern
Anderson	Fong	McIntyre
Bayh	Fulbright	Miller
Bellmon	Gravel	Nelson
Bible	Hansen	Packwood
Byrd, Va.	Harris	Pearson
Byrd, W. Va.	Hart	Percy
Case	Holland	Prouty
Cook	Inouye	Randolph
Cooper	Javits	Spong
Cranston	Long	Stennis
Dole	Magnuson	Talmadge
Dominick	Mansfield	Thurmond
Eastland	Mathias	Williams, N.J.
Ellender	McClellan	Young, N. Dak.
Ervin	McGee	Young, Ohio

NAYS—1

Proxmire

NOT VOTING—51

Aiken	Brooke	Curtis
Allott	Burdick	Dodd
Baker	Cannon	Eagleton
Bennett	Church	Goldwater
Boggs	Cotton	Goodell
Gore	McCarthy	Saxbe
Griffin	Metcalf	Schweiker
Gurney	Mondale	Scott
Hartke	Montoya	Smith, Maine
Hatfield	Moss	Smith, Ill.
Hollings	Mundt	Sparkman
Hruska	Murphy	Stevens
Hughes	Muskie	Symington
Jackson	Pastore	Tower
Jordan, N.C.	Pell	Tydings
Jordan, Idaho	Ribicoff	Williams, Del.
Kennedy	Russell	Yarborough

Mr. MANSFIELD. Mr. President, I ask for the regular order.

The PRESIDING OFFICER (Mr. FANNIN). On this vote there are 48 yeas and 1 nay. A quorum did not vote. The vote is invalid. The Chair directs the clerk to call the roll to ascertain the presence of a quorum.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 264 Leg.]

Anderson	Fannin	Nelson
Byrd, W. Va.	Hansen	Proxmire
Cook	Hart	Young, N. Dak.
Dominick	Holland	
Ellender	Mansfield	

The PRESIDING OFFICER (Mr. FANNIN). A quorum is not present.

ADJOURNMENT UNTIL 10 A.M., MONDAY, AUGUST 24, 1970

Mr. MANSFIELD. Mr. President, under the rules, the Senate has no choice but to adjourn at this time.

Therefore, I move, under the previous order, that the Senate stand in adjournment until 10 a.m. on Monday next.

The motion was agreed to; and (at 5 o'clock and 4 minutes p.m.), the Senate adjourned until Monday, August 24, 1970, at 10 a.m.

EXTENSIONS OF REMARKS

WEST VIRGINIA UNIVERSITY CELEBRATES CONSTRUCTIVE DECADE—FACILITY ONE OF FINEST IN NATION—PROVIDES OUTSTANDING SERVICE BOTH AS HOSPITAL AND AS TEACHING COMPLEX

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1970

Mr. RANDOLPH. Mr. President, on August 10, West Virginia University and the State of West Virginia observed the end of the first decade of outstanding medical service by the West Virginia University Hospital.

We are experiencing critical shortages of medical personnel and availability of hospital beds in many areas of our Nation. It is the university teaching hospitals throughout our country which are providing expanded medical services and helping to relieve some of the burden for increased demands for adequate medical care.

West Virginia University Hospital has filled a much needed void in the Mountain State and has provided our citizens superb medical care.

Much of the credit for the establishment of this fine facility, including the Basic Science Building, is given to former Gov. Okey L. Patteson, whose efforts and devotion to the project helped to make it a reality.

We, in West Virginia, are fortunate to have highly capable physicians at West Virginia University, who are held in high esteem by their colleagues throughout the medical profession.

I congratulate West Virginia University Hospital for its first decade of public service and wish it continued success in the coming years as it continues to provide truly exceptional medical care.

Mr. President, I request unanimous consent to have the news release from West Virginia University printed in the RECORD at this point.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA UNIVERSITY NEWS

MORGANTOWN, W. Va., August 10 1960.—On that day, the brand new and long-awaited West Virginia University Hospital admitted its first patient.

Accompanying the patient was her referring physician, Dr. Jacob C. Huffman of Buckhannon, then president of the State Mental Association which had actively helped in the early planning of the facility.

Flash bulbs popped, smiles abounded and the welcoming ceremony was warm and informal as WVU and the Mountain State celebrated the completion of the teaching and treatment hospital.

Adjoining the Basic Sciences Building (completed and occupied in 1957), the University's teaching hospital made the complex a true medical center built at a total cost of $26.2 million.

Thus began a new era that within the next decade would blend in a single setting: educational opportunities in the health sciences never before available to West Virginians in their own state; research into health problems; and extensive diagnostic and treatment services for patients.

In the first eight years, one of every 25 West Virginians had been treated at University Hospital.

In one sample survey taken of all patients admitted between midnight April 30 and midnight May 14, 1968, 83.9 per cent of the patients came from 41 of West Virginia's 55 counties. The remaining 16.1 per cent came from nine counties in Pennsylvania, Maryland and Ohio.

University Hospital is a referral center. Except for emergencies, all patients are referred to the facility by family physicians or community agencies. Payment of hospital bills must come from the individual patient or his responsible relative unless arrangements for payment are made through a third party.

University Hospital Director Eugene L. Staples, who was appointed in January, 1960,

one month before the University formally accepted the completed building, has long called the family physician "the key figure in admission process."

Because these physicians, mostly West Virginians, have shown their confidence by referring their patients with special medical problems or needs, the hospital has made steady growth.

By December of the first year, the hospital's services included medicine, general surgery, neurosurgery and the other surgical specialties, obstetrics and gynecology, pediatrics, and physical therapy and rehabilitation.

A department of psychiatry joined by the following November.

Another veteran of University Hospital's embryonic days is Audrey E. Windemuth, director of Nursing Service.

Responsible for more than 450 people in the nursing department, Miss Windemuth works with doctors, administrators and professional people in allied health fields to see that University Hospital patients get the best care possible. And she and her staff cooperate with the WVU School of Nursing to provide the clinical experiences nursing students must have.

Established in February, 1961, was Friends of University Hopital, an auxiliary organization whose members still give thousands of hours of volunteer services to patients and all their Gift Shop profits toward improvements for the hospital.

In February, 1962, the first open heart surgery was performed at the hospital. And in July of that year, the hospital received notice of its full accreditation by the Joint Commission on Accreditation of Hospitals. By the following November, 1,000 babies had been born there.

Director Staples could look back and point out with justifiable pride that, in its first 11 months, the University Hospital reached a level of operation that took then-new university hospitals in Washington, Florida and Kentucky two years to attain.

Today the 2,156-room University Hospital has 1,150 employees to meet the various needs of its ever increasing numbers of patients. Services by 30 members of the present staff date back to or before opening day, while many other staff members boast records of service to University Hospital almost as long.

A sampling of comparison figures contained in the hospital's latest annual report gauges its growth:

Admissions—(1960–61) 2,293, (1969–70) 12,036; Birth—(1960–61) 231, (1969–70) 895; Days of Care—(1960–61) 29,401, (1969–70) 135,552; Beds in Service, including newborn (1960–61) 170, (1969–70) 458; Outpatient Visits—(1960–61) 5,705, (1969–70) 80,-831; Emergency Room Visits—(1960–61) 3,041, (1969–70) 25,611; Operating Room—(1960–61) 947, (1969–70) 5,407; Physical Therapy Treatments—(1969–71) 8,033, (1969–70) 22,674; X-ray—Diagnostic—(1960–61) 6,901, (1969–70) 59,065; X-ray Therapy Procedures—(1960–61) 1,460, (1969–70) 7,319; Laboratory Procedures—(1960–61) 38,026, (1969–70) 633,860.

During University Hospital's first decade, 153 men and women have completed internships there, 151 have completed residencies in 16 medical and dental specialties, 20 have become X-ray technicians, and West Virginia University has granted 156 degrees in medical technology, 234 degrees in nursing, 327 degrees in dentistry, 76 degrees in dental hygiene, 289 degrees in pharmacy, and 440 degrees in medicine.

First priority as University Hospital enters its second decade is construction of a four-story addition, already approved and funded. The addition will enlarge emergency room and radiology facilities and make possible a specially designed 16-bed intensive care unit to replace 10 beds in an ill-adapted area currently used for this critical service.

PROBLEMS OF INTERNATIONAL TRADE

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CULVER. Mr. Speaker, the problems of international trade have attracted particular national attention in the past several months. Many are worried that large influxes of cheap imports will seriously damage important industries. Others are equally as worried that American protectionism will spark a trade war which will injure many other industries with markets abroad and which will contribute to the inflationary spiral.

In response to this national concern, the Ways and Means Committee recently reported out a bill which would reverse the recent trend toward freer trade and which would establish mandatory import quotas for textiles and shoes. President Nixon has threatened to veto this bill, if it is passed by the Congress. In this context it is important for the country to candidly examine all sides of this issue to see where the interests of the United States really lie.

On the one hand, the injury done to certain industries by increased imports should be fully recognized. It is painful for a worker to find a new job when his previous employer is forced to shut down or change his operations. It is equally as painful for the employer to close his doors or to change his methods of doing business.

In these situations life patterns are disrupted and workers with special, nontransferable skills are deprived of a means to earn a living for themselves and their families. Investments are destroyed. Buildings and machinery stand idle while unemployment lines grow.

On the other hand, Iowa and the Nation as a whole have a tremendous stake in keeping open the channels of free international trade. In the agricultural field alone, the United States earned $6.65 billion through exports in 1969–70. Iowa's share of this total amounted to well over $400 million. Soybean and soybean products accounted for $160 million with feed grains and meat products making up a substantial part of the remainder. American protectionism could provoke retaliation and seriously affect this market. For example, it has been estimated that should protectionism induce a reduction in foreign demand of as little as 5 to 8 percent, it would result in a drop of soybean prices of 25 to 50 cents a bushel.

The 2.7 million Americans depend upon exports for their livelihood, because they are involved in producing goods for sale overseas. Additional jobs are created in the transportation field and in the export of services.

In the final analysis, however, every American would be affected by a trade war, because a reduction of imports would mean a reduction in the supply of many items for which there is a large domestic demand. The result will be higher prices, and fewer product choices. Those families with lower incomes have the most to lose. Some may even find themselves unable to afford certain articles or be forced to settle for those of lesser quality.

Another factor should be kept in mind. An import quota directly benefits only those companies in the specific industry, while it penalizes every American consumer by maintaining prices at an artificially high level.

Many experts in the field have also noted that quotas tend to favor the creation of "vested interest" groups, which have a direct interest in excluding other manufacturers from obtaining a share of the American quota. In this way quotas promote the establishment of monopolistic practices which severely limit competition and tend to maintain high prices.

Under existing law the Government has a number of ways in which to alleviate the damage caused to sectors of the American economy by cheap imports. The Trade Expansion Act of 1962 provides for investigations by the Tariff Commission and for Federal assistance when serious injury has been sustained by individual workers, by specific firms or by an industry as a whole. Workers can receive training, counseling, and additional cash allowances. Firms become eligible for technical and financial assistance, and when the injury is industry-wide, tariffs can be increased above existing levels.

This approach is designed to deal with the specific damage caused in our economy and is intended to retain the benefits of lower priced, imported products. If the present programs do not operate effectively, they should be improved and liberalized.

In fulfilling its responsibilities to promote the national welfare, the Federal Government should pay particular attention to those sectors of the economy which are damaged by large quantities of imported products. The Government should not, however, become so impressed with the arguments of special interest groups that it takes steps injurious to all Americans in the long run by closing to us our own important foreign markets.

EGYPT'S BREACH OF MIDDLE EAST CEASE-FIRE AGREEMENT

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1970

Mr. SCHWEIKER. Mr. President, I wish to address myself to the latest developments in the so-called standstill cease-fire which went into effect in the Middle East August 7.

I was one of those who hailed the achievement of a cease-fire in the Middle East, because a true cease-fire period would provide an excellent climate for peace negotiations between Israel and its Arab neighbors. Furthermore, I felt that the mere fact that a cease-fire had been accepted by Egypt, Jordan, Lebanon, and Israel was in itself a hopeful sign.

Now, however, Israel has shown that Egypt violated the cease-fire by moving several surface-to-air missile batteries to within 16 miles of the Suez Canal, after the cease-fire period began. The cease-fire agreement called for no improvement of military positions by either Egypt or Israel within 31 miles of the canal.

Mr. President, I am deeply concerned with this news, first, because it is a serious breach of the cease-fire agreement, and second, because it now puts Egyptian-Soviet missiles in a position to hit Israeli planes flying over the Israeli-held side of the Suez Canal. Until the cease-fire period began, Israel air missions were able to deter the emplacement of Soviet-Egyptian missiles so close to the canal. This has caused a marked deterioration in Israel's strategic position.

Yet our State Department, which does not deny that the movement of missiles took place or that this constitutes a breach of the cease-fire, is strangely silent.

I am afraid, Mr. President, that once again we have permitted Egypt and the Soviet Union to escalate their forces against Israel without lifting a finger or even raising our voice. We have counseled Israel to be moderate but we have done little or nothing to discourage Egypt or the Soviet Union from being immoderate.

We are all hopeful that peace can come to the Middle East. We all hope that the cease-fire can succeed toward that end. But at the same time we cannot be blind to the deadly game the Soviet Union and Egypt have been playing at the expense of Israel's security posture. Once again, if we do nothing or say nothing, they will have scored and the Middle East crisis will become that much harder to solve.

Mr. President, I call upon our State Department to make it clear that we will not tolerate such breaches of the cease-fire, and I hope, as well, that Israel's new worsened strategic position can be duly noted by those in charge of our military aid policies in the executive branch.

IMPEACHMENT OF ASSOCIATE JUSTICE WILLIAM O. DOUGLAS

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. GERALD R. FORD. Mr. Speaker, on August 5, I forwarded to the distinguished chairman of the Committee on the Judiciary and of its special subcommittee, Mr. CELLER, investigating the impeachment of Associate Justice William O. Douglas, a comprehensive legal memorandum on the impeachment process as it relates to the Federal Judiciary. This study was independently prepared at my request by the Detroit, Mich., law firm of Dykema, Gossett, Spencer, Goodnow and Trigg. The full text of this legal memorandum, together with related correspondence, appears in the CONGRESSIONAL RECORD of August 10 at pages 28091 to 28096 inclusive.

Under previous permission, I am hereby placing in the RECORD an important addendum to the basic memorandum consisting of a letter from Dykema, Gossett, Spencer, Goodnow and Trigg, dated August 12, 1970, commenting particularly upon the legal memorandum prepared by the attorney for the accused, submitted to the special subcommittee on May 18, 1970. The text of the commentary and the memorandum to which it refers follow:

DYKEMA, GOSSETT, SPENCER, GOODNOW & TRIGG,
Detroit, Mich., August 12, 1970.

HON. GERALD R. FORD,
House Minority Leader,
The U.S. Capitol,
Washington, D.C.

DEAR CONGRESSMAN FORD: Several months ago, you requested that we prepare a memorandum concerning the Congressional Impeachment Power as it relates to the Federal Judiciary. You asked that our analysis be objective, non-partisan and unbiased and that our conclusions be without regard to any pending controversy involving the Federal Judiciary. I and my associate D. G. Wyllie researched the problem thoroughly and on June 23, 1970, we delivered that memorandum to you (the "Kelley Memorandum"). We reviewed each of the reported proceedings where federal judges were impeached, we discussed each proceeding and we concluded on the basis of precedents and authorities that conduct of a Federal Judge properly subject to impeachment need not be "indictable" or "criminal" and might even consist of conduct which would be "blameless if committed by a private citizen".

Since delivering the Kelley Memorandum to you, we have received a document entitled "Memorandum on Impeachment of Federal Judges" prepared by Simon H. Rifkind as counsel for Mr. Justice Douglas (the "Rifkind Memorandum") and submitted to the Celler Subcommittee on May 18. The Rifkind Memorandum purports to establish the proposition that "There is nothing in the Constitution or in the uniform practice under the Constitution to suggest that Federal Judges may be impeached for anything short of *criminal* conduct." (Rifkind Memorandum, p. 1. Emphasis in original.)

On August 7 you requested that we review the Rifkind Memorandum and advise you if that Memorandum in any way affects the opinions and conclusions expressed in the Kelley Memorandum. After a careful review, we conclude that there is nothing in the Rifkind Memorandum that in any way alters the opinions and conclusions expressed in the Kelley Memorandum. In fact, the references and sources of material in the Rifkind Memorandum led us to authorities not included in the Kelley Memorandum that confirm beyond any reasonable doubt the correctness of the conclusions reached in the Kelley Memorandum and the absolute invalidity of the proposition argued in the Rifkind Memorandum. We shall discuss those authorities in this letter.

The Rifkind Memorandum is to a considerable degree grounded on historical inaccuracies. For example, Rifkind claims that past impeachment proceedings, notably that of Justice Chase, conclusively established that impeachment would lie only for "criminal conduct" or "criminal offenses". As we discussed at page 9 of the Kelley Memorandum, the Chase Impeachment merely established that impeachment was not to be a purely partisan weapon.

Rifkind makes reference to impeachment proceedings against President Andrew Johnson. As the Kelley Memorandum clearly shows, different standards are to be applied in the case of the Federal Judiciary. The tenure of office of the President is not based upon "good behavior" as in the case of Federal Judges and thus is in no wise an analogy as the decided cases involving the Federal Judiciary clearly demonstrate.

When Rifkind attempts to support the proposition that impeachment of the Federal Judiciary will lie only for *"criminal* conduct" he refers us to source material (and for authority not included in the Kelley Memorandum) which indisputably establishes that the Rifkind position is completely and utterly without foundation. Rifkind deals with the *Archbald* case at pages 8 and 9 of the Rifkind Memorandum which in its entirety reads as follows:

"B. *Robert W. Archbald* (Circuit Judge—Commerce Court 1912): Archbald, a former district judge and later circuit judge assigned to the Commerce Court (which had jurisdiction over ICC orders), was formally charged with inducing railroads with cases pending before him to sell or lease to him certain coal properties; with accepting $500 from a coal operator for seeking to persuade another railroad with a matter before him to lease certain coal properties to the operator; with generally speculating in coal properties while a member of the Commerce Court and with selling his services to compromise matters pending before the ICC for his own personal profit. With "respect to his prior service as a district judge, he was charged with 'accepting' loans from lawyers and litigants who had cases pending before him. Archbald, who admitted the factual basis for the charges but denied any criminal intent, was convicted on five counts. Senator Elihu Root, joined by Senator Henry Cabot Lodge, explained that he had voted to convict Archbald—

" 'Because I find that he used the power and influence of his office as judge of the Court of Commerce to secure favors of money value for himself and his friends from railroad companies, some of which were litigants in his court and all of which were under the regulation of the Interstate Commerce Commission, subject to the review of the Court of Commerce.

" 'I consider this course of conduct, and each instance of it, to be high crime and misdemeanor.

" 'I have voted 'not guilty' upon the other articles, because while most of them involve improper conduct, I do not consider that the acts proved are high crimes and misdemeanors . . .' ". (End of Rifkind quote.)

It is noted that the Rifkind Memorandum, relying solely upon Senator Root for its inferences, indicates no source for the Root statement and the Root quotation was clearly taken out of context. I repeat that Rifkind, as his *sole* authority, relies upon remarks of the illustrious Senator Elihu Root. Carefully read the quoted language does not in fact support Rifkind's proposition. Other action by Senator Root establishes the very contrary; that Senator Root considered the Archbald case as "forever removing from the domain of controversy the proposition that judges are only impeachable for the commission of crimes or misdemeanors against the laws of general application", and as establishing the proposition that a Federal Judge may be impeached for acts "that would have been blameless if committed by a private citizen". It was none other than Senator Root who on January 13, 1914 successfully moved that a Harvard Law Review Article be printed as a public document (Senate Document No. 358) terming it "very instructive" and "of very great value when taken in connection with the proceedings in the Archbald case" (Cong. Rec. 1914, p. 1561). The action of Senator Root, and the part of the article dealing with the issue with which we are concerned here was adopted as the highest precedental authority by the House of Representatives.

The article that was printed as Senate Document No. 358 was written by Mr. Wrisley Brown, Special Assistant to the Attorney General, who conducted the original investigation which resulted in the impeachment of

Judge Robert W. Archbald and was designated by resolution of the managers on the part of the House of Representatives to assist in the trial of the case before the Senate. The article is entitled "The Impeachment of the Federal Judiciary", 26. Har. L. Rev. 689 (1913). In this article Brown discusses in detail all of the six impeachment proceedings against federal judges which had occurred prior to 1913, the date of the article. Brown states at page 704: "The impeachments that have failed of conviction are of little value as precedents because of their close intermixture of fact and law, which makes it practically impossible to determine whether the evidence was considered insufficient to support the allegations of the articles or whether the acts alleged were adjudged insufficient in law to constitute impeachable offenses." Prior to 1913, the date of publication of Brown's article, there had been six impeachments of Federal Judges; three being acquitted (Chase impeached in 1804, Peck impeached in 1830, and Swayne impeached in 1904) and three convicted (Pickering impeached in 1804, Humphreys impeached in 1862 and Archbald impeached in 1912). Of the three impeachments resulting in convictions, Judge Pickering and Judge Humphreys did not defend. The only impeachment up to 1913 resulting in conviction (and during which proceedings the entire subject matter was concerned with whether or not impeachment would lie for non-criminal offenses) was that of Judge Archbald which was concluded in 1913. The Archbald case has been termed a "landmark" decision on the subject of whether impeachment will lie against a Federal Judge for noncriminal offenses and has been so recognized by the House of Representatives in its own Precedents (Cannon's Precedents, Section 457). We quote in its entirety that part of Cannon's Precedents dealing with Senator Root's motion and the extract from Senate Document No. 358 relating to the precise issue concerning which there is such distinct variance between the Kelley and Rifkind Memoranda. We quote the entire extract as it appears in Cannon's Precedents:

"457. Summary of deductions drawn from judgments of the Senate in impeachment trials.

"The Archbald case removed from the domain of controversy the proposition that judges are only impeachable for the commission of crimes or misdemeanors against the laws of general application.

"On January 13, 1914, *on motion of Mr. Elihu Root, of New York* (Emphasis added.) a monograph by Wrisley Brown, of counsel on behalf of the managers in the impeachment trial of Judge Robert W. Archbald, was printed as a public document. The following is an excerpt:

" 'The impeachments that have failed of conviction are of little value as precedents because of their close intermixture of fact and law, which makes it practically impossible to determine whether the evidence was considered insufficient to support the allegation of the articles, or whether the acts alleged were adjudged insufficient in law to constitute impeachable offenses. The action of the House of Representatives in adopting articles of impeachment in these cases has little legal significance, and the deductions which have been drawn from them are too conjectural to carry much persuasive force. Neither of the successful impeachments prior to the case of Judge Archbald was defended, and they are not entitled to great weight as authorities. In the case of Judge Pickering, the first three articles charged violations of statutory law, although such violations were not indictable. Article four charged open and notorious drunkeness and public blasphemy, which would probably have been punishable as misdemeanors at common law. In the case of Judge Humphreys, articles three and four charged treason against the United States. The offense charged in articles one and two probably amounted to treason, inasmuch as the ordinance of secession of South Carolina had been passed prior to the alleged secessionary speeches of the respondent, and the offenses charged in articles five to seven, inclusive, savored strongly of treason. *But, it will be observed, none of the articles exhibited against Judge Archbald charged an indictable offense, or even a violation of positive law. Indeed, most of the specific acts proved in evidence were not intrinsically wrong, and would have been blameless if committed by a private citizen. The case rested on the alleged attempt of the respondent to commercialize his potentiality as a judge, but the facts would not have been sufficient to support a prosecution for bribery. Therefore, the judgment of the Senate in this case has forever removed from the domain of controversy the proposition that the judges are only impeachable for the commission of crimes or misdemeanors against the laws of general application. The case is instructive, and it will go down in the annals* of the Congress as a great landmark of the law.' " (Emphasis added.) (End of Cannon quote.)

I leave to you and any other fairminded and discriminating reader the judgment as to whether or not the Archbald case did not forever remove "from the domain of controversy the proposition that judges are only impeachable for the commission of crimes or misdemeanors against the laws of general application," and did not establish that federal judges may be impeached for acts "not intrinsically wrong" and which "would have been blameless if committed by a private citizen". If this be so, what is there in *Archbald* to support the Rifkind thesis that federal judges may not be impeached for any conduct "short of *criminal* conduct"?

Following Archbald there were three impeachments, English (1926), Louderback (1933) and Ritter (1936). English resigned and Louderback was acquitted and as Brown stated these "are of little value as precedents". Ritter is quite another matter—for Ritter was convicted. If there could be the slightest doubt as to the precedent established in *Archbald* that impeachment will lie for non-criminal conduct by federal judges, that doubt was put to rest in the Ritter case. The Ritter conviction expressly recognized that the judicial tenure provision of the Constitution affords grounds of impeachment for other than criminal offenses. Specifically in the Ritter case, the first six Articles of Impeachment alleged offenses that on their face appeared to be of a criminal nature. On each of these Ritter was acquitted. The seventh Article of Impeachment against Judge Ritter was phrased in *general terms of misconduct only* and it was *only* upon the seventh Article of Impeachment that Judge Ritter was found guilty. As set forth in the Kelley Memorandum (pages 20–22) the various written opinions of the Senators filed in that case confirm the conclusion that conduct on the part of a Federal Judge need not constitute a *criminal* offense to be impeachable and in fact, as established in *Archbald*, conduct is impeachable that is non-criminal and even such conduct as "would have been blameless if committed by a private citizen" is impeachable.

The Impeachment Precedents and the conclusions to be derived therefrom as reflected in Cannon establish, as stated by Cannon, "that the Archbald case removed from the domain of controversy the proposition that judges are only impeachable for the commission of crimes or misdemeanors against the laws of general application" and the Ritter case, the only subsequent case involving successful impeachment of a Federal Judge, supports this principle absolutely.

The Rifkind Memorandum airily dismisses the principles established by the Archbald and Ritter cases, the solemn recognition given by the House of Representatives to the principles in Cannon's Precedents and the virtually unanimous view of historians and other authorities supporting the principles established in *Archbald* as announced in Cannon by stating:

"Some academics have been misled by the heated statements of disgruntled supporters of impeached judges to conclude that they have been impeached for less than criminal offenses. Professor Corwin, for example, relies upon the *Archbald* and *Ritter* cases for the proposition that in this century the meaning of 'high crimes and misdemeanors' has broadened to include elements of 'good behavior.' "

The Rifkind Memorandum neglects to reveal that virtually every learned student of the Constitution since the founding of our Government (and who were assuredly not just "disgruntled supporters of impeached judges") supports the conclusions of the Kelley Memorandum and denies the validity of Rifkind that only "*criminal* conduct" is impeachable. Rifkind mentions the distinguished Ritter cases but omits mention of other distinguished authorities who likewise endorse those principles.[1]

In conclusion, of the nine federal judiciary impeachments in this nation's history, there were four acquittals; two who did not defend and one resignation (all proceedings lacking precedental value) and there is the Archbald conviction immortalized in Cannon's Precedents, the Ritter conviction, Cannon and virtually every recognized authority to completely demolish the Rifkind thesis that only "criminal conduct" is impeachable. We reiterate the opinions and conclusions expressed in the Kelley Memorandum.

Respectfully,

BETHEL B. KELLEY.

MEMORANDUM ON IMPEACHMENT OF FEDERAL JUDGES

A careful examination of the Constitution itself, of the materials reflecting the intent of its draftsmen, and of the records in actual impeachment proceedings clearly demonstrates that federal judges may be impeached only upon charges of "Treason, Bribery, or other High Crimes and Misdemeanors." There is nothing in the Constitution or in the uniform practice under the Constitution to suggest that federal judges may be impeached for anything short of *criminal* conduct. And the prohibition against *ex post facto* laws, the notice requirement of due process, the protection of the First Amendment, and considerations of "separation of powers" prevent any other standard.

I. THE CONSTITUTIONAL PROVISIONS

As Thomas Jefferson noted in his "Manual of Parliamentary Practice," "the provisions of the Constitution of the United States on the subject of impeachments" are found *exclusively* in Article I, Sections 2 and 3; Article II, Section 4; and Article III, Section 2.

---

[1] Wrisley Brown, Clarence Cannon, the distinguished House of Representatives of the United States in adopting Cannon's Precedents (see Jefferson's Manual, 1969 ed. p. vi) and Senator Elihu Root, as discussed above;

Rawle in his work on the Constitution (p. 211);

Story on the Constitution (V. 1, 5th ed. pp. 584 and Sections 796, 799);

Cooley in his Principles of Constitutional Law—(p. 178);

George Ticknor Curtis in his Constitutional History of the United States, (V. 1, pp. 481–482);

Watson in his Treatise on the Constitution, (V. 2, pp. 1034, 1036–1037);

American and English Encyclopedia of the Law (2nd ed., V. 15, pp. 1066–1068);

Black in his work on Constitutional Law (2d ed. pp. 121–122).

Article I, Section 3 provides that the House shall have the "sole Power of Impeachment," and that the Senate shall have the "sole Power to try all Impeachments." Article II, Section 4 provides that "the President, Vice President, and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors."

Section 2 of Article III provides that "the Trial of all Crimes, except in Cases of Impeachment, shall be by Jury."

Note that Jefferson did *not* include the provision, found in Article III, Section 1, that federal judges are to serve "during good Behavior" among the provisions relating to the impeachment power.[1]

II. THE DRAFTSMEN'S INTENT

The records of the Constitutional Convention reinforces Jefferson's conclusion that impeachment of federal judges is to be confined to charges of "Treason, Bribery, or other high Crimes and Misdemeanors." In the Convention, impeachment was discussed principally with reference to removal of the President. Early drafts provided for "impeachment and conviction for malconduct or neglect in the execution of his office," and later for "malpractice or neglect of duty," 1 Farrand, Records of the Federal Convention, pp. 89–90, 226, 230, 236. Later, the draft language was changed to focus more narrowly upon charges of "treason, bribery or corruption." 2 Farrand, pp. 185–86. It was thereafter suggested that the more general phrase "maladministration" be added. When James Madison argued that "so vague a term will be equivalent to a tenure during the pleasure of the Senate," the general phrase was rejected in favor of "for other high Crimes and Misdemeanors against the United States." 2 Farrand, pp. 445, 450. When an effort was made to insert a separate judicial removal provision in Article III, following the words "good behavior," it was rejected upon the opposition of Morris, Randolph, Rutledge and Wilson. 2 Farrand, 428, 429.

That it was the intention of the Founding Fathers to deal with impeachment of judges exclusively under the language of Article II is made clear by Hamilton's writings in the *Federalist Papers*, our most authoritative guide to the meaning of the Constitution. In No. 79, Hamilton wrote that it was the intention of the draftsmen to make federal judges more independent than were any state judges, and that—

"The precautions for their responsibility are comprised in the article respecting impeachments. . . . This is the only provision on the point which is consistent with the necessary independence of the judicial character, and is the only one which we find in our own Constitution with respect to our own judges."

Hamilton proceeded to indicate that there had been a deliberate decision not to make judges impeachable "on account of inability." He argued that "an attempt to fix the boundary between the regions of ability and inability would more often give scope to personal and party attachments and enmity than advance the interest of judges in the public good."

In short, in order to preserve judicial independence, provision was made by the Founding Fathers to permit removal of judges only when they could be shown to have committed criminal offenses. Broader bases for removal were rejected as being too dangerous.[2]

And in the summer of 1789, in the debate on establishing the first executive department, Congressman Livermore of New Hampshire observed that federal judges "hold their offices during good behavior, they have an inheritance which they cannot be divested of *but on conviction of some crime.*" 4 Elliot's Debates, at 365. (Emphasis supplied.)

Moreover, in 1802 Senator Stone of North Carolina delivered a classic argument, which appears to have persuaded the Senate which was then considering abolition of certain inferior courts, that the Constitution provides for removal of judges by impeachment only in the case of high crimes and misdemeanors, and that accordingly judges might be guilty of lapses from "good behavior" for which they cannot be impeached. In the Senator's words:

"If the words, impeachment of high crimes and misdemeanors, be understood according to any construction of them hitherto received and established, it will be found, that although a judge, guilty of high crimes and misdemeanors, is always guilty of misbehaviour in office, yet that of the various species of misbehaviour in office, which may render it exceedingly improper that a judge shall continue in office, many of them are neither treason, nor bribery, nor can they be properly dignified by the appellation of high crimes and misdemeanors; and for the impeachment of which no precedent can be found; nor would the words of the Constitution justify such impeachment." 11 Annals of Cong. 72 (1802)

On April 9, 1970, Assistant Attorney General William E. Rehnquist testified before Senator Tydings' Subcommittee on Improvements in Judicial Machinery, and said of Senator Stone's argument:

"The fact that it was persuasively set forth and really not refuted on the floor that early suggests to me that this is probably consistent with the view of the framers on the matter." (Tr. 9)

III. THE PRACTICE

It has been our practice under the Constitution to impeach only on the basis of charges which state criminal offenses.

The first impeachment case, that of Judge John Pickering in 1803, although brought and decided on purely political grounds, illustrates how wide was the recognition that impeachment was confined to "Treason, Bribery, or other high Crimes and Misdemeanors"—the criminal offenses enumerated in Article II. Although Judge Pickering had been hopelessly insane for three years, was an incurable drunkard, and had misconducted himself on the bench, the leaders of the effort to remove him felt it necessary to couch their charges under the rubric "high Crimes and Misdemeanors," [3] and to charge him with three counts of willfully violating a Federal statute relating to the posting of bond in certain attachment situations, and the misdemeanors of public drunkeness and blasphemy. They not only believed that strong evidence of insanity, drunkeness and judicial misconduct were insufficient to justify impeachment, but because they viewed impeachment as requiring proof of criminal conduct they found it necessary to attempt to exclude evidence of Pickering's insanity "only from the fear, that if insanity should be proved, he cannot be convicted of high crimes and misdemeanors by acts of decisive madness." I *Memoirs of John Quincy Adams* 299–300.

The next, and most important, judicial impeachment case not only affirmed the rule that impeachment is confined to "high Crimes and Misdemeanors," but made it clear that to warrant impeachment actual criminal conduct must be shown. The case involved a major effort by the Jeffersonians, newly in power, to remove Associate Justice Samuel Chase from the Supreme Court. As Senator Giles of Virginia openly avowed, the impeachment of Justice Chase was to be the first step by the Jeffersonians in the removal of all the Justices appointed by prior administrations, including Chief Justice John Marshall—the principal target.

Chase was impeached in the House by a vote on straight party lines, Jeffersonians against Federalists. Each of the eight articles of impeachment dealt with his official conduct during judicial proceedings and none stated a criminal offense, although each one was captioned "high crimes and misdemeanors"—the House did not then, and never has since, attempted formally to impeach for want of "good behavior." He was charged, for example with the "high crimes and misdemeanors" of using intemperate language in instructing a grand jury, in conducting a trial in an arbitrary way, and in unreasonably refusing to excuse a juror from jury duty.[4]

Chase's Senate trial turned into a great constitutional debate over whether a federal judge may be removed on charges which do not amount to "high Crimes and Misdemeanors." For the Jeffersonians, George Washington Campbell of Tennessee unsuccessfully contended that impeachment was "a kind of an inquest into the conduct of an officer . . . and the effect that his conduct . . . may have on society."

For Chase and the Federalists, counsel argued successfully that impeachment could only be had for "an indictable offense," noting that "high Crimes and Misdemeanors" were technical legal terms:

"Well understood and defined in law. . . . A misdemeanor or a crime . . . is an act committed in violation of a public law either forbidding or commanding it. By this test, let the respondent . . . stand justified or

[1] As is indicated later in this Memorandum, the settled construction of the Constitution is to confine impeachment to charges of "Treason, Bribery, high Crimes and other Misdemeanors," and without regard to the "good behavior" provision. This Memorandum has no bearing upon the present debate between those who believe that impeachment for high crimes and misdemeanors is the exclusive avenue to remove judges, and those who contend that the Constitution permits remedies short of impeachment to deal with lapses from "good behavior" which do not amount to grave criminal offenses. With regard to this controversy, see Kurland "Constitution and the Tenure of Federal Judges: Some Notes from History," 36 Chi. L.Rev. 665 (1969); Memorandum on the Constitutionality of a Statutory Alternative to Impeachment, Submitted by the Senate Subcommittee on Improvements in Judicial Machinery, printed in the Congressional Record for June 5, 1969.

[2] Justice Story, writing a half century later but relying not only on Hamilton but also on Mr. Justice Wilson's lectures of 1804, agreed, see 2 Story, Commentaries on the Constitution, §§ 1624–26, 1631. Justice Wilson had written of Federal judges that "they may be removed, however, as they ought to be, on conviction of high crimes and misdemeanors."

[3] The removal of Pickering was sought, not because of his incapacity, but to test the procedure for purging the Federalist judges. As the Jeffersonian leader, Senator Giles of Virginia, asserted, "We want your offices, for the purpose of giving them to men who will fill them better." Historian Henry Adams observed it was "an infamous and certainly an illegal conviction." 3 Beveridge, *Life of John Marshall*, p. 157, 143.

[4] Chase was widely regarded as one of the most able members of the Supreme Court. He had been a delegate to the Continental Congress, a signer of the Declaration of Independence, a member of the Maryland Convention to ratify the Constitution and Chief Justice of his state's Supreme Court. 3 Beveridge, *Marshall*, pp. 184–185.

condemned." 3 Beveridge, *Life of John Marshall*, p. 199.

The Nation's most distinguished lawyer, Luther Martin of Maryland, on Chase's behalf reiterated the principle that only "indictable offenses" could support impeachment, arguing that any other interpretation was barred by the *ex post facto* clause of the Constitution. 3 Beveridge, *Marshall*, p. 202.

In response to the charge that Chase had given an inflammatory grand jury instruction with the intent of stirring "the good people of Maryland against their state government, and constitution," counsel asserted Chase's right to freedom of speech. He asked the Senate:

"Is it not lawful for an aged patriot of the Revolution to warn his fellow-citizens of dangers, by which he supposes their liberties and happiness to be threatened?"

The Senate was asked to decide whether Chase's appointment to the bench deprived him of the "liberty of speech which belongs to every citizen?" 3 Beveridge, *Marshall*, p. 206.[5]

The turning point came when the lead prosecutor openly conceded that impeachment *was* a "criminal prosecution." Although controlled by Jeffersonians (25 to 9), shaken by the debate and by the defenses resting on the *ex post facto* and free speech clauses, the Senate on March 1, 1805 acquitted Chase, putting beyond doubt the principle that impeachment was to be for criminal offenses only.

So it has remained in our history. The point was driven home during the impeachment of President Andrew Johnson in 1867 for alleged "high Crimes and Misdemeanors." The former Justice Curtis summarized Johnson's successful defense as resting on the proposition:

"That when the Constitution speaks of 'treason, bribery, and other high crimes and misdemeanors,' it refers to, and includes only, high criminal offenses against the United States, made so by some law of the United States existing when the acts complained of were done, and I say that this is plainly to be inferred from each and every provision of the Constitution on the subject of impeachment." 1 *Trial of Andrew Johnson*, p. 409.

In the twentieth century, only five federal judges have been impeached.[6] In *every* case, the articles of impeachment charged acts amounting to "High Crimes and Misdemeanors." Consider them case by case:

A. *Charles Swayne* (District Judge—N.D. Fla. 1903): Judge Swayne was formally charged by the House with three counts of falsely certifying to excessive traveling expenses and thereby unlawfully obtaining money from the United Sttaes, committing a "high crime and misdemeanor in his said office." He was also charged with two counts of unlawfully appropriating to his own use a railroad car for the benefit of himself, his family and friends while the railroad involved was under the receiver appointed by him. In the Senate there was much debate over whether the high crimes and misdemeanors charged had to have been committed in the discharge of Swayne's official duties—but no debate about the necessity of establishing actual criminality, which was conceded. Swayne was acquitted in the Senate.

B. *Robert W. Archbald* (Circuit Judge—Commerce Court 1912): Archbald, a former district judge and later circuit judge assigned to the Commerce Court (which had jurisdiction over ICC orders), was formally charged with inducing railroads with cases pending before him to sell or lease to him certain coal properties; with accepting $500 from a coal operator for seeking to persuade another railroad with a matter before him to lease certain coal properties to the operator; with generally speculating in coal properties while a member of the Commerce Court and with selling his services to compromise matters pending before the ICC for his own personal profit. With respect to his prior service as a district judge, he was charged with "accepting" loans from lawyers and litigants who had cases pending before him. Archbald, who admitted the factual basis for the charges but denied any criminal intent, was convicted on five counts. Senator Elihu Root, joined by Senator Henry Cabot Lodge, explained that he had voted to convict Archbald—

"Because I find that he used the power and influence of his office as judge of the Court of Commerce to secure favors of money value for himself and his friends from railroad companies, some of which were litigants in his court and all of which were under the regulation of the Interstate Commerce Commission, subject to the review of the Court of Commerce.

"I consider this course of conduct, and each instance of it, to be a high crime and misdemeanor.

"I have voted 'not guilty' upon the other articles, because while most of them involve improper conduct, I do not consider that the acts proved are high crimes and misdemeanors. . . ."

C. *George W. English* (District Judge—E.D. No. 1925): Judge English resigned after being impeached but before trial in the Senate on charges of personal corruption in the handling of bankruptcy cases, to his own personal profit and that of Charles B. Thomas, a referee in bankruptcy with whom he was charged with conspiring.

D. *Harold L. Louderback* (District Judge—N.D. Cal. 1932): Judge Louderback was formally charged by the House with improper conduct in the appointment of receivers and receivers' attorneys in bankruptcy and reorganization cases. In particular, it was charged that Louderback had improperly appointed as a receiver the son of a California Senator, to whom he owed his judicial appointment. Louderback was acquitted.

E. *Halsted L. Ritter* (District Judge—S.D. Fla. 1936): Judge Ritter was impeached and formally charged with "high crimes and misdemeanors," including: "corruptly and unlawfully" receiving $4500 out of a $75,000 receiver fee he improperly ordered to be paid to his former law partner, after another judge had set a much lower fee; committing the "high misdemeanor" of continuing to practice law and to receive fees for such practice while on the bench;[7] willful failure to report $17,300 in income on his Federal income tax returns for 1929 and 1930; and conspiracy in a champertous foreclosure proceeding. Although the Senate narrowly failed to convict him on the specific criminal charges, it did convict on a blanket charge which asserted that he was guilty of "high crimes and misdemeanors in office," specifically including "income tax evasion."

Some academics have been misled by the heated statements of disgruntled supporters of impeached judges to conclude that they have been impeached for less than criminal offenses. Professor Corwin, for example, relies upon the *Archbald* and *Ritter* cases for the proposition that in this century the meaning of "high Crimes and Misdeameanors" has broadened to include elements of "good behavior." But Archbald was charged by the House with extorting bribes from litigants before his court, with interfering in cases before the ICC for a monetary compensation, and other "corrupt conduct" for personal gain. Ritter was formally charged with receiving illegal kickbacks, with the misdeameanor "of practicing law" while on the bench, with willful income tax evasion, and with conspiracy; and having admitted receiving the fees involved and not reporting them on his income tax returns in violation of law, he was convicted under an article charging "high crimes and misdeameanors in office," and including "income tax evasions" with respect to unlawful income.[8]

IV. CONCLUSION

The constitutional language, in plain terms, confines impeachment to "Treason, Bribery, or other high Crimes and Misdemeanors." The history of those provisions reinforces their plain meaning. Even when the Jeffersonians sought to purge the federal bench of all Federalist judges, they felt compelled to at least assert that their political victims were guilty of "high Crimes and Misdeameanors." The unsuccessful attempt to remove Justice Chase firmly established the proposition that impeachment is for *criminal* offenses only, and is not a "general inquest" into the behavior of judges. There has developed the consistent practice, rigorously followed in every case in this century, of impeaching federal judges only when *criminal* offenses have been charged. Indeed, the House has *never* impeached a judge except with respect to a "high Crime" or "Misdemeanor." Characteristically, the basis for impeachment has been the soliciting of bribes, selling of votes, manipulation of receivers' fees, misappropriation of properties in receivership, and willful income tax evasion.

As Hamilton noted in the *Federalist Papers*, this stringent standard for impeachment makes the unwieldy procedure unavailable to deal with such problems as disabled judges. But that, according to Hamilton, and Story as well, was the price the Founding Fathers deliberately paid to insure the independence of the federal judiciary. If federal judges commit grave crimes, they may be impeached. If not, they are not subject to impeachment. In consequence, while the federal judiciary has over the years suffered a few judges who were unable to perform their duties,[9] since 1805 it has been

---

[5] According to then Professor Frankfurter, political speeches by Justices to grand juries (in those days the Justices "rode circuit") were no rarity around 1800:

"They utilized charges to the grand juries as opportunities for popular education, Jay, Cushing, Wilson, Iredell, all indulged in the practice. . . . Having a Federalist flavor [the speeches] promptly aroused political opposition," Frankfurter & Landis, *Business of the Supreme Court*, 20–21 (1927).

[6] After Chase's acquittal, impeachment was used against judges in only two isolated instances before 1900. In 1830 Judge Peck was impeached for "high misdemeanors in office", but acquitted on a charge of having harshly sentenced a lawyer for contempt (one day in jail and 18 months suspension from practice.) The impeachment and trial of Judge Peck focused on the illegality of his action and his alleged guilty intent, not his fitness to hold office. Judge Humphreys was impeached and convicted *in absentia* in 1862 for acts amounting to treason, including aiding and abetting armed rebellion against the United States.

[7] In the Mulford Realty matter, he had written to a former client to indicate that he would continue in the case while on the banch and to demand a $2000 fee for himself—which was not reported to his former law partner. He earned his fee. From another client, he obtained $7500 for legal services in connection with several real estate transactions. Those fees were deliberately not reported on his income tax returns.

[8] Indeed, a solid majority of the Senate found him guilty of all but two of the specific charges of criminality.

[9] To deal with this problem, the Federal Judiciary Act of 1801 provided that when a federal judge could no longer discharge his duties, the circuit judges could appoint one of their number to fill his place. Thus, Judge Jeremiah Smith had been designated in 1801 to do Pickering's work.

free from political purges and from harassment directed at the beliefs, speeches and writings of individual judges. In consequence, it has not been necessary to test Luther Martin's argument in the Chase case that the *ex post facto* clause of the Constitution forbids legislative punishment for conduct not defined in advance as punishable, or to measure impeachment for a judge's beliefs, speeches and writings against the flat prohibition contained in the First Amendment that Congress shall not abridge freedom of speech. History has, therefore, demonstrated the wisdom of the choice made by the Founding Fathers.

Respectfully submitted,

SIMON H. RIFKIND,
Counsel for Mr. Justice Douglas.

STRATEGIC ARMS LIMITATION TALKS

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CULVER. Mr. Speaker, the second phase of the strategic arms limitation talks has recently been concluded in Vienna with an indication that significant progress continues to be made.

The United States has been seeking discussions with the Soviet Union on limiting the arms race since 1964. The first indications of reciprocal interest appeared in 1967, and on July 1, 1968. The President announced that an agreement had been reached to open talks "in the nearest future." The subsequent Soviet invasion of Czechoslovakia followed by the U.S. election and the presidential transition period delayed further action until last November, when preliminary talks began in Helsinki.

The arms race today is costing the world $182 billion a year, almost the entire U.S. budget, and 16 times the amount of the total world investment in the potentially explosive emerging countries of Africa, Latin America, and Asia.

The ultimate hopes for SALT are that a formal agreement will be reached. That will certainly be a long and difficult process. But in the shorter term, SALT, may be of major importance just by providing the forum for a closer understanding of each other's nuclear philosophy and an unwritten agreement for mutual restraint.

A recent article in the Washington Post by Chalmers M. Roberts, ably describes the level which the talks reached before their recent adjournment and some of the issues which will be coming up during phase III, which will begin in November. I insert pertinent excerpts of the article in the RECORD at this time:

ARMS TALKS: PROGRESS AND PROSPECTS

(By Chalmers M. Roberts)

Many long months ago, when the way finally was cleared for what have become known, redundantly, as the SALT talks, some American arms controllers argued that the talking would be more important than any agreement that might be reached. Now that phase II of SALT (the four months at Vienna), has ended and phase III (at Helsinki) has been scheduled to begin Nov. 2, it appears that the talking has been highly profitable but that the agreement is vital.

Despite the official lid of silence on the substance of the talks, a number of points are clear. One is that the United States started out far in advance in its thinking, both inside and outside government, on the subject of the nuclear arms race—its problems and how it might be curbed. Some experts estimate there was perhaps a year's time gap involved.

Historically, the Soviet bureaucracy forces the diplomats, the scientists and the military to stay in their own baliwicks, sending their ideas up their own bureaucratic ladders to the top. Only then, if approved, does an idea of one group start down the bureaucratic ladder of the others. Now there is evidence that this procedure has been altered radically, that, for example, foreign office desk officers can talk directly to military counterparts and others about the issues involved in SALT.

One reason for the change has been the Soviets' observation of how the process works in the United States. Another has been a necessity born of the thousands of pages of printed hearings of last year's American ABM debate, plus the Congressional Record's account of Senate floor debate, all of which had to be absorbed. There has been more such material, though not in equal amount, pouring into Moscow this year. Another factor in the changing Soviet ways has been, the United States effort to speed up the Soviet process by letting Moscow know in advance of Vienna how it was itself proceeding. This was the so-called "building block" technique described in President Nixon's State of the World report last spring. There is evidence the Soviets have accepted the technique.

This talking out process appears to have speeded up Soviet understanding of the complex nuclear arms issue and produced some common understandings of the elements involved—elements that have no ideological coloration and are susceptible to a high degree of mathematical precision, as in the case of the laws of nature.

Because this process has proved so valuable at the SALT talks it is excepted to become a permanent part of any treaty. The idea is not to establish a new international bureaucracy but to provide, in an arms limitation treaty, for periodic Soviet-American meetings. Such meetings would offer an opportunity for one side or the other to raise what seem to it suspicious goings on that hint of treaty violation, or for one side to tell the other why it is doing this or that outside the treaty if its actions might be taken as an infringement of the treaty's provisions. For example, if the United States were to erect new radars for airways control or as part of an early warning system to protect against Soviet missiles, its actions could be construed by Moscow as work toward an ABM system banned by the treaty. Explanation, with evidence, might be vital in avoiding a crisis.

Beyond the value, both in the SALT talks and as part of a treaty setup, of the talking process, however, there remains the necessity of an agreement. SALT has made it clear beyond doubt that any treaty must be built around a trade-off of the American Safeguard ABM system for a Soviet curb on its massive SS–9 missiles. Since the talks began last November in Helsinki (phase I), both sides have proceeded with testing and deployment of these and other strategic nuclear weapons. Only a treaty will halt the process.

The treaty now in prospect, however, is limited to an initial "building block:" quantitative control. It would permit qualitative improvements in numerous respects. Most widely known among these is the continuation of multiple warhead development and deployment—the MRVs and MIRVs. The way the American treaty proposal has been framed substitutions would be permitted under a gross ceiling on missiles with a special sub-ceiling for huge missiles such as the SS–9. Thus Poseidon could be substituted for Polaris on submarines, Minuteman III for Minuteman I and II and the B–1 bomber for B–52s; each represents a major qualitative improvement. The same would be true for comparable Soviet weapons systems. The dramatic new submarine project, ULMS, however, might be inhibited by the sub-ceiling for huge missiles. That sub-ceiling would limit the size of missiles that might be deployed for this system which is still at the drawing board stage. Some ULMS concepts call for missiles beyond the proposed limitation.

But even though the treaty in prospect would basically limit only numbers, it would certainly represent a major gain. It would be the first substantive curb on the nuclear arms race in history, and beside it the nuclear test ban treaty would pale in importance.

Given the treaty now in prospect, what logically should follow is the next building block: a curb on further qualitative improvements. Continued multiple warhead testing, the initial American deployment of Minuteman III with MIRV warheads and the scheduled January deployment of Poseidon along with similar Soviet advances all make this more and more difficult as time goes on. One possibility being discussed is a second stage SALT agreement that would lower the permissible number of missiles from that set by the first agreement. But such a move would make only a dent in the problem, especially with MIRV warheads in place.

It should be observed at this point that the Vienna phase did not get as far as some in Washington hoped. Not until July 24 did the United States put forward its proposal in what amounted to one package, although the pieces had been discussed long before. And the Soviet Union simply did not make the necessary decisions before the Vienna phase closed. Part of the reason was the thinking lag, but another part, as far as can be perceived, has been Kremlin hesitancy in taking the momentous steps involved.

By now, however, SALT has reached a fish-or-cut-bait point for Moscow. A counter proposal is expected at Helsinki, and—unless the Americans at Vienna have totally misconstrued their Soviet counterparts—it cannot vary on the major premises and thus the parameters of the American proposal. It might, of course, vary in detail and quite probably will. If the Kremlin gives a "go" signal and if the counter-proposal is within range of the American proposal, it should take perhaps six months to hammer out a treaty. History teaches, as the Soviets say, that once the necessary political decisions are taken in Moscow and Washington the details are manageable.

By most accounts the Soviet military are the most resistant to, or at least suspicious of, a treaty. Yet there are military subdivisions, it is believed. The Navy wants to go on expanding its global role; the Army wants to hold onto its manpower, especially given the Chinese threat; the rocket forces perhaps may be the hardest to convince that a ceiling is acceptable.

The alternative, as the Kremlin knows, is a continuing arms race moving into new levels of strategic systems. If there is no treaty, Safeguard will proceed and might become an area defense system. There will be new bombers in larger numbers than otherwise and perhaps ULMS will get off the drawing boards. Land based missiles probably would go into hard rock silos and become mobile as well.

Billions of rubles—and dollars—are involved here. But perhaps even more persuasive to Moscow is the technological strain of a new weapons round. Currently thousands of scientists badly needed elsewhere are locked into the weapons business. The

Kremlin's answer, and the fate of the treaty, thus are unlikely to be known until sometime after Nov. 2. It will be a critical decision for the world.

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 21, 1970

Mr. RANDOLPH. Mr. President, Hon. Frank C. Haymond, judge of the West Virignia Supreme Court of Appeals for the past 25 years, has received a high honor from the American Bar Association. Judge Haymond was presented with the ABA highest award, the ABA Medal. The award is made each year to a member of the bar who has provided outstanding service in the cause of American jurisprudence.

Judge Haymond is a highly respected citizen and is held in the high esteem by members of the bar. He is an outstanding jurist and has served his State and Nation well.

The judge is the only ABA member to have served twice on the association's board of governors.

Mr. President, Judge Haymond is to be commended for his devotion to American jurisprudence and for the discharge of responsibilities which have been placed in him.

It is my desire, Mr. President, to have the release of the American Bar Association on Judge Haymond award printed in the RECORD at this point.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

JUDGE FRANK C. HAYMOND PRESENTED HIGHEST ABA AWARD

ST. LOUIS, Mo., August 12.—Judge Frank C. Haymond of Charleston, W. Va., a member of the West Virginia Supreme Court of Appeals, was presented Wednesday night with the American Bar Association's top award, the ABA Medal.

Bernard G. Segal, president of the ABA, made the presentation at the official Association dinner of the ABA annual meeting, which began last week in the "Gateway City" and closes Thursday. The medal is awarded each year to a member of the Bar who has provided "outstanding service in the cause of American jurisprudence."

Judge Haymond, 83, has been a judge for the past 31 years. Before that he had practiced law for 27 years. He has served on the West Virginia Supreme Court of Appeals since July 1, 1945, when he was appointed to fill a vacancy.

He was elected in 1946 to complete the unexpired term, and was re-elected to fill 12-years terms in 1952 and 1964. From 1939 to 1945 he had served as a judge of the Circuit Court of Marion County, W. Va.

In his long service to the Supreme Court of Appeals, Judge Haymond has set several state records. He is the first judge ever elected to the court three times, has served longer than any other judge, and is the only one to serve as president of the court six times.

Judge Haymond also is the only ABA member to serve twice on the Association's Board of Governors, 1943–46 and 1966–68. He has been the West Virginia state delegate in the House of Delegates for a total of 27 years, was a founding member and the second chairman of the Section of Insurance Law, and has served on a number of committees.

He also was a founding member of the Conference of Chief Justices. Judge Haymond has been vice president and a director of the American Judicature Society, and past president of the Marion County and West Virginia Bar Associations. He has served as a member of the state legislature and of the West Virginia Commission on Constitutional Revision. And he has lectured at the West Virginia College of Law.

"During his long and distinguished career on the Bench, Judge Haymond zealously pursued his duties toward the Bar," President Segal said at the presentation. "He has been extraordinarily devoted to his Association and has made major contributions to its work and progress. He richly shares credit for the leadership the Association has attained in professional and public affairs."

President Segal added that Judge Haymond "has won the high esteem and warm affection of his associates on the Bench, of the members of the Bar who practice before him, and of his countless friends and associates in the work of the organized Bar."

Born in Fairmont, W. Va., on April 13, 1887, he was graduated with distinction from Harvard College in 1910 and completed his law studies at Harvard Law School in 1912. He also holds honorary law degrees from Morris Harvey College and West Virginia University.

Judge Haymond practiced law in Fairmont from 1912 to 1939, except for military service from March, 1918 to August, 1919. He was a member of the West Virginia Legislature from 1916 to 1918 and served on several committees of the House of Delegates.

The judge represents the fourth generation of his family to serve on the West Virginia bench. His great grandfather, Thomas S. Haymond, was a justice of the peace and president of the Marion County Court. His grandfather, Alpheus F. Haymond, served on the supreme court from 1873 to 1882 and was a member of the Second Constitutional Convention in 1872. William S. Haymond, his father, was a circuit judge.

"I feel that this office offers an unusual opportunity for public service," said Judge Haymond. "And that is what I have tried to do, to the best of my ability and according to the law as I see it."

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

FIFTY YEARS OF BROADCASTING

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD a brief history of Pittsburgh's excellent radio station KDKA, the world's first radio station, which this year is celebrating its 50th anniversary. The citizens of our good community can rightly be proud of the many historic firsts in the broadcasting industry that have been accomplished by KDKA radio 1020. Even today in an era of advanced communications we note in the programing of this fine station the spirit of pioneering for the future of this important medium. And though KDKA's signal today beams around the globe and has the entire world as its domain, it is especially gratifying for us to know that KDKA is the descendant of a small experimental station built in our community a half century ago.

The information follows:

PITTSBURGH'S KDKA RADIO 1020—50 YEARS OF BROADCASTING

KDKA Radio 1020, the world's first radio station, began a continuous schedule of broadcasting with the Harding-Cox elections of November 21, 1920. KDKA was licensed by the federal government on Oct. 27, 1920 and its call letters were assigned from a roster maintained to provide identification for ships and marine shore stations, these being the only regular radio services then in operation under formal license at that time.

KDKA is the direct descendant of experimental station 8XK constructed and operated by Doctor Frank Conrad from a garage at the rear of his residence in Wilkinsburg, a Pittsburgh suburb. First official record of this station appears in August 1, 1916 edition of the radio service bulletin issued by the Bureau of Navigation of the U.S. Department of Commerce. Conrad had become interested in radio in 1915, when to settle a $5.00 bet on the accuracy of a $12.00 watch made with a friend, he built a small receiver to hear time signals from the Naval Observatory at Arlington, Virginia. Experimental station 8XK was off the air due to the wartime amateur ban from April 7, 1917 until Oct. 1, 1919.

Dr. Conrad was kept busy answering mail from listeners in widely separated locations. Radio messages, in early days, were chiefly discussions of the kinds of equipment being used and the results obtained. Bored by this monotonous routine and anxious to save his voice Dr. Conrad, on Oct. 17, 1919 placed his microphone before a phonograph and substituted music for voice. Requests poured in for records to be played at certain times to convince skeptics. Because of the demand, within a few days, Conrad announced that instead of complying with individual requests he would "broadcast" records for two hours each Wednesday and Saturday evenings.

By late summer of 1920 interest in these broadcasts had become so great that the Joseph Horne Company, a Pittsburgh department store ran an ad in the Pittsburgh Sun featuring Dr. Conrad's "wireless concerts" and offering amateur wireless sets at $10 up.

H. P. Davis, Westinghouse Vice President, an ardent follower of the Conrad venture reasoned that the real radio industry lay in the manufacture of home receivers and in supplying radio programs which would make people want to own such receivers. Westinghouse officials were won to the same view

and a station was authorized, license application submitted, and election night—then only a little more than two weeks away—selected for the grand opening.

KDKA has broadcast regularly ever since and many of KDKA firsts are firsts for the radio industry.

On January 21, 1921, KDKA broadcast the first religious service live from the Calvary Episcopal Church.

On March 19, 1921, KDKA aired the first official government broadcast with members of President Harding's cabinet speaking.

On April 11, 1921, the first sports broadcast, a boxing bout for the lightweight title, Johnny Ray vs. Johnny Dundee, was broadcast from Motor Square Garden.

The first farm program was May 19, 1921.

On October 5, 1921, the first World Series broadcast was transmitted from the Polo Grounds in New York City.

A Newark, New Jersey, station WJZ was listed in the radio service bulletin of June 1, 1921, although not officially licensed until September 20, 1921, went on the air September 19 with a remote pickup from the eastern states exposition at West Springfield. KDKA, WBZ, and WJZ constituted broadcastings first group of stations under one ownership, and Westinghouse became the first such owners. Today the Group W, Westinghouse Broadcasting Company, owns seven radio stations and five television stations in the United States.

KDKA began in a tiny transmitter shack atop the East Pittsburgh Westinghouse plant. Today its 50,000 watts clear channel has been heard in every state and at sometime in every foreign country around the world. KDKA Radio 1020 has become an integral part of the Pittsburgh community through direct involvement. In cooperation with the urban coalition KDKA sponsors "Call for Action" an urban hot line for residents to get direction on solving housing and related problems. KDKA and the Allegheny Board of Trial Lawyers produce an annual "Mock Trial" hearing to spur legal awareness in the community and give encouragement to promising law students. In 1970 KDKA received the annual Judge Wallace S. Gourley Award for this service. KDKA utilizes the services of worldwide Group W and press services as well as a staff of news specialists to keep Pittsburghers informed with objective reports on their world. KDKA's "Open Mike" show features experts and personalities in the news and allows listeners a chance to talk back to newsmakers.

KDKA is proud to be the pioneer station of broadcasting and witness the growth of radio from a handful of wireless amateurs to today's industry which reaches all Americans through over 350,000,000 radio receivers.

MRS. MAXINE BROWN AND CITIZENS OF BURLESON, TEX., SPEAK OUT ON THE STATE OF THE NATION

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. TEAGUE of Texas. Mr. Speaker, back in June, I received a letter from Mrs. Maxine Brown of Burleson, Tex., which letter was also signed by a number of other citizens of the same town. I believe the letter to be one of the finest I have received ever from a constituent and portrays vividly the great concern of what I believe to be the majority of my constituency on the state of the Nation. The people of Burleson, Tex., are good American citizens, God fearing, and deeply concerned for what is happening in our country as is evidenced by this letter. I urge all Members of this body who have expressed concern for the future of this great Nation to read this letter, as follows:

Congressman OLIN E. TEAGUE,
Rayburn House Office Building,
Washington, D.C.

DEAR MR. TEAGUE: As a citizen of this country, and a registered voter, my conscience will no longer let me remain one of the silent majority.

I feel it is my duty to my country and my God to protest the major issues facing the Free Americas.

My concern ranges from the riots on our college campus to poverty on the home front, and most emphatically the course of the Vietnam war.

As we approach the middle of 1970 statistics show that interest rates are higher than they have ever been, cost of living increases with each monthly report, crime and poverty is tremendously high, and numerous other subjects reaching their peak.

Our country is in a recession because of internal problems and mismanagement.

We, the working people, have had to gird our belts, and carry the burden of the national debt, and send our fathers, sons, and husbands to fight and defend a country who apparently do not want us there. They have, however, become wealthier due to narcotics and stolen goods sold openly on the streets by Vietnamese civilians. The real tragedy aside from the death, heartbreak and broken bodies is the opportunity of industrialists to pounce on the sufferings of humanity, filling their fat pockets with additional monetary gain. Since we are in the war, let's take steps to do the job that should have been finished long ago, and bring our boys home.

It is amazing that the great minds of this world can probe outer space, place men on the moon, and design weapons to destroy nations with one push of the button. The superior intelligence of these people was a gift from our Creator, and would be much more pleasing to him if their thoughts, time and energies could be spent in creating devices for saving lives instead of total destruction.

I firmly believe the present peace movement, racial problems, and riots with moral strife have the undercurrent of communism at work. These people, most of them American citizens, are protected by our Constitution; with only a requirement for them to register as Communists. They must register, I am told, so that the government can be informed of their activities. Well, the whole world is watching as they divide our nation using a weapon dear to our hearts, a plea for peace. They nurture the minds of minorities, the emotionally disturbed, the poverty stricken and the youth of our nation whose task it will be to correct the problems we created today.

This must cease immediately if we are to survive as a people. It is imperative that the majority reign, and strongly support those who are in the position to enforce the laws of our land. These immoral Hippie Fests are allowed to exist because it is a social problem we have allowed to evolve out of the miseries of humanity. Every day people are convicted on charges of possession of marijuana and punished; yet nothing is done by law enforcement to stop these public Pot Parties. Why?

Since the surtax has been introduced, nothing constructive to my knowledge has been done on the homefront to alleviate the problems of those paying. We have homes now encircling us built with Federal Grants at the interest rate of one percent to the purchaser. A cheap home, built cheaply, with the taxpayer paying the outstanding debt of high labor and interest. In this same period, our Senate and Congress voted themselves a salary increase along with the President getting a larger sum. He also felt the need for a summer White House in California with the expense of travel, communication, installations and of course the windscreen for the pool, all at the taxpayer's expense of $60,000. Yet, we are encouraged to buy only what we need to control inflation. Well, the majority of us obviously are Indians and not Chiefs, to coin a phrase, and examples set by our leaders leaves us somewhat confused.

Because of high costs of daily living, we cannot decide whether to fence our back yard. The cost of $300 would be mere trivia to some, yet if we do get a fence that will keep at least three children out of the street.

As our representative in Congress, I have written you on separate occasions expressing my views, and have received very cordial replies stating your understanding and sympathy to my problems. Your voice in Congress is the voice of the people in your District, and we are ready to have our grievances heard. We can no longer be a silent majority weeping silent tears in privacy and praying in earnest concern for our nation, and the future of its people.

Will you help us?

Mrs. W. E. Brown, Mr. W. E. Brown, Mr. and Mrs. William H. Fox, Mrs. B. H. Colling, Bobby H. Colling, Mrs. A. L. Porter, Mrs. Earl Brown, Mrs. Irwin Cameron, Irwin Cameron, Pauline Webb, Mrs. W. A. Greer, Mr. Donny Timmis, Mrs. Donny Timmis, Mrs. Berta Bennett, Mrs. Bob Roberts, Emma Lee Love, Donald B. Trimble, Ernie E. Dill, Mrs. Mamie Dill, all of Burleson, Tex.

SECOND ANNIVERSARY OF SOVIET-BLOC INVASION OF CZECHOSLOVAKIA

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. TAFT. Mr. Speaker, as we are all sadly aware, the week of August 17 marks the second anniversary of the Soviet bloc invasion of Czechoslovakia. I am proud to join with freedom-loving people everywhere in saluting the courageous people of Czechoslovakia and to assure them that their cause has not been forgotten.

The continued Soviet occupation of Czechoslovakia is another crime against the right of a small country to determine its own destiny and aspirations. While we enjoy the individual liberties of a free society, the people of Czechoslovakia, wracked with fear and frustration, have seen the spark of freedom stamped out by the heavy boot of communism.

In times such as these, we in the United States must sustain the hopes of these people by affirming and activating our own deep dedication that they have what their country has so seldom enjoyed through the years—freedom and liberty.

POLLUTION OPINION POLL

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. KOCH. Mr. Speaker, in the next few weeks I will be sending to my constituents a brief summary of my congressional efforts with regard to the growing pollution crisis now facing our country, and a short questionnaire posing alternative steps that might be taken to help meet New York City's pollution challenge.

This mailing, which will go to approximately 170,000 households, is a product of the responses I received from my April questionnaire indicating that pollution and sanitation are uppermost in people's minds when considering all of the problems facing New York City.

With the thought that it might interest my colleagues I would like to insert at this time the complete text of my report and questionnaire:

CONGRESSMAN EDWARD I. KOCH ASKS FOR YOUR OPINION

DEAR CONSTITUENT AND FELLOW NEW YORKER: The 25,000 residents of the 17th Congressional District replied to my April questionnaire. It was an enormous response and in my June newsletter there was only time and space to report the statistical results.

Since then I have read with great interest your recommendations on how I can improve the job I am doing and, in particular, what single change you would suggest to make New York City more livable.

Over half of those responding singled out pollution and sanitation as the most obvious and obnoxious problems requiring action. People want something done about the dirty air, polluted waters and filthy streets of New York City.

Let me tell you what I've been trying to do and then ask your opinion about some proposals that constituents made when replying to my April questionnaire. I think we all have some hard choices to make if we really mean to clean up our City.

CITIZEN ENFORCEMENT OF POLLUTION LAWS

On June 29, I filed affidavits with the U.S. Attorneys in Manhattan and Brooklyn requesting prompt and vigorous prosecution of 10 industries which have been listed as polluters of major importance in New York City by the State Department of Health. I relied on the Federal Refuse Act of 1899 which provides for citizen action against those who unlawfully discharge refuse into navigable waters. In the past, the Justice Department has refused to use this potentially powerful and effective federal statute except in a very limited way. I will continue to press for strict enforcement of this important water pollution control law.

Last month I co-sponsored and testified in support of a bill which would allow an individual citizen, or group of citizens united by a common grievance, to bring lawsuits directly against those industries who threaten or those government officials who neglect the citizen's right to a pollution free environment.

WATER POLLUTION

Recently I introduced the Regional Water Quality Act which establishes a national system of special taxes levied on industrial polluters based on the volume and toxicity of each polluter's waste. Such taxes provide the best incentive for polluters to install abatement equipment at their own expense. I believe when industry is faced with paying taxes on waste, it will find it more profitable to stop polluting.

AIR POLLUTION

I have joined the formation of a Congressional Clean Air Committee, an ad hoc group of Congressmen now pressing for stronger air pollution control legislation proposed by Environmental Action and endorsed by several major conservation organizations.

I am particularly interested in getting the federal law changed so that New York can establish auto emission standards that are more restrictive than national standards. At present, California is the only state which can adopt tougher standards yet the auto pollution problem in New York City is just as bad as in Los Angeles.

If you want further details on this and other legislation proposed by our Congressional Clean Air Committee, please drop me a note.

(Space has been given for answers by two persons to allow for differences of opinion in a household.)

QUESTIONNAIRE

1. Would you favor banning all vehicles (except taxis, buses, police, fire, sanitation, commercial vehicles etc.) on a trial basis in the 17th C.D.?

2. Would you favor prohibiting all street parking Mon.-Fri. from 8–6 p.m. (except taxis, buses, police, fire, sanitation, commercial vehicles etc.) on a trial basis in the 17th C.D.?

3. Based on your current information about Con Ed's applications to enlarge their electric generating plant in Astoria (involving the issues of adequate power and clean air) do you favor the approval of such applications?

4. Would you favor outlawing the internal combustion engine by 1975 if Detroit cannot make it non-polluting even if alternative modes of propulsion (steam or battery driven cars) prove to be more costly and less efficient?

5. Do you favor banning the use of non-returnable bottles and cans for beer and soft drinks?

THE SUBTLE SUICIDE OF FREE ENTERPRISE

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CRANE. Mr. Speaker, for a number of years I have extolled the virtues of the free enterprise system in as many forums as were available to me.

One of my main themes has consistently been that the American business community has not done enough to sell itself and to present its case persuasively. In addition, it has not bothered to "dirty its hands" with the business of politics. As a result of this hands-off policy, the vital political decisions are too often made by those whose interests are not the interests of the free enterprise system.

Prof. Yale Brozen of the University of Chicago has found the same situation to exist, and he has told some businessmen about the problem in no uncertain terms. I commend Professor Brozen's speech—as reprinted from the August 10, 1970, issue of Barron's magazine—to the thoughtful attention of my colleagues:

FOR SWEEPING REPEAL

I bring you a message that will hardly surprise you. Free enterprise in this country is one-quarter dead and one-quarter strangled. It is only half alive. We are the inheritors of a proud tradition of peaceful, progressive, permanent revolution through free enterprise, but we are seeing about us increasingly unresponsive rigidity that is freezing us into a mold of stagnation.

That rising unresponsiveness leaves the young with, they believe, no alternative but either to obtain political power or begin thinking in terms of violent, destructive revolution. The peaceful, constructive, continuing revolution that was the hallmark of America's past creating the greatness of America today is neither understood nor regarded as an alternative. Many among the young mouth Marxist and Maoist slogans because they are too ignorant to know that that is the poison which is sickening them. But they do recognize that sickness is in the air. (Students listening to Ramsey Clark, former Attorney General of the United States, cheered when he said, ". . . an individual has to have some power to affect the quality of his schools, the quality of garbage collection, the quality of the police protection he gets, or he's utterly helpless. This means that we've got to involve communities in political power action and we've got to do it on whatever basis is necessary.")

The young recognize the senility that is setting in, if not its causes. The cause lies in the creeping socialism we have undergone. Just look around, and you see mail delivered by a socialized enterprise; children schooled in a socialized educational system; collectivized water; compulsory government annuity insurance; research for a major industry (agriculture) done by government agencies; food inspected by another government agency, cars and trucks rolling on socialized highways, and our aged parents protected by socialized medical insurance.

In that half way house to socialism, compulsory monopoly under government regulation, we ride monopolized and regulated, if not socialized, city transit systems, commuter railroads, taxicabs, air lines, buses, and trains. Our raw materials are delivered and our products shipped by regulated trucks, trains, barge and pipelines. Our homes are heated by regulated gas. We read by socialized or regulated light. And some of us clamor for regulated prices and wage rates where they are still free, crying that only price and wage controls can stop inflation. Free enterprise is half dead and some of us are asking for a noose to strangle what still lives.

Our national malaise is that every time someone sees a problem, we think that passing a law will cure that problem. We see postal service deteriorating—pass a law to reorganize the U.S. Post Office into a U.S. Postal Service. There is poverty—pass a law to get rid of it. There is crime in the streets—pass another law. There is congestion in the airports—put in another regulation. The schools are failing to educate—pass another appropriation to give them more money. Colleges face a financial crisis—pass a law providing state aid for private colleges. Juveniles are dropping out of school or becoming delinquent—pass a law providing more counselors. Our cities are burned by rioters—pass a law making it illegal to cross state lines to foment a riot. Japanese textiles are making life tough for cotton manufacturers—pass a law limiting imports. Consumers find their appliances need maintenance—pass a law requiring mandatory guarantees.

Pass a law. Pass a law. We are asking for so many laws that Congress has to stay in session almost the year round instead of going home after three or four months as they used to do. We are getting more laws

than we know what to do with. We should pass a law against more laws. We should pass a law limiting Congressional sessions to a maximum of six months each year. Pass a law. Pass a law. It's become a national refrain. Perhaps we ought to put it to music.

How many of us think about the fact that many of the problems that confront us could be better solved by repealing a law instead of passing another law. For example, perhaps the postal mess can be solved better by repealing a law than by passing another one. What would happen if we repealed the provision in our postal laws which makes it illegal for anyone but the U.S. Post Office to provide first class mail service?

It is, of course, un-American to propose an alternative to a governmentally operated postal system. After all, Ben Franklin, a great patriot, was a founder and supporter of this governmental enterprise. Anyway, what sensible American would want to go into a business which loses as much money as the Post Office?

Believe it or not, a good many Americans seem to think that the postal business is worth entering. The Post Office investigates thirty to forty cases a year where it suspects that its monopoly is being infringed. It prosecutes fifteen to twenty cases a year.

Of course, first class mail is profitable for the U.S. Post Office and it is in this class of mail in which it has a legal monopoly. It has never bothered obtaining a legal monopoly of other classes of mail since it believed that it lost money on other classes. It was glad to have anyone who wished take these over. But, of course, who would want to get a piece of a money losing business?

A number of people evidently have been anxious to move in on this money losing business—and some have done so. Tom Murray started a service in Oklahoma City where he offered to deliver third class mail for $25 a thousand, much less than the $43 a thousand the Post Office charged. Also, he guaranteed delivery within a specified time. The Post Office' habit of frequently delivering such mail after the event had already occurred that was being announced created many customers for Tom Murray, giving him the opportunity to lose even more money than the Post Office since he was charging less and giving better service. To everyone's amazement, he is making money. Others find the opportunity to compete with the P.O. on these terms so attractive that Mr. Murray has now franchised operators or is operating himself in sixty other cities under his Independent Postal System of America banner. His 1500 bonded carriers are serving 70 million people in these sixty cities in the U.S. and Canada, and he appears to be making money.

In parcel post, United Parcel Service is competing with the Post Office. Its service is enormously superior to that of the U.S. Post Office, and its rates are lower. Where the Post Office charges $1.17 for a 10 lb. package mailed in San Francisco and delivered in Portland in eight to ten days, United Parcel charges 98 cents and delivers in two days.

These are services on which the Post Office claimed to be losing money, yet private operators are providing better service at less cost and a lower price. Think of what private operators could do for first class mail service—which has deteriorated to the point of being ludicrous. The service is so poor that many companies pay the postage they are required to pay by law for first class mail but never let their mail get near a U.S. Post Office. They deliver the mail themselves rather than lose the time involved in letting a U.S. postal employe get his hands on their messages.

If we wish to improve our mail service and reduce its costs, we don't need to sell the Post Office. All we need to do is repeal the law monopolizing the carriage of first class mail for the U.S. Post Office. Also, it would help to repeal the law monopolizing the use of a householder's mail box. The would-be competitors who are now being prosecuted for violating the law could operate. The alternative services that would become available would not only be an improvement but also would greatly reduce our vulnerability to postal strikes.

At present, a large portion of the monopoly power in the hands of the U.S. Post Office accrues to the interest of the postal unions. The result has been that postal workers in the last ten years have been winning wage increases outstripping those of industrial workers. From 1959 to 1969, postal wage rates rose by 4.7% per year while industrial wage rates rose by 4.4% a year. You might never suspect that listening to the complaints of New York postmen. Given their recent success, a continuation of a monopoly Post Office is going to result in postal wage rates rising even more rapidly in the future. Postmen received a 6% increase this year and are scheduled to receive another 8% for a total increase of 14.5% as compared to the 7.8% average unions have won this year in private industry.

Simply setting up a U.S. Postal Service will not cure that situation, as has been demonstrated by the transportation unions. With competition from potential entrants to the common carrier transportation industry barred by the necessity to obtain a certificate of public convenience and necessity, the unions in the industry have a monopoly position which has enabled them to win wage increases well in excess of those won by other workers—and they win them at the expense of other workers. The Brotherhoods, the Teamsters, and the Air Line Pilots Association are a labor aristocracy engaging in wage setting activities which depress the wage rates of workers in other industries.

The alternative to the present proposals for passing a law to reform the Post Office—which will do nothing to improve many aspects of the situation—is simply to repeal the law monopolizing first class mail.

Free enterprisers have been remiss in bringing about a free enterprise solution to the postal scandal. A bill has been dropped into the Congressional hopper by Congressman Philip Crane from Illinois repealing the monopoly provisions in present postal laws (H.R. 16691). Has the Midwest Employers Council, or any other association of free enterprisers, given Crane's bill any support? I have seen none.

The few I have talked with have been afraid of losing their subsidies. The newspapers and magazines want their postal subsidy continued. The advertisers in these media want the subsidy continued. They are afraid that the elimination of monopoly in first class mail will mean no subsidy for second class mail. So Crane's bill receives no coverage in the media and few know of this proposed solution.

I would suggest to the advertisers who complain about governmental regulation of advertising and of their businesses, of governmental competition with their businesses, and of the burden of taxes on their businesses—which in combination are strangling the free enterprise sector—that they have only themselves to blame. If they abandon the free enterprise principle when they think it is to their interest, the whole principle becomes suspect. Who is going to rally with them to the defense of the free enterprise principle when these enterprisers want it defended if they do not support it when it may cost them something. It becomes a principle with friends only in fair weather.

To heap irony on irony, the postal subsidies which the newspaper owners and advertisers think are in their interest benefit them but little. Most, if not all of the subsidy is consumed in inefficiency, not in providing cheaper service. The subsidy they think they receive at other people's expense yields so little benefit that it is more than offset by their own tax contributions to the subsidy—a tax they pay everytime they use first, third and fourth class mail as well as the directly perceived taxes paid to provide the billion dollar a year operating loss suffered in postal operations plus the taxes paid to provide the interest on the Federal debt incurred to finance postal facilities.

If you free enterprisers want to avoid suicide, you can start on the socialized postal monopoly. Get rid of the monopoly element in this socialized enterprise. Let free enterprise provide now unimagined solutions for delivering better and less costly service than that now provided by this legal monopoly. With the elimination of this socialized monopoly, there will be less opportunity for the strangulation of free enterprise and free choice via postal regulations on what may be transported in the mail as well as via the tax and cost burdens imposed on free enterprises by this creaking, inefficient, giant governmental business.

Let me turn to another area where we have passed a law—and more laws—to cure the problem when a more appropriate action would have been the repeal of a law—or of several laws. We were concerned about poverty, and we passed an Economic Opportunity law in 1964 to launch a war on poverty. Numerous programs managed by an Office of Economic Opportunity were set up. These were all presumably designed to lift the incomes of those making less than $3,000 a year. We could do more to raise the incomes of the poor by repealing laws than has been done or will ever be done by this law.

Minimum wage laws create poverty by forcing people into unemployment. Agricultural price support programs make people poor by raising the price of food and by decreasing job opportunities through the production restrictions imposed to maintain high agricultural prices. The laws regulating transportation rates prevent industry from moving to disadvantaged regions where the poor live and providing jobs for them. They increase the cost to the poor of migrating to regions where better paying jobs can be found and prevent them from curing their own poverty.

Union supporting legislation causes poverty by permitting and encouraging union power to grow to the point where it can be and is used to restrict the entrance of the poor into higher paying jobs. . . . The urban renewal program is forcing the poor out of inexpensive housing into more costly shelter. The Federal migrant housing act is eliminating the jobs available to migrant labor by forcing farmers to choose between constructing expensive housing if they use migrant labor or buying less expensive crop harvesting machinery. The tariff law is monopolizing low paying jobs for Americans in protected industries which yield only $2.00 an hour and preventing the expansion of our export industries which pay $3.00 to $6.00 an hour.

The Tennessee Valley program is subsidizing people to stay put in a region where their opportunities are poor. The Rural Electrification Program is eliminating job opportunities for farm labor and depressing rural wage rates. And the taxes levied to support these programs are reducing the rate at which we increase our stock of capital—tools, machines and other equipment—and are reducing the rate at which better paying jobs would become available if these taxes

were not levied. We could do more for the poor by the repeal of all this legislation than we can possibly do by the special enactments designed to help the poor.

That was a rapid summary of some complex pieces of legislation, but rather than elaborate on this topic, I want to take the few minutes remaining to analyze two other proposals. We are all puzzled by the fact that our children receive so much schooling but so little education. Without dwelling on this point, let me just say that this is the inevitable consequence of subsidizing teachers and schools. If we bought a product and let free enterprise compete to see who could win the customers' favor, we would get a better product. But if we subsidize production with no competition for customers, we are guaranteed either a lousy product or a terribly expensive product or both. That is why we are getting lots of schooling at great expense and little education.

How can we cure the situation? Let schools compete for customers. How can that be arranged? Stop giving money to schools. If you want to give money away for education, give the parents of school age children vouchers which they can use to pay tuition at whatever school that can attract their patronage. If it costs $600 a child to operate the Omaha school system, give the parents of your school children vouchers good for up to $600 to pay tuition at any school. Public schools would then have to compete with each other and with private schools to see whose product can attract customers. Parents who want their children in programs with an abundance of individual attention or other especially expensive features could add the $200 or $300 required to pay the tuition in schools offering such programs. Present public schools would have to compete with each other for students as well as with private schools. The badly run schools would lose out to the well run schools. Schools would become more efficient in their use of resources as well as producing a better product in the competition to obtain students.

It's time we applied the free enterprise principle to this socialized arena in order to get our children educated. It's time that we stop putting children in jails labeled school from 9 to 3 every day.

This would have the advantage not only of improving the education of our children. It would also slow the indoctrination of our children with a socialist theology. The employes of a socialized enterprise are not likely to feel much loyalty to the free enterprise principle. (There are, of course, some exceptions.) Their analysis of the virtues of socializing economic activity is not likely to be balanced with more than a passing nod to the disadvantages. Their analysis of the defects of free enterprise is not likely to be balanced with equal enthusiasm for the discussion of the advantages of a free enterprise system.

You are killing the political support for the free enterprise principle by your support of socialized schooling. If you persist in this suicidal course, you will continue to get costly education and poor education for your children and an erosion of the free enterprise arena. Free enterprise will continue to die by the salami technique—slice by slice. . . .

SENATE—*Monday, August 24, 1970*

The Senate met at 10 a.m., and was called to order by the President pro tempore (Mr. RUSSELL).

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, we thank Thee for the world in which Thou has placed us. Help us to learn its laws and to trust its mighty powers.

We thank Thee for the world within us, fashioned for Thy presence—for the silent spaces of the soul and the kingdom of the mind.

We thank Thee for the world of the spirit revealed to us in the Man of Nazareth, for the vastness of His love, the purity of His life, and the grace of His forgiveness.

Let that mind be in us which was in Him that we may be gentle as He was gentle, true as He was true, brave as He was brave, loyal as He was loyal, and prompt as He to do the Father's will. Grant that we may so live this day that Thy kingdom may be advanced in and through us.

For Thine is the kingdom and the power and the glory forever. Amen.

CALL OF THE ROLL

The PRESIDENT pro tempore. Since the Senate adjourned on Friday, August 21, 1970, without a quorum, the first order of business is to obtain a quorum.

The Chair directs the clerk to call the roll to ascertain the presence of a quorum.

The assistant legislative clerk called the roll and the following Senators answered to their names:

[No. 265 Leg.]

Allen	Byrd, W. Va.	Fong
Allott	Cook	Griffin
Anderson	Dominick	Hansen
Bellmon	Eagleton	Harris
Bennett	Eastland	Hart
Bible	Ellender	Hatfield
Boggs	Ervin	Holland
Burdick	Fannin	Hruska
Jordan, N.C.	McIntyre	Sparkman
Jordan, Idaho	Metcalf	Spong
Mansfield	Muskie	Stennis
Mathias	Packwood	Williams, Del.
McClellan	Ribicoff	Young, N. Dak.
McGovern	Russell	

Mr. BYRD of West Virginia. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. CANNON), the Senator from Idaho (Mr. CHURCH), the Senator from Connecticut (Mr. DODD), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Iowa (Mr. HUGHES), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senators from Minnesota (Mr. MCCARTHY and Mr. MONDALE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Wisconsin (Mr. NELSON), the Senator from Rhode Island (Mr. PELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Georgia (Mr. TALMADGE), the Senator from Maryland (Mr. TYDINGS), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. YOUNG) are necessarily absent.

I also announce that the Senator from Rhode Island (Mr. PASTORE) is absent because of the death of a friend.

Mr. GRIFFIN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from New Hampshire (Mr. COTTON), the Senator from Florida (Mr. GURNEY), the Senator from New York (Mr. JAVITS), the Senator from California (Mr. MURPHY), the Senator from Kansas (Mr. PEARSON), the Senator from Ohio (Mr. SAXBE), the Senators from Pennsylvania (Mr. SCOTT and Mr. SCHWEIKER), the Senator from Illinois (Mr. SMITH), the Senator from Alaska (Mr. STEVENS), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Tennessee (Mr. BAKER) and the Senator from Maine (Mrs. SMITH) are absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Iowa (Mr. MILLER) is temporarily absent.

The PRESIDENT pro tempore. A quorum is not present.

Mr. BYRD of West Virginia. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from West Virginia.

The motion was agreed to.

The PRESIDENT pro tempore. The Sergeant at Arms will execute the order of the Senate.

After some delay the following Senators entered the Chamber and answered to their names:

Brooke	Goldwater	Percy
Byrd, Va.	Goodell	Prouty
Case	Hartke	Proxmire
Cooper	Hollings	Randolph
Cranston	Long	Thurmond
Curtis	Magnuson	Yarborough
Dole	McGee	
Fulbright	Moss	

The PRESIDENT pro tempore. A quorum is present, and the clerk will proceed to call the roll again on the final passage of H.R. 18127, the public works appropriation bill.

The clerk will proceed to call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. CANNON), the Senator from Idaho (Mr. CHURCH), the Senator from Connecticut (Mr. DODD), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Iowa (Mr. HUGHES), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Minnesota (Mr. Mc-

CARTHY), the Senator from Minnesota (Mr. MONDALE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Wisconsin (Mr. NELSON), the Senator from Rhode Island (Mr. PELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Georgia (Mr. TALMADGE), the Senator from Maryland (Mr. TYDINGS), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. YOUNG), are necessarily absent.

I also announce that the Senator from Rhode Island (Mr. PASTORE), is absent because of the death of a friend.

I further announce that, if present and voting, the Senator from Idaho (Mr. CHURCH), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from New Mexico (Mr. MONTOYA), the Senator from Rhode Island (Mr. PASTORE), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Ohio (Mr. YOUNG), the Senator from Nevada (Mr. CANNON), the Senator from Alaska (Mr. GRAVEL), the Senator from Tennessee (Mr. GORE), and the Senator from Rhode Island (Mr. PELL) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from New Hampshire (Mr. COTTON), the Senator from Florida (Mr. GURNEY), the Senator from New York (Mr. JAVITS), the Senator from California (Mr. MURPHY), the Senator from Kansas (Mr. PEARSON), the Senator from Ohio (Mr. SAXBE), the Senators from Pennsylvania (Mr. SCOTT and Mr. SCHWEIKER), the Senator from Illinois (Mr. SMITH), the Senator from Alaska (Mr. STEVENS) and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Tennessee (Mr. BAKER) and the Senator from Maine (Mrs. SMITH) are absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Iowa (Mr. MILLER) is temporarily absent.

If present and voting, the Senator from Vermont (Mr. AIKEN), the Senator from Florida (Mr. GURNEY), the Senator from New York (Mr. JAVITS), the Senator from Iowa (Mr. MILLER), the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY), the Senator from Kansas (Mr. PEARSON), the Senator from Pennsylvania (Mr. SCOTT), the Senator from Maine (Mrs. SMITH), the Senator from Illinois (Mr. SMITH), the Senator from Alaska (Mr. STEVENS), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The result was announced—yeas 62, nays 1, as follows:

[No. 266 Leg.]

YEAS—62

Allen	Cranston	Hansen
Allott	Curtis	Harris
Anderson	Dole	Hart
Bellmon	Dominick	Hartke

Gurney	Pastore	Williams, N.J.
Hughes	Pearson	Young, Ohio
Inouye	Pell	
Jackson	Saxbe	

So the bill (H.R. 18127) was passed.

Mr. ELLENDER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. MANSFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ELLENDER. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives on the disagreeing votes on the two Houses thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the President Pro Tempore appointed Mr. ELLENDER, Mr. RUSSELL, Mr. MAGNUSON, Mr. HOLLAND, Mr. STENNIS, Mr. PASTORE, Mr. RANDOLPH, Mr. YOUNG of North Dakota, Mr. HRUSKA, Mrs. SMITH and Mr. ALLOTT conferees on the part of the Senate.

Mr. HART. Mr. President, I rise merely to underscore my hope that, at the first opportunity; namely, on the first supplemental appropriations bill, we will be able to add funds sufficient to begin to mount a fight under the old Refuse Act of 1899—the one weapon immediately available to protect against further deterioration of our navigable streams and waters.

As the able chairman knows, I had intended initially to offer an amendment to the bill just passed in the amount of $4 million, which would give the Corps of Engineers about 200 additional personnel to undertake this effort. With his counsel, I have come clearly to recognize the desirability of seeking to do that on the first supplemental appropriation. I am grateful for his counsel, and hope we will be able to arm the Corps of Engineers effectively to enforce the old Refuse Act.

In a recent message to Congress, the President of the United States warned:

> We face the prospect of ecological disaster.

The President went on to say:

> There are still large gaps in our environmental knowledge, but a great deal of what needs to be done can be identified. Much of this already has begun, and much more can be started quickly if we act now.

I agree both with the expression of urgency and with the call to action.

The President made these comments in connection with the first annual report of the Council on Environmental Quality and went on to urge congressional action on a series of legislative recommendations.

Congress is considering those proposals, and I am confident will act on those it thinks valuable in the fight against pollution.

However, I was disappointed to find no recommendation dealing with one antipollution measure already on the books, a measure which if more fully enforced could enable the administration to act with the urgency the President asks of the Nation and of Congress.

I refer to the Refuse Act of 1899.

The act establishes criminal penalties for dumping refuse of any description into navigable waters without a permit from the Corps of Engineers.

When written it was intended to prevent sediment from clogging up ship channels.

However, the language of the act is well suited to the fight against pollution. As as matter of fact, the administration has on a few occasions used the act to move against polluters, most recently in connection with reports of mercury pollution.

However, corps officials told the Senate Subcommittee on Energy, Natural Resources and the Environment that the budget request for fiscal year 1971 did not include enough funds to enforce this act as an effective antipollution weapon and that no additional funds would be requested until next fiscal year.

Apparently, budgetary restraints was the main reason the corps was not asking additional funds.

Mr. President, here is a clear example of what many of us mean when we say our spending priorities are out of whack.

The administration warns of a dire environmental crisis and warns that we must act quickly if we are to avoid disaster.

Yet when it comes to providing funds to enforce fully a law which could stop present and prevent future poisoning of our waters, the administration begs off until next year.

How does that position square with the urgent call to action?

Following our hearings, the corps has said it could use an additional $4 million to begin to move toward full scale enforcement of the act this year.

I will urge that we add to the first supplemental appropriations bill the $4 million, or as much of that figure as the corps can use for the portion of the fiscal year remaining when the bill becomes law.

I hope for and seek the support of the administration in this request.

If Congress provides the money and the administration spends it, then the Federal Government will have indeed moved with a sense of urgency against pollution.

If we do not, we can only expect renewed criticism from those who point to the gap between the rhetoric of the Nation's leaders and the reality of their actions.

Mr. ELLENDER. Mr. President, as I indicated to the distinguished Senator from Michigan last Friday, we had no hearings at all on the proposal that he made to the Senate, and under rules that were established long ago by the sub-

committee of which I am chairman, we did not present for consideration on the floor any proposals on which he had held no hearings.

I wish to assure the distinguished Senator from Michigan, as well as to reiterate to the distinguished Senator from Wisconsin, that there will be a supplemental bill soon, and I believe that on at least two of the subjects suggested by the distinguished Senator from Wisconsin, that is the Great Lakes demonstration and planning project, and the research program on inland lakes, there will be forthcoming some budget estimates, and I am very hopeful we might also be able to get a budget estimate for the program that has been mentioned by the distinguished Senator from Michigan. I assure both Senators that I shall do all that I can to see that adequate hearings are held on these programs and that a good case can be made for these programs so that the amounts they have asked for can be incorporated in the next supplemental appropriation bill.

Mr. HART. I thank the Senator from Louisiana. Mr. President, I ask unanimous consent that an information bulletin issued by the Corps of Engineers early in August be printed in the RECORD.

There being no objection, the information sheet was ordered to be printed in the RECORD, as follows:

FACT SHEET—CORPS CAPABILITY FOR REFUSE ACT ENFORCEMENT

1. Section 13 of the River and Harbor Act of 1899 (33 U.S.C. 407), known as the Refuse Act, makes it illegal to throw, discharge, or deposit, or cause, suffer, or procure to be thrown, discharged, or deposited either from or out of any ship, barge, or other floating craft of any kind, or from the shore, wharf, manufacturing establishment, or mill of any kind, any refuse matter of any kind or description, whatever other than that flowing from streets and sewers and passing therefrom in a liquid state, into any navigable water of the United States, or into any tributary of any navigable water from which the same shall float or be washed into such navigable water. The Corps of Engineers has in the past limited its enforcement of this provision of law to discharges carrying suspended material which becomes obstructive to navigation. Recent court decisions and the import of the Fish and Wildlife Coordination Act, the Water Quality Improvement Act of 1970, and the National Environmental Policy Act of 1969 have all stressed urgency of a more literal application of the law.

2. In testifying before the Subcommittee on Energy, Natural Resources and Environment of the Senate Commerce Committee on 29 July 1970, Mr. Robert Jordan, III, General Counsel to the Secretary of the Army and Special Assistant to the Secretary of the Army for Civil Functions acknowledged this urgency and announced that he was directing the Corps of Engineers to publicize the need for a permit for all future discharges into navigable streams and tributaries thereto (see attached press release). He also reported on steps being taken to reach an interagency agreement with the Departments of Interior and Justice on Enforcement procedures under this law. However, he noted limitations in the capability of the Corps of Engineers to increase its surveillance, investigation and reporting of cases for legal action, indicating that a budgetary request for the necessary funds would be initiated for fiscal year 1972, the next such opportunity.

3. To initiate such expanded activity, it is estimated that an average of 4–5 persons per Engineer District would be necessary, or a total of about 200 persons Corps-wide. With appropriate travel funds and administrative expense, it is estimated that additional funds in the amount of $4,000,000 would be required under General Regulatory Functions. If these funds and personnel spaces were available in FY 1971, this expanded effect to improve water quality could be started one year earlier.

CORPS OF ENGINEERS ANNOUNCES NEW PERMIT REQUIREMENTS

The Corps of Engineers today announced new permit requirements under the Refuse Act (33 USC 407) concerning all discharges into navigable waters. Permits will be required for all industrial discharges into navigable waters and their tributaries. New permits will be required where existing permits were granted without adequate consideration of the quality of the effluent. Permits will also be required for current discharges into navigable waters where no permits have been granted.

Applicants of new permits are now required to identify the character of the effluent and to furnish pertinent data such as chemical content, water temperature differentials, toxins, sewage, quantity of solids involved and the amount and frequency of discharge.

The Corps' revised requirements are in compliance with the Environmental Policy Act of 1969 which requires agencies to consider environmental impact in the administration of public laws, and with the Water Quality Improvement Act of 1970 which requires applicants for Federal permits to file a certification from the appropriate State that the discharge "will not violate applicable water quality standards." Under the revised procedures, the effects of discharges on water quality will be considered in processing the permit.

While permits will be required for all future discharges into navigable waters and their tributaries, the Corps of Engineers will initially concentrate on major sources of industrial pollution not covered by existing permits. The Corps hopes that through widespread knowledge of its new permit requirements including State certification, it will, alone with other Federal, State, and local anti-pollution activities, encourage industries to accelerate their own anti-pollution efforts.

All actions under the Refuse Act having Water Quality implications are being closely coordinated with the Federal Water Quality Administration to insure unity in the Federal Water anti-pollution program.

Mr. MUSKIE. Mr. President, I want to congratulate the senior Senator from Louisiana, Senator ELLENDER, for his excellent effort in bringing this legislation to the Senate.

The Public Works Appropriation bill contains a variety of items of importance to the American people. In recent years, it has received special attention from those of us who are interested in the fight to preserve the Nation's environment.

The appropriation for water pollution in 1968 and 1969 did not keep pace with the level of funding authorized in 1966; however, because of the strong commitment of the Senator from Louisiana, last year the Senate voted the full $1 billion authorized for fiscal year 1970. The final $800 million figure agreed on by the conference indicated to States and local government that the Federal Government would keep its commitments to pay part at cost of construction of needed waste treatment facilities.

Once again this year, the Appropriations Committee in the Senate has acted to fund the water pollution program at a level which will evidence good faith and continue to honor the commitment the Congress made in the Clean Water Restoration Act of 1966.

The $1 billion appropriated for fiscal year 1971 is less than that which I had hoped and is less than that which I understand the chairman of the subcommittee recommended. It may be the maximum that can be effectively spent in the next 12 months. It will stimulate the construction of new waste treatment plants. It will stimulate States which have been slow to inventory their needs and move ahead. It will help honor the Federal promise to reimburse those States which acted in anticipation of full Federal funding, and most importantly it will mean that less sewage is dumped untreated into the Nation's waterways.

As a result of the formula included in the bill, 20 percent of that $1 billion or $200 million will be available to reimburse States which have prefinanced the Federal share the cost of projects since 1966. The remaining 80 percent will be allocated on the formula established in the existing law, a formula which is under review by the Subcommittee on Air and Water Pollution.

Many States, according to the information available, will not utilize their allocation this year. However, fiscal year 1971 funds not used by some States will be reallocated next June to other States which have greater needs. These two innovations: First, setting aside 20 percent of the appropriation for reimbursement and, second, providing for the reallocation of the 1971 appropriation after 1 year, rather than the statutorily established 18 months, should expedite funding of State and local waste treatment plant construction.

Mr. President, I would like to take this opportunity to make a few comments on the statistical information made available by the administration on the cost of the waste treatment plant construction program. As Members of the Senate will recall, earlier this year the President indicated that there was a $10 billion backlog of needed waste treatment facilities. The President estimated the Federal share of constructing those facilities would be $4 billion and, in his environmental message, recommended funding that $4 billion over a 9-year period with authority to obligate these funds in 4 years.

Since that message, additional information has been provided to the Subcommittee on Air and Water Pollution, which indicates that the Federal Government intends to fund $3.2 billion of that $10 billion in the next 4 years. The remaining $800 million will be made available at the rate of $200 million a year to fund projects which have been approved for reimbursement and which the States are expected to fund ahead of the availability of Federal grants.

Since the President's message on the environment, additional information has been provided the Subcommittee on Air and Water Pollution which suggests that the pending proposals for Federal funding are even less adequate than originally suggested. According to

a study provided by the National League of Cities-U.S. Conference of Mayors, retirement of the backlog of waste treatment plants will cost an estimated $33 to $37 billion. In other words, the $3.2 billion represents something less than 10 percent of the actual cost.

After Labor Day, the Subcommittee on Air and Water Pollution will begin to mark up pending water pollution legislation. These figures, as well as other information available to the Subcommittee, will be the basis for determining the degree of funding to be provided for this program. I only mention these figures now so that my colleagues will be aware of the fact that this program will be expensive and will require a continued massive injection of high priority of Federal funds.

Mr. President, I ask unanimous consent to insert at this point in the RECORD a staff memorandum on this subject.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

AUGUST 21, 1970.

TO: Senator EDMUND S. MUSKIE.

Subject: Estimates of Federal Cost for Grants for Waste Treatment Plants

According to information developed by the Administration, there is a backlog of grant requests in excess of funds available for obligation of $132 million. According to the same information, the proposed appropriation of $1 billion together with the $435 million carry-over from 1970, will meet or exceed by varying amounts the estimated needs of 41 states, and will fall short of the estimated needs of 13 states.

At such time as the funds are reallocated from the first 41 states, the reallocated amount will be less than the demand of the other states by the above mentioned $132 million. This is due to New York's demand of $504 million which, in fact, exceeds their eligibility for funds under the Clean Water Restoration Act of 1966.

The Administration now estimates reimbursements to be $197 million. I understand that the new figure is the amount actually advanced by the states for the Federal share of projects cost. It does not include the Federal share that will be advanced for projects approved but not under construction, nor does it include the Federal share of the remaining portion of projects under construction. In others words, it only represents the actual out-of-pocket cost that the Federal Government would have incurred had adequate funds been available to fully fund these projects. The earlier reimbursement figure of $814 million has been deleted from these calculations except for the $197 million actually owed.

These are projects which have been approved and for which the states have allocated a portion of Federal funds for preceding years, but on which construction has not begun, and for which no actual funds have been expended. The Federal obligation for these projects is in excess of $600 million, an amount which should be a part of any calculation of demand for Federal funds. If the amount is included, the total demand would be $2.28 billion.

Mr. EAGLETON. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by the Senator from New Mexico (Mr. MONTOYA), together with an insertion.

There being no objection, Senator MONTOYA's statement and insertion were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MONTOYA IN SUPPORT OF H.R. 18127, PUBLIC WORKS FOR WATER, POLLUTION CONTROL, AND POWER DEVELOPMENT AND ATOMIC ENERGY COMMISSION APPROPRIATION BILL, 1971

Mr. MONTOYA. Mr. President, the Senate today passed a bill that will have far-reaching effects on many aspects of the nation's water resources. It funds numerous projects that fulfill the needs of citizens in many localities, including the state of New Mexico. These programs are designed to insure that man can control these water resources to his best advantage rather than being victimized by their excesses. Programs for flood control will prevent extensive damage to municipalities and industry, and especially to our agricultural lands. The money spent for such programs is an investment that pays excellent dividends. Studies have shown that the potential damage in areas affected by the projects far exceed the costs of the measures taken.

But beyond merely preventing damage, these projects harness the water resources and put them to use in supplying power, in satisfying irrigation needs, in fulfilling commercial and municipal needs for water, in meeting recreational desires, and in serving numerous other needs.

More than a billion and a half dollars is being appropriated in the bill for dams, reservoirs, and other public works projects that are to be undertaken by the Army Corps of Engineers and the Bureau of Reclamation. This money will be used for general investigations as well as construction at various sites across the country. More than a billion dollars is allocated for other water and power projects of a more regional nature such as the Tennessee Valley Authority, the Southeastern Power Administration, and the Bonneville Power Administration.

Mr. President, these programs are all very worthwhile, but in recent years many citizens have come to realize that there is more to the water resources program than merely making water available in the necessary quantities. What is equally important is the quality of the water being supplied. A multimillion dollar dam may be quite efficient in supplying water to a local municipality, but that expenditure has been useless if the water is thoroughly polluted.

FEDERAL WATER QUALITY ADMINISTRATION

Congress recognized the dangers of water pollution in 1966 when it passed the Clean Water Restoration Act. This bill authorized levels of spending for federal waste treatment grants that were to increase from an initial outlay of 150 million dollars in 1967, to 1 billion dollars last year, to 1¼ billion dollars for fiscal year 1971. Last year heated debate occurred with regards to the level of appropriations for these projects. Despite the clear recognition of the urgency of the problem by many groups, including the Water Resources Council, who, in their report of November 1968 estimated that the total water requirement by the year 2020 will be over 400 percent greater than the amount used in 1965, the administration requested only 214 million dollars. This was subsequently raised to 600 million in the Senate Appropriations Committee and, after an amendment raising this figure to the full billion dollar authorization passed the Senate, a conference report set the compromise figure of 800 million dollars.

This year the committee has recommended 1 billion dollars for the Federal Water Quality Administration, which administers these waste treatment programs. This is still less than the 1¼ billion dollars authorized and is a minimal amount to even begin meeting needs in this area.

This money, according to the provisions of the 1966 act, is distributed in the form of grants made to the state or local municipalities. However, several problems have arisen. In expectation of full funding at the levels authorized by Congress, local governments have embarked upon ambitious projects for which funding has not been forthcoming. They have ended up footing the brunt of the bill. Also, because the bill provided that funds would be distributed proportionate to population in each state, rather than water needs, some states have been unable to get sufficient funds, while others have not utilized their money. Measures are being taken to correct some of these inequites, but in the meantime the water needs of many communities remain serious.

During fiscal year 1970 New Mexico received 2,436,460 dollars for 14 different programs in 8 different localities. This amount was below the amount that the localities were potentially eligible had full funding been available.

We cannot be sparing in dealing with the water pollution crisis. Newcomers to Washington are dismayed to see the sorry state of the historic Potomac River. The Great Lakes are rapidly becoming incapable of life support. And even the almighty Mississippi River has taken on a brownish hue. The gloomy prophecies of the ecologists, once dismissed as mere scientific daydreaming, have become a stark reality to many Americans who find their local streams, rivers, and lakes no longer suitable for swimming, for fishing, or even for drinking.

I am in general agreement with the ecologists about the gravity of the situation, but I am not as pessimistic as some. The very technology that has inadvertently created many of these problems can be just as easily put to work to solve them, provided the commitment of the nation is there. A nation that can land a man on the moon within a decade can surely clean up her waters and put them to work for her in many useful ways. Expenditures of several billion dollars are far from unrealistic when considered in light of the tremendous amount spent on defense and, in particular, for as-yet-unproved defense missile systems. Mr. President, we are spending billions of dollars to protect ourselves against a nuclear war that is becoming increasingly unlikely of ever occurring. But to guard against natural disasters that are sure to come if we do nothing, we quibble about relatively small sums. Also, the money spent on these water resources programs, unlike dollars down the drain for defense, are a real investment in the country and its people.

ARMY CORPS OF ENGINEERS

Mr. President, this bill funds several projects that are vital to the state of New Mexico. The money appropriated for the Corps of Engineers includes 170,000 dollars for seven survey projects that will determine the need for construction of water facilities. This sum will only allow for the completion of three of these surveys. All three were to be completed last year but now they require extra funding because of cost overruns due to unanticipated increases in interest rates.

The completed projects are Santa Fe River; Rio Hondo and Rio Felix and tributaries; and Rio Puerco and Rio Salado (tributaries of the Rio Grande). Funds would also be allocated for continuation of work on four other survey projects. They are: Rio Grande and tributaries in New Mexico and Colorado; Pecos River and tributaries at Carlsbad; Pecos River Basin above Santa Rosa; and the Pojoaque River and tributaries. Most of these projects will remain far from completion with the limited funds included in this bill.

Floods in the areas affected by the surveys have caused considerable property damage and, in some cases, a loss of lives. In October, 1954, the Rio Hondo and Rio Felix caused total damages of 2 million dollars and a loss

of eleven lives. The Pecos River caused a million dollars damage at Carlsbad in 1966. Other flooding caused damages to the metropolitan areas of Santa Fe and Roswell, and considerable damage to agricultural areas in the vicinity. Surveys being conducted by the Corps will investigate the need for building dams, reservations, diversions, and channel improvements. Besides flood control the facilities will be aimed at meeting needs for irrigation, municipal and industrial water supplies, water quality control, recreation, and fish and wildlife conservation.

Three projects in New Mexico are now under construction by the Corps and further funds would be allocated to them in this bill. The 700,000 for the Albuquerque Diversion Channels would almost allow the completion of the project. Authorized by the 1954 Flood Control Act, the project consists of two diversion channels designed to intercept storm sewers, which otherwise would be funneled through arroyos and washes onto heavily populated areas of Albuquerque. Only the Northern Diversion Channel has been completed thus far.

The Cochiti Dam and Reservoir Project, authorized by the 1960 Flood Control Act and P.L. 88-293, will be one of the major parts of the comprehensive plan for development of the water resources of the Rio Grande watershed. The reservoir will control 11,695 miles of drainage area and will assist in preventing flood damage in Albuquerque, the Middle and Espanola Valleys, and the smaller urban areas of Bernalillo, Los Lunas, Belen, and Socorro. The reservoir and dam will also be a major recreational site for northern New Mexico, contributing substantially to the economy of the area. Almost seven million dollars is allocated for the project in this bill.

Finally, the bill includes 200,000 dollars for additional work on the Los Esteros Dam and for modifications of the Alamagordo Dam. This reservoir would help to stop property damage and loss of life caused by frequent flooding of the Pecos River and its tributaries, as well as providing for irrigation storage. Although the allocation is somewhat higher than it was last year, the project is still far from completion.

BUREAU OF RECLAMATION

Mr. President, the Bureau of Reclamation also operates many multi-purpose water resource projects in seventeen western states. They have expanded the scope of their activity greatly in recent years. Originally this agency devoted their efforts largely to irrigation problems. Now only 40% of their resources are devoted to such programs. Financial resources devoted to power development have increased to over 30 percent, municipal and industrial water to 10 percent, flood control to about 10 percent, and recreation and other functions to about 7 percent.

The economic growth stimulated by federal reclamation projects has become evident. The Bureau estimates that 700 million dollars in federal internal revenue collections was attributable to reclamation projects throughout the seventeen western states during fiscal year 1969. The success of the programs is seen through increased agricultural production especially. For instance, federal reclamation projects alone produce about 20 percent of the nation's supply of vegetables, fruits, and nuts, according to their estimates.

Of the more than 300 million dollars appropriated for the Bureau, 234,700 dollars have been appropriated for three survey projects in New Mexico. These funds would allow completion of the Gallup survey, which seeks to find alternative sources of water to meet the projected potential needs of the city and other potential customers in the area. The Colorado River Basin is one such source that is currently under consideration.

Also to be completed is the Mora survey, which was initiated in order to find a way to alleviate water shortages experienced on about 11,000 acres. The New Mexico State Water plan survey, a comprehensive statewide reconnaissance report on present and future water resources, is scheduled to be completed in fiscal year 1973. Seven other general investigations that each effect several western states, including New Mexico, are to be funded at the level of nearly 3 million dollars. Three of these projects would be completed during the fiscal year.

In additon, more than a million dollars will fund further construction for three projects operated by the Bureau—the water salvage project at the Pecos River Basin, the Carlsbad project, and the Tucumcari Project. Also, of the participating projects that are part of the Upper Colorado River Storage Project, two include New Mexico—the Animas-La Plata project and the San Juan-Chama project, for which more than three million dollars would be appropriated.

ATOMIC ENERGY COMMISSION

Mr. President, the bill we are now considering also includes funds for the Atomic Energy Commission. The state of New Mexico has benefitted greatly from the many programs operated there by the A.E.C. In fact, it could well be said that New Mexico is the "A.E.C. state." It was here that the first atomic bomb was tested at Alamogordo. It is here that the A.E.C. operates one of its most vital facilities, the Los Alamos Scientific Laboratory. The Sandia Corporation and the Lovelace Foundation are just two of the many large contractors that do work for the Commission in the state. Total costs incurred by the A.E.C. in New Mexico in fiscal year 1969 were 374 million dollars, a sizeable portion of its total budget.

It is obvious, therefore, that the A.E.C. has been quite important to the economy of New Mexico. But perhaps more importantly, the work conducted in New Mexico has been of vital importance to the nation. Through the efforts of the Atomic Energy Commission the United States has been able to maintain a position of leadership in the field of nuclear technology.

While the discovery of atomic energy may be said by some to be a curse upon mankind, we must recognize that the benefits of nuclear power are potentially crucial to man's existence, and must be developed to the point where they outweigh the risks. Nuclear power is a tool, and a tremendously powerful tool, that can be used just as easily for our salvation as for our destruction.

The A.E.C. is exploring the many possible uses of nuclear power. It is increasing our knowledge and sophistication in this area so that we will be able to use nuclear power to our best advantage. Many citizens do not realize the great diversity of A.E.C. programs, a large percentage of which involve pure research, the fruits of which will have wide-ranging applications in the scientific field.

One important program is the reactor development program, which is aimed at facilitating the use of nuclear power for a number of non-military purposes. The program is designed to provide cooperative assistance to industry and to other federal agencies. It seeks to make use of the full potential energy available in nuclear fuels, and thus open up vast reserves of energy. For instance, one facet of the program is an exploration of the possibilities of a nuclear process for desalting water.

The appropriation of more than 56 million dollars in plant and capital equipment for the program includes a 1 million dollar allocation for Project Rover, which is being conducted at the Los Alamos Scientific Laboratory, as well as for the Nevada Test Site. The money will be used for the modification and/or expansion of facilities and systems that will allow these institutions to keep pace with the latest developments in the field. Progress in the field of nuclear research requires a flexibility that will allow the plants to adapt to changing conditions, and the proposed level of support will fully fund these changes.

The other major program of the A.E.C. is the physical research program. This supports theoretical and experimental investigations required to support the Commission's immediate and long-range research objectives. This basic research is directed at a greater understanding of atomic energy and its uses. Fundamental research is undertaken in the fields of physics, chemistry, metallurgy and materials, and controlled thermonuclear research. Included in the total appropriations of 129 million in plant and capital equipment for the program are 10½ million dollars for the Meson Physics Facility of the Los Alamos Scientific Laboratory. This amount, plus the 38 million dollars appropriated in previous years, will leave only some seven million dollars to be requested in the fiscal year 1972 for the completion of the project, the total cost of which is 56 million dollars. The project provides for the construction of a nuclear physics research complex consisting of an 800 Mev linear proton accelerator, 2,600 feet long, and attendant experimental and support facilities.

* * * * *

Mr. President, the total appropriations for this year's public works bill is nearly 490 million dollars higher than it was last year. Although this increase is not nearly enough to meet the needs it is designed to serve, it is a step in the right direction. It is a step towards the re-ordering of priorities that is so desperately needed today. We see in many parts of the bill a growing concern, for the first time, of the effect of the projects on our environment. We are coming to realize that for every action there is a reaction and are trying to fathom out just what that reaction will be in each instance. The agencies are moving to implement provisions of the National Environmental Policy Act of 1969 that relate to water resources.

Mr. President, in authorizing these appropriations we are making an investment in our country, its natural resources, and its people.

PUBLIC WORKS PROJECTS INCLUDED IN H.R. 18127 THAT DIRECTLY AFFECT THE STATE OF NEW MEXICO

	Total Federal estimated cost	Allocated prior to fiscal year 1970	Allocation fiscal year 1970	Tentative fiscal year 1971	Additional to complete

[1] Allocated to date.

Mr. GOODELL. Mr. President, I ask unanimous consent to place the following communications in the RECORD.

The first is a telegram from Gov. Nelson A. Rockefeller in which he strongly recommends appropriation of additional funds for construction of sewage treatment plants. He points out that the State has prefinanced $405 million of the Federal share of these plants, and the State's municipalities have prefinanced $370 million, for a total of $775 million as of June 30, 1970.

In addition the State provides its own 30-percent share of the costs, and the municipalities provide 20 percent for its own share.

The second is a recent letter from Mr. Syd Askoff, chairman of the Sewer Committee of the Suffolk County Legislature. The effect of Federal underfinancing on New York State taxpayers in assuming this huge burden is set forth by Mr. Askoff. He points out that a homeowner in Suffolk County can expect to pay approximately $300 more a year in property taxes for at least 40 years for sewage disposal facilities. This amount would be dramatically decreased if the Federal Government obligated its full 50 to 55 percent of its share of the cost, instead of an average of 7 percent as at present.

I think it is unfair for New York and its localities to have to bear the burden of financing the Federal Government's obligation, particularly in these days of soaring interest rates. It is my hope that adequate funds will be appropriated so that the Federal Government will be able to meet its obligation to repay funds prefinanced by State and local governments.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

Senator CHARLES E. GOODELL,
New Senate Office Building,
Washington, D.C.:

It is my understanding that the Senate is about to take action on appropriation bill H.R. 182127 which includes appropriations for water pollution control authorized under the clean water restoration act of 1966.

I strongly support adoption of the amendment you are sponsoring to provide for full funding of the $1.25 billion authorized in aid for construction of sewage treatment plants. In the last four years, Federal appropriations have lagged nearly $1 billion behind the amount authorized with the result that Federal participation in New York State's pure waters program has averaged only seven percent, even though all projects qualify for fifty percent in Federal funding and most for fifty-five percent.

Because of the shortage, New York has pre-financed $405 million of the Federal share in addition to providing its own thirty percent grant share. The State's municipalities have pre-financed another $370 million along with their basic share, for a total of $775 million in pre-financed funds which are owed by the Federal Government to the State and its municipalities.

Under the State's program 211 additional projects valued at $1.495 billion and eligible for $822 million in Federal funds are expected to be approved during the current Federal fiscal year. The combination of the $775 million that New York and its municipalities have prefinanced and the $822 million for which we are eligible in new projects totals $1.597 billion which New York alone can use during the present fiscal year.

I also urge deletion of the provision which extends by an additional six months the time before which unused funds appropriated for fiscal 1970 can become available for reallocation. Deletion will permit these unused funds to become available as soon as possible for projects ready to go in States like New York.

The shortage in Federal funds, along with the funding and reallocation provisions of the Federal program with their lack of consideration to need or ability to use funds has served to penalize New York because of the size and advanced position of our effort to restore New York's waters. Your favorable consideration of these recommendations will help to correct this imbalance in the Federal program.

NELSON A. ROCKEFELLER.

COUNTY OF SUFFOLK,
Babylon, N.Y., August 10, 1970.

Hon. CHARLES E. GOODELL,
New York City, N.Y.

DEAR SENATOR GOODELL: In the very near future the construction of sewerage disposal facilities will begin in certain areas in the County of Suffolk. The major part of this work, costing approximately three hundred million dollars, in direct cost, will be done in a very small portion of the southwest area of County.

As Chairman of the Committee in charge of this work, it has become glaringly apparent to me that even with State and Federal aid, the taxpayers of this District are going to be confronted with a tremendous increase in their yearly taxes unless some way can be found to get additional aid.

So that we can acquaint you with the problem, I have called a meeting of September 16, 1970 at 10 A.M. at the County Center in Hauppage. At the meeting we hope to have our various representatives in attendance so that we can acquaint them with the problem and also to have our various local officials there to let them know as best we can what the anticipated costs for this work will be.

I would very much appreciate your advising me as quickly as possible whether or not you can be there so that we can make our plans accordingly.

This particular area is presently burdened with intolerable school taxes, as well as various and sundry municipal taxes. In my opinion, it is one of the most highly taxed areas in the County, if not in the State. It is also clear that a homeowner who has a home valued at approximately $30,000 can expect to pay somewhere in the neighborhood of $300 per year more for sewerage disposal for at least 40 years. I think it is incumbent upon all of us to direct our attention to this matter since before long the necessity of installing sewers throughout the County will raise similar problems elsewhere and the matter of financing should be looked into now.

Sincerely,

SYD ASKOFF.

PUBLIC WORKS APPROPRIATIONS: INSURING CONTINUED PROGRESS IN AMERICA

Mr. YARBOROUGH. Mr. President, a few minutes ago we passed one of the most important matters that Congress must act on each year and that is the funds for vital public works projects in America. These projects are what make the wheels of progress in America turn and insure continued improvement of life in our country.

The public works appropriations bill for this year is a comprehensive measure that deals fairly with the vast problems that exist in every State. I wish to com-

mend the distinguished chairman of the Public Works Appropriations Subcommittee, Senator ELLENDER, and the other distinguished members of the committee for their hard work in producing this bill. I am particularly pleased that the committee acted favorably on many important Texas flood control, navigation, and reclamation projects.

In the interest of time, I shall not speak of each one on these projects individually; however, I would like to comment on certain projects that are of particular significance.

First, I am particularly glad that my colleagues on the Senate Appropriations Committee agreed to provide an additional $100,000 for the Millican Dam project. Together with the $50,000 appropriated by the House, this project will receive a total of $150,000 for preconstruction planning and a study of the effects of this project on the ecology of the area. These additional funds will enable orderly progress to continue on this important project while insuring that the ecological features of this area are not destroyed.

Mr. President, the Millican Dam project is vital to the future economic development of the Brazos Valley of Texas. Progress must be made on it this year. In my opinion, this dam and reservoir when completed, will be a lasting memorial to Gen. Earl Rudder, the late president of Texas A. & M. University, who, during his life, believed in this project and worked hard for it.

Mr. President, I am also pleased that the committee approved my request for an additional $1 million for construction of the Lakeview Reservoir flood control project. When combined with the $112,000 provided by the House, the total appropriation for this important project will be $1,112,000. This means that real progress can be made on this project which is an integral part of the overall Trinity River development plan.

In addition to approving these additional sums for Texas projects, the Senate Appropriations Committee agreed to my request that significant increases for Texas projects which were voted by the House, over the budget request, be retained.

Among these significant increases are the $100,000 appropriated for planning Aquilla Reservoir in Hill County for which the President did not request any funds; an additional $45,000 for planning the Cedar Bayou flood control project near Beaumont, which when combined with the $15,000 originally requested by the administration for this project, brings the total appropriation for Cedar Bayou flood control project to $60,000; an additional $2 million for the San Gabriel River project in Williamson County—with this additional $2 million, a total of $4 million is provided for this important project; and $15,000 for the Osa Creek flood control in Robstown, Nueces County. This project was also not included in the budget by the administration.

Other important Texas projects for which the Senate and the House have appropriated funds are:

I.—Flood control and navigation projects

Arkansas-Red River chloride control	$250,000
Aubrey Reservoir	300,000
Bachman and Joe's Creek	5,000
Belton Reservoir (raise water level)	1,688,000
Big Pine Reservoir	40,000
Brazos Island Harbor	770,000
Brazos Island Harbor at Brownsville	15,000
Brazos River and tributary	425,000
Buffalo Bayou and tributary	1,055,000
Burnett, Crystal and Scotts Bay	10,000
Cibolo Creek	24,000
Colorado River and tributary	24,000
Cooper Reservoir	2,900,000
Corpus Christi Ship Channel	385,000
Delaware Creek	30,000
Denison Reservoir	110,000
Dickinson Bayou	30,000
Duck Creek Channel	182,000
Elm Fork Floodway	220,000
El Paso	2,800,000
Freeport and vicinity	2,000,000
Galveston Bay navigation study	115,000
Guadalupe and San Antonio Rivers	116,000
Gulf Intercoastal Waterway	200,000
Highland Bayou	1,000,000
Lake Kemp Reservoir	1,300,000
Lavon Reservoir	8,400,000
Mouth of Colorado River	185,000
Neches River and tributaries	45,000
Port Arthur	6,840,000
Red River above Denison	65,000
Red River Levees	2,600,000
Sabine—Neches Waterway	5,400,000
San Antonio Channel	1,000,000
San Jacinto River	65,000
Taylors Bayou	250,000
Texas City Hurricane Protection	2,200,000
Texas coast hurricane	500,000
Texas water supply and pollution study	260,000
Trinity River Bridges	2,750,000
Trinity River project	500,000
Vince and Little Vince Vayous	1,000,000
Wallisville Reservoir	2,500,000
White Rock Creek	10,000
Whitney Reservoir	300,000

II.—Bureau of reclamation

Cameron County	700,000
Hidalgo and Willacy counties	1,000,000
Santa Maria project	200,000

III.—Study projects

Texas Basin projects	130,000
West Texas and Eastern New Mexico Import	545,000

In conclusion, Mr. President, I again wish to commend my colleagues on the Appropriations Committee for their fine work on this bill. They have demonstrated their concern for the well-being of our people by their efforts for this bill. I am pleased that my colleagues have given this bill their overwhelming support.

APPROPRIATIONS FOR DICKEY-LINCOLN SCHOOL DAM

Mr. MUSKIE. Mr. President, New England and New York have suffered major power shortages this summer, and we are now told that fuel scarcities will lead to power shortages this winter.

When air-conditioning units shut down, when subways stop running, or when there is no heat in the winter, the differences between private and public power no longer matter.

The Northeastern United States needs all the electric power it can generate with a minimal impact on the environment. Our crisis is of major proportions. Our reserves of reliable power are low, and we cannot afford to postpone any longer the construction of needed facilities. Charles Luce, chairman of the board of Consolidated Edison, stated in hearings before my Subcommittee on Intergovernmental Relations on August 3 that electric power from the Dicky-Lincoln project could have helped alleviate the power shortage that reached crisis proportions in New York City during the last week in July. As each year passes, the peaking power from Dickey-Lincoln is missed more and more in the major metropolitan areas of the Northeast.

The benefits of this project are vital to New England. When construction of the Dickey-Lincoln facility was authorized in 1965, consumer rates for electricity in New England were among the highest in the Nation because New England has no "Federal yardstick." This situation has not changed. The people of Maine continue to pay some of the highest electricity bills in the Nation, as the promise of 100,000 kilowatts of public power that was made in 1965 goes unmet.

The benefit/cost ratio of the Dickey-Lincoln Dam continues to be almost 2 to 1. This year we have been told of the added benefits of Dickey's potential for the irrigation of potato farmlands. The following excerpts from House hearings on Public Works appropriations discuss this new benefit:

EXCERPTS FROM HOUSE HEARINGS ON PUBLIC WORKS APPROPRIATION

Colonel BANE. Sir, there does seem to me to be an increasing awareness of the need for dependable and economic power.

IRRIGATION POTENTIAL FOR POTATO GROWING

I should also note another area of potential significant benefit that has not been previously considered. Last month a member of my staff attended a meeting sponsored by Congressman Hathaway relative to the irrigation needs of Aroostook County. Discussed was a report by the Department of Agriculture which indicated that the Aroostook County potato crop yield had been declining since 1964. This reduced yield is attributed to the lack of proper irrigation.

It was estimated that the net income increase to the main potato growers would be between $8 and $20 million annually if the irrigation were provided.

Mr. BOLAND. Who developed the report?

Colonel BANE. Department of Agriculture.

Mr. BOLAND. I know Congressman Hathaway has been tremendously interested in this project and has done everything within his power to see it funded and on its way to construction. I notice in the Congressional Record of March 4, yesterday, that he indicates that Dickey could help stabilize and increase the potato crop and improve its quality by providing water for irrigation. This is a benefit which had not heretofore been considered, I understand.

Colonel BANE. That is correct.

Mr. BOLAND. He also said:

"Irrigation would assure that water is available whenever needed. Conservative estimates are that water from the Dickey Reservoir, by increasing yield on 150,000 acres currently in cultivation and improving crop quality, could improve the revenue of Maine potato growers by $20 million annually."

He has indicated he has asked the U.S. Corps of Engineers to investigate the possibility with respect to the irrigation benefits.

Can you comment on this? You have indi-

cated you are aware of the new proposal to irrigate potato fields in Aroostook County and he says in his opinion this is important as you have indicated, by the Department of Agriculture report, and such irrigation would improve potato quality and again would increase the yield of revenue to the potato growers by $20 million.

Does the Corps have plans to explore the feasibility of adding an irrigation benefit to this project?

Colonel BANE. We have just received the Agriculture report and naturally we have no money for this year so I do not have the capability right now to explore it in depth. But offhand, based upon the information we have, perhaps a hundred to 200,000 acre-feet of water would be required for this irrigation purpose, which would be a relatively small amount when we consider the gross storage that would be included in the Dickey project of 7.7 million acre-feet.

Mr. BOLAND. Do you have any estimate of cost for exploring the feasibility of implementing this idea?

* * * * *

Colonel BANE. Not now, I do not. I can provide it.

Assuming that about 2 years would be the minimum required to complete planning, what further increase in the project cost would you anticipate?

Colonel BANE. We would anticipate 14 percent.

Mr. BOLAND. How much would that be?

Colonel BANE. It would be $35 million more.

Mr. BOLAND. So this would mean this project is now going to cost $280 million plus, is that right?

Colonel BANE. Yes, sir.

Mr. RHODES. Will the chairman yield?

Mr. BOLAND. Yes.

IRRIGATION

Mr. RHODES. Do you have the capability of finding the beneft-cost ratio of these irrigation features?

Do you have any funds in shop to do this?

Colonel BANE. No, sir; not without robbing some other project.

Mr. RHODES. I was sure that would be the answer. We really will have problems considering this new element until we can get some idea of what the cost would be as well as the return.

Do you have any idea of what the annual rainfall is in Aroostook County?

Colonel BANE. Thirty-six inches, I believe, sir. But the problem here, as I understand it, is that there are certain periods that require 1 inch per week and there are certain drought periods, say 1 week, where they have no rain, for example, and maybe more rain at other times, and this is, according to the Agriculture report, affecting both the quality and quantity of the crops.

Mr. RHODES. So this would be really supplemental irrigation?

Colonel BANE. Right, sir.

Mr. RHODES. And if you have 200,000 acre-feet available, you probably would be able to service about 200,000 acres on a supplemental basis?

Colonel BANE. Yes, sir.

Mr. RHODES. I would not imagine it would take more than 1 foot per acre.

Colonel BANE. Yes. I might add on this, as you know, we have already spent considerable money on the preconstruction planning, better than $2 million. We are getting awfully close to completing it and this other aspect as far as we are concerned would certainly be advisable if we could at least complete the planning on the project.

Mr. BOLAND. You have indicated that you do not at this moment know what the capability would be for implementing the irrigation benefit, and you are going to try to determine what dollar estimate you can place on this benefit.

When will you be able to determine what you would need for a restudy of this potential new benefit that has now been developed?

Colonel BANE. This is all part of the overall thing, sir.

Mr. BOLAND. Irrigation was never considered in connection with the over-all study?

Colonel BANE. It would have to be considered in conjunction with the over-all study.

Mr. BOLAND. When you arrive at some figure, why do you not supply it for the committee?

Colonel BANE. All right, sir.

(The information follows:)

"The cost of the irrigation study is $125,000."

Mr. BOLAND. The benefit-to-cost ratio is shown as, 1.9 to 1. Does the escalation and price increase of this project alter the ratio?

I know that the value of the benefits is increasing also.

ANNUAL BENEFITS

Colonel BANE. Annual benefits have also increased, $1.515 million, sir. Actually, the BC ratio has changed practically none since last year. This amounts to a rounding off of the figures.

Mr. BOLAND. Would this new irrigation benefit increase the benefit-to-cost ratio?

Colonel BANE. Again, sir, we would have to see what it could cost to do it, and I do not have the money right now is what I am saying.

Mr. BOLAND. What interest rate has been used in the determination of the current 1.9 to 1 benefit-to-cost ratio?

Colonel BANE. Three and one-quarter percent, sir.

Mr. BOLAND. Will you provide for the record a detailed breakdown of how the request of $807,000 would be utilized, indicating the items in order of priority?

I note that $639,000 would be required to complete the preconstruction planning, as you have indicated, after fiscal year 1971.

Colonel BANE. Yes, sir.

(The information follows:)

The recommended appropriation in the amount of $807,000 for fiscal year 1971 would be used to perform preconstruction engineering and design work as necessary to permit commencement of construction on the diversion works at the Dickey site early in the third quarter of fiscal year 1973 and on the main dam at Dickey in the third quarter of fiscal year 1974. The above amount would be allocated as follows:

a. Complete the mapping of the main damsite at Dickey and the sites of the saddle dikes and the cross sectioning of the St. Johns River between the Dickey site and the Lincoln School site	$71,000
b. Continue and complete the subsurface exploration and sampling of borrow areas for embankment materials for Dickey-Lincoln School dams and the quarry for concrete aggregates	170,000
c. Supplement the previously completed program of preliminary foundation explorations as necessary to verify the foundation conditions as final design proceeds on items under (*f*), (*g*), and (*h*) below	100,000
d. Commerce surveys and subsurface explorations for relocation of roads and cemeteries and start final design	80,000
e. Develop the preliminary master plan and complete the preparation of property maps and real estate planning precedent to the initial construction activities	100,000
f. Initiate and continue the final design of the works for diversion and control of the St. Johns River at Dickey and start preparation of contract plans and specifications	$120,000
g. Initiate and continue the preliminary design of the powerplants at Dickey-Lincoln School	100,000
h. Commence final design of the main earth embankments and spillway at Dickey	66,000
Total	807,000

Mr. BOLAND. Are there any questions?

Mr. RHODES. I have a few questions.

Again this year, Mr. President, the Senate has included $807,000 for the final year of preconstruction planning for Dickey-Lincoln School. Again this year, the House has refused to recognize the immediate and urgent need for the project's electric power.

The Senator from Louisiana (Mr. ELLENDER) has worked with my colleague from Maine (Mrs. SMITH) on the Appropriations Committee to overcome resistance to this project, and the people of Maine and New England appreciate his continuing support.

PORT JEFFERSON HARBOR DREDGING PROJECT

Mr. GOODELL. Mr. President, the bill provides $50,000 to commence the preconstruction survey of the Port Jefferson dredging project. The funds would permit the Corps of Engineers to examine the plan of improvements and the project economies.

There is no question that additional receiving facilities will be required to assure an adequate supply of petroleum for Long Island. If they are not provided, the cost of heating oil, gasoline, and other petroleum products would soar.

A number of alternatives to Port Jefferson have been suggested. I hope if funds are provided in the bill that is approved by Congress the survey conducted by the corps will include an examination of alternatives.

However, we do not have an evaluation of the environmental advantages and disadvantages of such a project, and this is an area that is of increasing concern to our citizens. In light of the national environmental policy statement issued June 7, 1970, by the Chief of Army Engineers, Lt. Gen. F. J. Clarke, I would expect the corps to insure conformity with the purposes of the 1969 National Environmental Policy Act and the 1970 Environmental Quality Improvement Act. General Clarke's statement and these laws emphasize the examination of environmental values and how these values directly affect economic, technical, and social factors of federally sponsored programs.

I am pleased that my distinguished senior colleague from New York (Mr. JAVITS) has stated he expects the corps to insure conformity with the purposes of these acts. Environmental values must be weighed not only with regard to Port Jefferson, but with regard to alternatives that might be considered.

The rapid population growth on Long Island points to the need of a detailed study of the environmental effects of projects that are proposed for the area. In this connection, I note that the Suffolk County Charter Revision Commission recently recommended that the county

adopt an environmental bill of rights, which reportedly is the first for any county in the Nation. The commission urged that the county's basic policy be to "conserve and protect its natural resources, the quality of its environment and natural scenic beauty, and to encourage the conservation of its agricultural lands."

In view of these considerations and in order to assure that the quality of Suffolk County's environment will be protected, a comprehensive study of environmental and other factors should be made in connection with this project.

ENVIRONMENT QUALITY: A CONTINUING BATTLE

Mr. McINTYRE. Mr. President, I wish to commend the distinguished Senator from Louisiana (Mr. ELLENDER) for his fine work in reviewing the public works appropriations bill of 1971, H.R. 18127. I am most impressed by the fact that the hearings held on the various sections of this bill were among the most complete ever held on these subjects.

I have voted for the bill because I believe it moves us a step forward in the vital battle to do something about our environment and the conservation of our resources.

This is not to say that I approve every crossed "t" and dotted "i" in this legislation. But, on balance, I believe that the funds for pollution control under the waste treatment construction grants program, the Clean Waters Act, and other parts of the legislation can be of value to improving our environment.

The bill, as reported, provides new obligational authority of $5,258,195,000. This figure is roughly $5 million less than the budget request and $27 million more than was authorized by the House. I feel that on the whole the sums appropriated are necessary to the administration of programs covered by this bill. While I do have reservations about certain of the projects funded, I voted to pass this measure, for it is basically sound.

I wish to add my praise for the work of the committee in resolving a most difficult situation with regard to the appropriation for the waste treatment construction grants program. This program has long been the victim of inverted priorities and consequently has never been fully funded. Last year, this trend was significantly reversed when the committee recommended full funding of this program at the level of $1 billion. While the final conference figure was reduced to $800 million, it was still almost four times the amount requested by the administration.

This was a significant action, for it broke a longstanding logjam of needed construction of waste-treatment facilities for the control of water pollution.

Yet we are all painfully aware that this was only a beginning. What remains is a backlog of many billions of dollars of needed construction and, as a result of a lack of Federal funding in the past 5 years, a sum of $800 million of prefinanced and reimbursable obligation by the States. Now it is painfully evident that this backlog must be eliminated. Be the figure $33 billion advanced by the Association of State and Local Governments, or $25 billion advanced by the Senator from Maine (Mr. MUSKIE), or $10 billion advanced by the administration, we must move to eliminate this backlog or our Nation's waters will undergo further and fatal deterioration.

There is no doubt that funding of this scale requires full Federal participation; State and local governments simply do not have the revenue sources to raise these sums of money without seriously inflating an already tight bond market.

It is for these reasons that I have followed the committee's deliberations with regard to this program with utmost interest. Of all the programs traditionally funded by this appropriation, the water pollution control programs have been the only ones consistently underfunded. Last year's breakthrough, in my opinion, had to be continued and enlarged.

I am most happy to see that this attitude was shared by the distinguished chairman of the subcommittee and by its members. We have before the Senate the continuation and enlargement that I had hoped for. And we have solid evidence in the bill before us that this trend will continue.

This bill recommends the sum of $1 billion for the waste treatment facilities construction program. This is an increase of $200 million over last year's appropriation. While there has been criticism that this sum is $250 million less than was authorized by the Clean Waters Act of 1966, I feel that the committee was justified in determining this level of funding.

Because of the long delay in approving appropriations for this program last year, a sum of over $400 million still remains to be obligated from sums appropriated for fiscal year 1970. When the committee recommendations are analyzed to consider the outside factors affecting this program, I believe that the recommended funding is the best level that could be arrived for this year.

The committee has arrived at a sound solution to the problem of continuing the impetus provided last year while at the same time providing that legislation to reform this program now pending before the Senate, will be adopted with a clean slate upon which to work. First, the level of $1 billion, as I have mentioned before, is $200 million more than was available last year. Second, the committee has recognized the tremendous fiscal burdens by some States, my own State of New Hampshire included, that have prefinanced significant amounts of construction in the expectation of Federal reimbursement. Here the committee has allowed 20 percent—or $200 million—of the funds appropriated to be used to reimburse these States. This compromise maintains the current funding levels for all States while also giving an added measure of relief to those States that have led the way.

Yet there is still more to be considered in analyzing this bill. First, the committee has recognized that a most significant problem with this program is that its formula for allocation of funds to the States has not been satisfactory and has worked hardship upon smaller States, like my own, by basing allocations on population. Many States have, therefore, received amounts in excess of their need or capacity to use, while others have received relatively small sums as compared to their needs. Under existing law, sums obligated by the States remain in limbo for at least 18 months before they can be reallocated. From last year, for instance, over $400 million remains unallocated, while some States have a desperate need for additional funds.

New Hampshire, for instance, received only between $3 and $4 million last year out of a total appropriation of $800 million. Yet the State's projected needs for waste treatment facilities over the next several years have been established at $156 million. This need goes unmet while over $400 million remains in Federal coffers unused.

The committee, wisely recognizing this problem, has recommended that funds unobligated under this year's appropriation by the end of the fiscal year will be reallocated to States in need of these funds before the end of the current fiscal year. This will accelerate the reallocation process by approximately 7 months and allow for the reallocation of all unused funds appropriated under the Clean Waters Act of 1966 before the expiration of that act in June 1971. Thus those States most active in this program will be assured of the opportunity to share in all unused funds before a new authorization and appropriation are enacted for the next year.

I feel that these recommendations reflect a profound recognition of existing problems faced in the administration of the waste treatment facilities construction program and present a sound temporary solution to these problems. I might also add that these recommendations reflect changes in this program proposed both by President Nixon and by Senator MUSKIE. These changes could not be enacted in time to affect this appropriation, and the committee wisely used sound discretion in implementing some needed changes on a temporary basis for this year. This action, I am certain, will greatly assist a sound transition when new programs are enacted next year.

I would also like to add a note concerning the other aspects of this appropriation as they relate to environmental quality considerations. Over $1.75 billion or roughly 32 percent of the funds appropriated by this bill will be used in environmentally related activities. This reflects an unprecedented commitment on the part of the agencies affected by this bill and can serve to correct past difficulties relating to the environmental effect of certain Federal activities. Notable among these expenditures are an appropriation for the creation of an Office of Water Resources in the Corps of Engineers to develop and implement environmental guidelines for field planners, the creation of the post of Assistant to the Commissioner for Environmental Quality in the Bureau of Reclamation, and the creation of an Office of Health and Environmental Science in the Tennessee Valley Authority. It is my hope

that these activities can provide a full measure of protection for environmental quality in the future activities of these agencies.

In concluding my remarks, I would like to mention my keen interest in seeking funds for activities authorized by the Water Quality Improvement Act of 1970. This bill authorized a sum of $38 million for this fiscal year for research into the effect of pesticides on inland waters, the control of algae and aquatic plants, and for demonstration projects involving new pollution-control techniques on the Great Lakes. I feel that these funds are vitally important if we are to solve some of the most dramatic instances of water pollution now facing this Nation. Our lakes are unique entities. Unlike rivers, they cannot flush themselves of accumulations of pollutants; and these pollutants remain in these waters to greatly accelerate the natural aging process, eutrophication, leaving, after relatively short periods of time, dead waters incapable of supporting most forms of life.

Because of my concern, I joined in an offering amendment to the bill to provide for funding of vital research and demonstration projects authorized by the Water Quality Improvement Act. On Friday, the committee raised objections to the amendment on the ground that it had not held hearings on these matters. Both I and the other sponsors of the amendment have acceded to this objection only with the greatest reluctance. I am satisfied, however, by the comments of the distinguished chairman (Mr. ELLENDER), which indicated that he will hold hearings to include these items in the supplemental appropriation soon to be submitted by the administration. I am satisfied that the Senator shares my deep concern about this matter and I wish to assure him that he has my full support in seeking these funds.

On the whole, the bill reflects many months of hard work. It is a good bill. I feel that it is imperative that the funds appropriated by this measure be made available as soon as possible, especially those for water pollution control and water resources management. I have, therefore, added my vote to approve this bill. I am hopeful that the minor differences with the House bill can be quickly ironed out in conference so that these necessary funds can be put to use.

Mr. BENNETT. Mr. President, I would like to take this opportunity to express my full support of the public works appropriation bill for fiscal 1971 as reported by the Senate Appropriations Committee.

In particular, I would like to bring to my colleagues' attention the $300,000 for the start of the Upalco unit of the central Utah project and $300,000 for the Jones Hole Fish Hatchery in northeastern Utah which the committee added to the House bill at my request. I sincerely hope these figures will be retained when the bill goes to conference.

I was very pleased that the committee agreed with Utah's water experts and provided us with a realistic budget for our vital projects. The $12.9 million approved for the Bonneville unit for the central Utah project assures a more progressive construction program. It provides for completion of water hollow tunnel and open channel No. 2, as well as acquisition of land for the Strawberry Reservoir enlargement and collection works. Contracts also will be awarded for the construction of Soldier Creek Dam; for Currant Creek Dam; Currant Creek road rehabilitation; Water Hollow Diversion Dam and pipeline; layout tunnel and access road; Layout Creek diversion dam, pipeline, and feeder pipe; Currant Tunnel and access road; and the relocation of U.S. Highway 40 to bypass the enlarged Strawberry Reservoir. The program also provides for initial land acquisition for the Jordan Aqueduct system and the awarding of a contract for construction of Jordan Aqueduct section 1.

The $500,000 provided for the Jensen unit of the central Utah project will go for the continuation of design and preparation of designs and specifications for Tyzack Dam and Reservoir. Rights-of-way will also be purchased with these funds. This was one of two new reclamation starts included in the President's budget request for fiscal 1971. The Jensen unit will provide municipal, industrial and irrigation water to the Vernal and Jensen areas.

The $300,000 for the start of the Upalco unit, which the Senate committee added, is particularly gratifying to me. This unit is an irrigation development of the Lake Fork and Yellowstone Rivers north of Roosevelt, Utah. The project, which will eventually cost upward of $18 million, will include a dam on the Lake Fork River below Moon Lake Reservoir. It will serve as a supplemental water project for the Uintah Basin.

I am also pleased with the $150,000 in new funds for the Little Dell flood control project which is included in the measure. This will add to approximately $400,000 appropriated late last year and just recently released by the administration for use, giving the Corps of Engineers about $550,000 for planning in fiscal 1971.

I also support the $100,000 provided for planning purposes for the Dixie project in southern Utah.

Mr. President, I cannot overemphasize the importance of these reclamation projects to my State. I would also like to point out that the reimbursable costs of these projects, which represent 90 percent of the total cost, will be paid back to the Federal Government.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, August 21, 1970, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of executive business, for action on nominations.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider executive business.

DEPARTMENT OF COMMERCE

The assistant legislative clerk read the nomination of William Robert McLellan, of California, to be an Assistant Secretary of Commerce.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

FEDERAL TRADE COMMISSION

The assistant legislative clerk read the nomination of Miles W. Kirkpatrick, of Pennsylvania, to be a Federal Trade Commissioner.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

ENVIRONMENTAL SCIENCE

The assistant legislative clerk proceeded to read sundry nominations in the Environmental Science Services Administration.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR CHURCH ON WEDNESDAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that after the disposition of the Journal on Wednesday next, and after the disposition of unobjected to items on the Calendar, the distinguished Senator from Idaho (Mr. CHURCH) be recognized for not to exceed 30 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

CHANGE OF REFERENCE

Mr. JORDAN of North Carolina. Mr. President, S. 3070, a bill to encourage the development of novel varieties of sexually reproduced plants to make them available to the public, providing protection available to those who breed, develop, or discover them, and thereby promoting progress in agriculture in the public interest, was reported by the Committee on Agriculture and Forestry on August 21, 1970. Since there is subject matter in the bill over which the Subcommittee on Patent and Copyrights of the Committee on the Judiciary has jurisdiction, I ask unanimous consent that the bill be referred to the Committee on the Judiciary.

The PRESIDENT pro tempore. Without objection, it is so ordered.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of unobjected to measures on the Calendar, beginning with Calendar No. 1144, to and including Calendar No. 1150.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXPENDITURES BY THE COMMITTEE ON ARMED SERVICES

The resolution (S. Res. 440) increasing the limit of expenditures for hearings before the Committee on Armed Services was considered, and agreed to, as follows:

S. RES. 440

Resolved, That the Committee on Armed Service hereby is authorized to expend from the contingent fund of the Senate, during the Ninety-first Congress, $10,000 in addition to the amount, and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act, approved August 2, 1946.

EXPENDITURES BY THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

The resolution (S. Res. 448) authorizing the Committee on Interior and Insular Affairs to expend additional funds from the contingent fund of the Senate was considered and agreed to, as follows:

S. RES. 448

Resolved, That the Committee on Interior and Insular Affairs is hereby authorized to expend from the contingent fund of the Senate, during the Ninety-first Congress, $10,000 in addition to the amount, and for the same purpose, specified in section 134(a) of the Legislative Reorganization Act approved August 2, 1946.

EXPENDITURES BY THE COMMITTEE ON FINANCE

The resolution (S. Res. 451) to authorize the Committee on Finance to expend $10,000 in addition to the amount, and for the same purpose, specified in section 134(a) of the Legislative Reorganization Act of 1946 was considered and agreed to, as follows:

S. RES. 451

Resolved, That the Committee on Finance is hereby authorized to expend from the contingent fund of the Senate, during the Ninety-first Congress, $10,000 in addition to the amount, and for the same purpose, specified in section 134(a) of the Legislative Reorganization Act approved August 2, 1946.

RESOLUTION PASSED OVER

The resolution (S. Res. 452) authorizing of the 71st annual report of the National Society of the Daughters of the American Revolution as a Senate document was announced as next in order.

Mr. MANSFIELD. Over, Mr. President.

The PRESIDENT pro tempore. The resolution will be passed over.

COPIES OF "EDUCATION IN ISRAEL"

The concurrent resolution (H. Con. Res. 679) authorizing the printing of additional copies of "Education in Israel" for use of the Select Subcommittee on Education was considered and agreed to.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No 91–1133), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

House Concurrent Resolution 679 would authorize the printing for the use of the House Select Subcommittee on Education of 10,000 additional copies of its report entitled "Education in Israel."

The printing-cost estimate, supplied by the Public Printer, is as follows:

Printing-cost estimate

Back to press, first 1,000 copies	$1,397.08
9,000 additional copies at $407.02 per thousand	3,663.18
Total estimated cost, House Concurrent Resolution 679	5,060.26

ADDITIONAL FUNDS FOR FRANKLIN DELANO ROOSEVELT MEMORIAL COMMISSION

The bill (H.R. 15351) to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1131), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

H.R. 15351 would authorize the expenditure of $75,000 for the continued operation of the Franklin Delano Roosevelt Memorial Commission.

The Franklin Delano Roosevelt Memorial Commission was established by Public Law 372, 84th Congress, approved August 11, 1955, to consider and formulate plans for the design, construction, and location of a permanent memorial to Franklin Delano Roosevelt. The Commission is composed of 12 members appointed as follows: four persons by the President of the United States, four Members of the Senate by the President of the Senate, and four Members of the House of Representatives by the Speaker of the House of Representatives. The Commissioners serve without compensation, but are reimbursed for expenses incurred by them in carrying out the duties of the Commission.

In 1959, a 27-acre portion of West Potomac Park between Independence Avenue and the inlet bridge was reserved for the site of the proposed memorial.

A national competition was authorized in 1959, and as a result a memorial design was selected. Eventually this design was rejected. The Franklin Delano Roosevelt Memorial Commission was then directed to produce a modified design, and the Commission is currently working to develop an acceptable design.

Since 1955 the total authorization for the Franklin Delano Roosevelt Memorial Commission has been $285,000. Of this sum, $110,000 was prize money for the design competition, and $40,000 was expended to organize and conduct that competition. Another $47,500 was spent on the latest modification of the memorial design. The remainder of the total authorization, $89,500, has been expended for the operation of the Commission since 1955. H.R. 15351 would authorize an additional $75,000 for the continued operation of the Commission.

INVESTIGATIONS PERTAINING TO CONSTITUTIONAL RIGHTS

The Senate proceeded to consider the resolution (S. Res. 442) to investigate matters pertaining to constitutional rights which had been reported from the Committee on Rules and Administration with an amendment on page 1, line 1, after the word "Resolved,", strike out "The S. Res. 336, Ninety-first Congress, second session, agreed to February 16, 1970 (authorizing a complete study of any and all matters pertaining to constitutional rights), is hereby amended by striking out "$230,000" and inserting in lieu thereof "$240,000." and insert "That the Committee on the Judiciary is authorized to expend from the contingent fund of the Senate $10,000, in addition to the amount, and for the same purposes and during the same period, specified in Senate Resolution 336, Ninety-first Congress, agreed to February 16, 1970, authorizing a study of matters pertaining to constitutional rights."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1132), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Senate Resolution 442 as referred would increase by $10,000, from $230,000 to $240,000, the limitation on expenditures by the Committee on the Judiciary for the study of matters pertaining to constitutional rights it is currently engaged in pursuant to Senate Resolution 336 of the present Congress.

Senate Resolution 336 as agreed to by the Senate on February 16, 1970, authorized the Committee on the Judiciary, or any duly authorized subcommittee thereof, to expend not to exceed $230,000 from February 1, 1970, through January 31, 1971, to examine, investigate, and make a complete study of any and all matters pertaining to constitutional rights.

The additional funds which would be authorized by Senate Resolution 442 are requested by the Committee on the Judiciary to enable it to meet the costs of the salary increase granted by Public Law 91-231, approved April 15, 1970.

The Committee on Rules and Administration is reporting Senate Resolution 442 with an amendment in the nature of a substitute. This action is taken by the committee upon the advice of the Parliamentarian of the Senate, who has recommended that this new format be employed for a resolution to increase the limitation of expenditures by a Senate committee for an inquiry or investigation authorized by a prior Senate resolution.

The committee has also amended the title of Senate Resolution 442 to conform to the amended text.

The amendment was agreed to.

The resolution, as amended was agreed to.

The title was amended, so as to read: "Resolution authorizing additional expenditures by the Committee on the Judiciary for a study of matters pertaining to constitutional rights".

PROGRAM—ORDER FOR ADJOURNMENT UNTIL TOMORROW

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I am delighted to yield.

Mr. GRIFFIN. Mr. President, while we have many Senators in the Chamber, I should like to ask the distinguished majority leader whether he could give the Senate some guidance and information as to the program for the remainder of the day and the remainder of the week, if possible.

Mr. BYRD of West Virginia. Mr. President, may we have order?

The PRESIDENT pro tempore. The Senate will be in order.

Mr. MANSFIELD. Mr. President, I would be delighted to respond to the distinguished acting minority leader by stating that, after discussion, it is the intention of the joint leadership to bring up later in the afternoon, unless something contravenes which makes it impossible to do so, Calendar No. 1151, H.R. 17575, an act making appropriations for the Departments of State, Justice, and Commerce, the judiciary, and related agencies.

In view of what happened last Friday night, which was most embarrassing so far as the Senate was concerned, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 9 o'clock tomorrow morning.

The PRESIDENT pro tempore. Without objection, it is so ordered.

(Later the order was modified to provide for an adjournment until 8:30 a.m. tomorrow.)

Mr. MANSFIELD. May I call to the attention of the Senate that there is supposed to begin a 2-day recess beginning at the conclusion of business on September 2, a week from Wednesday. It is only a 2-day recess, and it takes in Labor Day. At the rate we are proceeding, we will be on the pending bill until sometime close to the election. So I think it is time for the Senate to forget its outside activities, including campaigning—and I have a campaign underway myself—and to attend to the business of representing the people, which is our primary responsibility.

I think the Senate should be on notice that the joint leadership has also discussed the possibility—and it is a very strong possibility—that the Senate will meet this coming Saturday. We will just have to put our collective nose to the grindstone—to invent a new saying—get down to business, and try to come to some agreement in an effort to expedite business.

One of the matters to be taken up is the Hatfield-Goldwater amendment, seeking to create a volunteer army. It was possible to vote on that measure last Thursday, but, unfortunately, no agreement could be reached. Now that I see the three principals on the floor, I wonder whether it would be possible at this time to arrive at a time certain when we could vote on the Hatfield-Goldwater amendment. I will direct my question first to the distinguished Senator from Oregon.

Mr. GRIFFIN. First, a point of clarification. Is it in fact the case that the amendment is pending?

Mr. MANSFIELD. No amendment is pending.

Mr. GRIFFIN. It has not been offered yet?

Mr. MANSFIELD. The reason is, of course, as the Senator from Oregon will explain, that he wanted ample time to be able to bring the matter before the Senate and have interested Senators make their views known, both for and against. He always has been most willing—more than willing—to arrive at a reasonable time agreement so that a final up and down vote could be had on the amendment, of which I happen to be a cosponsor.

It is true that the proponents of this amendment have been anxious to get underway with laying the amendment before the Senate and then going into a full-fledged debate. We have been reluctant to lay the amendment before the Senate until we could reach some kind of time agreement which, hopefully, would include the proviso that we would vote the whole amendment up or down on the merits of the case, rather than to make a decision with a parliamentary procedural vote, such as a vote to table the amendment.

Having failed to achieve that agreement, we have discussed with the distinguished chairman of the Committee on Armed Services, the Senator from Mississippi (Mr. STENNIS), the possibility of reaching a time agreement without the proviso on the matter of tabling the amendment—hopefully, the Senate would not move in that direction. We are willing to set up a 6-hour time agreement, the time to be divided equally, 3 hours on each side, along with an hour on each amendment which may be offered to the amendment, the time to be equally divided.

I believe that the Senator from Mississippi, in a previous conversation with the distinguished coauthor of the amendment, the Senator from Arizona (Mr. GOLDWATER) and myself, indicated a willingness to agree to that kind of limitation.

Mr STENNIS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. STENNIS. At the proper time, Mr. President.

Mr. MANSFIELD. Is there no possibility of reaching an agreement now?

Mr. STENNIS. When I am called upon, I will state my position. The Senator from Montana called on the Senator from Oregon.

Mr. MANSFIELD. My intention was to ask now for the thoughts of the Senator from Mississippi if the Senator from Oregon has concluded.

Mr. STENNIS. Mr. President, no one would be more anxious to dispose of this amendment than I would after it is really presented and understood by the Members of the Senate. This is one of the most far-reaching amendments that have been offered on the floor of the Senate, without any hearing, during my entire service as a Senator. That is the reason why I did not agree to a quick vote on it.

As part of my effort to bring this matter before the Senate, I have here a letter dated August 21, from Mr. Timmons, who is assistant to the President, directly stating that he is replying to my telephone conversation with Mr. Kissinger on this amendment, and that because of the President's temporary absence from Washington, he asked that I confirm Mr. Kissinger's conversation.

I will ask permission later to insert this letter in the RECORD.

The President, through Mr. Timmons, gives four reasons why he is totally opposed to this amendment in its present form, to any amendment at this time on the subject matter of a volunteer army.

So I feel that that is a rather substantial witness on the subject.

I am ready to vote on the matter. I do not know yet what amendments may be offered, but I am willing to vote on the matter at any reasonable time, say tomorrow. The reason I say tomorrow is that that is a good time for Senators to be advised so that they can get here. The way this matter came up, though, without any hearings, without any consideration by the committee—I do not remember it being mentioned to the committee or asking it to pass on it—I am not willing to go into a unanimous-consent agreement here. It would cut the opposition to the amendment off from using any parliamentary rule that may be available. So, as I understand these agreements to vote at a certain time, it precludes all kinds of motions—to commit, to recommit, to table, and so forth—which I am not going to waive. My purpose is to defeat the amendment, because I think it would be a disaster for the country if it became law now. So I am not waiving any procedure, on behalf of those who are opposed to the amend-

ment. There will be a good many Senators who will be interested in debating it.

Mr. MANSFIELD. Would the distinguished Senator from Oregon consider the suggestion made by the chairman of the Armed Services Committee and the manager of the bill, the distinguished Senator from Mississippi (Mr. STENNIS)?

I make this request only in view of the fact that we are moving very slowly on the bill, and if there is no action, it may well take us beyond Labor Day making the Senate's schedule that much more difficult.

So far as I am concerned, I would oppose any tabling motion on the amendment because I think that an amendment of this significance and importance is entitled to an up-or-down vote. In short, there are no circumstances present that warrant the tabling device, in my judgment. But I also have to face up to the realities and the practicalities of the situation.

If I may ask, would the Senator from Oregon and the Senator from Arizona, who are the chief cosponsors of the amendment, give this matter some thought and see if it might be possible to come to an agreement which would not foreclose the use of a tabling motion, which I would oppose under any and all circumstances, in the interest of expediting the business of the Senate and of getting this matter disposed of one way or the other?

There are some who think that a tabling motion is a way out. It is not. It has, in certain respects, the same effect as an up or down vote. A vote against a tabling motion is a vote in favor of what the Senators from Oregon, Arizona, Montana, and others are seeking to establish. If we vote for it, it means that we are not in favor of the concept or at least we have doubts in our minds about bringing it up at this particular time.

Mr. GRIFFIN. Before the Senator responds, would the Senator from Arizona permit me to say a word?

Mr. MANSFIELD. Surely.

Mr. GRIFFIN. First of all, I want to indicate that the Senator from Mississippi, the chairman of the Armed Services Committee, of course, does accurately reflect the position of the administration concerning the amendment.

The President, as is well known, is very much in favor of the goal of a volunteer army but, at this particular time and in this particular way, it is my understanding the administration is constrained to oppose adoption of the amendment as it is being presented.

As the majority leader has already indicated, I think we should keep in mind that unanimous-consent agreements can be with or without the reservation of the right to offer a motion to table. It is quite common, in fact, for the motion to table to be offered at the conclusion of the time reserved for debate.

Mr. MANSFIELD. Not common, may I say to my distinguished colleague.

Mr. GRIFFIN. Not unusual, I should say.

Mr. MANSFIELD. It is a rare occasion. It is a procedure that should not be employed lightly and indiscriminately, not that that is the case here—it is not. But it seems to me that a vote on the merits is justified on this matter.

Mr. GRIFFIN. I only wanted to say that if there is an appropriate time for a motion to table, it is in a situation where normally the ordinary procedures of the Senate have to be followed, where there have not been adequate hearings on a very important and far-reaching matter and where the Senate might justifiably not want to vote on the merits of the amendment.

Thus, I want to indicate that the distinguished chairman is entirely within his rights in insisting upon having, at least, the opportunity to offer a motion to table. I would hope that the Senator from Arizona and the Senator from Oregon would give serious consideration to an agreement which would preserve this procedural right for such procedural rights are very important in the Senate.

Mr. GOLDWATER. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. May I say—as I said already—that the Senator from Mississippi is entirely within his rights. I find no fault with what he seeks to do, because it is a procedure allowable to a Senator.

Mr. GOLDWATER. Mr. President, I should like to ask the Parliamentarian the rule on this.

The PRESIDING OFFICER (Mr. BYRD of West Virginia). The Senator from Arizona will state his inquiry.

Mr. GOLDWATER. As I understand, once a time certain has been agreed to, a motion to table is not in order. I should like to address that query to the Chair.

The PRESIDING OFFICER. If a time certain to vote on an amendment is agreed upon, a motion to table would not be in order unless it is acknowledged in the agreement.

Mr. GOLDWATER. Would it be within the rules of the Senate to agree to an agreement allowing the Senator from Mississippi to move to table at any time during the debate on the amendment?

Mr. MANSFIELD. Yes, but I would hope the Senator is just inquiring——

Mr. GOLDWATER. That is all that I am doing. I just want to get it clear in my own mind.

Mr. MANSFIELD. The Senator from Mississippi is a man of honor and integrity and would bear in mind I am certain that if someone decides to invoke the tabling device they would do so when all time had expired.

Mr. GOLDWATER. I just wanted to make it clear for my own sake, and for the sake of others, what can be done in the circumstances. I certainly do not want to deny my chairman the right to do anything he wants. As the Senator from Montana has indicated, he is probably one of the most honorable Members in this body. Whatever he wants to do, while I may not agree with him, he certainly has the right to do.

Mr. THURMOND. Mr. President, will the Senator from Montana yield?

Mr. HATFIELD. Mr. President, I should like to respond to the statement of the majority leader.

We are certainly not going to hold up the business of the Senate on the matter of a unanimous-consent agreement problem. We want, basically, the time necessary to express our viewpoints and to discuss this amendment. There is so much misunderstanding about the amendment today that I think 6 hours is certainly a reasonable time to try to clear up the misunderstandings.

This is not an amendment to end the draft. We are not tampering with the draft whatsoever. Under the amendment, we are merely laying the groundwork for a period of experimentation on the basis of whether we can achieve sufficient volunteers within the military to move to an all voluntary army when it comes up in June 1971.

I should like to stress again to the Senate the point that if we do not take this kind of action now, the Senate will be up against the wall, come June 1971, when the matter will be presented to the Senate to extend the draft. I know that there is much sentiment in the Senate today not to extend the draft for another year or 2 years. But I want to say, for the sake of practicality, that we cannot move from one system to another system overnight. If we do not have the basis for this move to a new system well established, we will be facing the inevitable request from the administration to extend the draft another year or 2 years.

I do not think it is fair for the young men of this country to have to face that indecision on the part of Congress. It is a matter of indecision if we do not make some kind of statement of policy now. So I think it will necessitate at least 6 hours to get this sufficiently understood. I certainly will not hold up the business of the Senate by demanding what I think was within our rights under a unanimous-consent agreement to ask for a no-tabling motion, but I will agree with him on that, if it is a matter of getting on with the business of the Senate, at the same time providing us with adequate time to get clearly understood what the amendment does and what it does not do.

Mr. MANSFIELD. That sounds fair to me. I would request the Senator from Mississippi if he is agreeable to a 6-hour limitation on the Hatfield-Goldwater amendment and a 1-hour limitation on other amendments thereto. I know of only one, the Harris amendment, with the proviso that—I would not even put in a proviso, knowing the Senator from Mississippi, there would be no motions made of any kind until all the time had expired or been yielded back.

Would the Senator from Mississippi agree to that?

Mr. STENNIS. Mr. President, I want to be sure that I understand the effect of any agreement with respect to the exercise of any motion by any Senator.

I am not speaking only for myself. I speak for anyone opposed to the amendment. I would not want to cut anyone off whether he is opposed to it or not. My idea is that whatever we agree to as

the time for that debate it be used as long as either side wants to use it before I would agree to any motion to recommit, table, or follow any other rule allowed by the Senate. I would not want to enter into an agreement to cut anyone off.

Mr. President, since this matter has been argued at some length, I would like to read a letter from the assistant to the President on this matter.

The PRESIDING OFFICER. Does the Senator from Montana yield for that purpose?

Mr. MANSFIELD. Yes, indeed.

Mr. STENNIS. Mr. President, the letter is dated August 21, 1970. This was prompted by a call from me to the White House, first to Mr. Kissinger, as I related on the floor, and later I told him that I would like to have something in writing. The President was in Mexico at the time.

The letter reads:

THE WHITE HOUSE,
Washington, August 21, 1970.

HON. JOHN STENNIS,
Chairman, Armed Services Committee, U.S. Senate, Washington, D.C.

DEAR SENATOR STENNIS: I am taking the liberty of further reply to your conversation with Henry Kissinger on Amendment 765 to H.R. 17123.

Because of the President's temporary absence from Washington, he has asked that I confirm Henry Kissinger's conversation with you and, more specifically, reaffirm his steadfast determination to establish an All Volunteer Force and bring the draft calls to zero at the earliest possible date consistent with the needs of national security and fiscal responsibility.

As you know, the President sent to Congress, earlier this session, legislation designed to begin implementation of the goals recommended by the Gates Commission. This legislation would provide a 20% pay increase for first-term enlisted personnel effective January 1971. Additional pay and benefit augmentations are planned for fiscal year 1972.

Even though the amendment in question has the same stated goals, the President is opposed to it for several cogent reasons, as follows:

1. There can be no certainty that the proposed changes in pay and incentives will attract sufficient volunteers to permit cancellation of the draft on June 30, 1971, as implied in Amendment 765.

2. It would enact into law a large number of personnel policy changes without knowledge of either their effectiveness or comparative costs with quite possibly more efficient alternative proposals.

3. It would add several billions of unplanned increased costs to the FY '71 budget.

4. And, provide no opportunity for the Armed Services Committees to hear the views of the Department of Defense or other increased witnesses.

In closing, permit me again to assure you that the President's intent to eliminate the draft calls and in concert with the establishment of an All Volunteer Force has not changed. The Administration looks forward to cooperating with you during your soon to be scheduled hearings on this broad and important subject.

With highest regards,
Sincerely,

WILLIAM E. TIMMONS,
Assistant to the President.

Mr. President, I thank the leader for yielding.

The PRESIDING OFFICER. The Chair states that under the previous order, the able Senator from Oregon (Mr. PACKWOOD) was to have been recognized immediately after the disposition of the reading of the Journal and the disposition of the unobjected to items on the consent calendar.

Does the able majority leader at this time wish to ask unanimous consent that the special order be delayed until the current colloquy is completed?

Mr. MANSFIELD. Yes; briefly. I had discussed the matter with the distinguished Senator from Oregon prior to the vote on the appropriation bill.

I had no idea that the matter would take this long. If the Senator from Oregon would be amenable, I would like to see if we could bring this matter to a head. To make sure that the time granted to the Senator not be infringed upon, I ask unanimous consent that the special order to be delayed until the completion of this colloquy.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. THURMOND. Mr. President, because the Senator from Maine (Mrs. SMITH) is absent on official business, she has asked me to act as leader on this side on the military procurement bill.

It is my judgment that the amendment is a mistake. I shall oppose it. But I wanted to say that I also think it is necessary to preserve our procedures, and the position taken by the distinguished Senator from Mississippi is substantiated by me.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, if I may have the attention of the distinguished Senator from Mississippi (Mr. STENNIS), the manager of the bill, the distinguished Senator from Oregon (Mr. HATFIELD), and the distinguished Senator from Arizona (Mr. GOLDWATER), as well as the acting minority leader, I send to the desk on behalf of both of us a unanimous-consent request.

The PRESIDING OFFICER. The clerk will state the unanimous-consent request.

The legislative clerk read as follows:

Ordered, That on the Hatfield-Goldwater Volunter Army amendment to the pending measure the time be limited to 6 hours to be equally divided and controlled by the sponsors and the Senator from Mississippi (Mr. STENNIS) and that any amendment to that amendment be limited to 1 hour to be equally divided and controlled by sponsor and Senator from Oregon (Mr. HATFIELD) if Senator HATFIELD is opposed to the amendment; but if Senator HATFIELD is in favor then the time in opposition is to be controlled by the Senator from Mississippi (Mr. STENNIS),

Provided further, That no tabling or other motions will be in order until all time allocated is consumed on the question to be tabled.

Provided further, That the time will commence to run under this agreement upon the further consideration of the unfinished business on Tuesday, August 25, 1970.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. HOLLAND. Mr. President, the amendment has not been offered as yet.

Mr. MANSFIELD. No; but I am sure that we can make a unanimous-consent request. The matter has been discussed, and the reasons why the amendment has not been offered have been made quite clear.

Mr. HOLLAND. Would this mean that the time would begin to run from the time of the adoption of the unanimous-consent request or at the time the amendment is offered.

Mr. MANSFIELD. With the beginning of the consideration of the unfinished business tomorrow. I would hazard a guess that would be about 9:05 a.m.

Mr. HOLLAND. And this would take place regardless of whether the amendment had been called up or not by that time?

Mr. MANSFIELD. Mr. President, the amendment would be called up at that time. It would be called up this afternoon, or almost immediately, so that it would be a matter of record.

Mr. STENNIS. Mr. President, I overlooked the fact that the amendment had not been offered.

Mr. President, is that the situation?

Several Senators addressed the Chair.

Mr. MANSFIELD. Mr. President, the amendment has been printed. It is at the desk. It has not been called up.

Mr. HATFIELD. Mr. President, would the Senator yield for a point of inquiry.

Mr. MANSFIELD. Mr. President, I yield.

AMENDMENT NO. 844

Mr. HATFIELD. Mr. President, I ask unanimous consent at this point to lay the amendment before the Senate.

Mr. MANSFIELD. Mr. President, the Senator could call up his amendment and make it the pending business on the basis of the unanimous-consent agreement.

The PRESIDING OFFICER. Is there objection to laying the bill before the Senate at this time so as to make it in order to call up the amendment?

Mr. STENNIS. Mr. President, I am not agreeing to the unanimous-consent request until I make some inquiries. I have no objection to making the amendment the pending business.

Mr. HATFIELD. Mr. President, to clarify the situation, I ask unanimous consent to call up my amendment and make it the pending business.

Mr. HOLLAND. That satisfies the situation as I see it.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection and it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated.

The legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each

Reserve component of the Armed Forces, and for other purposes.

The Senate proceeded to consider the bill.

The PRESIDING OFFICER. The clerk will now state the amendment offered by the able Senator from Oregon.

The LEGISLATIVE CLERK. The Senator from Oregon (Mr. HATFIELD) and others propose an amendment, No. 844, as follows:

At the end of the bill, insert the following language:

H.R. 17123

SEC. . The Congress hereby finds that—

(1) the Armed Forces of the United States can be materially improved and strengthened by increasing and improving the economic and educational benefits of the members thereof, by elevating the status of military personnel generally and by developing and maintaining a system of military manpower procurement based on the free choice of the individual;

(2) involuntary service in the Armed Forces is a discriminatory tax-in-kind upon those persons required to serve because it falls upon a relatively small number of the total population;

(3) the military manpower requirements of the Nation can be adequately met through the effective administration of a voluntary system;

(4) a voluntary system should be instituted and given a fair test as soon as practicable while providing necessary safeguards in the event that unforeseen circumstances create a need for additional military manpower;

(5) the President, the Secretary of Defense, and the Secretaries of the military departments should exercise all authority available to them to promote the success of a voluntary system of meeting the military manpower needs of the Nation; and

(6) the Reserve forces should be maintained at adequate strength levels and should be better trained and equipped to meet emergency combat assignments.

CONTINUED REGISTRATION

SEC. . Notwithstanding the delimiting date specified in section 17(c) of the Military Selective Service Act of 1967, the President shall provide for the continued registration under such Act of all male persons in the United States between the ages of eighteen and twenty-six years in order that the involuntary induction of persons under such Act may be reinstituted without serious delay in the event the President determines pursuant to section 4 of this Act that such action is necessary and legislation authorizing conscription is enacted pursuant to such determination.

ACTION FOR REINSTITUTING CONSCRIPTION

SEC. . If at any time after the termination of induction of persons into the Armed Forces under the Military Selective Service Act of 1967 the President determines that the military manpower needs of the Nation are not being adequately met through a voluntary system and that conscription is necessary for the national security, he shall promptly notify the Congress of such determination, and of the facts upon which such determination is based, and submit to the Congress such recommendations for legislation as he deems necessary and desirable to provide for the involuntary induction of persons into the Armed Forces.

CONGRESSIONAL DIRECTIVES RELATING TO THE IMPROVEMENT OF THE ARMED FORCES

SEC. . (a) The President, the Secretary of Defense, and the Secretaries of the military departments shall exercise the authority vested in them by law to provide for the military manpower needs of the Nation through a voluntary program of enlistments. In the exercise of such authority, the Secretaries of the military departments shall, under the direction and supervision of the Secretary of Defense, specifically provide for—

(1) the inducements necessary to take fullest advantage of career selection motivations in attracting persons to military careers;

(2) the improvement and expansion of the program for utilizing civilian personnel in lieu of military personnel for noncombatant services;

(3) the improvement and expansion of programs under which the education of specialists, such as doctors and dentists, is paid for by the Armed Forces in return for an obligated period of military service by the person receiving the educational assistance;

(4) the improvement and expansion of officer training programs, particularly programs to facilitate the qualifying and training of enlisted members who wish to become officers;

(5) the improvement and expansion of military recruiting programs;

(6) a more effective incentive program for recruiting personnel under which (A) successful recruiting personnel would be afforded the opportunity to earn extra pay or bonuses as well as accelerated promotions, and (B) quota systems would no longer be in effect; and

(7) the institution of any other appropriate actions designed to upgrade the conditions of military service and the status of military personnel generally.

(b) In implementing subsection (a)(2) of this section, relating to increased utilization of civilian personnel, the Secretary of Defense shall, as soon as practicable, (1) conduct a position-by-position analysis of all military jobs within the Department of Defense with a view to determining which jobs should be performed by military personnel and which should be performed by civilian personnel, and (2) develop accurate and current data for determining whether it is less expensive to have any such job performed by military or civilian personnel. The position-by-position analysis and the development of data required under this subsection shall be completed not later than eighteen months after the date of enactment of this Act.

(c) Not later than eighteen months after the date of enactment of this Act, the Secretary of Defense shall submit to the Congress a detailed report regarding the operation of the voluntary system of meeting the military manpower needs of the Nation and for the improvement of the Armed Forces, and shall include in such report such recommendations for legislation to improve such system as he deems appropriate.

INCREASE IN PAY RATES FOR MEMBERS OF THE UNIFORMED SERVICES

SEC. . The Secretary of Defense shall formulate as soon as practicable after the date of enactment of this Act a revised basic pay schedule for members of the uniformed services incorporating the increases in the basic pay of enlisted personnel and officers listed in the table below and such adjustments in the basic pay of other personnel as the Secretary deems necessary and appropriate to insure equitable pay differences between different grades.

	Enlisted personnel	Officer personnel
Years of service:		
1	$1,700	$1,504
2	1,544	2,031
3	804	1,142
4	727	----------
5	347	----------
6	344	----------
7	233	----------
8	344	----------
9–10	258	----------

SPECIAL PAY FOR PHYSICIANS, DENTISTS, AND VETERINARIANS MADE PERMANENT, INCREASE IN SPECIAL PAY FOR PHYSICIANS AND DENTISTS

SEC. . (a) Sections 302 and 302 of title 32, United States Code, are amended by striking out "and before July 1, 1971." each time it appears in such sections.

(b) Section 302(1) of such title is amended by deleting the comma after "1947" the second time such date appears therein.

(c) Section 302(b) of such title is amended to read as follows:

"(b) The amount of special pay to which an officer covered by subsection (a) of this section is entitled is—

"(1) $150 a month for each month of active duty if he has not completed two years of active duty in a category named in that subsection;

"(2) $200 a month for each month of active duty if he has completed two years of active duty in a category named in that subsection;

"(3) $450 a month for each month of active duty if he has completed three years of active duty in a category named in that subsection;

"(4) $600 a month for each month of active duty if he has completed four years of active duty in a category named in that subsection;

"(5) $750 a month for each month of active duty if he has completed five years of active duty in a category named in that subsection;

"(6) $900 a month for each month of active duty if he has completed six years of active duty in a category named in that subsection; or

"(7) $1,050 a month for each month of active duty if he has completed seven years of active duty in a category named in that subsection."

MORE EFFECTIVE USE OF PROFICIENCY PAY FOR ENLISTED MEMBERS

SEC. . (a) The Secretary of Defense shall, at the earliest practicable date, promulgate regulations under which the Armed Forces will increase the utilization of proficiency pay authorized by section 307 of title 37, United States Code, for the purpose of attracting and retaining enlisted members who are specially proficient in military skills.

(b) Section 307 of title 37, United States Code, is amended by redesignating subsection (d) as subsection (e) and inserting after subsection (c) a new subsection (d) as follows:

"(d) Proficiency pay under subsection (a)(1) or (a)(2) of this section shall be made available to enlisted members with critical skills after such members have satisfactorily completed their training in such skill. Proficiency pay under this section shall be paid to enlisted members who qualify therefor without regard to whether they are career members or not."

HOSTILE FIRE PAY INCREASE

SEC. . Section 310(a) of title 10, United States Code, is amended by striking out "$65" and inserting in lieu thereof "$200."

COMBAT ZONE PAY

SEC. . (a) Chapter 5 of title 37, United States Code, is amended by adding after section 310 a new section as follows:

"§ 310a. Special pay: duty in a combat zone

"(a) Except in time of war declared by Congress, and under regulations prescribed by the Secretary of Defense, a member of the uniformed services may be paid at the rate of $65 a month for any month in which he was entitled to basic pay and was serving in a combat zone.

"(b) A member may not be paid special pay under this section for any month for which he receives special pay under section 310 of this title, but may be paid special pay under this section in addition to any other

pay and allowances to which he may be entitled.

"(c) The provisions of section 310(c) of this title relating to determination of fact under that section shall apply in the case of the determination of fact under this section.

"(d) The Secretary of Defense shall report to the Congress by March 1 of each year on the administration of this section during the preceding calendar year.

"(e) As used in this section the term 'combat zone' means any area which the President by Executive order designates as an area in which Armed Forces of the United States are engaged in combat."

(b) The table of sections at the beginning of chapter 5 of such title is amended by inserting immediately below

"310. Special pay: duty subject to hostile fire."

the following:

"310a. Special pay: duty in a combat zone.".

EXTENSION OF TIME WITHIN WHICH REENLISTMENT BONUSES MAY BE PAID

SEC. . Section 308(a) of title 37, United States Code, is amended by striking out "within three months" and inserting in lieu thereof "within six months".

TRAVEL AND TRANSPORTATION ALLOWANCES AND DISLOCATION ALLOWANCES FOR ENLISTED MEMBERS IN LOWER GRADES

SEC. . (a) Section 406(a) of title 37, United States Code, is amended by inserting ", including a member in pay grade E–4 (four years or less service), E–3, E–2, or E–1," immediately after "A member of a uniformed service".

(b) Section 407(a) of such title is amended by striking out "uniformed service—" and inserting in lieu thereof "uniformed service, including a member in pay grade E–4 (four years or less service), E–3, E–2, or E–1—".

ENLISTMENTS AND DISCHARGES

SEC. . (a) Section 505(c) of title 10, United States Code, is amended to read as follows:

"(c) The Secretary concerned may accept original enlistments in the Regular Army, Regular Air Force, Regular Marine Corps, or Regular Coast Guard, as the case may be, (1) of male persons for the duration of their minority or for a period of two years, and (2) of female persons for a period of two years. The Secretary concerned may accept an original enlistment in the case of any person for a specified period longer than two years, but not more than four years, where the cost of special education or training to be afforded such person would make a shorter enlistment period impracticable."

(b) Section 505(e) of such title is amended to read as follows:

"(e) The Secretary concerned may accept reenlistments in the Regular Army, Regular Navy, Regular Air Force, Regular Marine Corps, or Regular Coast Guard, as the case may be, for unspecified periods and for periods commensurate with the cost of any special education or training to be received by any member, as may be prescribed in regulations of the Secretary concerned. In no case shall the Secretary concerned specify a period of more than four years of obligated service because of special education or training to be received by any member."

(c) Section 509(a) of such title is amended by striking out "Under" and inserting in lieu thereof "Subject to the provisions of section 505(e) and".

(d) The Secretary of Defense shall promptly conduct a comprehensive study to determine the term of service which should be required of enlisted members who receive various types of special education or training programs. The Secretary concerned shall, on the basis of the conclusions reached in such study, prescribe by regulation the term of service required to be performed by enlisted members who receive special education or training.

(e) Section 1169 of such title is amended to read as follows:

"§ 1169. Regular enlisted members: limitations on discharged

"Any enlisted member who has completed his original period of enlistment and who has been reenlisted for an unspecified period shall be discharged upon written request, except that—

"(1) the Secretary concerned may refuse to grant a discharge during any period of war or national emergency;

"(2) a member shall be required to fulfill a term of service commensurate with the cost of any special education or training received by him, as prescribed in regulations of the Secretary concerned;

"(3) the Secretary concerned may refuse to grant a discharge to any enlisted member who has been assigned to sea duty or duty outside the United States; or

"(4) as otherwise provided by law."

RESERVE OFFICER TRAINING CORPS SCHOLARSHIP PROGRAM INCREASE

SEC. . Section 2107(h) of title 10, United States Code, is amended to read as follows:

"(h) Not more than the following number of cadets and midshipmen may be in the financial assistance programs under this section at any one time:

"Army program: 10,000

"Navy program: 10,000

"Air Force program: 10,000."

GREATER UTILIZATION OF CIVILIAN MEDICAL FACILITIES AND PERSONNEL

SEC. . (a) The Secretary of Defense shall, as soon as practicable after the date of enactment of this Act, formulate plans for utilization, to the maximum extent practicable, of civilian medical facilities and personnel to serve the medical needs of military personnel and their dependents. In formulating such plans the Secretary shall give consideration to more extensive use of a medical insurance program for retired personnel and their dependents and for the dependents of active duty personnel.

(b) The Secretary of Defense shall submit to the Congress the plans formulated pursuant to this section not more than nine months after the date of enactment of this Act, together with such recommendations for legislation as may be necessary to effectuate such plans.

FORMULATION OF NEW SALARY STRUCTURE FOR THE UNIFORMED SERVICES

SEC. . (a) The Secretary of Defense shall formulate as soon as practicable after the date of enactment of this Act a new pay structure for the uniformed services. Such pay structure shall—

(1) provide salary schedule of pay which combine basic pay rates and present allowances for quarters and subsistence;

(2) provide for cash contributions to a retirement system similar to the civil service retirement system provided for Federal civilian employees; and

(3) take into account the amount lost as the result of the termination of separate allowances for quarters and subsistence and the amount which will be contributed to a retirement system, including the loss of any tax advantage realized under current law.

The Secretary is authorized to include such other features in any new pay structure as he determines necessary or appropriate to make such pay structure fair and equitable and to attract qualified personnel to the uniformed services.

(b) The Secretary of Defense shall submit to the Congress the new pay structure formulated by him pursuant to this section not later than nine months after the date of enactment of this Act.

EFFECTIVE DATE

SEC. . This Act shall became effective upon the date of enactment, except that sections 6, 7, 8, 9, and 10 shall become effective on the first day of the first calendar month in which this Act is enacted.

Mr. MANSFIELD. Mr. President, I yield to the chairman of the committee.

Mr. STENNIS. Mr. President, concerning the unanimous-consent request, reserving the right to object, and I do not expect to object, as the Senator from Mississippi understands now—and I repeat that I would not favor any motion that would cut off this agreed time of debate and thereby preclude either side from making arguments—when that time has expired the amendment of the Senator from Oregon would be subject to any motion, and that includes a motion to table or any other motion that is allowed by the rules.

Mr. MANSFIELD. Absolutely.

Mr. STENNIS. Does the Chair so rule?

The PRESIDING OFFICER (Mr. BYRD of West Virginia). The Chair rules that a motion to table would then be in order at the expiration of all time on the amendment.

Mr. STENNIS. My inquiry was: Would any other motion making disposition of the amendment be in order, such as a motion to commit to a committee or any other motion that is permitted under the rules of the Senate.

The PRESIDING OFFICER. The Chair will state, in view of the fact that no specific time has been included in the request to vote on the amendment, any other motion under the rules would be in order.

Mr. MANSFIELD. It is so stated in the unanimous-consent request.

Mr. STENNIS. If I understand correctly, this agreement has no time to vote on the amendment.

The PRESIDING OFFICER. The Senator is correct. No motion under rule XXII would be ruled out by the agreement.

Mr. STENNIS. I have no objection to the agreement. In fact, I welcome it.

The PRESIDING OFFICER. Without objection, the unanimous-consent agreement is entered.

Mr. MANSFIELD. Mr. President, I wish to express deepest thanks for the consideration, courtesy, and kindness of the distinguished Senator from Oregon, who has been delayed. I think the delay has been well worthwhile.

I again call to the attention of the Senate that in all probability the appropriation bill for State, Justice, Commerce, and the judiciary will be called up later this afternoon.

ORDER OF BUSINESS

The PRESIDING OFFICER (Mr. EAGLETON). Under the previous order, the Senator from Oregon is recognized for 1 hour.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. PACKWOOD. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the unfinished business be laid aside tempo-

rarily until the special orders for recognition have been concluded and until a period for the transaction of routine morning business, with statements limited therein, has been concluded.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

THE ABOLISHMENT OF THE SENATE SENIORITY SYSTEM

Mr. PACKWOOD. Mr. President, I am today circulating for cosponsorship, and will later introduce as an amendment to one of the two legislative reorganization bills presently before the Congress—either S. 844 or H.R. 17654—to abolish the Senate seniority system.

Under the provisions of this amendment, Mr. President, the chairman of each standing committee of the Senate will be elected by the members of that committee who are of majority party. The ranking minority member will be elected by the members of that committee who are of the minority party.

Mr. President, I know it is going to be alleged that this is a startling and abrupt change in our Senate procedures and it should not be done hastily. But for 125 years we have lived under the seniority system and most fair evaluators of it have found it wanting. Mr. President, the seniority system as we presently use it has caused Congress to be a laughing stock among the public. I am merely asking that we experiment with something new. If it does not work we can alter it, or if the Senate desires, we can go back to the seniority system. Nothing will be lost by trying something new.

Defenders of the seniority system assert that in spite of its frailties, it is the best system that has yet been devised to select committee chairmen. I cannot agree.

In this age of crisis, Government must be flexible to meet new challenges. The world is moving at a dizzy pace. Emergencies are omnipresent. Everything is changing.

Yet, the rule of seniority is the direct antithesis of this. It is rigid, inflexible and unyielding. Through seniority, an isolationist may head the Foreign Relations Committee during a period of great internationalism or a foe of conservation may become the chairman of the committee charged with protecting America's dwindling supply of natural resources.

George Haynes, the distinguished historian of the Senate, underscored the repressive rigidity of the seniority system when he wrote:

> Servile compliance with the seniority rule involves gamblers' chances. It is a limited appeal to the lot. It implies merely duration of service on the committee—not in the least does it guarantee superior ability or fitness for leadership.

One thing, however, that must be said for the seniority system is that it is wholly nondiscriminatory. Under it, the sick get the same consideration for committee chairmanships as the healthy, the dull the same opportunity as the intelligent, and the wicked the same advantage as the noble. The late Senator Estes Kefauver offered a dramatic illustration some years ago when he wrote:

> On the Senate side, few, if any members had a record of more distinguished public service than the late Senator Carter Glass of Virginia. It is nevertheless true that he retained his important post as chairman of the Senate Appropriations Committee although physically unable even to attend a session of the Senate, or of his committee, for more than three years. (Estes Kefauver and Jack Levin, A Twentieth-Century Congress, P. 135.)

My point is not that able men do not rise to committee chairmanships through the seniority system. They do. Some of the ablest committee chairmen in the history of the Republic serve in this body today. But under the seniority system, their qualifications are secondary to their seniority.

Specifically, the seniority system has a host of crippling flaws:

First. It is undemocratic.

Second. It has no relation to competency.

Third. Seniority can—and has—produced chairmen who are unrepresentative of the times.

Fourth. It rewards those States with one-party systems and, conversely, penalizes States in which two dynamic and equally matched political parties fight it out at the ballot box.

UNDEMOCRATIC

In a Nation dedicated to democratic ideals, it is an anomaly for the Senate to elevate men to key positions of leadership without regard to any qualification except length of service. Even the law of the jungle operates on the principle of survival of the fittest. Congress operates only on the principal of survival, period.

The seniority system denies competent men a chance to exercise their leadership talents at the time of life when they are most able to meet the rigors of the job. The present selection system is tragically wasteful and inefficient in this regard.

NO RELATION TO COMPETENCY

The seniority rule defies commonsense. It rewards neither ability nor party loyalty but only longevity. There is no relationship between the ability to be elected over and over again and the qualifications and ability needed to head a Senate committee.

I agree with Arthur Krock, who wrote in the New York Times of May 6, 1943:

> A new member, or even one who has served two or three terms, may be ideally constituted for an important chairmanship. But by the workings of the seniority system he will find himself near the bottom of the list, subject to the committee power of a man of far less competence.

It is illogical to assume that the man longest in service on a committee is therefore automatically the most qualified to be chairman. In many cases, the committee member with the longest service on a committee is the most qualified to be chairman. But it is illogical to say that a Senator should be a committee chairman just because of his seniority. Long service does not necessarily produce expertise. Natural ability, devoted interest, and detailed study do.

Despite the alleged harmony which seniority is said to achieve, it can—and has—been carried to absurd lengths. For instance, once a Senator leaves the Senate, by defeat or choice, he loses all of his accumulated seniority, and if again elected, he must start out at the bottom.

Three spectacular examples of canceling seniority serve to dramatize this point. One was the case of Senator John Sherman of Ohio, who entered the Senate in 1861 and in time became chairman of the Finance Committee. In 1877, Sherman resigned his seat to become Secretary of the Treasury in the Cabinet of President Hayes. But when Sherman returned to the Senate in 1881, he was placed last on the Finance Committee.

Another example of the same situation was the case of Senator Alben Barkley of Kentucky. First elected to the Senate in 1926, Barkley became a member of the Finance Committee and ultimately served as one of its senior members. Then, after serving 4 years as Vice President of the United States under President Truman, he returned to the Senate and was reappointed to the Finance Committee in 1955, where he was last in rank.

More recently, the same is true of our colleague, the junior Senator from Arizona (Mr. GOLDWATER). Senator GOLDWATER, who was first elected to the Senate in 1952, was the second ranking minority member of the Armed Services Committee when he retired to run for the Presidency in 1964. Today, the distinguished Senator from Arizona is second from the bottom.

CHAIRMAN UNREPRESENTATIVE OF THE TIMES

At a time when other American institutions are turning over the reins of leadership to younger men, the chairmen of Senate committees are more deeply entrenched than ever before.

One hundred years ago, the average age of a Senator was 50.6; today the average age is 56.6. Not really so great a difference. But 100 years ago the average age of a committee chairman was 53.7 and today it is 65.4.

One hundred years ago, a committee chairman had served an average of 6.8 years in the Senate. Today the average Senate committee chairman has served 20.9 years.

Mr. President, I ask unanimous consent that there be inserted at this point in the RECORD a table which compares the age distribution of Senate committee chairmen in 1870 and 1970.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

AGE DISTRIBUTION OF SENATE COMMITTEE CHAIRMEN

Age range	Number	Percent
1870		
40 to 49	9	34.6
50 to 59	13	50.0
60 to 69	3	11.5
70 to 79	1	3.9
1970		
40 to 49	1	6.225
50 to 59	3	18.75
60 to 69	6	37.50
70 to 79	6	37.50

Source: Congressional Directory 1870; Congressional Directory 1970; and Biographical Directory of the American Congress.

Mr. PACKWOOD. Mr. President, this table shows that while 84.6 percent—or 22—of the Senate's committee chairmen were between 40 and 60 years old in 1870, only 25 percent—or four—were between 40 and 60 in 1970. Instead, in 1970, 75 percent—or 12—committee chairmen were between 60 and 80 years old; while in 1870 only 15.5 percent—or four—committee chairmen were between 60 and 80 years old.

As I indicated, the average age of Senate committee leaders is 65.4. In private business the usual age for retirement is 65. If the retirement rules of private business were followed by the Senate, all but four of the 16 Senate committee chairmen would be forced to retire.

Congress has itself passed rules requiring civil servants to step down at age 70. But if the Senate followed the rules it laid down for others, six committee chairmen would have to retire. Only Congress has institutionalized age and length of service.

Mr. President, let us look at the executive branch for a moment. In the executive branch, the average age of Cabinet members on taking office under President Nixon was 55.7 years. Mr. President, I ask unanimous consent that there be inserted at this point in the RECORD an analysis of the ages of the members of President Nixon's Cabinet.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

CABINET AGES

HUD, Romney, July 8, 1907, 63.
Commerce, Stans, March 22, 1908, 62.
HEW, Richardson, July 20, 1920, 50.
Labor, Hodgson, December 3, 1915, 54.
Agriculture, Hardin, October 9, 1915, 54.
State, Rogers, June 23, 1913, 57.
Treasury, Kennedy, July 21, 1905, 65.
Defense, Laird, September 1, 1922, 47.
Justice, Mitchell, September 5, 1913, 56.
Post Office, Blount, February 1, 1921, 49.
Interior, Hickel, August 18, 1919, 50.
Transportation, Volpe, December 8, 1908, 61.
Average Age: 55.7 years.
(SOURCE.—Congressional Directory 1970.)

Mr. PACKWOOD. Under President Johnson, it was 50. And under President Kennedy it was 48. While in the Senate, the average age of committee chairmen is 65.4.

SENIORITY REWARDS ONE-PARTY STATES

The Senate's seniority system allows some States which regularly reelect Senators to be overrepresented as far as actual power and influence in national affairs are concerned. On the other hand, States which are more sensitive to political change and switch from one party to the other may not elect members to a sufficient number of consecutive terms for them to receive chairmanships.

Implicit in this analysis is the fact that those States where the two parties are more closely matched politically—as New York, Illinois, California, Pennsylvania—have not held major Senate committee chairmanships for a considerable number of years, despite their vast populations and their importance to the Nation's economy. I can think of no more compelling reason for modifying the seniority rule than the manner in which seniority must inevitably discriminate against great two-party States such as these.

Mr. President, admittedly, my knowledge of the seniority system was slight when I first came to this Congress. My only previous legislative experience had been that of serving in the Oregon Legislature. In the Oregon Legislature, committee chairmen are picked by the majority leader on the basis of merit and ability rather than seniority. This system worked well in Oregon. I was resolved, however, to say nothing about the seniority system until I had had a chance to both study it and serve under it. Unfortunately, studying it was easier said than done because there has always been more heat than light spread upon this problem in the past.

Mr. President, I shall limit my comments to the Senate, although I feel the pros and cons of the seniority system would apply equally to either House. Now, Mr. President, regardless of the merits or demerits of the seniority system, one thing is obvious: The seniority system favors those who are elected to Congress at a young age and continue to be reelected. The chairmen of the standing committees in the Senate today served an average of over two terms before obtaining their chairmanship. That is an average, and many able men had to wait much longer to achieve chairmanships.

Mr. President, I ask unanimous consent that there be inserted in the RECORD at this point a table showing the length of service of the present standing committee chairmen of the Senate at the time they achieved their chairmanships.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Committee chairman	Age when become chairman	Year began service	Year he assumed the chair	Average year served before attaining chairmanship
Anderson	66	1949	1961	12
Ellender	61	1937	1951	14
Russell	54	1933	1951	18
Stennis	68	1947	1969	22
Sparkman	68	1946	1967	21
Magnuson	50	1944	1955	11
Tydings	41	1965	1969	4
Long	48	1948	1966	18
Fulbright	50	1945	1955	10
McClellan	53	1943	1949	6
Jackson	51	1953	1963	10
Eastland	52	1943	1956	13
Yarborough	66	1957	1969	12
McGee	54	1959	1969	10
Randolph	64	1958	1966	8
Jordan	67	1958	1963	5

Average years served before attaining chairmanship: 12.125.

Source: Congressional Quarterly.

Mr. PACKWOOD. Therefore, Mr. President, those who are elected to the Senate at the age of 50 or over are playing hide-and-seek with the standard insurance mortality tables as to whether or not they will ever chair a significant committee in this body. On the other hand, those elected at age 50 or under may have the good fortune to chair a committee. Certainly those elected in their 30's or early 40's can, by virtue of the simple fact that they were first elected to the Senate at a young age, propel themselves to power by the sole expedient of being reelected. Having been elected myself to the Senate at the age of 36, I will, if the voters of Oregon reelect me, by virtue of seniority alone, find myself eventually elevated to a committee chairmanship at a younger age than that at which many of my distinguished colleagues are elected for the first time.

The obligation of a U.S. Senator, however, runs deeper than personal advantage. As U.S. Senators, our obligations run to all of the people of this country. It is incumbent upon us to attempt to govern, with their consent, in the most expedient and intelligent way possible. Thus, with some misgivings about even questioning this system that would favor me, I started to look into the background and antecedents of the seniority system.

The first place to look, of course, was at Congress in its days of infancy. How did the Founding Fathers of this country view the seniority system? After all, the early leaders of the Congress of this country were the very people who had carried us through a revolution with Britain and fashioned the American Constitution, which Gladstone called "the most wonderful work ever struck off at a given time by the brain and purpose of man." These were indeed the giants of our history. If they could fashion a U.S. Constitution that has governed us well for so many years, would there be anything we could learn from their method of organizing the Senate of the United States?

Mr. President, at this point I ask unanimous consent to have printed in the RECORD a breakdown I have prepared showing the method by which Senate committees and their chairmen were selected from 1789 to 1846.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SELECTION OF SENATE COMMITTEES

(NOTE.—The term Presiding Officer refers to either the Vice President or the President Pro Tempore depending on the practice of the Senate at the time as to who presided at the time committees were appointed.)

1789–1823: Elected by ballot.

1823–1826: Appointed by the Presiding Officer.

1826–1828: Elected by ballot.

1828–1833: Appointed by President Pro Tempore (President Pro Tempore specifically designated so as to insure that the Vice President—as Presiding Officer—would not appoint committees).

1833–1837: Elected by ballot.

1837–1841: Appointed by Presiding Officer.

1841–1845: Appointed by the President Pro Tempore as Presiding Officer. (Because of death of President William Henry Harrison, Vice President John Tyler succeeded to the Presidency, leaving the Vice Presidency vacant from 1841–1845).

1845: Appointed by Vice President as Presiding Officer in March; elected by ballot of the Senate in December.

1846: Caucus (Beginning of the Senate seniority system).

SELECTION OF SENATE COMMITTEE CHAIRMEN

1789—1823.—The Senator having the greatest number of votes is first named and, as such, is Chairman.

1823–1826: Presiding Officer namer Chairman.

1826–1828: Elected by separate ballot of the Senate (Ezekiel Chambers Rule).

1828–1833: President Pro Tempore appointed Chairman. (President Pro Tempore specifically designated so as to insure that the Vice President—as Presiding Officer—would not appoint committee chairmen.

1833–1837: Elected by separate ballot of the Senate as in 1826.

1837–1841: Appointed by the Presiding Officer.

1841–1845: Appointed by the President Pro Tempore, as Presiding Officer (Because of the death of President William Henry Harrison, Vice President John Tyler succeeded to the Presidency, leaving the Vice Presidency vacant from 1841 to 1845.)

1845: Appointed by Vice President or Presiding Officer in March; elected in December.

1846: Selected by caucus (Beginning of the seniority system).

Mr. PACKWOOD. Before even considering, however, how committee members or committee chairmen were selected, the first thing we learn is that from the time of the first Congress in 1789 until 1816 there were no standing legislative committees at all in the Senate. Pending legislation was scrutinized instead by select committees named as the occasion for such service arose. These select committees were abolished after finishing work on the problem or legislation submitted to them.

One of the first 19 rules adopted by the Senate in 1789 provided:

> All committees shall be appointed by ballot, and a plurality of votes should make a choice.

However, during this entire period of select committees, the rules made no specific provision for committee chairmen.

In his monumental study of the Senate, the distinguished historian George Haynes noted that in the tentative draft apparently prepared by Senator William Maclay of Pennsylvania for the consideration of the committee which framed the Senate's first code of rules, adopted in April 1789, it was stipulated that each committee's chairman "shall be the Senator from the most northerly State of those from which the committee is taken." Fortunately, this outlandish proposal never found its way into the rules.

My study of the early Senate Journals has revealed that while no specific method for selecting committee chairmen was mentioned in the rules, it was the practice when the commitees were elected to designate as chairman the man receiving the most votes. This is confirmed by John Quincy Adams, who served in the Senate from 1803 to 1808 and was later Secretary of State and President, when he said of the practice of the Senate while he served in it:

> The member having the greastest number of votes is first named, and as such is chairman. (Memoirs 1, page 482).

For example, on November 3, 1803, a committee was appointed to study an appropriations bill to effect the Treaty of Amity and Commerce between the United States and England. John Quincy Adams, whose Senate service began in 1803, was chairman. The two other members of the committee were Uriah Tracy of Connecticut, who had been a Senator since 1796, and Abraham Baldwin, who had served since 1799. By the standard of seniority, John Quincy Adams would not have been chairman.

On December 4, 1805, a committee was formed to study additional naval appropriations for 1805. The chairman, Senator Samuel L. Mitchell of New York, had served in the Senate since November 8, 1804, while the two other members of the committee—Senator Stephen R. Bradley of Vermont and Senator Thomas Sumter of South Carolina—both came to the Senate in 1801.

Mr. President, even after the Senate changed from its system of select committees to standing committees, the early Senate Journals reveal that seniority was not a factor in the selection of committee chairmen.

For example, Mr. President, in 1823, when chairmen were appointed by the President pro tempore—as the Presiding Officer—a freshman Senator was named chairman of the powerful Military Affairs Committee. This freshman Senator had less seniority than every other member of the committee, but his unique background and ability were considered more important. His name was Andrew Jackson.

In 1834, when committee chairmen were elected by ballot of the Senate, Henry Clay became chairman of the prestigious Committee on Foreign Relations, though he was only the third-ranking member of the committee.

In 1837, when the committees were appointed by the Vice President as Presiding Officer, an outstanding young Senator from Pennsylvania, James Buchanan, later to be President of the United States, was named chairman of the Committee on Foreign Relations. He was outranked by three of the other four members of the committee: Senator William King of Alabama, a Senator since 1819; Senator Henry Clay of Kentucky, who came to the Senate in 1831, and Senator Nathaniel Tallmadge of New York, who was elected in 1833.

Mr. President, in 1841, when the committee chairmen were appointed by the President pro tempore—as Presiding Officer—out of the 16 standing committee chairmen, seven were freshmen Senators, four had been in the Senate only 1 year, and two had been Senators for only 2 years. Only two committee chairmen had served more than 4 years.

Mr. President, as I have previously indicated, the Senate abandoned the system of select committees in 1816 and went instead to a system of standing committees. However, the Senate continued to elect its committee chairmen and members until December 9, 1823. On that day Senator John Eaton of Tennessee proposed that the chairmen of the five most important committees be chosen by ballot and that these five men be given the power to fill up their own committees and to select the members of all remaining committees. However, the Senate rejected Eaton's proposal and adopted instead an amendment to the rules that all committees "shall be appointed by the Presiding Officer"—who was always either the Vice President or the President pro tempore—"of this House unless otherwise ordered by the Senate."

Initially, the phrase "Presiding Officer" presented no difficulty as Vice President Daniel Tompkins is said to have entered the Senate Chamber hardly once during the last 3 years of his term—and committee appointments therefore devolved upon the President pro tempore, John Gaillard.

The next Vice President, though, was John Calhoun. Contrary to precedent, Calhoun took the chair on the opening day of the 19th Congress and—as Presiding Officer—appointed the committee chairmen and members with such blatant bias that 4 months later, on April 14, 1826, the Senate, with hardly a dissenting vote, took the appointment of committee chairmen and members away from the Presiding Officer, be he the Vice President or the President pro tempore, and restored choice by Senate ballot as it had existed from 1789 to 1823.

In 1826 the Senate again slightly changed its procedure. On December 8 of that year, on the motion of Senator Ezekiel Chambers of Maryland, the Senate divided the election of chairmen from the election of members. It was provided that the chairman of each committee would be selected on a separate ballot by majority vote and the other members of the committee would be selected on another ballot by plurality vote.

On December 24, 1828, the rule regarding the appointment of committees was changed again, this time to provide for the appointment of committee chairman and members by the President pro tempore. It was further provided, if there should be no President pro tempore, that appointment should be made by ballot, in accordance with the rule of 1826.

The 1830's were marked by the birth of two dynamic political parties. Early in the decade a cleavage developed in the Senate based on these two parties. While there had been factions and loose coalitions in the Senate prior to this time, this period ushered in the two-party system as we know it today. And, though the cleavage was not completed until the end of Andrew Jackson's administration in 1837, it was unmistakable by 1833, and in that year an unforeseen contigency arose.

Under the rule, as it had stood for the previous 5 years, the committees would be appointed by Senator Hugh White of Tennessee, elected President pro tempore at the previous session. But, the November election had placed his party in the minority in the Senate. Hence, the 1826 rule by which committee chairmen and members were selected by separate ballot was restored, and so remained until 1837.

Between 1833 and 1837, however, a difficulty that frequently arose from the

election of members by plurality balloting was that the Senator heading the list might be of the party opposed to that of the chairman who had just been elected by majority vote on a separate ballot. To remedy this situation, after all committee chairmen and members had been elected by ballot in compliance with the rules, it was frequently voted that the committee members be "arranged" in accordance with a schedule presented by the mover, the object being to secure succession to the chairmanship of the committee on the basis of party in case of the chairman's absence or withdrawal.

By 1837 frequent and continual balloting was becoming a nuisance and an inconvenience. Thus, in that year, after four chairmen had been elected, Henry Clay moved, and it was agreed to by unanimous consent, that the other appointments be made by the Presiding Officer. This gave the task to Vice President Richard M. Johnson. At the beginning of the regular session 3 months later the power to appoint committee chairmen and members was again placed in his hands. It thereafter became customary, by unanimous consent, to suspend the rule requiring the ballot and to authorize the appointment of the committees by the Presiding Officer. Therefore Vice President Johnson continued this task until 1841.

In 1841, William Henry Harrison, who had been elected President in 1840, died and John Tyler became President. Therefore, there was no Vice President from 1841 to 1845 and committee appointments were made by the President pro tempore.

At a brief 16-day session of the Senate in March 1845, the newly inaugurated Vice President, George M. Dallas, as Presiding Officer, named the committees, but when that Congress convened for its first regular session the following December, Senator Thomas Hart Benton with three other Democrats joined the Whigs in defeating by a single vote a motion that the committee appointment be made by the Vice President, and the Senate proceeded to ballot for the entire list of names, which later had to be "arranged." At the next session, the same issue was raised, and again the Senate defeated a motion to authorize the appointment of committees by the Vice President.

It was not until the first 10 days of the second session of the 29th Congress, December 7 to 17, 1846, that the seniority system in the U.S. Senate was born. After defeating a motion to entrust the appointment of committees to the Vice President, the Senate began balloting for chairmen—in accordance with the rule of 1826. After the chairmen of six committees had been elected, there developed a long debate over the method of choosing the other chairmen and all committee members.

The Democratic floor leader then presented motions which arranged by seniority the names of committee members and safeguarded the majority's succession to chairmanships which might become vacant. After several committees had been filled by this method, the Senate proceeded to elect upon one ballot a list of candidates to fill the vacancies on all of the remaining committees. This list gave to each committee thus filled its chairman and the majority of its members from the same party which held a majority in the Senate.

Mr. President, the Senate in 1846 did not "back into" the seniority system for any of the high-sounding reasons advanced by its defenders today for its retention.

Instead, the Senate turned to the seniority system over a century and a quarter ago in desperation. The Senate was tired of balloting for weeks to choose chairmen and fill the committees. It distrusted the Vice President. It wanted to assure that members of the majority party would be in line for succession to the chairmanship in case of the chairman's absence or withdrawal.

The seniority system enabled the parties to rapidly organize the Senate and assured succession to the chairmanship on the basis of party loyalty.

From that day to this, the appointment of Senate committees—in most cases—has been a perfunctory affair. By unanimous consent the rules requiring election of the chairmen on one ballot and the committee members on another ballot have been suspended and the election has taken place by acceptance of a resolution for the adoption of a list of committee assignments which has been drawn up by the Republican and Democratic caucuses. The general rule is that the Senator of the majority party with the longest continuous service on each committee is named chairman.

It will thus be seen that from 1789 to 1846 committee chairmen were selected in a variety of ways. Sometimes they were elected by ballot. At other times they were picked by the presiding officer, be he the Vice President or the President pro tempore. Regardless of whether the chairman was elected or appointed, however, there was always one striking consistency: The committee chairmen were not picked on the basis of seniority. In addition, the committee members themselves, no matter whether they were elected by their fellow members or selected or appointed in some other method, were selected on some basis other than seniority. It is obvious, then, that our forefathers eschewed the seniority system and instead preferred electing or appointing their committee chairmen and committee members on a basis other than that of seniority.

Mr. President, it is said in defense of the seniority system that it avoids intraparty fighting, that the Senate does not waste its time in petty party bickering over who should be chairman, and that it automatically promotes a man of experience and expertise. If this is true, why not apply the same criteria to the election of our majority and minority leaders and majority and minority whips? If they were selected on the basis of seniority, then we could avoid the petty internal party fighting, we could select men of experience, and so forth.

Yet we reject the seniority system in the selection of our own party and floor leaders. Why, then, must we use it in the selection of our committee chairmen? Why should we not measure prospective committee chairmen by the same yardstick we measure prospective party leaders?

Again, it is instructive to learn from our country's founders. Not only did they reject the seniority system as a method of picking committee chairmen and committee members; they also rejected it as a method of picking their party leaders and presiding officers. No better example of this can be found than Henry Clay.

Clay was elected to the U.S. Senate on January 4, 1810, to fill the vacancy caused by the resignation of Senator Buckner Thruston. He found the Senate, however, to be a moribund and dull place and in the election of 1810 he ran for the U.S. House of Representatives and was elected. In 1811, Henry Clay was elected Speaker of the House of Representatives on his first day as a Representative.

By the standard of seniority the 34-year-old Clay would have gone unnoticed for decades, but because of his towering prestige and limitless ability his colleagues chose him immediately upon election as their leader in the House of Representatives.

One of Clay's biographers later wrote:

> So unexpected was this upset of precedent that the new speaker was at first confused with Matthew Clay (his distant relative), the veteran Virginia Representative. But the country was soon informed that the man selected was young Mr. Clay of Kentucky, formerly of the Senate; a new man but capable and accustomed to legislation; a proper man at this crisis to conduct public business with dignity and dispatch. (Henry Clay by Bernard Mayo, P. 403).

Clay became Speaker because, though he was short on seniority, he was long on ability. And, far from being a failure—because of his youth and lack of seniority—history records that—

> Henry Clay . . . became one of the best and most powerful speakers that the House of Representatives has ever had. When he assumed the office in 1811 the Speaker was little more than a presiding officer. But Clay made the position one of party leadership and by his precedents immeasurably strengthened the office. Six times he was elected speaker and never was his election seriously contested.
>
> He was the boldest and most decisive, perhaps, of the long line of Speakers of the House of Representatives. (Henry Clay and the Art of American Politics by Clement Eaton, pp. 22–23.)

Although Henry Clay was elected as Speaker of the House, all evidence indicates that in the election of Senate leadership, seniority has never been a factor in the selection of Senate leaders. Reviewing just the last half century, it will be noted that there has not been a single majority or minority leader or majority or minority whip who was the ranking member of his party at the time of his election, with the exception of Styles Bridges, who was elected as minority leader in 1952. This is stark and clear evidence that in the selection of party leaders we in the Senate pay no

attention to seniority but instead pick our leaders on the basis of ability. Why do we adhere to the wisdom of our forefathers in rejecting the criteria of seniority in picking our party and floor leaders, and yet persist in selecting committee chairmen on the basis of seniority, a method which our forefathers so assiduously avoided?

As I have previously detailed, Mr. President, the birth of the seniority system in 1846 in the Senate, was a matter of convenience because of the exigencies of the time. It obviously was not intended by the proponents in 1846 as the be-all and the end-all of congressional organization. One would think that there must be some stronger force binding the supporters of seniority than historical accident. It might, therefore, be wise to examine the governing parliamentary bodies of other countries of the world.

We should look first at Great Britain. After all, our legal and political traditions are much fashioned from that country. Let us examine how Great Britain and her fellow Commonwealth countries select their committee chairmen.

The parliamentary organization and practice of the 17 countries that compose the British Commonwealth are modeled on that of the Mother of Parliaments: the English House of Commons. Committee chairmen in the British House of Commons are appointed by the Speaker, they are not selected on the basis of seniority, and this is true in all countries of the British Commonwealth.

Mr. President, I ask unanimous consent that a study on the selection of committee chairmen in Great Britain and the countries of the British Commonwealth be printed at this point in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

APPOINTMENT OF COMMITTEE CHAIRMEN IN THE PARLIAMENTS OF THE BRITISH COMMONWEALTH

(Prepared by the Legislative Reference Service (Library of Congress), March 3, 1959)

The parliamentary organization and practice of the seventeen countries that compose the British Commonwealth are modeled on that of the Mother of Parliaments: the English House of Commons.

The practice of the House of Commons at Westminster as regards the appointment of the chairmen of standing committees is described as follows by Sir Thomas Erskine May in the fifteenth edition (1950) of his famous *Treatise on the Law, Privileges, Proceedings, and Usage of Parliament*, at page 628:

"Chairmen of standing committees.—The chairman of each standing committee is appointed by the Speaker from a panel consisting of not less than ten Members nominated by him at the commencement (d) of every session to act as temporary chairmen of Committees of the whole House when requested by the Chairman of Ways and Means (see p. 240), together with the Chairman of Ways and Means and the Deputy Chairman (S.O.s No. 62(1) and 96(4)). The Speaker is given power to change the chairman so appointed from time to time (S.O. No. 62(2)). Any member of a standing committee may act as temporary chairman, at the request of the chairman of the committee, for not more than a quarter of an hour, but without the powers granted by S.O. No. 57(5) (S.O. No. 62 (4).

"The Chairmen's Panel, of whom three are a quorum, settle points of procedure which are not covered by the rules of the House, and are empowered to report to the House from time to time any resolutions they may came to on matters of procedure relating to standing committees (S.O. No. 62(3)). Such resolutions relating to standing committee procedure have been reported each session, *e.g.* C.J. (1937–38) 19; *ibid.* (1938–39) 25; *ibid.* (1947–48) 51; *ibid.* (1948–49) 24."

Mr. PACKWOOD. Having realized then that there is nothing in our Anglo-Saxon traditions attesting to traditional usage of the seniority system it might be worthwhile to look at other free countries in the world.

A report of the Interparliamentary Union on Parliamentary Committees, based on replies to a questionnaire received from members of the union, indicates that the general practice in the 57 parliaments that are members of the Interparliamentary Union is for the chairmen of their committees to be elected by the committee members themselves.

Mr. President, I ask unanimous consent that a Library of Congress study on the selection of committee chairmen in foreign parliaments be printed in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

SELECTION OF COMMITTEE CHAIRMEN IN FOREIGN PARLIAMENTS

(Prepared by the Legislative Reference Service (Library of Congress), March 3, 1959)

A report of the Interparliamentary Union on *Parliamentary Committees*, based on replies to a questionnaire received from members of the Union, indicates that the general practice in the 57 Parliaments that are members of the IPU is for the chairmen of their committees to be elected by the committees themselves. The following quotations from the report describes the departures from this general rule.[1]

Chairmen of Committees are elected by the Committee themselves. They take part in the deliberations of the Committee.

The following are departures from this general rule:—

In the *House of Commons:*

(a) the Chairman of Committees of the whole House, the Standing Orders Committee (1) and Unopposed Bill Committees, is the Chairman of Ways and Means (Deputy Speaker) of the House: these are the only Committees of which he is a Member.

(b) Chairmen of Standing Committees are appointed from a list by the Speaker.

(c) Chairmen of Committees on opposed private bills are appointed by the Committee of Selection.

In the *Netherlands Chamber*, the Chairman of the Committee on Foreign Affairs and the Credentials Committee is the President of the Chamber.

Chairmen of Committees in the *Bundestug* are allotted proportionally among the parties. The number of Chairmen of Committees allotted to a parliamentary party corresponds to the number of Members of the different parliamentary parties (Hondt's system). Chairmen of different Committees are nominated by parliamentary parties on the basis of agreement between the parties. The Chairman is then formally elected in Committee. Up to the present, the Chairmen proposed by the parliamentary parties have always been elected. They do not take part in the deliberation of the Committee.

In the *Federal Swiss Assembly* the Bureau nominates the Chairmen of Committees, but the Committee on Finance nominates its own Chairman; he takes part in the deliberations of the Committee and has a casting vote.

In the *Belgian House of Representatives* permanent Committees are chaired by the President of the House, or by one of the Vice-Presidents of the House designated by him. They take no part in the deliberations of the Committee. Special Committees appoint their own Chairmen. They take part in the deliberations.

In other parliaments modelled on the British system, a distinction must be drawn between the Committee of the whole House and Committees with a permanent character set up to consider bills. In the first, the chairmanship is held, generally speaking, by the Speaker or Deputy Speaker of the House: in the second, the Chairman is appointed by election in the Committee itself.

However, in *Ireland*, the Assembly itself may appoint a member of the Committee as Chairman. This is also the practice in the *Congress of the United States* (where the oldest member is often elected). The President of the Assembly normally appoints the Chairmen of temporary Committees.

In the *Australian Senate* the Speaker of the House presides over three of the six Committees which deal with domestic matters. Besides belonging to these Committees he may be a Member of other Committees of which he then acts as Chairman.

An analogous position exists in the *Lok Sabha* where the Chairmen of Committees are appointed by the President of the Assembly. If the Vice-President is a Member of a Committee, he invariably becomes Chairman.

In the *Constituent Assembly of Pakistan*, the Assembly designates the chairmen of Committees. However, the Minister of Finances is *ex officio* chairman of the Committee on Public Accounts.

The chairmen of Committees of the *Japanese Diet* are appointed by the President of the Assembly. They are chosen from the members of Committees. The chairmen of special Committees are elected by the Committees themselves.

Mr. PACKWOOD. As a matter of fact, Mr. President, I have been unable to find a single free world parliament that operates under the seniority system. For that matter, no Communist government or other dictatorship operates under the seniority system.

Let us turn next to the various State legislatures in the United States. The Legislative Reference Service of the Library of Congress reports that there is no State legislature where seniority is the controlling criteria in the selection of committee chairmen. Other factors are more important than seniority. Mr. President, I ask unanimous consent that a memorandum from the Legislative Reference Service of the Library of Congress on seniority in State legislatures be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

To: Senator BOB PACKWOOD.

From: Government and General Research Division; Norman Beckman, Division Chief.

Research by: Walter Oleszek.

Subject: Seniority in state legislatures.

In accordance with your request, we enclose excerpts from two studies—one by Pro-

[1] Interparliamentary Union. Quarterly Bulletin on *Constitutional and Parliamentary Information*, 3rd Series, No. 24, November 1, 1955, pp. 190–92.

fessor Jewell and the other by Professors Keefe and Ogul—that discuss the use of seniority in state legislatures.

In a telephone call to Mr. Albert Abrams, Secretary to the New York State Senator and a long-time observer of state legislatures, further information about seniority and its use in state legislatures was obtained. The pertinent remarks of Mr. Abrams follow:

(1) There is no state, to Mr. Abrams' knowledge, where seniority alone is the controlling criterion in the determination of committee chairmen. Other factors are as important as seniority, or *experience* as Mr. Abrams preferred to call continuity of service in a legislature, such as geography and membership in the faction controlled by the party leader.

(2) Two methods of selecting committee chairman are used in the states: (1) appointment by the party leader (and in those states where the Governor exerts a voice in selecting the party leader, he too may influence the selection of committee chairmen) or (2) selection by an appointments committee, a creature, generally, of the party leader.

(3) Seniority is not as important in state as opposed to the National legislature for two reasons: (1) turnover is very high in state legislatures (one-third to two-thirds turnover every session) and (2) the recent reapportionment efforts have brought new and younger men into the legislative process while older men, from predominantly rural areas, have been defeated or districted out of their seat.

(4) Of course, states operate differently even within either of the two selection processes. For example, the Massachusetts State Legislature traditionally appoints a minority member in each chamber to chair the Tax Committee, thereby giving what could be a politically unpopular task—raising taxes—to the minority party. As a result, the minority party bears part of the onus for raising taxes even with a chamber controlled by the opposite party.

Mr. Abrams indicated that he would be happy to speak with any congressman about the use of seniority in state legislatures. He can be reached at the following telephone number in Albany, New York—472-8800 (518).

We trust that this information proves helpful. If further assistance is required, please do not hesitate to call us.

Mr. PACKWOOD. Mr. President, in my research I have been unable to find even a city council in the United States that operates under the seniority system.

Mr. President, the news media of this Nation appear to be united in their opposition to the seniority system. I ask unanimous consent that various editorials from newspapers throughout the United States opposing the seniority system be printed in the RECORD.

There being no objections, the editorials were ordered to be printed in the RECORD, as follows:

[From the Eugene (Oreg.) Register-Guard, July 6, 1970]

MAKE WAY FOR "YOUTH"?

As Congress reconvenes after its Fourth of July holiday there'll be a looming possibility of revolution in the House of Representatives.

Younger members of the House—those under 50, that is—are considering banding together to overthrow the committee seniority system, particularly as it applies to House committee chairmanships.

There's nothing new about dissatisfaction with the hoary rule that House committees are governed by members who belong to the majority party and have the longest, not necessarily the best, records of congressional service. Heretofore, however, the rule has been attacked only by hot-heads or those willing to pay the price of being passed over for future assignment to important committees.

Now earnest "young" members of both parties are girding themselves to advocate automatic transfer of chairmen's gavels whenever those wielding them reach the age of 70.

What effect would result if the younger generation had its way in the House? Nine committee chairmen—three in their 80s and six in their 70s—would be immediately replaced. And of all present chairmen, only three would have prospects of continuing longer than 10 years in their positions of special power.

[From the Portland (Oreg.) Oregonian, July 15, 1970]

HALF A LOAF

After years of stalling, the leadership of the U.S. Congress House of Representatives is apparently prepared to reform some of its antiquated rules and procedures in the public interest—not all, but some.

THE OREGONIAN

The reform bill that came to the House floor Tuesday out of the Rules Committee has some modest proposals for reform, but the real contest will be over a series of amendments proposed by a bipartisan coalition of young congressmen. The chief purpose of these is to reduce the imposition of secrecy in committees and on the floor, and thus to give constituents a better idea of how their congressman is really performing.

One provision would make possible a recorded vote on amendments to bills on the House floor. Since colonial times these have been voice votes only, restricting the recorded vote to the bill in its final form. Thus are hidden the positions of members on significant amendments.

Ironically, the vote on this amendment will be by voice, under the current rules. The importance of the change is reflected in a statement by one of the reform supporters: "If we could get a record vote, we'd win three to one."

If the package presented by the reform coalition wins any degree of approval, the window will be opened a bit to give the public a view of House business. But it apparently will not be opened all the way. Neither the committee's bill nor the reformers' amendments would alter the venerable seniority system, which puts the power of committee chairmanships in aged hands and assures them the tenure which encourages arrogance and arbitrariness.

NEEDLING THE OLD MEN

There is certain to be some embarrassment behind the closed doors when the House of Representatives Democratic caucus meets next week in Washington, D.C. Some of its members propose to bring up embarrassing resolutions.

One of these, sponsored by the Democratic Study Group of northern liberals, will ask that committee chairmen be bound to give more attention to the opinions and desires of rank-and-file members. The second will propose an expression of "no confidence" in Speaker John W. McCormack.

Majority support is not to be expected for either, for ordinary congressmen are at the mercy of the speaker and committee chairmen in moving legislation. But the obvious unrest in the Democratic ranks is significant and could lead eventually to some degree of reforms in the interests of the nation.

The villain of the piece is the seniority system, long strictly honored in both the House and the Senate. It provides, in effect, that survival at the ballot box is the only necessary qualification to win a chairmanship. Thus nearly all chairmen have their roots in decades past.

The system is more stultifying in the House than in the Senate because of the rigorous rules restricting individual floor action in the House. Of the 21 standing House committees, well over half are chaired by men from southern or border states, whose seniority has been supported by the one-party tradition of the South. The 21 chairmanships are distributed among only 13 states, most of them in the South or on the border and representing a constituency of a minority of Americans.

Any real reform in Congress must include some modification of the seniority system. But don't expect this next week or even next year. For the beneficiaries of the seniority system are in control, and they will not readily yield even the smallest part of the power the system gives them.

SOLON, HEAL THYSELF

Although it has been generally conceded that the U.S. House of Representatives' majority leader, Carl Albert, D-Okla., will succeed Speaker John W. McCormack, if the Democrats retain their majority in the House, the McCormack decision not to seek reelection offers an opportunity for congressional reformers.

There will be a contest for Rep. Albert's position as party leader, if he steps up next year. There are already five representatives seeking the leadership. They should be questioned on their views on some much needed reforms in House rules and procedures. It is an opportunity to inform the people of the autocratic manner in which the House now functions and what can be done to make it more responsive to the public will.

Most important is reform of the seniority system and the powers invested in House committee chairmen whose survivial at the polls is the only qualification necessary. The House should abridge the dictatorial powers of chairmen and should initiate a means of choosing chairmen other than by the calendar. It would also be to the great advantage of their constituents if House members should agree to require a roll call on all important issues rather than leave them to an unrecorded head count, as has come to be the practice. And there is no really good reason for the considerable increase in secret committee sessions. National security interests should be the only cause for excluding the public.

Not all, perhaps none, of these objectives will be attained soon, but it should help to that end to give them an airing.

MORE REFORM SHOULD FOLLOW

The significance of the anti-secrecy vote in the U.S. House of Representatives this week awaits further action on congressional reform.

It was encouraging that the amendment to end the secret teller vote, in which bodies were counted without recording names, passed overwhelmingly.

But a good deal of secrecy remains to be overcome—especially in committee meetings that are closed to the public, but should be open.

A bipartisan reform effort has been concentrated on the secrecy in which the Congress goes about the public's business.

Other procedures also ought to be reviewed, however, for the sake of a more modern legislature.

There should be a better method of selecting committee chairmen than seniority. And the Congress ought to be able to design improved fiscal machinery. Congressional willingness to vote for spending programs but not for the taxes to pay for them has been the primary cause of budget deficits that have fueled inflation.

Once the House is finished with the reform package, it must go to the Senate—which does not have the secret vote provision. Then

the two houses must work out their differences.

Therefore, as the legislative process goes to work on its own improvement, there are ample opportunities for the Congress to do a complete job. One anti-secrecy vote is not enough.

FORCE THEM OUT?

Mandatory retirement for congressmen has been proposed by Rep. David Martin, R-Neb.

He notes laws requiring civil service employes and military personnel to retire at certain ages, and thinks this would be good in Congress. So he has proposed a constitutional amendment barring a House member to serve past age 71 and a senator past age 74.

Martin's proposal has been referred to the House Judiciary Committee. This means it will get clobbered in a hurry by that committee's chairman, 81-year-old Rep. Emanuel Celler, D-N.Y.

We think something should be done to encourage fresh blood in Congress. But we don't favor mandatory retirement. If a congressman doesn't know when it's time to retire, we're willing to rely upon the voters to do the job.

We do think something should be done to junk the seniority system for determining committee chairmanships, however. Congressional chairmen wield great influence over their committees and legislation assigned to them. They should be the congressmen of greatest ability. Instead, most tend to be up in years and from one-party states or districts where incumbents rarely get defeated. Of 21 House chairmen, for example, eight are over age 70 and three are over 80.

None of our state legislatures select committee chairmen purely on seniority. Neither do any of the other parliaments of the free world. And neither should the U.S. Congress.

Let's permit an elder congressman to serve just as long as the voters want him. But let's not guarantee him a committee chairmanship and all the power that represents.

[From the Miami (Fla.) Herald, Feb. 20, 1970]

THE SENIORITY ISSUE—AGAIN

Building a better mousetrap is the fondest dream of the reformer—whether of mice or men. It's current again in a movement among liberal congressmen to abolish the seniority system.

That system builds on political longevity to decide who heads the prestigious committees of the House and the Senate. As long as Congressman X gets reelected he has a claim on his chairmanship as a better one.

As the reader-voter knows, two things happen in consequence:

First, continued seniority is a heady argument for reelection, particularly in the House and especially if your lawgiver knows his way through the maze of defense contracts, military bases, rivers and harbors and other goodies.

Second, in the long run congressional committees grow old at the top. In a speech before the National Press Club a couple of months ago, former HEW Secretary John W. Gardner pointed out that "the Speaker of the House is 78. Thirteen Senate and House committee chairmen are over 70, six of them are over 75, two over 80."

Recalling that in 1958 Congress enacted a law requiring the chief judges of federal circuit and district courts to give up their administrative duties at 70, he said that "I propose that Congress impose the same rule on its own members."

This is one solution. Selection on merit rather than age is another. Lyndon Johnson was bossing the Senate, contrary to custom, a few years after he got there. Other hopefuls do not ascend until they reach Biblical ages. And both houses have had septuagenarians—Everett Dirksen was one—who seemed to grow larger in the sunset of life.

Speaker John McCormack, frankly, has not—but he has won handily in this week's attempt for a no-confidence vote.

Some few honorables have elected to retire at 70. One is Sen. John Williams of Delaware. But they are the exceptions. In all probability Congress would have found an acceptable substitute for the seniority rule long ago if anywhere there is one. The alternative, like the burden of proof, is on the critics.

[From the Philadelphia Inquirer, Feb. 14, 1970]

ABOLISH SENIORITY SYSTEM IN CONGRESS

One of the most archaic aspects of congressional organization and operation is the seniority system. Senators and Representatives rise to the apex of power through committee chairmanships awarded not on demonstration of ability but on longevity of service on Capitol Hill.

The practical result is a roster of generally undistinguished chairmen of Senate and House committees who usually come from the states or districts where their political party is overwhelmingly dominant, and therefore, once in office, getting re-elected term after term is almost automatic. At the present time, with Democrats in the majority in both houses of Congress, the committee chairmen are mostly from one-party strongholds in the South where nomination on the Democratic ticket is virtually tantamount to election.

There is nothing partisan or sectional about the seniority system, however. When Republicans are in power, committee chairmanships go to members of Congress from states and districts, almost always outside the South, where the GOP is in dominant position.

Right now, the principal target of anti-seniority reformists is a Democrat but not a Southerner: House Speaker McCormack. He has been winning congressional elections in his South Boston district since 1928.

A number of House Democrats—many of them young and some not so young—are planning a move to unseat Congressman McCormack from the speakership and to throw out the seniority system with respect to committee chairmanships as well. The issue may come to a head at a party caucus next week.

In the interests of good government, members of both parties in both houses of Congress should take action to replace the seniority system with a plan that would award committee chairmanships and other positions of leadership solely on merit and qualification instead of congressional longevity.

While they are about it, members of Congress also should consider diminishing the arbitrary powers of committee chairmen so that they will not be able to block legislation single-handedly for personal or irrelevant reasons as is frequently the case under present rules.

THE DEATH-GRIP OF SENIORITY IN CONGRESS

"Few institutions in our national life," declares John W. Gardner, chairman of the Urban Coalition and former Secretary of Health, Education and Welfare, "are as gravely in need of renewal as the Congress of the United States."

Measures that he sees essential are the abolishment of the seniority system and the curbing of the entrenched power of committee chairmen. Under a custom—not a statute, not a regulation, but simply a custom—that has become almost sacrosanct for over a half-century, committee chairmanships in the Senate and House automatically go to the members who have managed to live the longest and to get reelected the oftenest. Wisdom, capability, qualification do not count. As a result nine of the most powerful committees in the Senate and House are ruled by men past 70 years of age.

Some of these are able and their age has impaired neither their vigor nor their ability. The less said about the qualifications of the others, the better. They could serve their country best by stepping aside.

Perhaps the first who should move out of his favored position as the top-ranking elected official of the Democratic Party is Speaker of the House John W. McCormack, who is 78 and has served 41 years in Congress.

McCormack is suffering from the scandal caused by one of his staff employes, Martin Sweig, who thought nothing of picking up the telephone in his House office and announcing "This is the Speaker calling." Sweig has been charged with conspiracy based on misuse of the power and prestige of the Speaker's office, and his case has focused new attention on influence-peddling.

But aside from the Sweig scandal, and its rub-off on the Speaker, McCormack should agree that he has come to trail's end for another reason: leadership so inept that it cannot be called leadership at all.

It is not only the Democratic Congressmen who suffer from weak leadership; it is not only the Republican Administration that runs into endless frustration because of it. It is the country that suffers. Not only the aging Speaker should go, but with him the whole rigid seniority system that holds Congressional committees in a death-grip.

[From the Baltimore Sun, July 9, 1970]

SENIORITY

Representative Gilbert Gude has joined a few others in his party in the House of Representatives asking for an end to the seniority system. He is a Republican. The Democratic Study Group (over 100 members) has been fighting for the same thing for some time. Presently the senior member of a committee is automatically named chairman whenever his party is in the majority in the full House. Both parties follow this practice, under a strict seniority system.

If this were just a question of individual rewards and prestige, it wouldn't matter much. But the distribution of power in the Congress makes committee chairmen very influential. Their impact on American government and society is almost irresistible. Therefore, the best men in each field should be the leaders of committees. Often the most senior men are the best, but not always.

Gude recommends the simplest and best replacement for the seniority system. Members of committees would vote in secret for their chairmen and ranking minority members. What could possibly be wrong with that?

[From the St. Louis Post-Dispatch, Dec. 27, 1963]

REFORMING CONGRESS

The near-breakdown in congressional effectiveness this year has caused, in addition to much criticism, a search for causes and remedies. From one viewpoint, a basic difficulty is lack of adequate party discipline. The President may try to implement his party's campaign promises. But legislators, elected on the same platform, feel free to withhold their support, and even to enter into alliances with the opposition.

In the case of the Democrats, this situation is worsened by the seniority system. Under it, those Senators and Representatives least likely to be in full accord with the White House are most likely to hold the important congressional committee chairmanships which enable them to thwart the program

of the President and the majority of the party.

A review of the current Congress has moved Walter Lippmann and others to ask how long the United States can operate under these conditions. Changes in the rules—at least the adoption of a rule which would insure a vote on all presidential proposals—could break the blockade. But the beneficiaries of the system are able, on the whole, to block rules changes which would deprive them of their power.

Aside from the President, the chief victims are the Democratic liberals in Congress who form a substantial majority of their party's representation. Stung to yet another attempt to gain control in proportion to their numbers, they are organizing a campaign committee, under Representative Bolling of Missouri, which will seek to elect more of their kind in November. They also are preparing, if possible, to "purge" the party caucus of any member who works for a 1964 presidential ticket other than the one chosen by the national convention.

This is the "minimum program" of the Bolling group. Given the opportunity, it also will seek changes in the manner of making committee assignments. And other means of breaking the grip of the old-liners will be considered. A glance into the past does not raise high hopes for success. But with ingenuity and an increase in number, the reformers may be able to start the process of change.

The reformers—the approximately 100 members of the Democratic Study Group—probably will have little trouble in raising a $50,000 campaign fund to be used in 50 closely contested districts. They also will make personal efforts on behalf of the candidates, hoping to add at least 20 seats to their strength.

Institutional changes—in fact, if not in theory—may be the most difficult. The standpatters will not be eager to transfer authority over committee appointments from the 15 Democratic members of the Ways and Means Committee to the party caucus in which all House Democrats have a say. They also will defend the seniority tradition, even though it is only 50 years old. Undoubtedly it would help if voters were more keenly aware of how their desires may be frustrated by such tools of the minority.

There does not seem to be in the Congress as a whole a sufficient realization of how it has been failing to perform its function, how it has become a brake on Government instead of an instrument of Government. A deepening of the frustration thus engendered in the electorate—indeed, the urgencies of the contemporary world—could result in the concentration of sufficient power in the Executive to set aside the influence of the Legislature.

The irresponsibility of the French parliament brought in De Gaulle as a king without a crown. What's needed, however, is not speculation about this sort of revolution, but rather greater determination to accomplish reasonable reform.

[From the Detroit News, Aug. 13, 1966]

LET'S REFORM CONGRESS

As far as they go, most of the recommendations of the Joint Committee on the Organization of Congress will help Congress do its work more effectively.

New controls on lobbyists, more expense money for travel home, increased staffing, modernizing of its budget review—all these are changes which would tend to free Congressmen from too much reliance on the help of self-seeking outsiders and to professionalize their own legislative work.

If they are to write the laws which guide our increasingly complex society, congressmen must have more objective and expert help at their fingertips. Without it they will continue to yield more and more authority to the executive branch.

The public would be the main beneficiary of recommendations to open more committee hearings to the press, to establish a committee on ethics in the House, to limit the number of powerful committee memberships one man can hold, and to shift from a three-day week to a full, five-day operation.

Because the power structure of Congress enjoys things pretty much as they are, the joint committee was not even allowed to look into such time-saving changes as electronic voting. (The leaders oppose this since it would make last minute pressure on congressmen harder to apply and prevent as much unrecorded voting as now occurs.) Nor was the committee able to evaluate the controversial seniority system or the mysterious ways in which bills are scheduled for floor action.

Nor does there appear to be any congressional interest in opening to public view the now secret "markup" sessions of the committees. It is in these often clandestine sessions that the laws are actually written and that the voting separates honest men from hypocrites.

Despite a national concern over the state of congressional ethics, the committee rejected a financial disclosure proposal which would do more than anything else to solve the problem of unethical behavior and conflict of interest.

Within its limited authority, however, the committee has offered Congress many roads to improvement. Hopefully, Congress will realize that if it expects to retain its public respect and its constitutional authority, it must act soon on these recommendations.

[From the Washington Post, May 22, 1970]

NEW ERA FOR THE HOUSE?

Belated though it is, Speaker McCormack's decision to retire at the end of his present term does him credit. He has chosen to end his long public career gracefully instead of risking a bruising fight at the age of nearly 79 both for his seat in Massachusetts and his leadership of the House. Two former Republican leaders in the House, Joseph W. Martin Jr. and Charles A. Halleck, could have testified to the bitterness of being pushed out after having lingered too long.

As he bows out after 42 years in the House and the longest service in the speakership, save only that of his predecessor, Sam Rayburn, Mr. McCormack is entitled to commendation for his devotion to duty and his fairness as a presiding officer. Trained in the politics of the old school, he manifested a good deal of skill in holding the diverse Democratic factions in the House together. He has the respect of his colleagues, his constituents and many of his countrymen.

Yet it must be acknowledged that, especially in recent years, he has loosened his hold upon the political realities. As Majority Leader in the days of the New Deal, he was passionately devoted to Franklin D. Roosevelt's programs. In the sixties and seventies, however, this son of a Boston bricklayer has been less alert to the political and social currents that have been swirling through Washington and the country. We surmise that his stature in history would have been enhanced if he had stepped down some years ago before the shabby misuse of the Speaker's office by Martin Sweig and Nathan Voloshen spotlighted his laxity and some of his colleagues felt a powerful urge to displace him.

It appears to be pretty well settled that, if the Democrats again win control of the House in November, the speakership will go to Majority Leader Carl Albert, who has the support of virtually all the other potential candidates. But this does not necessarily mean a projection of the McCormack-Albert policies in the new House. There seems to be a substantial demand for a younger and more energetic legislator in the majority leadership, and if this demand is satisfied the chief burden of pulling the majority in the House together may fall upon the No. 2 man.

Fortunately, there are a number of able and seasoned representatives in their middle years who would be equal to the task. But the scope of the job should not be minimized. The truth is that the House has coasted along in a routine and tradition-crusted fashion for so long that a major shakeup will be necessary to bring it abreast of the seventies. No one should suppose, for example, that the withdrawal of the aged Speaker will of itself break the deadening hold of the seniority system on the House. A persistent fight under able leadership and with the support of all the younger and more alert house members will be necessary if the power structure is to be reshaped so as to reflect the will of the majority.

All that can be said at the moment is that a door to modernization of the House has been opened. If a majority is disposed, it can take advantage of the opportunity to make the House once more the vital force in shaping governmental policy that it has often been in the past.

[From the San Francisco Chronicle, Nov. 12, 1968]

SOUTHERN FRIED SENIORITY RULE

It has been abundantly reported that the recent election leaves the Democratic party in comfortable control of both houses of Congress—a conclusion that is numerically unassailable but wide open to doubt in the light of crass, political reality.

For the Democratic majorities are heavy with Southern Democrats, whose viewpoints and voting records bear a striking resemblance to those of Northern Republicans when related to such issues as taxes, government spending, civil rights, gun control, foreign policy, defense, health, education, welfare, labor, the District of Columbia—and, of course, cloture. Their tendency to split from the party line was repeatedly noticeable in the last Congress, when they differed from Northern Democrats on 173 of 514 rollcalls in the two Houses.

What has happened to the Democratic party in the once solid South was inescapably plain in the recent election when not a single Southern State gave its electoral votes to Vice President Humphrey, the Democratic candidate. Yet the registered Democrats who voted for Nixon, the Republican, or Wallace, the defecting Democrat who invented the American Independent party, swung loyally and victoriously behind the Democratic candidates for House and Senate.

Thus, the old, familiar Southern fried legislators will return to the halls of Congress, bearing their accrued and powerful seniority with them. Thus, virtually every major committee of the Senate, and most of those in the House, will be headed up by a Southern chairman who is a Democrat only when in the mood.

In the Senate, these sometime Democrats from the South—and a few from the border—will head these committees: Agriculture, Appropriations, Armed Services, Banking, Finance, Foreign Affairs, Government Operations, Judiciary, Rules, Public Works and Labor. The only committee chairmen outside that regional bloc will be Magnuson and Jackson of Washington, and Bible of Nevada. None at all come from the Northeastern States that voted Democratic. In the House, the situation is quite similar.

Inasmuch as these committee chairmen

possess virtual life and death power over most legislation, there could be little comfort, indeed, for the Democratic party in its congressional majority. Its leaders may now discover wisdom in the proposal that committee chairmen be selected on some basis other than seniority.

[From the New York Times, Mar. 22, 1970]

REBELLION IN THE HOUSE

Revolutions in the House of Representatives are so rare that even the limited concession won by Democrats opposed to the seniority system must be considered an important advance. With one hand, the full caucus of the party granted the rebels the study of the seniority system they have been asking. With the other, the caucus put off the proposed deadline from June to some time after next November's elections.

The shift in date is more than dilatory; it is a calculated move to prevent liberal Democrats from making a campaign issue of this sixty-year-old blight on the Congress. Members of the Democratic Study Group in particular hoped to use the report either as an issue to take to the voters in the campaign or as a challenge to the party "establishment" on the opening day of the next Congress. Obviously a report issued in December will shut out the first of these opportunities and leave no time to prepare for the second.

In this little maneuver, however, the House leadership may have proved unprofitably slick. An accommodation that might have produced a compromise on an issue of great importance has been turned into fuel for a more far-reaching rebellion. Already nineteen House Democrats have signed a statement pledging to "reserve their options" for the House leadership elections next January until they know what reforms they can expect.

Some of these rebels talk of supporting a reform Democrat for Speaker, which could have the effect of throwing the House to the Republicans. Others might go all the way and vote for the Republican candidate. In that case Southern chairmen who have for so long taken the liberal Democrats for granted might lose their posts of power.

Whether the rebels would go this far is not for us to guess. But it is something for the House leaders to worry about. At the very least they can expect a series of moves to force an earlier deadline—and public agitation as well. All of which will keep the reform fires burning brighter than if the insurgents had resigned themselves at the outset to a moderate version of an overdue reform.

[From the Washington Post, Feb. 17, 1970]

WHO WILL ABOLISH SENIORITY?

The move to unseat Speaker McCormack with a vote of no confidence in the House Democratic caucus tomorrow appears to have evolved into a campaign for modernization of the House. In the view of Representative Waldie, who is spearheading the attack upon the Speaker, the two causes seem to merge into one. But other more experienced members are more inclined to strike a blow now at seniority and similar defects in the system, while leaving the fate of the Speaker to a more propitious moment. Herein lies the greatest hope for rescue of the House from its lamentable stagnation.

It is true that the 78-year-old Speaker has become a symbol of the organizational and procedural hardening of the arteries which afflict the House. Probably it is also true that the chance of achieving effective reform will be meager so long as he is in the driver's seat. But a change of pilots would not alone bring about the modernization that is so urgently needed. A far more serious drag on the House as a legislative body is the control of many of its major committees by conservative Southern Democrats in their seventies. As Representative Lowenstein said on Meet the Press on Sunday, "Even societies that worship their ancestors don't automatically put their ancestors in charge of their Armed Services Committees and whatnot."

Probably the most practical maneuver at the moment is that sponsored by the Democratic Study Group, which wants a carefully selected committee to review the seniority system and other organizational defects with a view to action at the beginning of the next Congress. Representative Bolling, who seems to be the most influential member of this group on this subject, has sought for years to show his colleagues that they do not need to choose between the existing confusion and a return to the dictatorship that existed prior to 1910 under Speaker Joe Cannon. There is a sensible middle ground—assignment of the ultimate power to select committee chairmen to the caucus of the party in power, from nominations made by the Speaker without regard to seniority.

In our view, the Democratic caucus could greatly enhance its standing before the public by moving in this direction. If it fails to do so, it may drop a momentous issue into the lap of the Republicans. Representative McCloskey has pointed out how vulnerable the Democrats are to a campaign against senility in the House and suggested that the Republicans could capture the enthusiasm of the younger voters by promising to abolish seniority in the House if a Republican majority is returned in November. A campaign on who could most effectively relieve Congress of the incubus of the seniority system would be welcomed with open arms.

Many Democrats may be inclined to rebuff any suggestions of reform when the issue arises tomorrow to save the face of the Speaker. But they should be fully alert to the risk they would take upon themselves by leaving this enormously popular issue to the Republicans.

[From the New York Times, Feb. 23, 1970]

ALTERNATIVES TO SENIORITY

The Democratic Study Group has postponed very briefly its attempt to do something about the seniority system, which has for so long made committees of the House of Representatives a collection of principalities, each with its own maharajah.

The group's resolution, calling for a special panel to recommend ways of making these committee chairmen responsible to their party, was sidetracked last week by a filibuster within the Democratic caucus. But the movement for reform is gathering momentum, and another effort will be made within a very few weeks.

What most of the reformers seek is a change mild enough to retain the shadow of seniority, a revered principle on Capitol Hill, but drastic enough to make even the most senior of chairmen wholly dependent on the favor of the party majority in the House. Of the several ways for achieving this purpose, three stand out in the discussions. The simplest and most likely of success calls for a yes-or-no vote in the caucus, starting with the most senior member and proceeding until a majority endorsement is reached.

The second plan would confine the contest to the three members of the committee with the greatest seniority, again with the caucus making the choice. And the third would allow the Speaker to name the chairman, subject to the voted approval of the caucus.

Clearly the last of these is the one least tainted with the seniority principle and accordingly the one that seems to us the most rational. Nomination and election by the caucus would be even more democratic, but it would also, no doubt, be the most divisive.

All these approaches—and this is their great appeal—would end the automatic tenure in power that has turned committee heads into autocrats, answerable neither to their committees nor their party nor their constituents for their conduct as chairmen.

The momentary postponement on the resolution, and the time required for the committee to do its work if it is appointed, will not be without advantage. It will provide time for the educational job that must be done, in the House and out, if the Congressional hierarchy is to be convinced—as it is already beginning to sense—that changes must be made.

Some of that job is promised by liberal Republican members who plan to make seniority a campaign issue with which to taunt the Democrats; and some by the threat of liberal Democrats to help the opposition organize the House next January unless concessions on seniority are made. Such a move would be drastic, through not without precedent.

But how effective, after all, can a liberal Democrat be in a chamber in which military spending depends on an L. Mendel Rivers, the government of Washington is left to a John McMillan, and the order of business is determined by a William M. Colmer?

[From the Seattle-Post Intelligencer, Mar. 26, 1970]

SENIORITY SYSTEM

Both Democrats and Republicans have taken tentative steps toward reform of the Congressional seniority system by indorsing review of present methods of appointing House committee chairmen.

In shaping federal legislation, committee chairmen possess vast powers. Yet many are well beyond the national norm for retirement.

Younger members of Congress are distressed and feel ineffectual in attempts to advocate progressive legislation. These men are not youngsters but mature legislators in their 30's and 40's who are excluded from the decisionmaking process by an outmolded power structure.

If aging college professors can proudly accept emeritus roles and elder statesmen of the corporate world can graciously step down to advisorial positions then it certainly seems that senior members of Congress can share with their younger colleagues some of the power and authority for national legislation.

Some chairmen have the capacity to function ably in their 70's and even their 80's. But they and the Congress probably would function even better if younger voices are heard.

Young congressmen don't ask for absolute administrative power in either the House or the Senate. But they do deserve a more active role in leadership responsibilities.

It is widely conceded that the country as a whole has a generational problem. This very well may be reflected in a Congress where younger men must grow old before they are given any real authority.

[From the New York Times, July 15, 1966]

THE TYRANNY OF SENIORITY

The jubilation of moderate and liberal forces over the evident defeat of Representative Howard W. Smith in Virginia's Democratic primary is tempered by one unpalatable by-product: under the seniority system Representative William M. Colmer of Mississippi will succeed Mr. Smith next January as chairman of the immensely powerful House Rules Committee.

If Mr. Smith compiled a matchless record for obstruction and reaction in 35 years in Congress, Mr. Colmer, a member since 1933, cannot be far behind in any contest for that distinction. He obviously would use the Rules

chairmanship as ruthlessly as Mr. Smith ever did to try to block liberal legislation from reaching the floor of the House.

It would be hard to find a better illustration of the bankruptcy of the seniority system in Congress than the probable elevation of Mr. Colmer to this key post of traffic director for House legislation. Unfortunately, however, there have been many similar examples in recent Congressional history. The point is not diluted by the fact that the evident defeat of Mr. Smith's Virginia colleague, Senator A. Willis Robertson, will promote an abler man to the Senate Banking and Currency Committee chairmanship.

Is there a hope that the Democratic leadership in January will finally support revision of the seniority system? At the start of the 89th Congress in 1965 liberal Democrats fought successfully for three changes in the House rules, but backed off from a move against seniority because Speaker McCormack and other party veterans would not support it. It may depend next January on how many of the 180 present members of the liberal Democratic Study Group—many of them freshmen who rode in on the Johnson landslide in 1964—survive in November.

Perhaps the prospect of Mr. Colmer as Rules chairman will prod even complacent Democrats into action. If the House scrapped or revised seniority, pressure would mount on the Senate to do likewise.

On the record, it would be foolish to expect any such political earthquake on Capitol Hill, though it is clear that few reforms would do so much to improve the image of Congress with the country—and the world.

[From the St. Louis Post Dispatch, Apr. 1, 1969]

THE SENIORITY HURDLE

A staff report for the Democratic Study group provides a further illustration of how the seniority system in Congress can threaten party programs and stall needed action.

As a key to this finding the report concentrates on 30 votes in the last Congress on such issues as poverty and hunger programs, education, housing and urban affairs, civil rights, consumer protection and foreign aid. These votes were tests of Democratic party platform positions, or of party unity or support of the Democratic Administration, or of liberal versus conservative positions.

The report states that Congressmen associated with the Democratic Study Group voted 91 percent behind Democratic principles in the 30 tests, while other Democrats showed only 31 percent support and Republicans 24 percent. The DSG Democrats suffered 17 defeats. And votes of Democratic committee and subcommittee chairmen alone were responsible for half of those defeats.

In fact, the report says, 42 of the 114 Democratic committee and subcommittee chairmen voted more often against than for Democratic programs. Thirty-four of them exceeded the Republicans in opposition. All but one of the 42 are from Southern and Border states, but the report says the regional distinctions seem less important than basic differences with present Democratic policies. However, it seems clear enough that the Southern Democrats are unwilling to qualify as national Democrats.

Chairmanship opposition to party programs has increased in 15 years. In the eighty-third Congress, there were no Democratic chairmen voting more often against than with their party, but the number taking this position has increased in each Congress since. Men who owe their committee leadership to their years in Congress have too often been unable to accept new answers to new problems such as those in civil rights and the poverty program.

The seniority system is, indeed, a poor method of promoting power and influence in the nation's legislature. We say this not because it disrupts party unity, but because tenure alone is not a measure of a public servant. Tenure is, too often an obstacle to new ideas, yet these are what Congress is expected to confront year after year.

[From the Cleveland Plain Dealer, Dec. 16, 1969]

BETTER TOOLS FOR CONGRESS

Modest reforms that undoubtedly would improve the performance of Congress as a study and deliberative body have been proposed by a subcommittee of The House Rules Committee.

The committee's bill makes not the slightest assault on the major flaw in congressional organization—the seniority system which determines committee chairmanships—but it does attack other weaknesses. Some of those are inadequate staff, laborious information services and authoritarian committee procedures.

Approval of the bill would help Congress keep up with the difficult task of reaching sound judgments about the increasingly complex problems facing society today.

The bill would provide Congress for the first time with an organized coordinated computer system so that members could obtain rapidly the information they need for modern lawmaking.

It would greatly expand the research services provided to Congress by the Library of Congress.

It also would increase the size of the professional staffs of Senate and House committees, including staffs of the minority members, and it would provide the money for the House members' own staffs.

Information, from staff and from legislative research services, is indispensable if Congress is to reach wise decisions, or if it is to fulfill its role as a check on the powers of the administration.

The bill also would reform committee procedures to produce more open and regular meetings, public record of voting and less voting by proxy. Exposing committee activity to greater public scrutiny would discourage the closed-door maneuvering which too often works against the public interest.

The bill also proposes that the federal government's fiscal year conform with the calendar year, and that the Bureau of the Budget and congressional committees provide five-year forecasts of the programs they recommend. This would eliminate unnecessary confusion and allow Congress to approach budget problems in greater order.

Another provision would bring Congress closer to the public by permitting radio and television broadcasting of House sessions.

All of these reforms, though modest in nature, are good and would improve congressional efficiency. They should be approved.

[From the Cleveland Plain Dealer, Mar. 22, 1970]

IMPROVING THE SENIORITY SYSTEM

Members of the U.S. House of Representatives who want to reform the seniority system have the responsibility of putting forward workable alternatives.

The Democratic party caucus has agreed to a study of the system, although those opposed to the study were able to delay the deadline for submission of the findings until after the congressional elections in November.

It is true that there are numerous abuses built into a system that makes a person a committee chairman simply because he has served on the committee longer than the other members. This is no assurance of quality leadership.

But what improvements are possible? The seniority system was instituted as a reform measure. It would not necessarily be any better to return to the days when one person or a tiny clique of powerful congressmen decided upon the committee chairmen.

Nor would it necessarily be any better to elect a chairman from among the committee members. The congressman who is most popular or able to make the most promises in return for votes may not make the best chairman.

What would be beneficial would be a system under which the most qualified congressman becomes chairman and could be removed without great difficulty if he fails to perform as he should. Moreover, it would be good to build some degree of continuity into the post of chairman. However, no suitable way of bringing about all these chances has been offered thus far.

One of the main reasons why there are so many objectionable persons serving as chairmen is because the two-party system was ineffective for so long in the South. Congressmen from that region have become entrenched in chairmanships because once elected to office they have seldom been dislodged, thereby building up the most seniority.

We would welcome an improvement upon the seniority system, but we have not yet seen one.

CONGRESS MAY MODERNIZE A BIT

There are indications that Congress may attempt some modest steps toward modernization this year.

A reorganization bill that would make some changes in the way Congress operates is slowly making its way through the House Rules Committee.

It would provide congressmen with important new information services through expansion of the Legislative Reference Service and of committee staffs, and would curb some of the power of committee chairmen.

The bill does not touch what many congressmen, particularly the younger, newer members, consider to be the basic flaw in the organizational structure of Congress. That is the seniority system which awards committee chairmanships to the men who have served longest in Congress, whatever their competency.

The House Republican Research Committee, headed by Rep. Robert A. Taft of Ohio, has appointed a 19-member task force to study the seniority system. It is to make a report before the end of the year. There is no indication yet of task force sentiment about the system.

A similar study has been started on the Democratic side by an 11-member committee appointed by Rep. Dan Rostenkowski of Illinois, chairman of the Democratic caucus. Its report is not due until January 1971. A group of liberal young Democrats, however, is pressing hard for an earlier report, early enough to be of use when Congress organizes for its next session.

Whatever the outcome of the two task force studies, the more modest reforms being considered by the Rules Committee are welcome and should help Congress in coping with the nation's increasingly more complex problems.

TOWARD A MODERN CONGRESS

The winds of change that have forced reforms in such venerable institutions as church and university are beating against Congress.

Its younger members, particularly in the House, are demanding a share of the power that is now held almost exclusively by their senior colleagues because of the system of awarding committee chairmanships solely on the basis of seniority. A group of freshmen Democrats, impatient for change, even threatens to bolt the party and vote to organize the House for the Republicans unless

Democratic leaders indicate willingness to institute reforms spreading the power around.

Some veterans who have climbed halfway up the seniority ladder call for change, worried that customs and traditions "outside of the law and the Constitution" have developed the Congress into an institution "at least one and one-half generations behind the times," as Rep. Charles A. Vanik of Cleveland put it.

He and Rep. Henry S. Reuss of Wisconsin urge the Democrats now vying for House leadership posts to take a public stand on reforms calling for selection of committee chairmen by democratic procedures in party caucus, open meetings of committees except when national security is involved, restraints on the arbitrary powers of committee chairmen, and record voting on all major bills.

These are not new ideas, nor ideas held exclusively by Democrats. A House Republican task force on congressional reform covered much of the same ground in a report prepared in 1966. Each party today has a committee of House members studying reforms, including abandonment of the seniority system, and a more modest modernization program is now taking shape in the House Rules Committee.

There is no rule of seniority, but only the custom. House rules provide only that the full House shall elect as chairman of each standing committee one of the members thereof. In practice, the House ratifies decisions already made in party caucus. And by custom, the caucus selects as chairmen the committee members with the longest service, or seniority.

At any time, the party caucus could change the custom and select chairmen on the basis of ability, or adherence to the party position on broad national issues, which is what the reformers want.

The problem is, however, that generally only the younger members can agree that this would be a desirable reform. The longer a congressman has been in office, the better the seniority system looks to him. Then he begins to argue—with good reason—that abolishment of the system would lead to log-rolling, factional fights and political trading as congressmen fought for positions of power.

One can only speculate on what evils might develop if committee chairmen were selected by vote of the caucus, or of the committee itself. Loss of continuity and popularity contests would not necessarily bring abler men and better government.

Yet drawbacks of the seniority system also are apparent. The chief one is that it destroys party responsibility. A chairman, owing allegiance to a provincial constituency and not to his party can ignore platform pledges and legislative programs advanced by party leaders.

If Congress is not ready to abandon the seniority system, and it probably isn't, it can at least initiate reforms controlling abuses of power of committee chairmen.

In sum, a compromise reform would be desirable, specifically including more open meetings of committees, decision by vote of the committee on what legislation to consider, and record voting on major bills.

[From Chicago Today, Oct. 18, 1969]

CONGRESSIONAL REFORM? O, SURE

Remember congressional reform? It got to be a moderately well-known issue last year, when a group of reform-minded younger congressmen under former Rep. Don Rumsfeld [R., Ill.] kept kicking up dust about it. Their complaint was that Congress is becoming fossilized—an unwieldly, unresponsive, generally shiftless institution in which power is largely monopolized by elderly men, particularly committee chairmen who get and keep their posts thru seniority.

But the seniority system remains untouched. Changes in rules that would weaken the life-or-death power of committee chairmen over legislation have either been dropped or watered down to meaninglessness.

We think they were quite right. Since then, however, Rumsfeld left Capitol Hill to head the office of economic opportunity, and congressional nature has taken its course. By now, the "reform" action being contemplated wouldn't raise a speck of dust in a haunted house.

The measure being readied for House action is a congressional reform bill in name only. It does some mildly praiseworthy things like abolishing the 25-cent fee for Capitol tours, providing a dormitory for page boys, and lifting the ban on radio-TV coverage of committee hearings.

Attempts to tighten restrictions on lobbying have been abandoned.

Rep. B. F. Sisk [D., Cal.], head of the subcommittee that's been working on the reform bill since May, explained: "We're political realists. We want a bill that can pass."

That may be called realism—giving up a fight immediately for fear you may lose. It's also one way to guarantee that Congress will never have to improve.

[From the New York Times, May 22, 1970]

BREEZES STIR ON CAPITOL HILL

By serving notice now of his intention to step down from the Speakership, John McCormack may well be staving off a rebellion of historic dimensions in the House of Representatives. Had he chosen to run again, there is no question that a large segment of Democrats would either have fought his re-election to the end or demanded as the price of acceptance a pledge of reforms in the institutional workings of that chamber.

In this respect the Speaker's sudden decision may be a setback. No serious student of the House questions the acute need for changes, particularly in the autocratic rule of committee chairmen and the seniority system that supports it. Representative Carl Albert, Mr. McCormack's probably successor, is a mediator rather than an innovator, a man capable of listening sympathetically to the very plaints of Congressional freshmen while he smoothes the ruffled feathers of outraged Establishmentarians. But by his very neutrality and acceptability to all factions, he presumably will conduct only a delaying action in the Democrats' most private civil war.

That war, desultory as it seems, will nevertheless continue. Regardless of who the next Speaker is, there will almost certainly be a spirited fight for the majority leadership now held by Mr. Albert. Preliminary speculation focuses sharply on Representative Dan Rostenkowski of Illinois, now head of the Democratic caucus in the House and candidate of the powers that be. A protege of Mayor Richard Daley—some think his chosen heir to Chicago's City Hall—Mr. Rostenkowski would certainly be opposed by members of the liberal Democratic Study Group as the type of machine leader they are so eager to supplant with a Congressman whose mind is more attuned to issues than to politics.

While we are mindful of Speaker McCormack's contributions in the past—especially his championing of New Deal legislation in his early Congressional days—his best days were well behind him when he assumed the Speakership. Even if his departure from that difficult and powerful office defers a planned uprising, it is nonetheless an unacknowledged recognition that, as everywhere else, fresh breezes are gaining strength—at long last—in the House of Representatives.

[From the Minneapolis Star, May 22, 1970]

MCCORMACK AND THE SYSTEM

House Speaker John McCormack, a Boston Irish politician of the old school, finally called it quits. It was a pity that he waited so long. He might have stepped out with honor. Instead, he lingered until he could no longer cut his losses.

He had lost his grip mentally. His leadership qualities, never strong, had disappeared. His health, at age 78, was poor. He had been betrayed by close associates. He was under attack by younger liberals within the Democratic party.

In a way, McCormack was more sinned against than sinning. He never questioned the seniority tradition that elevated him to a position of power and maintained him there even if he couldn't really exercise that power for good or ill. Nevertheless, the attack from the liberal flank is not so much on McCormack the symbol.

Harvard economist John Kenneth Galbraith underscored this when he told university students here that their revived zeal for working within the system for peace candidates would be a "fraud" unless they also worked to get candidates to commit themselves to attack seniority. The evil isn't only that it enables an ineffective figure like McCormack to hang on, but that effective figures like House Armed Services Chairman Mendel Rivers, D-S.C., not only hang on but build powerful empires.

Working within the system to influence changes in basic traditions (and seniority is a tradition, not a legal matter) will take long, patient hard work. This will pose a test not only for bright young activists but ultimately for the inherent capacity of the American political system to change.

[From the Rockford (Ill.) Morning Star, June 11, 1970]

SENIORITY REFORMS DUE

The issue. Reform of the seniority system in effect in the Congress of the United States.

Congressman John B. Anderson of Rockford has thrown his support behind the move for reform of the seniority system in Congress which is attracting an increasing number of members of both parties.

Opposition to the seniority system, under which members of Congress with the longest service receive leadership positions, gained momentum earlier this year when Rep. Jerome R. Waldie, D-Calif., introduced a resolution calling upon House Speaker John W. McCormack to step down.

The resolution was defeated by a 192–23 vote. Speaker McCormack made it unnecessary for another attempt when he announced May 20 he would not seek re-election to the House. He is completing 42 years in Congress.

Support for scrapping the seniority system is coming from both liberal Democrats and conservative Republicans. The liberal Democratic Study Group has called for the appointment of a caucus committee to review procedures for the selection of committee chairmen.

Rep. Paul McCloskey, R-Calif., has suggested to Rep. Gerald R. Ford, R-Mich., House minority leader, that the seniority system should be scrapped if the GOP wins control of Congress this year.

Anderson pointed out that the average age of chief executives of the nation's largest businesses is 57, while the average age of House Committee chairmen is over 70.

"Something is wrong with the system which doesn't make some provision for retirement of committee chairmen after a certain age," he said.

Anderson favors modification of the procedure so that each committee could choose a chairman by secret ballot from among the five most senior majority party members. That would be a big improvement.

The ranks of Congress are being filled by a growning number of younger men and women. Many have exceptional ability, but they are thwarted by a system which re-

quires them to be around for 20 years or longer before they have a voice in the leadership.

The seniority system will not die easily, but the voices for a change are growing louder. When the new Congress is organized next year, there may be a change.

[From the Cleveland (Ohio) Plain Dealer, June 22, 1970]

TOWARD A MODERN CONGRESS

The winds of change that have forced reforms in such venerable institutions as church and university are beating against Congress.

Its younger members, particularly in the House, are demanding a share of the power that is now held almost exclusively by their senior colleagues because of the system of awarding committee chairmanships solely on the basis of seniority. A group of freshmen Democrats, impatient for change, even threatens to bolt the party and vote to organize the House for the Republicans unless Democratic leaders indicate willingness to institute reforms spreading the power around.

Some veterans who have climbed halfway up the seniority ladder call for change, worried that customs and traditions "outside of the law and the Constitution" have developed the Congress into an institution "at least one and one-half generations behind the times," as Rep. Charles A. Vanik of Cleveland put it.

He and Rep. Henry S. Reuss of Wisconsin urge the Democrats now vying for House leadership posts to take a public stand on reforms calling for selection of committee chairmen by democratic procedures in party caucus, open meetings of committees except when national security is involved, restraints on the arbitrary powers of committee chairmen, and record voting on all major bills.

These are not new ideas, nor ideas held exclusively by Democrats. A House Republican task force on congressional reform covered much of the same ground in a report prepared in 1966. Each party today has a committee of House members studying reforms, including abandonment of the seniority system and a more modest modernization program is now taking shape in the House Rules Committee.

There is no rule of seniority, but only the custom. House rules provide only that the full House shall elect as chairman of each standing committee one of the members thereof. In practice, the House ratifies decisions already made in party caucus. And by custom, the caucus selects as chairmen the committee members with the longest service, or seniority.

At any time, the party caucus could change the custom and select chairmen on the basis of ability, or adherence to the party position on broad national issues, which is what the reformers want.

The problem is, however, that generally only the younger members can agree that this would be a desirable reform. The longer a congressman has been in office, the better the seniority system looks to him. Then he begins to argue—with good reason—that abolishment of the system would lead to log-rolling, factional fights and political trading as congressmen fought for positions of power.

One can only speculate on what evils might develop if committee chairmen were selected by vote of the caucus, or of the committee itself. Loss of continuity and popularity contests would not necessarily bring abler men and better government.

Yet drawbacks of the seniority system also are apparent. The chief one is that it destroys party responsibility. A chairman, owing allegiance to a provincial constituency and to his party can ignore platform pledges and legislative programs advanced by party leaders.

If Congress is not ready to abandon the seniority system, and it probably isn't, it can at least initiate reforms controlling abuses of power of committee chairmen.

In sum, a compromise reform would be desirable, specifically including more open meetings of committees, decision by vote of the committee on what legislation to consider, and record voting on major bills.

[From the Seattle Times, May 22, 1970]

A SYMBOL STEPS DOWN

Issue. Congressional reform

The decision of House Speaker McCormack to retire from Congress next year was one among many wise decisions that senior statesman has made in a notable 42-year congressional career.

It is not to detract from McCormack's impressive record of service to note that there comes a time for every leader to step down and that McCormack at last has recognized this fact.

The elderly Speaker had become the living symbol of the whole archaic seniority and committee system under which Congress operates. He was the principal target of the movement toward congressional reform.

Now that the symbol is stepping down, that ought not to mean that the reform efforts should be moderated.

Much is being written about the individual congressmen who are vying for the various openings to be expected in a reshuffling of House of Representative leadership posts (assuming the Democrats win control of the next Congress).

Of greater long-range importance than the matter of what individuals occupy what posts, however, is the need for Congress to shed its stifling and anachronistic ways and follow the lead of many other American institutions in adopting modern means of getting things done.

Under the existing seniority system, the average committee chairman is 70 years old. The process of advancement to positions of great power simply by holding on long enough to a congressional seat is obviously nonsensical.

Congress is extraordinarily jealous of its own prerogatives and unfailingly zealous in demanding detailed answers from the executive branch to the most minute questions raised by its members.

Yet Congress dons blinders when there are questions concerning its own failures to respond to the challenges of the times.

But there is yet hope for a meaningful measure of reform. That hope lies in the sudden interest on the part of most congressmen in putting on a great show of opening their office doors and listening to the voices of young people.

If the lawmakers really will listen, they will find that the archaic congressional system is one of the principal targets of youthful concern.

Congress must shed its bottleneck role; in a narrow sense, for its own sake, and, in a far larger sense, for the sake of our three-branch republican form of government.

[From the Louisville (Ky.) Courier-Journal May 15, 1970]

REORGANIZATION, NOT REFORM, ON CAPITOL HILL

It's probably human nature that more people seem to get agitated at the rise in congressional salaries—the going rate is now $42,500—than over how our elected representatives go about their business. The first is measurable: "That bum isn't worth a dollar an hour." The second is a kind of byzantine labyrinth designed to perpetuate inefficiency, reward old age and bewilder the average citizen.

It comes as no great shock, then, that the reorganization bill now before the House would oil the machinery a bit but not replace all those broken gears. It would open the door to computers and a stronger research arm and televised committee hearings, but it wouldn't tamper with the seniority system from which most of the troubles flow.

POWER VESTED IN ELDERLY

Any business that put all its oldest employes in the top spots, with no question of merit, would not only ask for trouble but deserve it. Yet Congress rocks placidly along its real power vested mostly in elderly men who get re-elected forever because the areas they serve are safely remote from the distresses of an increasingly urban society.

It would be pleasant to think that televised committee hearings would so expose the anachronisms of Congress to public view that the resulting clamor would force instant reform. But the Senate has been televising these things for two decades to no such avail. Perhaps that's because so many of the senior men, such as judiciary's Sen. James Eastland, don't need the publicity and find they can get more done when the door is closed.

Every other year, when a new crowd of Young Turks shows up on Capitol Hill, there's talk of dismantling the seniority system; of toppling such over-the-hillers as 78-year-old Speaker McCormack. And maybe one of these days the miracle will happen. But the lure of a little seniority for himself, as those above him on the ladder are defeated or retire or die, has a way of turning today's reformer into tomorrow's standpatter.

Congress is improving the arduous lot of the representative and senator, giving him more staff, making his pay more realistic, speeding the flow of information on which his decisions hinge. It also has taken the first tentative steps, via the two-year-old public disclosure act, to publicize at least some of the conflicts of interest that too often abuse the national good.

So the workings of Congress slowly improve, like an old car with a new clutch. But the driver, sad to say, still doesn't ask the passengers where they want to go.

[From the Toledo (Ohio) Blade, Jan. 3, 1970]

SENIORITY POWER, LTD.

Seniority, as it reflects experience, ability, and leadership, commends itself as a worthy and valued attainment. Indulged in the extreme, however, it runs the hazards of age and the erosions of physical and mental capacities. Congress, with its time-honored committee chairman system that rewards seniority with tremendous power, is again under attack on that score.

The fact that at the start of the new year 15 committee chairmen, nine in the House and six in the Senate, will be over 70 is adding fuel to criticism that comes within Congress and the Administration as well as from concerned citizens.

Such proposals as that of John Gardner, former Secretary of Health, Education, and Welfare, to bar anyone over 70 from serving in Congress are not likely to succeed. And the exemplary act of Sen. John J. Williams in announcing his retirement at age 65 because of his strong feelings about age will not set off a stampede to follow suit.

This suggested hewing to a hard and fast age limit is not necessarily a wise solution in the case of members of Congress because of the diverse physical constitutions and mental capacities of individuals. After all, it rests with constituents to decide if and when a representative or senator should be involuntarily retired.

But committee chairmanships within Congress are another matter. The vitality of Congress as a responsive body rests with the committee system in which the major legislative work is done.

Senators and representatives who for years on end have been returned to Congress virtually without challenge from their home districts have gained top seniority. The system not only has produced unbalanced numbers of chairmen representing southern and southwestern constituencies where one-party voting predominated for decades; it has also produced a cluster of aging chairmen without regard to ability or leadership qualities.

The instances of abuse and incompetence are sufficiently widespread to warrant breaking this grip. An age limit set on committee chairmen, preferably at 65, will terminate the virtual lifetime leases held by some and restore the leadership to experienced but younger men. This stripping of an elderly congressman's chairmanship powers and influence might also persuade his constituents to cast about for new blood. It could bring an infusion of younger men into Congress whose contributions had something more to recommend them than the attainment of seniority.

In any event, a turnover of committee chairmanships by virtue of an arbitrary age limitation would remove injuries to pride or reluctance to offend honored elder statesmen, at the same time protecting against indefinite entrenchment of dictatorial powers such as have thwarted committee efforts and, at times, even the will of Congress.

[From the Chicago Sun-Times Jan. 14, 1970]

McCormack's Time Has Come

Despite his age and charges that his office was used as a base for influence peddling, John W. McCormack is planning to seek reelection as speaker of the House next January.

McCormack was 78 on Dec. 21. Younger Democrats have argued that he is hopelessly out of touch with the problems of this swift-changing age. McCormack is accused of letting conservative elements in the party wield too much influence, particularly Southern committee chairmen who retain powers to be reckoned with because of the seniority system.

The seniority system itself has no place in a government that must be responsive to change. Because a congressman has served long years in Washington does not necessarily endow him with the wisdom and knowledge required to help guide the nation's destiny. Congress should not let length of service be the sole criterion for selecting committee chairmen.

Congressmen ought to re-examine periodically the qualifications of their leaders without regard to the length of their service. The spirit of the seniority system no doubt accounts in some part for the loyalty of many House Democrats to McCormack. His friends claim he has the support of 167 out of the House's 245 Democrats and can easily be re-elected speaker.

The indictment of McCormack's longtime trusted aide and a lawyer-crony on charges of criminal conspiracy and perjury in connection with allegations of influence peddling should certainly give pause to McCormack's supporters. This embarrassment to McCormack and to the Democratic Party should increase the antagonism that exists toward the speaker among younger Democrats.

This antagonism showed last month during a meeting of a few House members. McCormack said to younger members, "I think some of you want to run the House."

"That's perfectly true, some of us do," retorted Rep. Frank Thompson Jr. (D-N.J.), who is 51 and a combat veteran of World War II and Korea.

We believe it's a fair statement to say men like Thompson are in closer touch with the problems of modern America than McCormack who first went to Congress in 1928. The Sun-Times long has advocated that older statesmen must step down to make way for new and able leadership. McCormack's time has come. We endorse efforts of Democrats who are willing to challenge the system of seniority and who want a change.

[From the Salt Lake City Deseret News, Feb. 12, 1970]

Can Congress Modify the Seniority System?

Congress often is notorious for ignoring its own advice.

As a case in point, 12 years ago it passed a law requiring chief judges of federal circuit and district courts to relinquish their jobs at age 70.

But the Congress never got around to requiring the same rule for its own members. And, indeed, it is such a bastion for the seniority system that at least nine of the most powerful committees in Congress are controlled by men 70 or older. Six chairmanships are held by men past 75, two by men past 80.

That would not be so bad if ability instead of length of service were the determining factor. Often, men of advanced years can and do remain highly effective in leadership positions.

But not all do. House Speaker John McCormack, for example, now 78, has lost most of his effectiveness.

"The House is no longer governed," says one Congressional aide. "Nobody can be sure any longer when major legislation will be brought before the House. It is a leaderless, confused group of competing bloc interests, and something has to give."

Missouri's Representative Richard Bolling has proposed what he calls "simple reforms" of the Democratic Party within the House which might at least be a step in the right direction. His plan would, in effect, pick committee chairmen by nomination of the Democratic leader and a majority vote on those selections by fellow party members. Age would then be no automatic bar. It shouldn't be. But ability would also be a factor.

Some such system must be devised if Congress is to accomplish the tasks expected of it in an increasingly complex society. The slow pace of the 91st Congress during its first session, for example, can be attributed at least in part to their prime.

[From the Philadelphia (Pa.) Evening Bulletin, Feb. 17, 1970]

Reform in the House

An attempt to get a vote of no confidence in the Democratic leadership of the U.S. House of Representatives may grab most of the headlines about tomorrow's meeting of the House Democratic caucus.

But of perhaps more importance is a tame-sounding resolution calling for a study on alternatives to the present seniority system of picking House committee chairmen.

The challenge to the leadership of Speaker McCormack, Majority Leader Albert and Majority Whip Boggs is not insignificant, of course. The deficiencies that many see in the Speaker's performance have long been a subject of concern and debate. And a number of House Democrats are worried lest it be made a political issue in their own campaigns this fall.

But if the challenge picks up a score of votes in the caucus, it will surprise most of its backers. Such confrontations do not appeal to most congressmen, and many would probably prefer a straight vote on the man at the beginning of the new session next January.

The caucus, however, just might start ventilating the cobweb-hung stuffiness of the seniority system. It will be interesting to see what the House, with its occasional zeal for reforming others, will choose to do for itself.

The resolution merely asks that a study committee be appointed to investigate other ways of choosing committee chairmen and report back in the spring.

The first question is whether the proposal will be allowed to come to a vote. If the caucus leadership packs it with congressmen who find cobweb-hung stuffiness congenial, then the reformers will have to try a new trick.

Leaders of the Democratic Study Group, an informal collection of liberals have suggested that the caucus be given veto power over chairmen. If a chairman were voted down, the next senior Democrat member would be voted on, and so on. (The Republicans would have to make up their own rules for a GOP-controlled House.)

That could be an acceptable alternative. Or how about a vote of the Democratic members of the committee in question? In any case, there is a need to replace the seniority system and brush away the cobwebs.

[From the Washington Post, Feb. 17, 1970]

Who Will Abolish Seniority?

The move to unseat Speaker McCormack with a vote of no confidence in the House Democratic caucus tomorrow appears to have evolved into a campaign for modernization of the House. In the view of Representative Waldie, who is spearheading the attack upon the Speaker, the two causes seem to merge into one. But other more experienced members are more inclined to strike a blow now at seniority and similar defects in the system, while leaving the fate of the Speaker to a more propitious moment. Herein lies the greatest hope for rescue of the House from its lamentable stagnation.

It is true that the 78-year-old Speaker has become a symbol of the organizational and procedural hardening of the arteries which afflict the House. Probably it is also true that the chance of achieving effective reform will be meager so long as he is in the driver's seat. But a change of pilots would not alone bring about the modernization that is so urgently needed. A far more serious drag on the House as a legislative body is the control of many of its major committees by conservative Southern Democrats in their seventies. As Representative Lowenstein said on Meet the Press on Sunday, "Even societies that worship their ancestors don't automatically put their ancestors in charge of their Armed Services Committees and whatnot."

Probably the most practical maneuver at the moment is that sponsored by the Democrat Study Group, which wants a carefully selected committee to review the seniority system and other organizational defects with a view to action at the beginning of the next Congress. Representative Bolling, who seems to be the most influential member of this group on this subject, has sought for years to show his colleagues that they do not need to choose between the existing confusion and a return to the dictatorship that existed prior to 1910 under Speaker Joe Cannon. There is a sensible middle ground—assignment of the ultimate power to select committee chairmen to the caucus of the party in power, from nominations made by the Speaker without regard to seniority.

In our view, the Democratic caucus could greatly enhance its standing before the public by moving in this direction. If it fails to

do so, it may drop a momentous issue into the lap of the Republicans. Representative McCloskey has pointed out how vulnerable the Democrats are to a campaign against senility in the House and suggested that the Republicans could capture the enthusiasm of the younger voters by promising to abolish seniority in the House if a Republican majority is returned in November. A campaign on who could most effectively relieve Congress of the incubus of the seniority system would be welcomed with open arms.

Many Democrats may be inclined to rebuff any suggestions of reform when the issue arises tomorrow to save the face of the Speaker. But they should be fully alert to the risk they would take upon themselves by leaving this enormously popular issue to the Republicans.

[From the Lincoln (Nebr.) Star, March 23, 1970]

SENIORITY REFORM SOUGHT

The seniority system in Congress—under which great power is often vested in elderly men—has come under attack from various quarters, including a group of youthful Democratic rebels in the House and Nebraska's Third District Rep. Dave Martin, a Republican.

Martin, convinced that men in their 70's should make way for younger talent and concerned that many of the elderly members are committee chairmen, has proposed a constitutional amendment under which a person could not begin a Senate term after reaching age 69 or a House term after reaching 70, thus setting a mandatory retirement age of 74 for senators and 71 for House members.

We are not so sure that a mandatory retirement age, like a limit on terms of office, is a good thing. But it's obvious that a system that rewards age while many times overlooking ability is a bad thing.

In their bid to do something about what one termed the "antiquated people and antiquated machinery," 19 Democratic rebels have served notice that their votes cannot be taken for granted when the House reorganizes next January following the fall elections. They might go as far, they warn, as voting for a Republican for speaker if a study of the seniority system is not reported to the Democratic caucus prior to the elections.

The party caucus last week, with the support of the leadership, voted in favor of the study, but asked that the report be delayed until January. The 19 younger Democrats want the study completed by June so it can be digested before leaders are elected next term and so that Democrats can make it a campaign issue in the fall. A delay until January, they feel, will put off reform for another two years.

The pressure being exerted may not be enough to sway the majority party into initiating a reform movement, but the junior members have to be given credit for trying. Reform of the seniority system is long, long overdue.

[From the St. Petersburg (Fla.) Times, Mar. 23, 1970]

CHALLENGE TO SENIORITY: ORDER IN THE HOUSE

A group of reform-minded Democratic members of the House of Representatives has shown the seriousness of its intent to challenge the seniority system.

Nineteen determined, mostly young Democrats have threatened to upset their party's control of the House if careful consideration is not given to a study of committee organizations, with specific reference to "the custom of seniority."

The liberal representatives are concerned with some justification, that the study authorized by the House Democratic leadership could become a meaningless exercise—a paper concession to cries for reform.

Florida's Rep. Sam Gibbons had provided the House with a compromise resolution which broadened the narrow view of the entrenchment, yet satisfied the leadership that this would not be a shotgun attack on their seniority system.

Gibbons thus helped avoid a nasty party-split which would have polarized both reformers and stand-patters.

However, those who believe the time is long overdue for real reforms in the congressional committee system were set back by a modifier tacked on to the House resolution which called for the study. It put off the reporting date for the seniority study from June to January.

Sponsors of the resolution wanted the report to be delivered in time to do something about the system before the next Congress is reorganized. January would not only be too late for that, it would put any reform action off for at least another year.

There is new blood in the Congress which is boiling for a more modern system of representation for its constituents.

There is a new interest in the people who want representatives to have power derived from ability, not just through time on the job.

The seniority system has been responsible for some of Congress' worst excesses. It has allowed regional domination of important committees by members from the South, where there was seldom any challenge in politically safe Democratic districts. It has replaced responsibility with rote reelection of Speaker and automatic risings to chairmanships.

Failure to support party leadership, to the point of turning over House control to the opposition is a serious act.

But it is a measure of the strength of the movement for congressional reform, and should be considered for its seriousness by the Democratic leadership.

[From the Los Angeles Herald Examiner, March 26, 1970]

SENIORITY SYSTEM

Both Democrats and Republicans took tentative steps toward reform of the congressional seniority system last week by endorsing review of present methods of appointing House committee chairmen.

In shaping federal legislation, committee chairman possess vast powers. Yet many are well beyond the norm for retirement.

Younger members of Congress are distressed and feel ineffectual in attempts to advocate progressive legislation. These men are not youngsters but mature legislators in their 30s and 40s who are excluded from the decision-making process by an outmoded power structure.

If aging college professors can accept emeritus roles and elder statesmen of the corporate world can graciously step down to advisorial positions then it certainly seems that senior members of Congress can share with their younger colleagues some of the power and authority for national legislation.

Some chairmen have the capacity to function ably in their 70s and even their 80s. But they and the Congress probably would function even better if young voices were heard.

Young congressmen don't ask for absolute administrative power in either the House or the Senate. But they do deserve a more active role in leadership responsibilities.

It is widely conceded that the country as a whole has a generation problem. This very well may be reflected in a Congress where younger men must grow old before they are given any real authority.

[From the Buffalo Evening News, May 22, 1970]

HOUSE SPEAKER STEPPING DOWN

The announcement of Speaker John W. McCormack that he will retire from the House at the end of this year should substantially broaden opportunities for overdue and highly desirable institutional reforms in Congress.

Throughout his 42-year career on Capitol Hill, the gracious Mr. McCormack has remained loyal to his own personal code, surely a mark of steady conviction, and, as President Nixon said, the nation owes the Speaker a debt for his "statesmanship and patriotism."

At the same time, however, on-rushing social and political events have left Mr. McCormack somewhat out of touch and, at 78, he has become something of a symbol of the iron system of seniority in the House at a time when reasoned challenges to that system have mushroomed. Of 21 chairmen of standing committees in the House, for example, eight are 70 years or older. Moreover, Mr. McCormack, while not personally involved, was damaged by recent charges that an old friend and trusted aide had used his office as a base for influence peddling. This raised questions about whether he adequately controlled activities even in his own office.

A source of widening differences between the speaker's leadership and many Democrats and Republicans in the House relates to his unwillingness to consider broad institutional reforms in Congress. A couple of years ago, for example, a very modest reorganization bill, already approved by the Senate, was quietly buried by the speaker and Rep. William Colmer, chairman of the powerful Rules Committee. Nor has urgent public concern over ethical standards for House members won adequate legislative response.

No doubt Mr. McCormack's retirement will trigger a scramble for power among a number of potential Democratic successors and those intent on reshuffling the whole leadership hierarchy.

But a more important consideration, it seems to us, is that now the chance for various internal reforms has brightened. Whether Democrats or Republicans win a majority of House seats in November, the leadership emerging next January will be new, anxious to cultivate public support and approval, and with significantly fewer loyalties to the past. A part of achieving that end should include facing up squarely to the challenge of institutional change.

[From the Miami Herald, May 22, 1970]

AS SPEAKER JOHN STEPS DOWN

John W. McCormack was born in 1891, entered public life in 1917, and was elected to Congress in 1928. He has served there longer than most Americans have lived.

For Mr. McCormack to retire now, at 78, would seem to be an attractive sunset for him, and a service to the nation.

His age alone does not prompt us to take this view, for the experience of his years no doubt has given him wisdom that could well be used by younger colleagues. But it makes it more difficult for him to be representative of a young country in so powerful a position as Speaker of the U.S. House Representatives.

The median age in the United States is 27. Congress has passed laws making it mandatory for some civil servants to retire at 70. A survey of 25 of the nation's top corporations shows that the average age of their presidents is 57. These statistical straws do not by any means indicate that a man of 78 cannot understand the mood of his country, but they do quite clearly suggest it is more difficult for him.

Aside from other considerations, Mr. McCormack had developed into the national symbol of procedural restraints that inhibit the House as a whole in reflecting the will of the nation as a whole.

Specifically, he had become the single major target for attacks on the seniority system that have been mounted by younger congressmen. This system allows congressmen to rise to powerful committee positions simply on the basis of how many times they are re-elected. Years in office count more than skill and leadership.

The process of re-election does not offer any surety of leadership. Rather, it has often been due to a Congressman being from a "safe" district. This was especially true in the old one-party South, and in the political machine areas of the North. So repeated re-election carried no other guarantees of quality.

Mr. McCormack himself seemed to make at least grudging recognition of this when he endorsed the proposal of some rebelling congressional Democrats that the seniority system be subjected to study. Eleven Democrats in Congress will make that report after the November elections. It was the nearest thing to success the rebels ever achieved.

Now, with Mr. McCormack's retirement, the question has new life and the study may have new significance. It seems to us that it should, for Congress in these trying times cannot afford any artificial barriers between it and the public will. Tradition alone should not keep them there.

[From the Roanoke (Va.) Times, May 22, 1970]

McCormack Retirement Is Good News; Tired-Blood Sickness in House Remains

John McCormack, at 78, symbolizes practically all that's wrong with the House of Representatives: All-powerful by virtue of seniority alone, he is old and sickly, inflexible in outlook, a stereotype holdover from Irish Boston's ward-heeling politics of the Great Depression.

McCormack was already too old when he ascended to the House speakership in 1962. But because the fruits of the House vineyard are tasted only by colorless and patient men—men who hail from safe election districts and climb quietly through the committee ranks over a span of several decades—McCormack was the automatic choice as Sam Rayburn's successor.

So it was, for a time, that McCormack in the Sixties was only a couple of heartbeats from the presidency—this because the presidential succession ladder then mistakenly ranked House speakers immediately behind a vice president as backup president. And so it was, on Nov. 22, 1963, that for a moment it was thought that Lyndon Johnson as well as John F. Kennedy had been the target of an assassin's bullets, and that, incredibly, this Pleistocene politician from Boston might be president of the United States.

It did not take long for Congress, and the country, to repair the constitutional oversight on presidential succession. But, such is the paralysis of the House in attempts to reform itself, it has taken this long a time, an influence-peddling scandal involving the speaker's closest aide, and finally a self-imposed retirement, to bring an end at last to the sad rule of John McCormack.

"Few institutions in our national life are as gravely in need of renewal as the Congress of the United States," John Gardner has written. Yet, except among younger House members, there is little sense of urgency; little recognition that McCormack and the other tired old men in the House's inner-sanctum, and the system that brought them to power, are chiefly responsible for the low esteem in which the country holds the lower legislative branch of Congress.

As Gardner once noted, "these men are full of years and honors. They can serve their country best by stepping aside; that would be patriotism at its highest." But because of stubbornness, self-pride and self-deception, they stay. So it is that, including McCormack, nine of the most powerful men in the House are over 70.

Even southern conservatives, who have jealously nurtured the seniority system as a means of maintaining their control of Congress, finally have begun to sense that John Gardner and other reformers may be right. No speaker was ever voted out of office, and so it was doubtful that even McCormack's non-leadership would ever have prompted the tradition-conscious House to violate that custom. But soon even traditionalists are going to have to permit an overhaul of House machinery, simply because the pressures of the times and the anger of the younger members require it.

With college-age activists swarming all over Capitol Hill trying to get Congress to reclaim leadership that a previous generation of liberals shifted to the White House, McCormack has shown an exquisite sense of timing in making his impending retirement official. Others in Congress, in their seventies and eighties, should quickly follow McCormack's example. And, as the necessary leadership changes are made, the entire House ought not to miss this rare opportunity to treat the tired-blood, institutional diseases that needlessly bring the McCormacks to power.

[From the Rapid City (S. Dak.) Journal, June 25, 1970]

Both Parties Seem Intent Upon Altering House Seniority System

Since South Dakota will send two freshmen representatives to the U.S. Congress next year it is interesting to note that alternatives to the House seniority system are being examined.

The move is part of the winds of change beginning to blow in the tradition-bound House of Representatives. The decision of 78-year-old speaker John W. McCormack to step down at the end of the session will remove a prize symbol of the Old Guard. The unresolved question is whether the new breeze will be strong enough to topple the seniority system that places the control of Congress in the hands of aging men.

For the first time in recent years, the time-honored method of selecting committee chairmen—the basis of the House power structure—is under concerted attack by Democrats and Republicans. Both parties have set up groups to study the system by which men advance to key posts by longevity of service rather than by merit.

Power in the House now rests largely in the hands of men born in the last century or shortly after the beginning of the present one. Of the 21 committee chairmen, three are in their 80's, six are in their 70's, nine are in their 60's and only three are in the 50's and 40's. Southern Democrats from one-party districts are chairmen of one-third of the committees.

The seniority system became established in the House after 1911. Revolting against the autocratic Republican speaker, Joseph Cannon of Illinois, the House stripped him of his power to appoint committee chairmen. Instead, it was vested in a committee on committees. Since World War II, the seniority rule has been strictly followed although there is no rule requiring it.

Bitterness and frustration among younger members of the House who feel they are smothered by those born in the last century have been responsible for the pressure brought upon both parties to establish committees to study the seniority system.

The issue is likely to come to a head sooner than the leadership expected. A California Democratic congressman is planning to introduce amendments to a congressional reform bill due for debate in July that will call for committee chairmen over 70 to step aside. This would reduce the average age of the chairmen from 68 to 60 years.

The fact both parties have started competing on the issue is a sign the generation gap is stirring on Capitol Hill at last.

[From the New-Bedford (Mass.) Standard-Times, June 26, 1970]

Younger Leadership Needed

Next month, triggered in part by proposals of Rep. Thomas M. Rees, D-Calif., the House of Representatives is expected to debate amendments to a congressional reform bill that will call for committee chairmen over 70 to step aside. If enacted, this change in the basis of the House power structure would reduce the average age of the chairmen from 68 to 60 years.

Power in the House now rests largely in the hands of men born in the last century or shortly after the beginning of the present one. Of the 21 committee chairmen, three are in their 80s, six are in their 70s, nine are in their 60s, and only three are in their 50s and 40s. Southern Democrats from one-party districts are chairmen of one-third of the committees.

Bipartisan bitterness among younger members of the House had led to pressure on both Democratic and Republican leadership to study the seniority issue. Rep. James H. Scheuer, D-N.Y., undoubtedly voices the frustration of many junior members on both sides of the aisle when he complains that, "This Congress abounds in capable men in their 30s, 40s and 50s, but they are smothered by the dead hand of those born in the last century."

The generation gap has been a long time getting to Capitol Hill. It is to be hoped its tardy stirrings will produce a more proportionate voice for younger members. We are inclined to agree with John W. Gardner, head of the Urban Coalition, that "few institutions in our national life are as gravely in need of renewal" as the Congress of the United States and the best first step is an end to the seniority system.

Generation Gap in Congress

Probably no institution is more important to the ongoing functions of America's national life than the United States Congress for it represents the very heart of representative government. Paradoxically, probably no institution is in greater need of renewal than is that same Congress.

For the first time in recent history, the traditional method of selecting committee chairmen, which is the basis of the power structure in Congress, is under concerted and bipartisan attack. Public hearings have been started by a task force set up to examine alternatives to that power structure—the seniority system.

Under attack will be the time-honored system in which legislators advance to positions of power solely because of longevity of service. Merit and ability have nothing to do with it.

Power in the House of Representatives now rests largely in the hands of men born last century. Of 21 committee chairmen, three are in their 80s, six in their 70s and nine in their 60s. Only three are in their 40s or 50s. One-third are from one-party districts in the Deep South.

Facing the task force will be the job of determining a formula which will honor a matured legislator without defining that honor on age alone. Some of those men in their 70s and 80s remain capable and their counsel cannot be shunted aside. But the concern is

pointed toward those who have little to offer save seniority.

Then there is the nagging realization that other facets of our society are setting up mandatory retirement deadlines based solely on age. Already in the mill is an amendment to a proposed congressional reform bill which would ban committee chairmen who have reached their 70th year. They would not be denied committee membership, just the rigors of chairmanship.

There are winds of change blowing in Congress. The unresolved question is whether this new breeze wafting in the legislative generation gap will be an ill wind that bloweth no man good.

[From the Providence (R.I.) Journal, May 24, 1970]

AFTER MCCORMACK

House Speaker John W. McCormack has made the right decision. At the age of 78 and after 42 years of service in the House, he is stepping aside into a well-earned retirement.

It is somewhat unfortunate that a few discordant notes have accompanied the act of retirement. Liberals in the House have been prodding the speaker to move over and make way for more youthful leadership. Politicians with an eye on the big chance had been contemplating a face-off with Mr. McCormack in his own 9th Congressional District in Massachusetts. There is, too, the embarrassing evidence that influence peddlers had abused the speaker's friendship and used his office for their schemes.

But these discordant notes are of small importance against Mr. McCormack's long and faithful service to his district, his party and his country. It is a record that has won for him the respect of his colleagues and the gratitude of the nation.

Mr. McCormack's retirement has touched off the usual repercussions. A scramble has developed in the 9th district where the prospect is that a dozen or more candidates will compete for the House vacancy. Another scramble may develop next January when the House Democrats meet in caucus to elect a new speaker.

A more significant result of the retirement may be a new examination of the congressional system which puts a high value on longevity and lifts many elderly men, long past the usual age of retirement, to places of influence.

It is not disrespectful to Mr. McCormack to observe that he showed the effects of his years and that he has not lately been a forceful and energetic speaker. It could hardly be otherwise, for no man at 78 can be expected to display the vigor and alertness that were his at an earlier period.

The point is that a system suffers whenever considerable numbers of its positions of influence are allocated to men of advanced age, and the present congressional system suffers from precisely that malady.

Five Senate committees currently are headed by chairmen over the age of 72. Three House committees are headed by chairmen over 80, and six others by men over 70.

Various unsuccessful attempts have been made to revise the congressional seniority system and the method of selecting committee chairmen. Typical was a measure introduced in the Senate three years ago which would have fixed 70 as the maximum age for a committee chairman; it was defeated overwhelmingly with only one affirmative vote.

And yet, despite the fierce resistance which Congress shows toward reform and its tenacious clinging to traditional ways, the evidence multiplies that reform is absolutely essential in this area if Congress is to play a responsible role in these troubled times when so many of our institutions are being shaken by change.

Mr. PACKWOOD. Mr. President, time does not allow me to enter all of the editorials from various papers in the United States stating their opposition to the seniority system. I would like, however, at this point to read a representative list of those newspapers that have gone on record as opposing the Senate's seniority system:

The Eugene (Oregon) Register-Guard.
Portland Oregonian.
Oregon Journal.
The Salem (Oregon) Capitol Journal.
Miami Herald.
Philadelphia Inquirer.
Baltimore Sun.
St. Louis Post-Dispatch.
Detroit News.
Washington Post.
San Francisco Chronicle.
New York Times.
Seattle Post-Intelligencer.
Cleveland Plain Dealer.
Chicago Today.
Minneapolis Star.
Rockford (Illinois) Morning Star.
Seattle Times.
Louisville Courier-Journal.
Toledo Blade.
Chicago Sun-Times.
Salt Lake Deseret News.
Philadelphia Evening Bulletin.
Lincoln (Nebraska) Star.
St. Petersburg Times.
Los Angeles Herald Examiner.
Baltimore News-American.
Buffalo Evening News.
Roanoke (Virginia) Times.
Rapid City (South Dakota) Journal.
New Bedford (Massachusetts) Standard-Times.
Columbus (Ohio) Dispatch.
Providence (Rhode Island) Journal.

Finally, Mr. President, as evidenced by letters we receive from our constituents, from comments we hear not only in our home States but throughout the Nation, and from other notice that we, as politicians, cannot fail to be aware of, it is obvious that the American public also repudiates the seniority system.

So, Mr. President, what is it that every civilized and uncivilized government in this world have in common? What is it that every free government and every dictatorial government have in common? What is it that every State legislature and city council in the United States have in common? What is the only similarity between Czechoslovakia and Chicago, between Arabia and Azusa, between London and Paris, and Louisville and Peoria? The only thing, Mr. President, that every form of government known to man in this world, except the Congress of the United States, has in common, is that they have rejected every vestige of seniority as a fit system of choosing their leaders. Can we do any less?

Mr. PERCY. Mr. President, will the Senator yield?

Mr. PACKWOOD. I yield.

Mr. PERCY. Mr. President, I should like to point out the impression I have of the great courage of the distinguished junior Senator from Oregon (Mr. PACKWOOD) in the positions he has taken in this body ever since he has become a Member of it.

There are certain things that one presumably does not do. As a politician, one does not ever talk about abortion; one never talks about limitation on family size. Despite the fact that we do limit now the number of wives we have, we have no legal limitation on the number of children.

I think that the distinguished Senator in his approach to problem-solving sometimes appears almost to be extreme in the position he takes. Yet, I would say that the position he takes would be no more extreme than the extreme position taken on social security some years back.

As we look back on these positions, I think we are going to say, "Thank heavens we do have someone who has the courage to speak forthrightly on these matters."

Just as in the area of population control, he has been forthright. I think that the beginning of what I hope will be a healthy debate on the subject of how we organize the Senate should be undertaken. There are many procedures in the folklore of the Senate for which we hold great affection, and other procedures that really restrict our ability to operate and act effectively and efficiently and respond in a responsible fashion to our problems. Perhaps the seniority system is one of those that should be looked at carefully, and appraised and analyzed. It may well be that this body will decide to continue with it but, every once in a while, we should have healthy debate about many of the things that we do.

I commend the distinguished Senator from Oregon for the research he has put into and the careful thought he has given the subject, and the position he has taken, that it is not a radical thought, and that seniority is not inbred in everything that we do, as he has so ably shown.

I thank my distinguished colleague for permitting me this interruption. I again commend him on his courage, his analytical powers which he is sharing with his colleagues, and his forthrightness in the position he takes.

Mr. PACKWOOD. Let me thank my distinguished colleague from Illinois and say to him that insofar as he came to campaign when I was running for election, I shall look to him for leadership. In a country that too often finds leaders committed to the concept that leadership means to feel the public pulse and move neither too far to the right nor to the left and risk nothing that might hurt chances for reelection, the Senator from Illinois, in my estimation, has been a beacon in leadership, and I hope that he continues to be for many years to come.

ORDER OF BUSINESS

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ALLEN). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without

objection, it is so ordered. At this time, in accordance with the previous order, the Senator from Arkansas (Mr. FULBRIGHT) is recognized for not to exceed 1 hour.

OLD MYTHS AND NEW REALITIES—II: THE MIDDLE EAST

Mr. FULBRIGHT. Mr. President, although dangers and uncertainties remain, the prospect for peace in the Middle East has improved. The more favorable outlook is the result of the responsible and politically courageous actions of the Israeli, Egyptian, and Jordanian Governments in responding affirmatively to Secretary Rogers' letter of June 19, calling on the parties to implement a cease-fire, to declare their willingness to carry out the U.N. Security Council resolution of November 1967, and to renew negotiations through Ambassador Jarring toward the implementation of that resolution. Both the United States and the Soviet Union have played constructive roles in bringing about the improved prospect for peace, the United States by initiating the cease-fire proposal and persuading Israel to accept it, the Soviet Union by its own favorable response and by the influence it apparently brought to bear on President Nasser. Also encouraging was a Soviet declaration, published in Pravda on July 21, repudiating the allegation that either the Soviet Union or the Arab States wished to "push Israel into the sea."

As Ambassador Jarring's mediation gets underway, the first important move will probably be up to Israel, which, as the military victor of the moment, can reasonably be expected to initiate the bargaining with a demonstration of flexibility, if not indeed of magnanimity. Should the Israeli Government agree in the early stage of discussions, and in fairly specific terms, to a peace settlement providing for Israeli withdrawal from the occupied territories and for a just settlement of the refugee problem—both as called for in the Security Council resolution of November 22, 1967—the prospect for peace would be better than at any time since the 1967 war. One hopes that, in considering the course which it will now follow, the Israeli Government will consider the problem in its full political and moral dimensions as well as in terms of immediate military advantage. This, I am aware, is a great deal to ask of any government—it is more than most governments, including our own, can usually bring themselves to do. There are, however, rewards in farsightedness and generosity—for those who can muster the will and the wisdom.

One of our own leading Jewish intellectuals, the journalist I. F. Stone, has placed the problem in its moral perspective. He writes:

> For me, the Arab-Jewish struggle is a tragedy. The essence of tragedy is a struggle of right against right. Its catharsis is the cleansing pity of seeing how good men do evil despite themselves out of unavoidable circumstance and irresistible compulsion. When evil men do evil, their deeds belong to the realm of pathology. But when good men do evil, we confront the essence of human tragedy. In a tragic struggle, the victors become the guilty and must make amends to the defeated. For me the Arab problem is also the Number One Jewish problem. How we act toward the Arabs will determine what kind of people we become: either oppressors and racists in our turn like those from whom we have suffered, or a nobler race able to transcend the tribal xenophobias that afflict mankind."[1]

As a modest contribution in the effort to transcend the tribal xenophobias that afflict mankind, I propose today to review some of the myths and realities of the Middle East, as I perceive them, to define as best I can the perspectives of the local parties and their great power mentors, and finally to suggest some additional steps which might contribute to a durable peace.

I. THE MYTHS

The myths that shape events in the Middle East are the oldest myths of all.

Some derive from religion. The contested land is a "holy" land; more than a place for raising crops and building cities, it is "sacred soil" for three great religions. Jerusalem contains both the Wall of the Temple, which is sacred to Jews, and the Dome of the Rock, which is sacred to Muslims. Neither can hold exclusive title to the city without also owning the other faith's shrine. Now, as in the days of the Crusades, religion exacerbates the issue, because, now as then, the behavior of the belligerents is more affected by the zeal with which they hold their beliefs than by the humane ethics taught by their respective religions. Now, as in the past, it is hard to strike a bargain over sacred soil.

Then there are the myths of mutual victimization. Perhaps I should say the half-myths, because both Jews and Arabs have victimized each other, though surely not with the deliberate and malign intent that each attributes to the other.

The Jews are obsessed with the fear of a repetition of the Nazi holocaust, and the Arabs do nothing to allay this fear with extravagant talk about "holy wars" and about throwing the Jews into the sea. These threats have understandably alarmed the Israelis in much the same way that Khrushchev's talk of "burying" us agitated Americans a decade ago. As I shall point out in detail later on, President Nasser and King Hussein have both, in effect, repudiated such draconian threats, but the Israelis seem not to have noticed the disavowals.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. RIBICOFF. Mr. President, I thank the Senator for his courtesy in sending me a copy of his speech last week.

I have read the speech carefully and was deeply impressed by the new approach taken by the distinguished chairman of the Foreign Relations Committee. He is dealing with a very vital and complex problem.

In particular, I find his suggestion of a bilateral guarantee for Israel by our own country worthy of serious consideration.

After examining the speech, I took the liberty of drafting a few questions which I believe might help clarify and expand some of the thoughts of the chairman of the Foreign Relations Committee.

I would like to ask the Senator from Arkansas whether the United States could come to Israel's defense under the treaty the Senator suggests, without the prior approval of the Security Council.

Mr. FULBRIGHT. As the Senator knows, the treaty is suggested only after the Security Council has given a guarantee. We would be obligated under the Security Council guarantee ourselves to implement that in accordance with our constitutional processes. However, in recent years the confidence in the United Nations has so eroded that I can well imagine that the Israelis, along with many other people, do not have much confidence that the Security Council would take action. So it is to support the U.N. commitment that I suggested we fortify it, primarily as an incentive to the Israelis to proceed with the other provisions, such as those relating to withdrawal. Its purpose is to give them confidence that we would take the Security Council guarantee seriously. So when you come to the bilateral guarantee, it simply reiterates and strengthens our determination to come to their aid. But, once the Security Council had given its guarantee, I would see no reason for a second further action by the Security Council, if the occasion should arise, for us to live up to our own commitment.

Mr. RIBICOFF. What puzzles me is if our guarantee of Israel's security is based on a United Nations-imposed settlement, could not the Soviet Union render the guarantee meaningless, if it does not agree with the United States as to who the aggressor party is.

Mr. FULBRIGHT. In issuing the guarantee, it is necessary that the Soviet Union agree to it. They could veto the original action issuing the guarantee.

Mr. RIBICOFF. But if at some future date there is a violation of the U.N. agreements, then the Security Council is going to have to determine the aggressor. The Soviet Union could veto any action. How would the United States honor its own agreement with Israel if you have a Soviet veto?

Mr. FULBRIGHT. Over and above the Security Council, the guarantee, we would assume the further bilateral obligation to exercise according to our own judgment as to the conditions which warrant our intervention.

I do not consider that the further guarantee or action by the Security Council would be necessary at all as a condition precedent to our coming to the assistance of Israel in that case.

Mr. RIBICOFF. That is what I mean. Suppose at a later date war breaks out again between Israel and the Arab States after the U.N. agreement. How does the United States reach its decision whether to come to the assistance of Israel or not? How will the United States make this determination?

---

[1] I. F. Stone, "Holy War," in *The Israel-Arab Reader* (Walter Laquer, ed., New York: Bantam Books, 1969), p. 324.

Mr. FULBRIGHT. We would make it in accordance with the constitutional process, as we have always done—until recently. To take a hypothetical situation, if we decided the Israelis were the object of aggression by the Arab States, I think we would be as morally bound as we can be under the treaty to come to their assistance. That would not depend on further action by the Security Council. If it did not have that effect, it would not have the effect of giving the Israelis the assurance we would come to their defense.

Again, as the Senator knows, I have been very anxious that we in the Congress play our part in these matters in accordance with our constitutional processes. I cannot imagine, having taken the action of the treaty of guarantee in accordance with the usual procedure, that we would have the slightest hesitancy of going to their assistance. This would be dependent on the decision of our Government that Israel deserved it under the terms of the treaty.

To take another hypothetical example: if Israel, without provocation, renewed the war, this would remove our guarantee. It obtains only if Israel is the victim of aggression.

Mr. RIBICOFF. The Senator from Arkansas also states that Israel would obligate itself, if I state it correctly, never to violate the U.N-imposed borders. These, I should add, are the same borders that led to the 1967 war.

What if terrorist attacks on Israel mounted from Syria and Jordan continued? Does Israel still retain the legitimate right of self-defense to cross borders to get to the attackers who now enjoy the protection of Jordan and Syria?

Mr. FULBRIGHT. First, if Jordan and Syria consented to or harbored this kind of attack, they would be in violation of the Security Council guarantee and I think the Security Council ought to take action. But if they do not, and if the occurrence is a clear violation, Israel of course reserves the right of self-defense if it is attacked. By agreeing to the guarantee and the settlement, they do not give up all rights of self-defense.

Mr. RIBICOFF. Suppose Arab attackers flee back to Jordan, Lebanon, and Syria. Does the Senator conceive that Israelis, in hot pursuit, could not cross the borders of Jordan, Syria, Lebanon, or Egypt to get to the terrorist bases in those countries?

Mr. FULBRIGHT. If it is hot pursuit; I think they could do that. But here you raise a difficult factual matter. It is not unlike questions which have been raised with us in recent months in Southeast Asia.

This must be judged by rule of reason. If guerrillas are going back and forth across the borders, I think the rule of reason would say yes, the Israelis could defend themselves, even to the extent of following the guerrillas across the borders. Then, you get to the question; Suppose they go all the way to Amman; suppose they go to the extent of attacking Jordan. That exceeds hot pursuit.They should not be allowed to use hot pursuit as an excuse to occupy Egypt or Jordan; they should not be allowed to go beyond what a reasonable man would say was repelling an attack. The Senator also assumes the attack is mounted with the support of the government's of the countries from whose territory the guerrillas operate. We know there are certain bands of terrorists here and in other countries which cannot be controlled. But I do not see any way to judge this other than to say that, if a course of action is reasonably related to Israeli defense, they could do it; if not, it would be a breach of their undertaking under the negotiated settlement and under the guarantee of the United Nations and our own.

Mr. RIBICOFF. The Senator is correct in pointing out these are hard questions. Yet, despite unresolved questions, I take the Senator's speech very seriously, as anyone, both in this country and abroad, interested in the problem of peace in the Middle East should. The distinguished Senator as chairman of the Committee on Foreign Relations of the Senate is in a position of great authority and responsibility. This proposal encompasses his thinking over a series of years, and certainly in recent months.

But it becomes important, if other countries, our own Government and the Senate is to consider it seriously, to fully understand the situation. There are Arab terrorist bands that might choose, even if the Governments of Egypt, Jordan, and Lebanon chose to limit their operations, to continue to harass Israel. They might continue to assert that Israel must be defeated, and that Israel must be ejected entirely from this region.

If there are organized bands that are going to continue their murderous forays into Israel, and the Governments of Jordan Lebanon, or Egypt do not stop them, I do not see how, under those circumstances, how it would be possible to expect Israel to forbear from pursuing these terrorists across neighboring borders.

Mr. FULBRIGHT. I think so, too, so long as the pursuit is reasonably related to those forays.

First, let me say I would certainly hope that, regardless of its merits, the Senate takes the speech seriously. It is the first speech I have made on the very difficult situation in the Middle East. I have made it because of a number of factors which have arisen in recent months which indicate to me that the timing is right and also, most importantly, that the attitude of the Russians has altered in the last several months with regard to ourselves, and the west in general. I have reference to what has happened in the SALT talks, the agreement of the Russians with the Germans—this would have been most unexpected a year ago—and some other, less important happenings which indicate to me that the Russians themselves have recognized the seriousness of contributing an adversary, belligerent attitude toward us and toward the West.

There seems to be an attitude that they are willing to explore ways of lessening the continued belligerency with us, with the West generally, and especially with Western Europe and Germany.

So, whether my proposal is practical or not, I intended it as a serious speech. I certainly did not intend to just stir up controversy in an irresponsible way. Whether or not a suggested course of action is feasible and workable is always open to question or suggestion.

Coming to a more specific part, I personally do not believe these guerrilla bands can be a great problem to Israel unless they have the support of the country from which they operate. If the negotiations result in an agreement which can be guaranteed—I do not mean guerrillas or other nongovernmental people—and the governments agree, and they continue to support the guerrillas and allow them to operate, if they do not take all reasonable means to control them, I would say they would be in violation of their own agreements and would be in violation of the negotiated settlement.

But assuming, as the Senator has—I think he has assumed this—that even though the governments of Jordan and Syria took reasonable means to control them, but the activities went beyond their capacity to control, then circumstances would exist in which, as the Senator has properly said—and I have too—the Israeli Government would be entitled, in the exercise of hot pursuit, to do everything reasonably calculated to stop those forays into their country.

In the past—I suppose up to the present—the fact is that if those guerrilla bands did not have the explicit approval, certainly they had the tacit approval of their host governments.

Mr. RIBICOFF. I do not think there is any doubt about that. With regard to your statement that Egypt and Jordan had repudiated their previously stated intention to drive Israel into the sea—I wish this were so. I have tried to follow this situation very carefully. And except for interviews with foreign or American correspondents for external consumption, I have never seen any press reports where Nasser, in any statement made to the people of Egypt, ever asserted that Egypt must eventually live in peace with Israel. I believe his acceptance of the U.N. resolution of November 1967, has always made complete Israeli withdrawal a condition precedent for the application of the provisions of the rest of the resolution, has it not? That is what bothers me.

It is one thing to have an interview with a network television interviewer and be expansive and gracious because one is dealing with an American audience which expects such a statement, it is clear he is trying to influence American public opinion, and our own Government siezes on these statements. But then he keeps the pot boiling in his own country. He has not prepared his people for peace—which leads me to suspect his statements to American audiences.

How different it would be if Nasser were to tell his own people, and other Arabs who look to him for leadership that the time had come to live in peace with Israel, to have secure borders, to work out problems on a mutual basis, and that an Arab policy of driving Israel into the sea is a thing of the past. Does not the

Senator think Nasser could do that, if he really wanted peace with Israel?

Mr. FULBRIGHT. Of course, we can all think that all people in public life ought to be more frank and open in their statements, but I have observed that these leaders are not alone in their tendency to speak one way to one audience and another way to another. But the basic fact is that we are in a very difficult situation today and the question is what to do about it? These Arab leaders have publicly, on numerous occasions, stated that they do not subscribe to the idea of destroying Israel; they have said, in effect, that they are willing to accept Israel's existence, and they are anxious to implement the 1967 resolution which in itself provides, if it provides anything, for the acceptance of the permanence of Israel, and also for the forsaking of the state of belligerency, and the opening of the canal, and all those others of which the Senator is aware.

I grant that it is a very difficult situation in which to be optimistic about people living up to their protestations, public or otherwise, but we come back to the question again. What do we do about it?

I think it is worthwhile, in view of the present situation, to seek to get a formal agreement by the heads of the governments concerned. These governments are not constituted quite like ours, and we know their emotions are very great. I have heard for years that the leaders of those nations dare not publicly make concessions, because they would all be assassinated. It is that kind of area. They could not dare to say to their own people exactly what they have said in public statements to us and to the world. However, they have not been secret statements. They have been public statements. They have been reported widely in the press, on television, and over radio.

The Senator is raising the question of consistency in all public statements by leaders in various countries. To a greater or lesser degree, we find that a degree of inconsistency is characteristic of most leaders of most parts of the world.

I do not wish to inject into this discussion criticisms of our own people, but I think I could generalize by saying inconsistency is not unknown in our own country, both as to domestic politics and international politics. It occurs to a greater extent, I think, in the latter, because passions and emotions are much stronger in matters of international relations.

It is for that very reason that it is all the more important to try to bring about the kind of resolution of this tragic war that I am suggesting here. It may be that there is not sufficient ground for any trust at all that we can do anything about it. The present situation is very bad; I think the Senator will agree with that. If it were not so bad, I would not be so interested in making the suggestions I have. But it is very bad, and I think we would lose very little by at least trying to bring about this kind of agreement. If it fails, I do not see that we will be any worse off. If the parties do not agree, or things do not pan out, I do not know that we shall be any worse off than we are now. I think there is a good enough chance of progress to justify the risk of trying to negotiate a peace.

Mr. FULBRIGHT. Let me add that I think we get the same argument in connection with trying to negotiate a peace between ourselves and the Russians. There are many people, in public life and private life, who say, "You cannot trust the Russians; there is no point in trying to make any agreement with them." I have heard that said on this floor.

That may be; and I am not so completely naive, I do not think, as to say you can trust them for anything. But people do have interests. I think they have interests. In this case, I think both sides have an interest in settling the war.

I think all of us, from time to time, become quite irrational in these international matters. I believe in trying to do our best to bring about negotiation; and this is the best formula I can think of at the moment.

Mr. RIBICOFF. I am assuming that the distinguished chairman of the Committee on Foreign Relations, in suggesting this security treaty with Israel recognizes that the United States does have vital interests in the Middle East, although I note he has brushed aside the concept of geopolitics, in defining our Nation's interests in the world.

Mr. FULBRIGHT. I think, outside of our Nation's sentimental and cultural attachment to Israel, if we could wipe out all the historical and political relationships we have, it would be quite a different matter. We do not have any formal treaty that obligates us to do anything about Israel, unless it is through the United Nations. Under the United Nations Charter, we, together with the other members, do have a responsibility to try to deal with threats to the peace. I know that. But we and other peoples have lost confidence in the U.N.; therefore, we do not take it seriously. We have not taken it seriously with regard to Vietnam. We did not go to the United Nations when we started intervening there; we thought it was unimportant. It was only as an afterthought, after such people as Wayne Morse complained about it, that this country submitted the matter, in a very casual way, to the United Nations, and did not really press it.

There is no formal obligation to Israel. I would not consider, if we had no relationships of a cultural and sentimental kind with Israel, that the question of who controls Israel would involve a direct threat to the United States.

Mr. RIBICOFF. Is it of no concern to the distinguished Senator that the Soviet Union is now in a position of being the dominant power strategically in the Middle East? We must take into account the whole Mediterranean area including our NATO allies Greece, Turkey, France, and Italy. Then there is the Indian Ocean and the Red Sea to consider. Can you say all of these areas have no bearing on U.S. interests? That the obligations under NATO have no meaning, with the continued growth and power of Russia in the Middle East, that the Russians have sought for the last 200 years?

Mr. FULBRIGHT. I do not think the Senator should be so absolute, in speaking of "no concern" and "no interests." These matters are not that absolute.

First, I question the Senator's assertion that Russia is the dominant power in that area. We still have very important bases and arrangements with both Greece and Turkey, as well as with all the countries of Western Europe. We have a fleet that is much more powerful than anything the Soviets have in the Mediterranean.

We have grown accustomed, ourselves, to believing that we have the sole right to be dominant in all oceans. I think the Russians certainly have succeeded in projecting the strength of their presence in the Mediterranean, but I certainly would not say they are dominant. Their strength at least approaches parity, we might say.

The changing character of warfare, in any case, has brought about a change in the concept of dominance. That, I think, is the basic assumption of the SALT talks: If progress is being made in the SALT talks as we are told it is, I believe it is because the Russians feel they have achieved some reasonable parity in their overall strength, especially with regard to nuclear weapons.

The Senator has raised some very far-reaching questions in speaking about dominance. I do not know that either country dominates these areas. The Soviets have great strength in the Middle East. There is a great deal more involved there, of course, than Israel.

But as to the Middle East as a whole, although the Senator appears to think the oil interests are so important, I do not think they are absolutely vital to the United States. We have alternate resources. The Middle East oil resources are much more vital, if that is the proper word, or more important, at least, to Western Europe than they are to us.

Mr. RIBICOFF. That is correct.

Mr. FULBRIGHT. Why is not Western Europe doing something about it?

Mr. RIBICOFF. I think Western Europe is not doing enough about any of these problems because their attitude is one of letting the United States assume the burden.

France, of course, used to be an arms supplier for Israel. They had an agreement with the Israelis to provide them with planes, and after having received payment for them, broke that agreement and established an arms embargo against Israel. I would guess the French did that because France sees an opportunity of improving her trade and influence in the Middle East while insuring her oil supplies.

England today does not have much of a role left to play in the Middle East. They assume that the United States will carry the burden. I would hope that France and England would take a more active, constructive role. In speaking of the four powers getting involved, in a settlement, I think the Israelis have just cause for concern. France and England are apparently willing to back the Arabs for their own narrow interests, and the Soviet Union is certainly backing the Egyptians all the way. With the United

States bending over backwards to be evenhanded, this must leave Israel with a very empty feeling.

This is of utmost concern, and that is why the Senator's suggestion of a treaty of guarantee for Israel has important meaning, if we are eventually going to bring a lasting peace to the Middle East.

I have read some critical comments about the Senator's speech from various sources. But this proposal of a treaty is the most important and valuable part of the Senator's presentation. I think it could be of vital significance and I would like to see the United States adopt a bilateral agreement such as the Senator has suggested. I recognize that there are many roads that we would have to travel before that could be reached. But it could be an important factor bearing upon any durable settlement, in the Middle East.

Mr. FULBRIGHT. It seems to me that a possibility that the Senator apparently excludes, which I think could be significant, is not that the countries of Western Europe—which I think we agree have a greater immediate interest in access to Middle East oil than we do—are not concerned about Israel, but rather that they have a different view of the Russians and of the threat of the Russians and communism than we do.

In all honesty, I think we have, for various reasons—some of them quite good reasons, especially in the days of Stalin—become almost obsessed with the threat of the Russians, or what used to be called, and still is by some people, "the international Communist conspiracy."

I do not mean to say there was no reason or basis for that in the old days. But I think the development of nuclear weapons and the means of their delivery, as well as a number of other things, have served to change both the Western Europeans' ideas and those of the Russians about warfare; and I think we have been slow to catch up to their, I believe, more reasonable views. I think that part of our trouble in Southeast Asia is attributable to this. It is at least possible that they view the threat differently and that they do not believe that Russia is trying to take over, to own, and prevent Western Europe's access to Middle East oil.

Many people do not perceive the rivalry between the Russians and ourselves in quite the same terms that we do. It is not for me to attribute motives to the French either one way or the other. The French are not new on the international scene. I cannot help think that they have an appreciation of their own interests, and I believe they have decided that their own interests demand a relaxation of those attitudes which have divided the world, that the French would like to see some adjustment, and would like to see some settlement of this matter in the Middle East. Perhaps they are critical of the suggestion. I am not aware of what others besides the local newspapers think about it.

In the final analysis, this suggestion is put forward as an effort to find a basis for an agreed settlement of this war which troubles everybody. It troubles the Western Europeans. I have no doubt that they are concerned about it.

De Gaulle also exhibited some interest in trying to bring about better relations with Russia and Eastern Europe. We have usually resisted this idea, on the theory, as many people say, that "You cannot trust the Russians." I do not know how far they can be trusted in that sense. I trust them in this—that sooner or later they will recognize where their own interests lie. Their interests, I am convinced, are the same as ours in this connection and in other areas, and that is to stop the arms race and to stop the continued escalation of the attitude of belligerency that we have entertained for so long. Therefore, if they are not entirely devoid of reason—and I hope we are not either—perhaps some kind of accommodation can be brought about.

Mr. RIBICOFF. I wish I were as confident as the Senator. I wonder how he would interpret the presence of over 10,000 military personnel in Egypt today. There are more Soviet-piloted supersonic jets in Egypt than the entire total in the Israel air force. Does the Russian military presence in Egypt concern the Senator?

Mr. FULBRIGHT. I said a moment ago that I am not so Pollyanna-ish as to think that this is going to work out without any problem. It does concern everybody, because the Middle East situation focal point of the escalating confrontation between ourselves and the Russians.

I remind the Senator that the Russians have far fewer of their men under arms abroad than we have. I can name a dozen places; 10,000 men is a relatively small number. We have that many in Spain. Think of how many we have scattered in various countries in the Far East. How does the Senator interpret that? How does the rest of the world look upon our actions? Does the Senator believe that because we have 60,000 troops in Korea or 10,000 in Spain, we are trying to dominate the world?

Mr. RIBICOFF. I would say that we certainly intend to exercise influence in those specific areas where our own military personnel are located. There is no question in my mind that we are not there for altruistic reasons.

Mr. FULBRIGHT. I think that many of these are the outgrowth of former times, when the conditions, as I have said, warranted bases abroad more than they do now. I, along with a number of other Senators, have long adovcated that we bring home some of those troops, both from Europe and from the Far East.

I think the Senator tends to ascribe to the Russians evil motives which we reject on our own part. I am not saying that we should take the Russians at face value. What we are doing here is trying to set down conditions that would provide an equitable basis for negotiations and give the parties involved some confidence that if they negotiate, we and the other nations will live up to our undertaking under the United Nations.

If a negotiated settlement cannot be agreed upon, and the Security Council cannot guarantee it without the approval of the Russians: If we have to assume that the Russians would never live up to their promises and that nobody else would either, then there is no hope whatever for any negotiated settlement.

The meaning of that would be that there is no alternative to a settlement by arms. I am not willing to accept the theory that there is no possibility of anything but an all-out Armageddon. That is the alternative, it seems to me, to proposing some kind of negotiated settlement.

Mr. RIBICOFF. In the settlement that the chairman contemplates, does he envisage that the Russian military personnel and Soviet pilots would leave Egypt?

Mr. FULBRIGHT. I would certainly think that they would, eventually. I do not think they would do so before an agreement. It would depend upon the terms of the agreement.

Mr. RIBICOFF. If there were such an agreement.

Mr. FULBRIGHT. I do not know that we could demand that, any more than they could demand that we get out of Turkey and Greece. I would like very much to make an agreement with them that we both bring our troops home from all the places to which we have sent them as a result of the cold war, especially in the era of Stalin.

I think we all have to be a little more objective with regard to other countries. The assumption that we do all these things only for the welfare of all the world, and that we have no national interest different from that of others, and that we are good people and everybody else is suspect, is not a basis upon which to build confidence and trust, especially in the United Nations. If we are to make the United Nations work, if we are going to have any degree of collective security, we have to have some trust in other people.

Mr. RIBICOFF. The Senator is very experienced in these matters. Have not the Israelis shown flexibility, and a willingness to run grave risks by undertaking these talks, even in the face of the breaches of the cease-fire that have taken place?

Mr. FULBRIGHT. I hope they will show some flexibility, but I am not optimistic. Anything is possible. I often despair of the rationality of men all over the world as well as in our own country. But I always have to come back to the principle that it is completely defeatist to say that there is no hope other than for an all-out nuclear conflict. Therefore, I struggle to find alternatives.

I would say that if nothing is done, if the situation is left as it is, it is not promising for the Israelis or the Arabs, or for us or the Russians.

This proposal of mine is simply submitted as a suggestion. I would certainly welcome a better suggestion as to how to settle the Middle East war. I do not accept trial by arms as a good alternative. I think that the escalation of weaponry on each side can only end in disaster.

I am seeking an alternative to the present course of events. If this suggestion is not approved, if it is discarded and no better alternative is provided, we will be no worse off. The situation will remain as it is, which is to say, very

dangerous. I think all will agree that it is very dangerous. The Israelis, for the moment, occupy Arab territory. The Senator knows that we certainly publicly subscribe to the principle of the resolution of 1967, that the acquisition of territory by aggression is no longer acceptable international practice. We profess that. If we do not mean it, we just do not mean it. But I think it is a good principle.

I think that nothing can be lost by attempting to settle this problem by negotiations rather than by a trial of arms—in other words, by simply keeping on as we have in the past, with more and more arms on both sides. I do not have any great confidence that this will be accepted or that any other rational means will be accepted. I only hope that it will be. I think that it is worthy of discussion and that it may precipitate some better suggestion from the administration or from the Senator from Connecticut. If the Senator from Connecticut has a better suggestion, I welcome it.

Mr. RIBICOFF. I commend the Senator for trying to find a solution. To allow things to drift would be a tragedy.

Mr. FULBRIGHT. I think so, too.

Mr. RIBICOFF. Even though there are some points in his speech that I disagree with—I personally commend the Senator for taking the time and effort, and for drawing on his own sources of knowledge in attempting to come up with a possible solution.

I have one other question: I note that the United Nations Security Council resolution of November 22, 1967, states:

> The right of every state in the area to live at peace within secure and recognized boundaries, free from contention or acts of force,

This to me contemplates some adjustments of the boundaries, yet the Senator in his speech talks about Israel's having to give up all the territories and moving back to exactly what the boundaries were before the 1967 war. I believe that almost all serious impartial observers have recognized there will have to be some adjustments of Israel's boundaries because some of them are not realistic and certainly not defensible. Just as one example, I remember traveling from Tel Aviv to Jerusalem and traveling in a steadily shrinking corridor in between. It seemed to me that this calls for a readjustment. Does the Senator contemplate that Israeli withdrawal would be to the exact borders as it had before the 1967 war?

Mr. FULBRIGHT. Well, I think this has been and is the principle of the 1967 resolution. The Secretary of State, I believe, used a phrase which I quote later in my speech, with allowance for—I think it is an "insubstantial alteration" for purposes of security—but this is certainly a most serious matter and we can engage in negotiations on it, but always in accordance with the principle that all of the subscribers to the 1967 resolution announced concerning withdrawal from territories acquired by war. I think that the security of other very sensitive areas, such as the Golan Heights, Sharm el Sheikh, and the Gaza Strip should be guaranteed at least for a reasonable time by United Nations' security forces. As the Senator knows we have previously placed United Nations' security forces along the Egyptian-Israeli border for the purpose of providing security in those areas. It did not work very well. The Senator is aware of that.

Mr. RIBICOFF. What bothers me is that when Nasser told the United Nations forces to get out, they got out. How does the Senator contemplate that United Nations' security forces will cope with a future government order to leave its territory?

Mr. FULBRIGHT. If they negotiate a Security Council agreement, they should agree not to remove such forces. Many people believe that the action the Senator refers to should not have been taken without further consultation with the United Nations. But this is a matter which should be settled in the agreement and in the guarantee of the Security Council.

I agree with the Senator, in this sense, that it is difficult to solve these matters. My proposal will not work unless the Russians have changed their attitude to accord with what I have suggested and unless they want to make it work. If they do want to make it work and they can have influence, as we would be able to have influence, and as the other major powers, the other countries immediately concerned would, there is a fair chance that it would work.

I am well aware, as is the Senator from Connecticut, that any agreement can be breached, no matter how solemn. They have been in the past. But, again, we come back to the point: What do we suggest as an alternative? It seems to me that the only alternative is reliance solely upon arms. That is certainly a worse alternative and one which is even less likely to bring about a degree of peace than an agreement solemnly agreed upon and backed by the countries of the Security Council.

I will go further and state that I think it is their own self-interest, more than anything else, which might be brought into play here, in order to preserve the peace. I do not think it is in the interests of the Russians to continue the arms race—because of the possibility of a war with us—any more than it is in our own interest to do so.

If this reasoning is not true, then the whole thing is not worth anything. But if if it is true, then there is an opportunity to focus it and to allow it to be expressed in an agreement such as I have in mind.

Mr. RIBICOFF. Does the Senator from Arkansas contemplate, when he talks about a United Nations security force, that this will be the beginning of a permanent peacekeeping force under the aegis of the United Nations? Does the Senator contemplate this as an opportunity for the United Nations to be a meaningful organization instead of just a debating society?

Mr. FULBRIGHT. I would hope so. One of the two main reasons for my speech, and one of the things that made me speak on it now, is the approaching 25th anniversary of the United Nations. The confidence of all nations, including our own, in the United Nations has gradually eroded. As the Senator has stated, many people these days refer to it as a debating society. I believe the U.N. has the possibility, if we can ever make it work, of bringing some stability to this troubled world. What appeals to me particularly about this approach is, as I have stated, that the national interest of the Russians in this case has a greater degree of identity with our own than in any other major conflict that I can think of—far more than in Southeast Asia, or any place else that I can think of at the moment, other than such minor matters, relatively speaking, as the Austrian treaty on the Antarctic Treaty, in which the United Nations did play a role. But this is a much more important question and far more dangerous than either of those. I think that the interest of the Russians, whether they think so or not, is the question the Senator raises. But I think their interest is quite similar to ours over the long term. Therefore, it is my basic assumption that our two interests have come together, and that the Russians would be willing to enter into this agreement and to undertake a guarantee that leads me to believe in the possibility of creating an international police force, for example, capable of handling the Middle East situation.

We have had some earlier experiences in this—the Cyprus issue, and the previous ones in the Middle East. We had some degree of U.N. action in the Congo. There have been some small successes but they have, indeed, been small.

In this case, there is an opportunity for a large success. And success is possible if the Russians recognize or believe as I do, that it would be in their interest to bring about a settlement now that they have achieved a presence in the Mediterranean and in the Middle East. While I do not think their presence is a dominant one, or one that can exclude us, it is nevertheless, an important one. With all that as background, they may agree to action by the United Nations, if such an agreement is in their interest, as I believe the Senator will admit that it is.

So it would be of great importance to the future of the United Nations itself and it would be a great contribution to a revival of faith in the United Nations if it could be made to work. That would be no small matter to all the world—including ourselves. I think it would be a great thing if it could be done but it cannot be done without agreement of the permanent members of the Security Council, including, of course, the Russians.

Mr. RIBICOFF. Mr. President, in the Middle East, no matter what the Security Council or the United Nations does, if the United States and the Soviet Union do not really mean to have peace there will be no peace in the Middle East. The good faith of the United States and the Soviet Union are really an absolute condition to achieving peace in that part of the world.

Mr. FULBRIGHT. The Senator is right. I agree with that statement.

Mr. RIBICOFF. Mr. President, does the Senator from Arkansas feel that the United States wants a settlement in that part of the world so badly that it would

force the Israelis into a bad settlement?

Mr. FULBRIGHT. I would hope not. I certainly do not think so. I am bound to say that I think the administration in what it has said and in what it has done up to now has taken a wise approach to the problem.

I do not think they are so overly eager that they would abandon our interests, or the interests of the Israelis or that of so many people in our country who feel such a strong attachment to Israel.

Mr. RIBICOFF. I am interested in the Senator's interpretations of the U.S. reactions to the violations of the ceasefire by the Russians and Egyptians.

Mr. FULBRIGHT. The Americans have said that the evidence of those violations has been inconclusive.

As the Senator knows, I have no independent knowledge of what has taken place. I have known people who have a weakness for seeing these matters in the light of their own versions and apprehensions. I have no reason to doubt that our Government felt there was considerable doubt about whether there had been infractions and, if so, whether they were substantial infractions. I do not know any more than the Senator from Connecticut does. We read the same newspapers. I have no independent knowledge. But our Government, with the best technical facilities we have, has inspected the area by air.

I do not know whether they have any other intelligence; they may have. But the Senator knows that these allegations are not conclusive. There may be doubt as to whether the violations, if any, were substantial. That is all I know about it.

The PRESIDING OFFICER. The time of the Senator from Arkansas has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Arkansas be permitted to continue for 30 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection, and it is so ordered.

Mr. RIBICOFF. Mr. President, what troubles me particularly is the attitude of the Defense Department and the State Department concerning these violations.

I feel from reading articles in the newspapers by reporters whose judgment I respect as and, who are knowledgeable, and who treat facts with great integrity, and from the picture I have seen, that a large number of missiles were in fact put into place after the cease-fire.

What concerns me is the attitude of the United States in being angry with Israel for not swallowing these serious violations while walking so tenderly in its actions with the Russians and the Egyptians to try to rectify the breach of the cease-fire.

Mr. President, Al Friendly's article in the Washington Post of August 22 entitled "Scenario for Middle East," talks of "the fear in Israel that the United States wants a settlement so badly it will bludgeon Israel into a bad settlement."

Peter Grose wrote an article in the Sunday New York Times of August 23, entitled "Israelis Critical of U.S. Role on Missiles."

He stated:

The miniconflict with Washington may be a foretaste of the kind of "support" they can expect from their ally as the bargaining gets tough. With friends like this, as they say, who needs enemies?

The New York Times editorial of August 22, "Near-Disaster in Mideast" contends that "Washington has responded to Israel's legitimate protests in a less-than-creditable fashion" and "the critical failures, in intelligence," were American.

Mr. President, I ask unanimous consent that the three articles be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 22, 1970]

SCENARIO FOR MIDDLE EAST

(By Alfred Friendly)

JERUSALEM.—As near as one can see it from here, the scenario of the end of the first act of the American Middle East peace initiative looks about like this:

Special mediator Gunnar Jarring will tell the Israelis that their official proposal this week, for the discussions to be held in a Mediterranean or European city and at the foreign minister level, is simply not the basis for a deal. However much he may himself like Israel's terms, the Arabs don't, and that's that. So it's New York and at the level of the permanent United Nations representatives, or nothing.

But, perhaps as soon as Sunday, the Israeli cabinet will decide, bitterly, to accept the terms and some time thereafter the talks will start.

Israel will accept because a majority in its government wants the peace discussions as much as the other parties at interest, the Arabs, the Soviets and the United States. Nasser's War of Attrition did not, to coin a verb, attrite it, but all the costs were escalating, in lives as well as money.

Facing the inevitable, then, why did the Israelis put themselves to such an anguished period for the last three weeks, refusing to give an official reply to Jarring, letting themselves in for the propaganda accusation that they were stalling, when they had already agreed in principle?

The answer is that in Israel's eyes the peace talks are a much less attractive proposition in the third week of August than they were in the first. Two broad sets of events soured the potion that William Rogers and Joseph Sisco had mixed—a potion not very tasty to Israel to begin with.

The first was the evidence—so it seemed to Golda Meir and her government—that the support they thought they had from the United States was dissipating:

The details of the two main elements leading to that view—the wording by which America relayed Israel's acceptance to Jarring and Washington's prolonged refusal to credit the charges of cease-fire violations—have been thrashed out so often and at such length in the last days as to need no repetition.

But in both episodes, Israel saw America's action, and then its non-action, as very bad omens for its future firmness when the going gets really rough, when the talks about settlement get down to cases. The fear here is that the United States wants a Middle East settlement so badly that it will bludgeon Israel into a bad settlement.

It should be added, though, that the game of America-loves-us, America-loves-us-not has probably been going on at two levels. The lower one, closely tied to internal political considerations and public attitudes in a democracy, was the visible one. At upper levels—Mrs. Meir to President Nixon, foreign minister to State Department, chief of staff to Pentagon—it is pretty certain that American assurances were much stouter, more credible and comforting.

Therefore, what depresses the leadership in Israel more than the recent public slings and arrows from Washington is the utter absence of any signs of pacific intent from the U.A.R.

The recent utterings of Nasser, his foreign minister and his publicist have been blood-curdling.

Very well, it can be said, these are only speeches, "You have to make allowances for Arabs," Nasser was politically obliged to say what he did, and so forth.

But even at the most elementary, harmless level of human decency, that of prisoners of war, Egypt has put on the ugliest face, precisely counter to its most recent undertaking in the cease-fire agreement to "abide by the Geneva Convention" on POWs and to accept Red Cross intervention.

The second discouraging phenomenon is the Egyptian insistence that the peace talks be in New York, the last place for the quiet diplomacy that is required, and that the level be that of the permanent U.N. representatives. It is scarcely a great forward step to peace to bid Jarring talk to three people whom he could reach any day in the last two years by phone and who were always under obligation to deal with him.

Finally, the most discouraging and important phenomena of all were the violations of the cease-fire by advancing SAM–2 missiles into the standstill zone. It was hardly the act of a country whose principal aim is to make a peace settlement.

[From the New York Times, Aug. 23, 1970]

MIDEAST 1: ISRAELIS CRITICAL OF U.S. ROLE ON MISSILES

(By Peter Grose)

TEL AVIV.—The game diplomats play got a little rough last week between Israel and the United States. Each capital played according to rules determined by its own national interests in the Arab-Israeli confrontation, and since the immediate interests diverged, so did the rules of the game.

Yet this "crisis of confidence" between Israel and the United States was probably only a pale shadow of what can be expected in the weeks ahead when fragile peace negotiations begin in earnest. That is what worries the Israelis: The miniconflict with Washington may be a foretaste of the kind of "support" they can expect from their ally as the bargaining gets tough. With friends like this, as they say, who needs enemies?

The immediate point at issue centered in the realm of sophisticated intelligence gathering. Israel's public charges of an Egyptian and Soviet buildup of missile air defenses in violation of the Aug. 7 cease-fire agreement were initially greeted by official silence, and private annoyance, in the United States.

THE U.S. STAKE

Israeli diplomats understood the reasons for American reticence—the complaints of violation could serve to undermine the entire American diplomatic initiative aimed at starting talks between Israel and the Arab states. At the very least, the Israeli Intelligence reports cast grave doubts on the sincerity of the United Arab Republic in entering upon a cease-fire and standstill agreement and the parallel peace-making effort, in which the Nixon Administration had such a heavy investment.

What really rankled here were the reported innuendos from Washington that Israel was inflating, perhaps even falsifying, the evidence, either to undermine the negotiating process or to pry out of Washington more jet fighter-bombers and other war materiel.

"TOO MUCH"

"This is really too much," snapped the generally restrained Abba Eban, Israel's For-

eign Minister. "On the one hand our adversaries endanger our security, on the other our friends impugn our accuracy and sincerity."

Of course, Washington's own intelligence could not confirm that there was movement, Israeli officers said, since there had been no American reconnaisance before the cease-fire, and therefore no confirmed starting position by which the American analysts could measure any subsequent changes by their own means.

Vague statements from both Washington and Jerusalem later in the week were cranked out to remove the sting from the unseemly public quarrel. But the underlying problems remained.

First, even the United States reluctantly conceded that there had been "a forward deployment of missiles by the Egyptians around the time the cease-fire went into effect."

"This is something the Egyptians and their Russian friends have been unable to do for the past year," said a senior Israeli staff officer. He produced photographs which he said showed missile batteries in place considerably closer to the Suez Canal than before the truce was declared, when the closest deployment, he said, was 20 miles from the waterway. From the new sites, Israeli officers said, the air defense missiles could challenge Israeli flights directly over the canal and, in some places, as much as 12 miles inside the Sinai.

This is significant for the future defense of Israeli positions on the Sinai banks, for without air superiority over the canal, the Israelis would be hard-pressed to prevent an amphibious crossing by Egyptian units and the establishment of a bridgehead on the Sinai.

POLITICAL MESSAGE

The new situation is "not catastrophic," the staff officer said, "but it is very serious." In any case, over three months of daily bombardment by the Israeli air force had been specifically designed to prevent this forward deployment of the missile batteries. In one week of truce, the whole effort was negated.

This alone was enough to shake some of the anticipation that something good could come from the diplomatic effort. But there was also a political message to the nervous Israelis.

Premier Golda Meir led her country into the diplomatic process—breaking up her coalition government on the way—only on the basis of assurances from President Nixon that the United States would not take any position to undercut Israel's military stance or negotiating strategy. Yet at the first sign of trouble, as Foreign Ministry officials analyzed the United States position, Washington turned its back on Israel. The flashpoint issue with all the imprecision and ambiguities in photo and electronic reconnaissance, was less significant to the Israelis than the impatient American reaction to it.

PROPOSALS SUBMITTED

Israel's negotiating position may still be intact—that remains to be seen when the position is unveiled. The Nixon Administration may still make good on its oft-repeated promise that should fighting resume Israel would not find herself weaker for having attempted the truce. Israel last week submitted her formal procedural suggestions to the United Nations envoy, Gunnar V. Jarring of Sweden, and prepared to meet the Arabs—indirectly, according to the American formula.

But the seed of distrust in the American commitment is well planted, and it is worrisome to Israelis to realize that it will have ample ground to flourish in the coming weeks and months of negotiation.

[From the New York Times, Aug. 22, 1970]

NEAR-DISASTER IN MIDEAST

Despite a near-tragedy of errors that almost derailed the most hopeful Mideast peace effort since the 1967 war, it now appears that the cease-fire will hold and that talks will open soon—the overriding consideration.

But, two weeks after the fighting along the Suez halted, it is evident that Egypt has achieved an important military advantage and that Washington has responded to Israel's legitimate protests in a less-than-creditable fashion. Not one of the parties has covered itself with glory. But the performance of the United States, in the first test of its crucial role as guarantor of the military balance, raises serious questions about its ability to bring to fruition the imaginative initiatives it set in motion.

In private assurances and in a news conference statement July 31, President Nixon told Israel it could agree to the standstill cease-fire "without fear" that it would "run the risk of having a military build-up occur" on the Egyptian side of the Suez Canal.

This pledge was based, in part, on American warnings to Moscow and Cairo that it would regard gravely the movement, under cover of the truce, of Soviet-built antiaircraft missiles to sites so close to the canal that they could be used to shield Egyptian cross-canal invaders from counterattack by Israeli planes. Some Soviet assurance came back that no such movement would be made if both sides accepted the American proposal for talks and a ninety-day standstill.

Prior to the cease-fire, 72 consecutive days of intensive Israeli air bombardment—culminating in the dropping of 1,200 bombs on Aug. 7, the last day of hostilities—had thwarted all Egyptian efforts to move SAM–2 batteries into the critical zone eighteen miles or closer to the canal.

Today twelve to fifteen Egyptian-manned SAM–2 batteries are sited in that zone. Most of these highly mobile missiles are believed to have been moved in during the night of Aug. 7–8, after which the cease-fire made them immune to Israeli attack. Whether they arrived before or after the midnight deadline, it is plain that the work of installing them and fortifying the sites continued—in violation of the standstill—in the following days.

American and Israeli intelligence failures both contributed to the ensuing contretemps, but the critical failures were American. Strangely, neither country took any aerial photographs of the cease-fire zone on Aug. 8. More important, no American U–2 photos had been taken on the eve of the cease-fire, thus ruling out any clear basis of comparison with post-truce photos.

Despite warnings from experts weeks ahead that proof of violations would be difficult, Washington gave Israel firm assurances about enforcing the truce. Israel, recognizing the risk, pressed for the cease-fire to take effect in daylight hours on Aug. 7. But midnight was agreed to, under American pressure.

When the Egyptian build-up was detected two days later, Washington first expressed doubt that a cease-fire violation had occurred then implied that the Israelis were trying to block negotiations and finally stated on the record that "some evidence" of violations existed but that it was not conclusive.

Meanwhile, conceding privately that Egypt had taken serious military advantage of the cease-fire, Washington is shipping Israel air-ground missiles and other antimissile site weapons and electronics similar to those the United States has used effectively against SAM–2 sites in North Vietnam. What is not clear at this point is whether any effort is being made to hold Cairo or Moscow to their pledges before the cease-fire.

Israel understandably now fears American "peace at any price" tactics when substantive issues come up in negotiations with the Arabs. A settlement is vital. But a return to the pre-1967 conditions that brought war would be disastrous. The fumbles of recent days suggest that such a disaster—or failure in the negotiations—could eventuate unless all parties to the truce strictly adhere to the cease-fire commitment.

Mr. RIBICOFF. Mr. President, I take this opportunity to thank the Senator from Arkansas for addressing himself to a very grave and important problem.

I do feel—while disagreeing with much that he has had to say by way of background in his speech—that if we could bring about a durable peace in the Mideast under the auspices and the aegis of the United Nations, and with a commitment by both the United States and Russia to achieve peace, from this start we might make a beginning toward the solution of some of the other problems of the world.

To that extent, I commend the Senator for opening up this subject for discussion.

I would hope that the Senator's proposal for a bilateral treaty is given serious consideration.

Mr. FULBRIGHT. Mr. President, I thank the Senator very much. I know that he follows this matter far more closely than I do. And I am sure that he is far more knowledgeable about the whole background than I am. However, as I said in the beginning, I have not previously made any major statements on this subject. I have been to the Middle East to look at the situation. It seemed like an insoluble situation. Until very recently I never felt that there was reason to believe that the Russians would cooperate in any such venture.

I have already mentioned that there are a number of other developments outside of the Mideast that have lead me to believe that maybe the Russians have at long last seen that this continued rivalry, including a very dangerous undertaking in military adventurism, is no longer wise policy in view of the development of the missiles and other weapons. I believe there recently has been some change in their attitude and in our own.

I think that we have sufficiently recognized the gravity situation in Southeast Asia and, in addition, many people have come to the view that the situation in the Middle East with respect to us and the Russians is unacceptable. That made me believe that it is at long last timely to recognize the United Nations and to see if it could not be brought into play.

To me it was always the best hope as an institution to bring about some order and some respect for other people's rights and for the principle of negotiation and peaceful settlement. These principles, of course, are the basis of the charter, and particularly for that part relating to the Security Council which has a responsibility in this matter.

All of this coming together, I felt that it was timely to explore the matter. This is why I have made the speech. I have never professed to be a great expert on the Mideast or any other area, for that matter. After all, I represent Arkansas. But as chairman of the Committee on Foreign Relations, I felt that it would be appropriate to express my views. There they are, and if there is nothing to them, so be it. But if there is anything that inspires any people in the Government

to take seriously these proposals, I hope it would be very useful.

Above all I do hope that the United Nations can be made an effective instrumentality, as I said 25 years ago. I was here at the time. I remember very well at the time thinking that maybe at long last we had come to our senses and would try to find a means of keeping peace other than through a balance of power, which, although many people say is it realistic, has resulted from time to time in very grave destruction of the accumulated wealth, accumulated good will, and moral fiber of various countries. It has been a great disaster.

I never thought that was very realistic. We are looking for a substitute for it. I do not minimize from my own point of view the significance of bringing the United Nations into this.

It was all of this coming together that prompted me to make a speech. The Senator knows that I do not usually make speeches on many of these subjects—and I hope he agrees—without some reason and some justifications. I hope that people do not think that this is not a serious speech. It was intended to be serious, regardless of whether it turns out to be effective and successful.

I hope that it will be taken seriously and that something can be done to revive our confidence in the United Nations.

I thank the Senator very much for this colloquy.

As survivors of genocide, they can hardly be expected to distinguish with perfect clarity between Nazi crimes and Arab rhetoric. All they know is that they came to Palestine in peace, settlers in an underpopulated land, but have been allowed no peace; they have fought three wars they never wished to fight and still their enemies remain implacable, refusing even to talk to them, contesting—until recently—their right to survive as a state. Nonetheless, the Arab-Nazi analogy is a faulty one; it clouds the distinction between the myth and reality of Arab intent—whatever these may be.

The Arabs, for their part, perceive Zionism as a new form of western imperialism. Having lived on the land of Palestine for thousands of years, they can have little sympathy for the historic sentiments of the Jewish diaspora. It is, I should think, impossible for them to put themselves in the place of the Jews, whose cultural attachment to their ancient homeland sustained them through centuries of dispersal and persecution. The Arabs are on a different wave length: while the Jews prayed for Palestine—"next year in Jerusalem," they said in their prayer—the Arabs inhabited the land. They could not see the Jews as the Jews saw themselves: as refugees from genocide seeking safe haven. What did this have to do with the Arabs? They had done the Jews no harm and could see no reason why they should compensate the Jews for the crimes of Europeans. In fact, to Arab eyes, the Jews were Europeans, armed with European skills and technology, coming on the heels of other Europeans to drive them from their homes and steal away their lands.

In its way Zionism has seemed to the Arabs even more threatening than the old European imperialism. The British and French after all were only establishing colonies and, bad as that was, colonies come and go. But the Jews were establishing a homeland, and homelands do not come and go. On the contrary, once established, they are likely to expand. The Jewish state actively encourages immigration from all over the world, creating for Arabs the specter of a Jewish drive for lebensraum, which could only mean the annexation of even more Arab lands. Some elements within Israel and the world Zionist movement openly proclaim the need of a policy of expansion, which must give rise to a fear among Arabs not unlike that felt by the Jews when the Arabs talk of throwing them into the sea. To the Arabs, in short, Zionism is not a program of deliverance for a persecuted race but a foreign conquest bolstered by strong ties between the conquering people and the most powerful governments of the West.

As if the Arab-Israeli problem were not enough, the great powers have made their own special contribution to the mythology of the Middle East by infusing the crisis with the hocus pocus of geopolitics. The Middle East, in geopolitical terms, is something far more abstract than an oil-rich desert contested by feuding Semitic peoples. Beyond that, it is the "gateway to the East," the "hinge of NATO," and the crucial cockpit of the historic Russian drive toward warm water. By sending planes and missiles to Egypt the Russians are not merely bolstering a shaky client; to the X-ray eye of the geopolitician, they are embarked upon a drive to convert the Mediterranean into a Soviet lake. The concept is admittedly vague: would the Russians close the Mediterranean to foreign shipping? Prohibit fishing? Use it as a vacation resort? No one really knows what a Russian mare nostrum would be like, but the concept serves the purpose of its users: It scares people; it imputes the "vital interests" of the great powers to a regional conflict, converting it into a battleground of the cold war. In this frame of reference one even suspects the Russians of an insidious design in wishing to reopen the Suez Canal—something which used to be considered a good thing, before the geopoliticians came along.

The vital interests of the great powers are, in fact, involved in the Middle East—primarily because those powers have chosen to become involved. The ultimate danger is that the Arab-Israeli conflict could draw the superpowers and the world into a nuclear war—and that certainly is a matter of vital interest—but the danger is not inherent in the local situation, nor is it predestined by fate. It has come about because the great powers have surrendered much of their own freedom of action to the bellicose whims of their respective clients. There is of course one way—in case anyone still cares—in which the great powers are obligated to intervene: as members of the United Nations Security Council charged by the Charter with the responsibility to "decide what measures shall be taken" in response to a "threat to the peace, breach of the peace or act of aggression." Instead, the Soviet Union and the United States have played the role of cobelligerents to their respective clients, arming, and financing them, committing their own prestige to the issue and, in so doing, converting a local conflict into a potential world conflict. All that can be said in mitigation is that both great powers have shown a certain prudence by holding back at times on the arms supplied to the warring parties.

Finally there is the myth of militarism, and that affects all of the parties. Each clings to the notion that another round may settle things—although three wars have settled nothing—or that some new weapons system will stabilize the balance of power—as if either side would accept the other's notion of what it takes to establish a proper balance.

Since the June war of 1967 the Egyptians have acquired vast arsenals of Soviet weapons, including air support and advanced ground-to-air missiles, and they have launched a "war of attrition." What has it gotten them? The Israelis have been compelled to stop their deep penetration air raids but they still hold the Sinai; until the cease fire they were bombing Egyptian installations on the west bank of the Canal around the clock; and they have every prospect of acquiring additional Phantom and Skyhawk jets from the United States so as to reestablish their version of the balance of power. Nor has any of this new Egyptian hardware wrung any political concessions from the Israelis: Prime Minister Meir explicitly rejects the borders of 1967 and, instead of offering concessions, Foreign Minister Eban contributes pithy ironies about recognizing the right of the United Arab Republic to exist.*

The Israelis, for their part, have hardly profited from their military successes. They have gained territory and they have established their military superiority, but they have failed to gain what they most want: security. In 1967 they felt desperately insecure along the Gaza Strip frontier; today they feel desperately insecure along the Suez Canal, so much so that they and their friends abroad seem almost to have forgotten that it is not their own but Egyptian territory that they are defending so tenaciously. One begins to understand the spheres-of-influence psychology, which causes a nation to believe that it can have no security at all until it has robbed its neighbors of all semblance of security.

Surrounded by hostile neighbors, holding down occupied lands inhabited by a million Arabs, plagued by fedayeen attacks and oppressed by the costs of armaments, Israel is a desperately insecure nation. That is clear, but it is anything but clear that her present policy of relying on military superiority is ever going to alter the situation. If the Suez frontier does not provide security, what boundary would? And even if the United States provides all the Phantom jets the Israelis want and the electronic jamming

* Interview on "The Advocates," a public television network presentation of KCET, Los Angeles, and WGBH, Boston, June 21, 1970, "The Middle East: Where Do We Go From Here? Part II: The Case for U.S. Support for Israel."

gear which may neutralize the SAM–2 and SAM–3 missiles, it is unlikely that Israel will gain more than a respite; the Russians will soon enough come up with something else.

After the First World War the French tried to gain security in somewhat the same way that Israel seeks it today. They, too, were confronted with a potentially powerful but momentarily weakened antagonist and they tried to perpetuate that situation by occupying the German Rhineland, temporarily detaching the Saar, and compelling Germany to pay reparations. The effort to make France secure by keeping Germany weak was a failure. Now, 25 years after the Second World War, France has nothing to fear from Germany although Germany is strong and in possession of all of the western territories France once wished to detach. France is secure now not because Germany has lost the power to threaten her but because she has lost the wish to do so.

The analogy is imperfect and simplified but it holds: Israel will be secure when and if the Arabs lose the wish to threaten her. Eliminating that wish should be an object worth pursuing from Israel's point of view. As victors the Israelis are in a position to be magnanimous without being suspected of weakness—which is something nations worry about whenever they are thinking about behaving sensibly. But thus far they have shown little inclination to trade their conquests for peace. Instead, they cling to the advantages won by their military victory of 1967, which is a rapidly wasting asset. One insecure frontier has been traded for another and all that the future seems to hold is continuing conflict, as threatening to the outside world as it is to the Arabs and Israelis.

Because the conflict is a threat to the outside world, it cannot be left solely to the humors of the belligerents. I have never fully understood why some of our statesmen feel that it would be a heinous crime for external parties to impose a solution. Under the United Nations Charter the Security Council has full authority—possibly even the obligation—to impose a settlement upon warring parties who fail to make peace on their own. The very premise of the charter is that warring nations can no longer be permitted immunity from a world police power. As far as the United States is concerned, it is worth recalling now and then that the United Nations Charter is a valid and binding obligation upon us, ratified as a treaty with the advice and consent of the Senate. As to the Arabs and Israelis, they too are signatories of the charter and no one can say they have been denied a fair opportunity to settle their differences peacefully and on their own. They might now be reminded of their commitment under article 25 of the charter, which states that—

> The Members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

I think it would be a fine thing—a useful step forward for civilization—if, in the absence of a voluntary settlement by the parties, the United Nations were to impose a peaceful settlement in the Middle East. It would be an equally fine thing if the United Nations could impose a settlement in Southeast Asia.

II. PERSPECTIVES

There are four major perspectives on the Middle East conflict and need of a fifth. The needed one, as I have suggested, is that of the world community through its duly constituted organ, the United Nations. The development of such a perspective and its translation into action will require changes and adjustments in the long frozen perspectives of Arabs and Israelis, Russians, and Americans. There are at present some hopeful signs of possible change, brought forth by Secretary Roger's constructive initiative. In this slightly improved atmosphere it may be well to review the prevailing perspectives of those involved in the Middle East, with a view to detecting misconceptions, desirable directions of change, and opportunities for future agreement.

Starting with Israel, it is less than adequate to say that Israel is concerned with her survival. Surrounded and outnumbered by seemingly implacable foes, the Israelis are obsessed—as anyone else in their position would be—with the fear of being destroyed. This fear is based on salient facts but it is reinforced by fear itself, and by a 2,000 years' history which planted the fear of extermination deeply in Jewish minds. The result, I suspect, is a tendency on the part of the Israelis to exaggerate their own vulnerability, to credit their adversaries with more relentless hostility than in fact they may harbor, and to dismiss tentative gestures of conciliation as hypocritcial tricks.

It is noteworthy, in this connection, that, when President Nasser responded favorably to Secretary Rogers' peace proposal, the initial reaction of the Israelis and of some Americans was that Nasser was setting a trap in which Israel would be forced either to stop bombing the west bank of the Suez Canal or risk alienating the United States. Quite possibly that was President Nasser's motive—no outsider really knows—but how can there ever be progress toward peace if neither side is ever willing to take the other's word for anything, if each insists upon crediting the other with the most fraudulent and devious possible motives, and if each bases its policy on its own suspicions rather than the other's behavior? Would Israel, and Israel's friends in the United States, have liked it better if President Nasser had rejected the American proposal? Would they have thought better of him for it? Would they have commended him for candor and courage?

Chronic suspicion is ultimately unrewarding; it is the kind of outlook which causes myths to displace realities in the minds of statesmen who pride themselves on realism and hardheadedness. It has distorted American perceptions of China and the Soviet Union, and it has distorted the Israeli view of Arab intentions and capacities. When suspicion governs policy, it becomes impossible for adversaries to communicate or negotiate because neither side is receptive to even the bare possibility that the other may be telling the truth when he makes a conciliatory gesture, or that he may be amenable to compromise.

The Israeli conviction of Arab hostility is by no means invention, but there is a touch of paranoia about it—just as there is in our own attitude toward communism—and the worst of it is that the prophecy is self-fulfilling. It is a truism of modern psychology that we influence the behavior of others by our own expectations of how they are going to behave. The critical question for Israel is whether it is willing to risk taking the Arabs at their word when they offer to live in peace—as they have done in effect by accepting the Security Council resolution of November 1967—and, in taking this risk, helping to influence Arab behavior in the direction of compromise and peace. This is not to say that Israel can or should gamble her survival on the hope of Arab good will; Israel has the unchallengeable right to survive as a state and, as I shall indicate later, I would be willing to support a significant new commitment by the United States to assure Israel's survival. Nonetheless, I think it is incumbent upon Israel at this juncture to credit President Nasser with good faith when he says that he is willing to live in peace. A change in Israeli expectations might well bring about a change in Egyptian behavior.

A promising opportunity to do that was lost last spring when the Israeli Government refused to authorize the president of the World Jewish Congress, Dr. Nahum Goldmann, to hold talks in Cairo with President Nasser. The "torpedoing" of the Goldmann mission was surprising as well as unfortunate because, as the New York Times pointed out at the time, a meeting between a veteran Zionist leader and the Egyptian President would have represented a "significant breakthrough toward the direct contacts on which the Israel Government has always insisted."[3]

In Dr. Goldmann's view the Zionist movement has suffered since its inception from a failure to grasp Arab psychology. Instead of seeking to minimize the injustices done the Arabs by the establishment of the Jewish homeland in Palestine, Israel, writes Dr. Goldmann, "counted on military force or the intervention of foreign powers to attain its goals." As a result, he continues, Israel "has ceased to project the image of a small country threatened with destruction" and has become "an occupying power," which "exercises control over peoples who reject it and whom it has subjected." The result of Israeli policy since the Six Days' War of 1967, in Dr. Goldmann's view, is a dangerous impasse which does not work to Israel's advantage, because time is not on Israel's side. Israel's present advantage, Dr. Goldmann points out, derives from the virtues, character and technological ability of its citizens, but the Arabs too have demonstrated energy and talent in the past and they greatly outnumber the Israelis. "No one," writes Dr. Goldmann, "can predict how long it will take them to catch up with Israel technologically,

[3] "Sorry Wrong Number," editorial in *The New York Times*, April 10, 1970.

especially in the field of weaponry. But sooner or later the balance of power will shift in their favor." Maintenance of the status quo, Dr. Goldmann concludes, "will lead to new wars, new Arab defeats and growing hatred of the Israelis"—a situation which "could have disastrous consequences for the Jewish State in the long run." [4]

I recently had a conversation with a prominent Israeli journalist who had played a leading role in the struggle against British rule before 1948. Concerned that Israel has become a garrison state, he expressed fear for his country's survival as a democratic society. I said that I had the same fear for America, because we too have been chronically at war for over two decades. We agreed that both Israel and the United States would do well to recall Alexis de Tocqueville's warning of a century and a half ago:

> All those who seek to destroy the freedom of the democratic nations must know that war is the surest and shortest means to accomplish this. That is the very first axiom of their science.[5]

This Israeli journalist concluded by expressing the hope that Americans of moderate persuasion would speak out on the Middle East. If they did, he thought, Israeli moderates too would be encouraged to speak in favor of a policy of conciliation.

Israeli policy since the 6-day war has been characterized by a lack of flexibility and foresight. The establishment of Israeli settlements on the occupied west bank of the Jordan River and in the Sinai, as well as on the Golan Heights, can only be interpreted as steps toward foreclosing the return of these territories to their previous Arab owners. The insistence upon the nonnegotiability of the status of Jerusalem and upon the retention of certain other occupied territories—notably the Golan Heights, the Gaza Strip and Sharm el Sheikh—lends unfortunate credence to President Nasser's pessimistic assertion, in accepting Secretary Rogers' peace proposal, that, "While we inform the United States that we have accepted its proposals, we also tell them that our real belief is that whatever is taken by force cannot be returned except by force." [6]

Equally distressing—although not entirely unprovoked—is the Israeli view of the United Nations as what Mr. Eban calls a packed court whose recommendations may be ignored. The insistence upon the nonnegotiability of Israeli's annexation of Arab East Jerusalem is in open contempt of the United Nations General Assembly, which censured that unilateral act by a vote of 99 to 0.

I speak critically of Israeli policy in part because of my belief that Israel, as the momentary victor, has both an obligation and an interest in a policy of magnanimity. The obligation arises from general considerations of world peace and from the specific injustice which has been done to the Palestinian Arabs, who, as Arnold Toynbee has written, "have been made to pay for the genocide of Jews in Europe which was committed by Germans, not by Arabs." [7] Israel's self-interest in magnanimity is a matter of the only kind of security which really is security. In the words of a member of the law faculty of Hebrew University:

> A border is secure when those living on the other side do not have sufficient motivation to infringe on it . . . We have to remind ourselves that the roots of security are in the minds of men. . . ." [8]

The Arabs, too, must face up to certain realities: that Israel has come to stay; that it is demagogic nonsense to talk—as some of the Palestinian guerrillas still do—of driving the Jews into the sea; that in any case the Arab States can have no realistic hope of doing that because they themselves cannot defeat Israel, the Russians are not likely to do it for them, and the United States would almost certainly intervene to save Israel from destruction. Once these facts are recognized—as in large measure they have been recognized by the governments of Egypt and Jordan—the Arab countries will be able to free themselves from their morbid preoccupation with past defeats, from futile dreams of revenge, and from the oppressive burden of armaments which slows their development and makes them dependent upon foreign powers.

While Egypt and Jordan are still widely credited with the desire to destroy Israel, both in fact have repudiated any such ambition and have done so explicitly and repeatedly. They did it in the first instance by accepting the United Nations Resolution of November 22, 1967, which required them to give up positions to which they had held tenaciously for 20 years. By accepting that resolution, Egypt and Jordan committed themselves to terminate their belligerency against Israel; to acknowledge Israel's sovereignty, territorial integrity and right to live in peace within secure and recognized boundaries; and to respect Israel's right to freedom of navigation through the Suez Canal and the Strait of Tiran.

Having accepted these provisions of the resolution—which in fact meet all of Israel's stated and legitimate aspirations—the Egyptians and Jordanians now emphasize the other provisions of the resolution of 1967; the withdrawal of Israel from occupied territories; a just settlement of the refugee problem; and the inadmissibility of the acquisition of territory by war.

The last is a general principle which goes beyond the special interest of the Arab States. Its vindication—even in one instance—would represent a long step forward toward the establishment of the rule of law in international relations. That would serve everybody's interests—everybody, that is, who wishes to survive the nuclear age and who still has some hope that the United Nations can be developed into an effective peacekeeping organization. It is natural enough for Israel to resist the honor of being the first modern military victor to be obliged to abide by the principles and specifications of the United Nations Charter, especially when the great powers who dominate the Security Council have set such a wretched example. Be that as it may, the principle involved is too important to be cast away because of the hypocrisy or self-interest of its proponents.

Returning to the Arab perspective, I think there has been insufficient recognition of the distance the Egyptian and Jordanian governments have come toward accommodating themselves to some form of coexistence with Israel. President Nasser and King Hussein have repudiated the contention that they will be satisfied with nothing less than "driving Israel into the sea" not only by subscribing to the Security Council's resolution of November 1967 but through repeated and explicit public statements. Speaking in Washington last year, for example, King Hussein reiterated his own and President Nasser's willingness to abide by each of the provisions of the 1967 resolution and then added:

> In return for these considerations, our sole demand upon Israel is the withdrawal of its armed forces from all territories occupied in the June 1967 war, and the implementation of all the other provisions of the Security Council resolution. [9]

To take another example: in an American television interview on June 14, 1970, President Nasser stated unequivocally his willingness to accept the boundaries of Israel as they existed before the 1967 war as final boundaries. Asked whether Egypt would promise that its territory would not be used for attacks on Israel once the Israelis withdrew from the occupied territories, President Nasser replied—several times—"Yes." [10]

Unless one is prepared to contend—and back the proposition—that President Nasser and King Hussein are simply not telling the truth, it seems to me irresponsible to continue accusing either Egypt or Jordan of a policy aimed at "driving Israel into the sea." Even the President of the World Jewish Congress has recognized the extent of the change in Egyptian and Jordanian policy. Dr. Goldmann states it is his impression that not only King Hussein but President Nasser would be happy to conclude an agreement, if not a formal peace, with Israel. President Nasser, he notes, uses expressions which would not have been possible a few years ago.[11]

Withdrawal from the occupied territories is one of two concerns which dominate the Arab perspective; the other is the question of the Palestinian refugees. Whatever the political considerations which have led Israel to evade responsibility and the Arab States to exploit

their plight, the unhappy Palestinian refugees remain preoccupied with the indisputable facts that, after 20 years in exile, they are not permitted to return to their homes and they have been denied compensation for their lost properties. Although, according to United Nations estimates, some 60 percent of the refugees have found new homes and jobs, many thousands—made up mostly of the elderly, the very poor, the sick and the least educated—are still interned in miserable camps, living hopeless lives as wards of the United Nations. Since the 1967 war approximately half of the 2½ million Palestinian Arabs have been living under Israeli occupation. Despite annual United Nations resolutions recognizing their right to choose between returning to their homes and resettling elsewhere with compensation for lost properties, the refugees remain neglected and embittered pawns in the continuing Middle East conflict, the original 750,000 refugees of 1948 having increased to over a million. In the words of the Friends' Working Party:

> The Arabs of Palestine see themselves as a people in diaspora, just at the time when the Jews have won their struggle for a national home." [12]

Since the June war of 1967 the Palestinians have emerged as active participants in the Middle East conflict. The largest of the guerrilla organizations, Al Fatah, demands the dissolution of the present state of Israel and the creation of a secular multireligious state. They reject partition but they also deny any wish to "throw the Jews into the sea." Other Palestinian Arabs, more moderate, more realistic and—prudently, under present circumstances—more silent, acknowledge that Israel is here to stay and say that they are prepared to make peace—provided that Israel withdraws from the territories occupied in 1967.

The status of the Palestinians and the question of the occupied territories are the critical issues for peace in the Middle East. The two issues are closely related because many Palestinian Arabs are haunted by the fear that there are no bounds to Israel's territorial aspirations—a fear which feeds upon classic Zionist ideology as well as upon the declarations of military-minded Israelis who press the claim for "strategic" frontiers. A declaration by the Israeli Government of willingness to restore all of the occupied territories as part of a general peace settlement would go far to alleviate Arab fears of Zionist expansionism. Such a statement would meet the Egyptian-Jordanian condition for peace and would also improve the chances for a settlement in Palestine.

In the Arab perspective the central issues are the occupied territories and the Palestinians. In the Israeli perspective the issue is the survival and security of the Jewish state. The United Nations Resolution of 1967 recognizes the legitimacy of both parties' concerns. The question now is whether the two sides, and their great power mentors, are ready to proceed through the renewed mediation of Dr. Jarring toward the translation of general principles into specific agreements.

More perhaps than either would care to acknowledge, the two superpowers have played similar roles in the Middle East, both characterized by a certain ambivalence. On the one hand, they have played the traditional great power role, arming their respective clients, committing their own prestige, building spheres of influence, fretting over geopolitical abstractions—all serving to elevate a regional crisis into a global one. On the other hand, both the Soviet Union and the United States have shown an appreciation of the dangers in the Middle East, and that appreciation has caused them to restrain the two sides at critical moments and to encourage some form of accommodation. In recent weeks both great powers have shown a commendable sense of responsibility; as a result of their mediation, the prospects for a compromise settlement have improved. Particular credit is due Secretary Rogers for the cease-fire and the renewal of Dr. Jarring's mediation.

The conflict of course is far from over and the chances of a settlement arising out of the new Jarring mission have to be rated less than even. The great powers, accordingly, still must determine the kind of role they are to play in the Middle East, whether they are to revert to power politics or undertake to advance and enforce a compromise peace through the United Nations. Heretofore the superpowers have vacillated between the temptation to turn the Middle East into a cold war battleground and a caution induced by the well-founded fear of an uncontrollable conflict. The outcome in the Middle East will be determined as much by the great powers' conception of their own interests and of their own proper roles as by the attitudes of the Arabs and Israelis.

Like their tsarist predecessors, the Soviet leaders are pursuing a foreign policy aimed at the acquisition of influence in the Near East and the Mediterranean. What, if anything, they hope to gain in concrete terms is unclear—probably even to themselves. The Russians do not appear much inclined to try to communize the region; they have amiably overlooked the imprisonment of local Communists and the suppression of Communist parties in Egypt, Syria and Iraq, eagerly providing armaments to all three countries, both before and since the June war of 1967.

The Russians appear to be interested in the Middle East for reasons of security and trade as well as influence. They would like to see American military power removed from the region, although it is hard to see how that would benefit Soviet security since American bases would remain in Greece and Turkey. That, however, is the sort of thing big countries worry about, and I for one am inclined to take it at face value. The Russians would of course benefit commercially from the reopening of the Suez Canal, as would other countries, but that could be accomplished through a compromise peace and hardly requires a Soviet drive for power in the Middle East.

Basically, I suspect, the Russians are motivated by the same vague geopolitical impulses that all great powers are susceptible to: They enjoy sailing their warships around the Mediterranean and and would enjoy it even more if we felt constrained to keep our ships out; they would like in general to be "top dog" in the Middle East and would be delighted to see American influence reduced or eliminated. It appears to be in large part a matter of ego gratification, or of what the psychologists call "self-maximization," and it is by no means a unique Soviet susceptibility.

For the advancement of these noble purposes, Israel is indispensible to the Soviet Union. So, at least, says Edward Crankshaw, the well-known Kremlinologist. Israel, in his view, is the Soviet Union's admission ticket to the Middle East. If it did not exist, the Arab States would have little need of Soviet military and political support, and the Russians would have nothing with which to charm the Arabs except their communism, which does not seem to charm them at all. Without Israel the dream of paramount Russian influence in the Middle East and of the Mediterranean as a "Soviet lake" would go aglimmering. If Israel did not exist, says Crankshaw, the Russians would have to invent it.

Israelis can be forgiven for an unwillingness to base their security on Soviet national egoism, but at least they—and their supporters in the United States—ought to take solace in the available evidence that the Russians have a stake in their survival. The Israel leaders are not known for simple-mindedness or a lack of diplomatic skill, and that causes one to suspect that they may be somewhat less terrified of the Russians than they care to let on. After 25 years of the cold war the word has pretty well gotten around that invoking the Communist menace is a fairly reliable way of keeping the Americans in line.

A recent statement by the American Jewish Committee, for example, referred to the dispatch of Soviet military personnel to Egypt as an action "obviously designed to test the intentions of the free world and particularly that [sic] of the United States." "The balance of power in the area has already been disturbed," the statement goes on, "and a serious challenge to the national will of the United States has been raised." And further:

> The United States must make it unmistakably clear to the Soviet Union that it intends to defend its vital interests in the Middle East against encroachment by the Soviet Union.

The statement then calls for "affirmative action"—by which is apparently meant more Phantom jets and other military supplies for Israel—"to avoid the danger of a confrontation through Soviet misinterpretation of our past restraint as a sign of weakness." [13]

The language of this statement has a familiar ring; it is of Vietnam vintage. Their vital interests are suddenly identified as our vital interests; their security becomes a matter of our "national

[12] *Search for Peace in the Middle East*, p. 36.

[13] "American Jewish Committee, Statement on the Middle East," May 17, 1970.

will;" their regional conflict is identified with our global crusade against communism—all without benefit of factual analysis, much less a security treaty ratified by the Senate. It is the same old game of waving a red flag in front of the anti-Communist bull, and many Americans are still falling for it.

Fortunately, Secretary Rogers and other individuals in our Government have made a cooler assessment of Soviet intentions in the Middle East. They have recognized that, although the Soviet Union has made harsh verbal attacks on Israel, it has been consistent in its advocacy of a political settlement based on the Security Council resolution of November 1967. It also seems evident that the introduction of Soviet pilots and of SAM–2 and SAM–3 missiles into Egypt was something less than a bid for Soviet domination of the Middle East. The Israelis, it may be recalled, had been flying deep penetration raids over Egypt and had even bombed the suburbs of Cairo. The Egyptians at that time seemed unable to counter Israel air power and there was even talk of this situation resulting in the fall of President Nasser. The steps taken by the Russians since then can—and I think should—be interpreted as fairly cautious measures designed to bolster a faltering client. They seem quite cautious when compared with the things we have done to shore up our faltering client states in Asia.

The weight of evidence indicates that the Russians do indeed want a compromise settlement in the Middle East. In the view of the New York Times' correspondent in Moscow, they would welcome the reopening of the Suez Canal, relief from the heavy costs of arming Egypt, and a reduction of great power tensions. A solution acceptable to the Arabs, moreover, would earn gratitude and influence for the Russians in the Arab world, would enhance Soviet prestige all over the world, and appease the Jewish population of the Soviet Union.[14] And, most enticing of all, in the Soviet perspective, would be the ego-gratifying prospect of a region full of neutralist states more amenable to Soviet than to American "influence"—whatever that might mean in concrete terms.

When ideological and moral pronouncements are set aside—as every now and then honesty commends—the American perspective on the Middle East is in a number of important respects the mirror image of that of the Russians. We, too, attach great importance to our fleet plying Mediterranean waters; we too have an economic stake in the region—though not as great as that of some of our allies, who get most of their oil from the Middle East; we too derive ego-gratification from wielding "influence" in various parts of the world—although, like the Russians, we prefer to dress up our egoism in unctuous pieties; and, like our rival, we are a pushover for geopolitical grandiosities, the Middle East being, in President Nixon's phrase, the hinge of NATO." [15]

Only in one respect is our interest in the Middle East fundamentally different from that of other outside powers: we are tied to Israel by bonds of culture and sentiment and by the special attachment of our American Jewish population. These bonds represent a perfectly valid basis for the definition of a national interest and for the making of a valid commitment based on that interest—provided that the commitment is made in an appropriately constitutional manner, and provided too that it does not infringe upon or derogate from other valid interests. As matters now stand our commitment to Israel is de facto and undefined: we do not really know the extent of our own obligation, which could be very great, while Israel does not know what in the way of American support she can rely on. This uncertainty in turn appears to have driven Israel to greater militancy and inflexibility in her attitude toward the Arabs. For our part, the lack of a constitutionally legitimate commitment, candidly based on the sentimental and cultural bonds which are the real source of our interest in Israel, drives us to rationalize our involvement in terms of gradiose geopolitical concepts.

The assumption appears to be that there is something illegitimate about sentiment as the basis of a national interest and that we must therefore disguise it behind a facade of tough-sounding realpolitik. Reading the statement of the American Jewish Committee which I quoted earlier, for example, I could not help suspecting that the authors did not really believe all that stuff about the Russians testing the intentions of the free world in the Middle East and challenging the national will of the United States, any more than I believe it. The impression I had was that the authors of the statement feel a cultural and religious attachment to Israel but do not feel they can persuade the U.S. Government to pursue a policy designed to serve that attachment unless it can also be justified in terms of the grand strategy of the cold war. I regret this attitude very much, for one reason because there is nothing wrong with a policy based on sentimental attachment as long as it does not intrude upon other interests, but primarily because the introduction of cold war rationalizations can have—and to a great extent has had—the dangerous effect of expanding a local issue into a global one.

Both President Nixon and Mr. Kissinger have tended to speak in those terms. In his televised interview of July 1, for example, President Nixon spoke of the Middle East as being "terribly dangerous, like the Balkans before World War I, where the two superpowers, the United States and the Soviet Union, could be drawn into a confrontation that neither of them wants." Five days earlier, Mr. Kissinger had said exactly the same thing:

> What makes the situation in the Middle East so potentially dangerous is the fact that it has many similarities with the Balkans before World War I.

Pressing the analogy, Mr. Kissinger contended that "no one caused World War I;" that it came about as an accident; and that the situation in the Middle East is roughly analogous, Israel and the Arab States each being allied to a superpower. He said:

> Each of them to some extent not fully under the control of the major country concerned.[16]

This tough talk, it has been explained, was designed to scare the Russians, not to be taken literally. Whatever effect it had on the Russians, I must say that it scared me, because it reveals a dangerously outmoded way of thinking about international politics. The catastrophe of war is conceived as something fated, controlled by quarrelsome client states if not by the iron laws of power politics. Implicit in this outlook is the supposition that the coming of a great war is beyond the control of statesmen—even beyond the control of the Pentagon computers, or of Mr. Kissinger's staff of experts in the White House basement.

The outlook is faulty, and so is the analogy. World War I was not primarily an accident, and it was certainly not predestined. It came about, as recent German historians have shown, because Germany was willing for it to come about and aided and abetted the events which led to the explosion. It was within Germany's power at any time to restrain her Austrian client and, in so doing, to prevent war. The German leaders knew they had this power but consciously chose not to exercise it because they thought they could win a general European war and judged that it would derogate from German pride and grandeur if the great German Empire shrank from war.

That is why war came in 1914 and that is why it will come again, if it does come again. It will be, as it was in 1914, the result of human choice, human pride and human folly. Neither the Arabs nor the Israelis have the power to bring on a world war. Only the superpowers have that option and—whatever the political usefulness of historical misanalogies—they had better not forget it.

At least twice in his two background briefings at San Clemente, Mr. Kissinger referred to the American interest in the Middle East deriving from our allies' dependence on Middle Eastern oil. The Japanese, Mr. Kissinger pointed out, get 90 percent, and the Western Europeans 75 percent, of their oil from the Middle East—"which again is one reason why we can have an overwhelming interest in preventing this area from being dominated by the Soviet Union." [17]

For those who are worried about "neo-isolationism" Mr. Kissinger's words should provide ample reassurance that the policeman-of-the-world spirit is still a living force in American foreign policy. Without explanation or elaboration it is taken for granted that, because Japan and Western Europe need Middle Eastern oil, the United States has to protect the oil supplies from "the Soviets and their radical clients." What about the Japanese and the Europeans? Why

have they not had anything to say about all this? Why do they not send their fleets to keep the Mediterranean from becoming a "Soviet lake?" Or at least why do they not participate in the enterprise? And why do we not expect them to?

The answer appears to derive from the laws of geopolitics. The "responsibilities of power"—or what used to be called "providence" in the age of faith—have imposed upon us the duty of serving as the Hessians of the free world, with the lesser free world countries at liberty to provide a regiment or two, if they wish, to put a nice face on things.

I do not care much for this geopolitical hocus pocus. Whatever the reasons of strategy or preference that induced the administration to employ it, there is far more to be said for the sensible, conciliatory approach which has brought about the cease-fire and the renewal of the Jarring mission. The administration of course may contend that the renewed peace talks would not have come about but for the carrot-and-stick approach combining the Rogers overtures with the Nixon-Kissinger threats. Perhaps so, but the Russians seem equally convinced that it was they who brought the Americans to reason by sending pilots, missiles and other armaments to Egypt. Each side seems to cherish the view that it has intimidated the other. Spending so prodigally as they do on the instruments of intimidation, they naturally have a vested interest in having something to show for their money.

One would not begrudge them the conceit except for the fact that this attitude—this confidence in one's ability to intimidate an adversary into compromise and peace—seldom achieves the desired result. It has not achieved it in Indochina, and in the Middle East mutual intimidation has had a restraining effect—if indeed it has—only because both sides, for once, have been rational enough to recognize their common interest in peace and, therefore, to override their natural response to the other's threats, which is to feel challenged rather than intimidated, to be provoked and to respond provocatively.

The geopolitical formulations of America's interest in the Middle East are dangerous, historically unsound and basically romantic. There is no relevance in the Balkan analogy of 1914, which purports to show that we are helpless, and we have no automatic, unilateral vital interest deriving from the oil requirements of Europe and Japan. There are, to be sure, important American political and economic stakes in the Middle East, but our major specific interest is a cultural and sentimental attachment to Israel, rooted in the strong preference of a majority of the American people and their elected representatives.

We also have a nonspecific interest, which we share with the Arabs, with the Israelis, with the Soviet Union, and with the rest of the world. That interest is in the vindication of the United Nations as an instrument for the maintenance of peace. The Security Council resolution of November 22, 1967, which Secretary Rogers has said "will be the bedrock of our policy,"[18] emphasizes "the inadmissibility of the acquisition of territory by war," and it reminds the Middle Eastern parties of their obligations under article 2 of the United Nations Charter, of which paragraph 3 states that—

> All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

This is where the fifth perspective comes in, over and above that of Arabs, Israelis, Russians, and Americans. If a United Nations perspective can be developed and brought to bear, we might come out of the Middle East crisis with something better than a peaceful settlement. We might come out with a precedent too, with processes to draw upon in the future.

III. TOWARD PEACE

For most of the life span of both entities the United Nations and the State of Israel have been intimately, if not always cordially, involved with each other. Israel was legally initiated by the United Nations; since then its status, borders, and policies have been the subject of a series of United Nations resolutions. The United Nations Relief and Works Agency still has primary responsibility for the Arab refugees; a United Nations peace force was placed between Egyptian and Israeli forces after the 1956 war and United Nations observers have been stationed along the Suez Canal since the June war of 1967. The Security Council resolution of November 22, 1967, is still the most complete, impartial, and generally accepted policy statement for a Middle East settlement, and is still the best hope for a viable peace. If there has ever been an issue which is ripe and appropriate for peaceful settlement under United Nations auspices, it is the conflict between Israel and the Arabs.

First and foremost, a just settlement must vindicate the principle, as spelled out in the Security Council resolution, of "the inadmissibility of the acquisition of territory by war." This principle goes to the heart of the Charter; article 2, paragraph 4 states—

> All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state.

The return of the conquered territories is the major single requirement for peace as stated by both President Nasser and King Hussein. As King Hussein put it:

> Israel may have either peace or territory—but she can never have both.[19]

Restoration of the occupied territories is also American policy. In his notable speech of December 9, 1969, Secretary Rogers said:

> We believe that while recognized political boundaries must be established and agreed upon by the parties, any changes in the preexisting lines should not reflect the weight of conquest and should be confined to insubstantial alterations required for mutual security. We do not support expansionism. We believe troops must be withdrawn as the resolution provides.

In return for withdrawal from all of the territories occupied in 1967, Israel would be entitled to firm and specific guarantees of her security. One such guarantee might be the stationing of sizable United Nations forces in militarily neutralized zones on both sides of the borders at all of the points which are critical of Israel's security. This would certainly include the Golan Heights from which, before the 1967 war, Syrian guns tormented the Israeli settlements below. United Nations forces might also be stationed on what is now the occupied west bank of the Jordan River; in and around the Gaza Strip and the old border between Israel and Egyptian Sinai; and perhaps too at Sharm el Sheikh to guarantee Israel's egress through the Strait of Tiran. In all cases, it should be specified that the United Nations force could be removed only by consent of both Israel and the Arab government concerned. Perhaps too the consent of a majority of the United Nations Security Council might be required, either to remove the United Nations forces or to terminate the neutralized status of the zones in question.

Another necessary provision of an Arab-Israeli peace settlement would be a mutual disavowal of any further efforts by either side to alter the frontiers of 1967. The Security Council Resolution of November 1967 specifies the right of every state in the area to "live in peace within secure and recognized boundaries free from threats or acts of force." The Arabs, it must be remembered, are as frightened of the Zionist doctrine of unlimited Jewish immigration leading to a drive for lebensraum as the Israelis are of an Arab "holy war" to destroy Israel. Both sides are entitled to explicit guarantees against these deeply rooted fears. This can be accomplished by writing into a treaty a more explicit and detailed version of that provision of the Security Council resolution which would require "termination of all claims or states of belligerency and respect for and acknowledgment of the sovereignty, territorial integrity and political independence of every state in the area."

Israel is entitled to free access through the Suez Canal as well as the Gulf of Aqaba and the Strait of Tiran. That too is called for in the Security Council resolution and should be guaranteed in the definitive instrument of peace.

As to Jerusalem, I have no specific recommendation. I think it well, however, to recall that the United Nations General Assembly unanimously condemned Israel's unilateral annexation of the city[20] and that its status cannot be considered "nonnegotiable." Some form of international status would seem to be the appropriate solution. The Friends' study suggests the desirability of "some sort of federal condominium to govern an undivided and demilitarized Jerusalem" and makes the further contention, in which I concur, that Jerusalem "cannot peacefully become the sole possession of

---

[18] Testimony before the Senate Foreign Relations Committee, March 27, 1969.

[19] Speech to the National Press Club, Washington, D.C., April 10, 1969.

[20] On July 4, 1967, by the vote of 99 to 0, the United States abstaining.

one religion or one national state." [21] There may also be merit in Dr. Nahum Goldmann's suggestion that the old Arab section of Jerusalem be constituted "an autonomous enclave with an international status administered by its inhabitants." Such an internationalized city, Dr. Goldmann suggests, might become a "center for world organizations" as well as a center for three great religions.[22]

Probably the most difficult and intractable of the issues to be resolved is that of "achieving a just settlement of the refugee problem" as called for in the Security Council Resolution of 1967. In justice and law—the latter in the form of numerous United Nations resolutions—the Palestinian Arab refugees are entitled to one of two forms of restitution: either repatriation or compensation. As a practical solution it should be feasible to work out an agreement under which Israel would take back within its 1967 borders an agreed number of refugees who would be accepted as Israeli citizens and whose former properties would either be restored or compensated for. For the majority of refugees, repatriation would probably be neither feasible nor desired. A commitment by the Arab States to accept them and assist in their resettlement—as in part they have already done—should be accompanied by generous Israeli financial support, both to compensate these refugees for their losses and to facilitate their resettlement. With constributions from friends abroad, and with the relief from military costs which peace would make possible, Israel should have no great difficulty in meeting these costs, which in any case ought to be accepted as an elementary moral obligation.

In due course the Palestinian Arabs will find it necessary to accept the existence of the state of Israel and to recognize that further, futile efforts to destroy the Jewish state will only compound their own suffering. The Palestinians have been done a great historical injustice but it cannot now be undone in the way they would have it undone. Indeed, after 22 years of Israel's existence as an independent state, it would now be as great an injustice to disrupt that society as it was for the Jews to drive the Arabs from their land in the first place. A certain rough justice accrues to any existing state of affairs, insofar as it affects people's lives and homes; once people are established and living in a place—regardless of how they got there—it becomes an injustice, even if it were a practical possibility, to disrupt and expel them.

This must be a bitter pill for the Palestinian Arabs to swallow, but, myths and realities being what they are, they are going to have to do it if they want an end to futile guerrilla warfare. Whether, whenever, and however they do, the Palestinians are entitled to some form of self-determination on the non-Israeli territory of Palestine. Whether they will wish to form an independent Palestinian State, or rejoin the Kingdom of Jordan, or federate with it in some way, is beyond the reach of a foreigner's judgment, and perhaps beyond the feasible scope of any foreseeable peace settlement in the Middle East.

Central and indispensable to a peace settlement based on the Security Council Resolution of November 1967 would be the guarantee of the entire settlement by the United Nations. Such a guarantee would properly take the form of a specific commitment by the United Nations Security Council to enforce the peace and all of its specifications, including the "secure and recognized boundaries" of both Israel and her Arab neighbors and the neutralized status of designated border zones. The agreement should also specify strict limitations on the sale or provision of arms to Middle Eastern states by outside powers. As permanent members of the Security Council, the United States, the Soviet Union, the United Kingdom and France would have major responsibility for enforcement of the peace terms, but that obligation would fall upon them not in their capacity as "great powers" but as members of the Security Council, which is entrusted by article 24 of the Charter with "primary responsibility for the maintenance of international peace and security."

It might also be appropriate and desirable for the Security Council's guarantee to be ratified formally by the legislative bodies of the signatory states. Such action would represent a mark of the seriousness attached to this new commitment by members of the Security Council, although it might not be regarded as juridically essential since, by ratifying the Charter in the first place, every member of the United Nations is already committed, under article 25, to "accept and carry out the decisions of the Security Council." It would do no harm, however, by formal parliamentary act, to remind the members of this frequently forgotten obligation.

For reasons of varying merit Israel has indicated on numerous occasions a lack of confidence in the United Nations. In order to accommodate this attitude and provide Israel with an added assurance of security, I, for one, would be willing to supplement a United Nations guarantee with a bilateral treaty—not an executive agreement but a treaty consented to by the Senate—under which the United States would guarantee the territory and independence of Israel within the borders of 1967. This guarantee should neither add to, nor detract from, nor in any way alter the multilateral guarantee of the United Nations—which would obligate us, as a member of the Security Council, to defend the "secure and recognized boundaries" of both Israel and her Arab neighbors. The supplementary, bilateral arrangement with Israel would obligate the United States to use force if necessary, in accordance with its constitutional processes, to assist Israel against any violation of its 1967 borders which it could not repel itself, but the agreement would also obligate Israel, firmly and unequivocally, never to violate those borders herself.

I conceive of an American treaty of guarantee with Israel as an instrument which would come into effect after—and only after—the multilateral guarantee of the United Nations had been agreed upon and ratified by all parties. The bilateral treaty with Israel would represent no more than a repetition of and an additional assurance of, our intent to honor the multilateral guarantee of the United Nations. Essentially, the bilateral arrangement would serve as an accommodation to the fact of Israel's mistrust of the United Nations. It would repeat a commitment which every member of the Security Council, including the Soviet Union, would also have made through their multilateral guarantee of the borders of all of the states concerned.

At this hopeful moment of at least temporary truce and renewed contracts between the principal belligerents, the situation in the Middle East presents the world community with an important, indeed an unprecedented, opportunity. At its present juncture the conflict between Israel and the Arabs is the most significant issue since the end of World War II in which the Soviet Union and the United States have identified enough in the way of common interests to allow of a peaceful settlement mediated and guaranteed by the United Nations Security Council. I do not think one can exaggerate the importance of the opportunity. A settlement mediated by the great powers in their capacity as great powers quite possibly could be a fair and durable one, but a settlement mediated by the United Nations could serve as a precedent for the settlement of other conflicts through the procedures of international organization. Perhaps, if the precedents accumulated, and with further advances in civilization, it might even be found possible to apply these procedures in conflicts involving the great powers themselves. That, after all, was why we created the United Nations in the first place—to save succeeding generations from the scourge of war.

Mr. President, one other comment in response to the observations a moment ago of the Senator from Connecticut. I can only emphasize what I said, that I do not have overwhelming faith that the Russians or other nations are going to live up to every agreement; but I do not think that is sufficient reason for not trying to make the agreements which I have suggested. No doubt there are many views as to how the agreements can be implemented. I have suggested a number of things, such as the stationing of a United Nations force in areas which are sensitive and critical points from a point of view of security. I reminded the Senate of suggestions that really have been made by people far more knowledgeable than I of the problem of Jerusalem, which is very complicated because of the deep emotions involved therein. I made the suggestion not because I am confident in it as the solution, but as illustrative of the kind of problems that will arise, and to prompt discussion and to show that I recognize, at least, these problems as a part of the overall question. These matters of detail are the very essence of negotiations which must take place.

But the overall reason for the speech

[21] *Search for Peace in the Middle East*, p. 56.

[22] "Israel and the Arabs—An 'Unrepresentative' View," *Le Monde*, Weekly Selection, May 27, 1970, p. 4.

is largely, as I have said, the conditions that have arisen both in the Middle East and outside the Middle East, which indicate that there may now be an opportunity to arrive at an arrangement with the Russians which they would consider to be in their national interest, just as I think we would consider it to be in our national interest, to bring about a settlement in the Middle East.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. JAVITS. Mr. President, I have just arrived in Washington, and was apprised, very graciously, by the Senator from Arkansas (Mr. FULBRIGHT) that he was going to make this speech. I was unable to be here before this hour. I have had an opportunity to read excerpts, but not the whole speech.

When the chairman of the Foreign Relations Committee applies his very considerable gifts to so difficult a problem as the Middle East, I feel it is my duty and my pleasure to study his remarks very, very carefully. Then, if I have some observations or comments or reply, I should make them in the same considered way and with the same study, introspection, as well as research, that the chairman obviously has given to his speech.

I rise now only to say I think it healthy that the chairman of the Foreign Relations Committee, on which I have the honor to serve with him, has taken such an interest in this subject and has made his own proposals. It can only advance our knowledge of this subject, whatever may be the differences in our views. It may be that some of us think he is too trusting in the power of pieces of paper, called guarantees or treaties, over the will of the people or geography, or over the very nettling problem of Jerusalem, as was mentioned, or the Arab refugees.

I think there is a chance to settle this dispute. I think there is a chance. I think some of the genius which can be mustered here in the Senate can materially help in that chance. I deeply feel that the President, having announced his policy on July 1, which was so heavily premised on the interest of the United States and the free world, for peace in this area, having been supported by 71 Senators, though there was a heavy manifestation for it in this Chamber. In my judgment, the President would not have proceeded as he did without that support from so many senators.

We have a very creative responsibility. I shall consider it a privilege to try to share it with the chairman, as I am sure many other Senators will, and I hope to be able to contribute to the ultimate result.

One thing is very clear: Certainly, there is the most ample goodwill and desire to bring this terrible crisis to a peaceful conclusion on the part of the Senator from Arkansas, and for that we will all be grateful.

I thank the Senator for yielding.

Mr. FULBRIGHT. I appreciate the comments of the Senator from New York. I do not know any man better equipped to make contributions to this difficult problem than the Senator from New York. He has always had an interest in it, but in addition to his interest in it, he has one of the most thoroughly grounded minds that I have ever seen in matters both legal and political.

One of the purposes of the speech is to inspire—of course, the Senator from New York does not need any inspiration—the Senate and the whole country to take an interest in this matter and to recognize that we are already involved and that the whole world is involved in it, and to stimulate as many people as possible to come forward with any ideas they have to help us in the negotiations. It is high time we found some way other than the force of arms to deal with the problem.

I am not so optimistic as to believe that my speech or any other speech will provide a solution. The history of the human race does not give a great basis for optimism about solving these problems. But the previous history of the human race did not include nuclear arms. Until recently it did not have the present technological development which now burdens as well as benefits us. I think we are more burdened than benefited from it. The whole world has advanced. It is this realization that inspires someone to keep some hope in mind that we may avoid the shortsightedness which, in the past, has so frequently resulted in wars which have devastated the world.

Perhaps we are not able to solve these difficulties by reason. After all, it is a part of the responsibilities of the representatives of the people, such as Senators, to apply reason. We can always hope that our mentality and our political astuteness can catch up with the technological changes and find a way to bring about peace in the world. That is all. I think it is our duty to explore it, at the very minimum.

Mr. JAVITS. Mr. President, will the Senator yield further?

Mr. FULBRIGHT. I yield.

Mr. JAVITS. I hope for two changes. First, I hope it is true of the Jewish people, with whom I have such a deep acquaintance and feeling. They had a terrible heritage for five millennia, and the apogee of barbarism came in the Hitler regime. The Arabs have had a most illustrious history of culture and technology, mathematics in the fundamental sense, and they made great contributions to the world, and then they fell into a period of centuries of desuetude which has made their area one of the most feudal as well as one of the most depressed in the world.

It is hard to believe that modern currents have not touched the Arab world, as often seems to be the case. I think it is almost impossible to accept and I refuse to believe it.

Perhaps out of these two illustrious heritages—Jewish and Arab—not only can peace be made, but perhaps the whole area can be brought forward into a new developmental phase, in which it is now literally behind the whole world.

I shall certainly join hands with the Senator from Arkansas and all of my colleagues who are interested, to see if we can fashion this result.

Mr. FULBRIGHT. I thank the Senator. I agree with him that it is only recently we have had these developments. The Arabs and the Jews used to get along in close proximity there in the Middle East. The problem in earlier days was not rivalry between the Arabs and the Israelis; it was the colonialism of Western Europe, the British and the Americans who injected themselves into matters of local concern, that caused the trouble.

I do not believe there is really any reason why they cannot get along. They are both gifted peoples with rich cultural heritages. The reason I mention the cultural heritages of those countries is because I recognize the great talents of their people. We are all well aware of the tremendous talents and abilities of the Jewish people, as demonstrated here and in every other country. And, as the Senator mentioned, the Arabs have had periods of great accomplishment. They are, I am sure, people who can live at peace, as they did until recently. This is not a long lasting enmity, extending back hundreds of years. Their mutual enemies were the Europeans.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Arkansas may have an additional 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FULBRIGHT. Mr. President, does the Senator from Illinois wish me to yield?

Mr. PERCY. Yes, I shall appreciate the Senator's yielding for a few comments and several questions.

I noted yesterday the full coverage of the intended speech of the distinguished Senator from Arkansas today, and I commend the distinguished Senator for laying out before the world and the American public in such a thorough manner one of the most pressing problems that we face.

We have devoted too much attention to Vietnam and Indochina, an area 10 or 11 thousand miles from our country, where the direct relationship between our vital interests and our national security is not nearly as apparent as it is in the Middle East. I commend the distinguished Senator for bringing into public debate and bringing to public attention for consideration various alternatives and various routes that can be used to find what we must find—peace and stability for the people of Israel and of the Arab States, for all the peoples of the Middle East; because the future peace of the world may depend upon whether we can find an answer to this very agonizing problem.

Mr. FULBRIGHT. I thank the Senator.

Mr. PERCY. I also commend the distinguished Senator from Arkansas for what I consider to be an exceptionally fine presentation yesterday on "Meet the Press."

Mr. FULBRIGHT. I thank the Senator.

Mr. PERCY. If no one else intends to, I certainly shall want to put the "Meet the Press" transcript, when it becomes available, into the RECORD, because I

think all of us who did not see it should certainly study and read the very carefully chosen words of our distinguished colleague.

I have just a few questions, and I think they are serious and important questions, raised by the presentation made by the distinguished chairman of the Committee on Foreign Relations.

I feel certain that the Senator intended his proposals to be provocative, and to raise questions, because only by raising these questions can we obtain answers.

My first question respects the concern that I feel the people of the State of Israel, and the government of Israel would have about the proposal when it is suggested that they return to the their previously insecure borders, and give up what they now have and have gained through the so-called 6-day war, a war that they did not want, but which they felt was a necessary protection against the threats made that they would be driven into the sea and exterminated.

I presume that the philosophy is that a bird in the hand is worth two in the bush. They do feel much more secure as a result of having those territories but they are being asked, in this proposal, to give them up in exchange for a U.S. treaty commitment to rescue Israel if she is attacked, and in exchange for United Nations guarantees.

They look at United Nations guarantees with some concern, because they have not always been treated in what they consider to be a friendly and understanding way by the United Nations. Would the Senator care to expand on how he, walking in the shoes of the people of Israel, knowing what they have gone through, could give them assurance that giving up the land that they now hold can be a proper exchange for the commitment and the guarantee?

Mr. FULBRIGHT. I make the point, of course, that apparently—and I have no reason to doubt it—the return of the land is a precondition to any negotiated settlement. That is, if they do not do that, the war will continue. That is one of my assumptions; I think it is a just assumption.

If the territory is returned, and it leads to the guarantees which I have mentioned, it seems to me the only way to approach the matter is through a settlement that would give the State of Israel security so that she can live in peace and pursue her future without being a garrison state and continually waging war.

As to the significance of certain pieces of real estate to a nation's security, I think the experience of most of mankind is that real estate does not give security, especially with modern weapons. It may have to a greater extent in the days of bows and arrows, when a particular river, for example, which could not be crossed, except by boats or something, gave a certain security. I am sure there was a period prior to technological developments when mountains, heights, or rivers gave real security.

But I do not think that such factors are very significant any longer. What is significant is the attitude of the neighbors. You cannot really live in peace if your neighbors are determined to make war. We have had many examples of that.

I try to be careful about analogies, because they can be very misleading, but the French, before World War II, felt that if they had the Rhineland and the Saar it would add to their security. It did not. Now they do not have either one, and they are far more secure. There has been a change of attitude on the part of the Germans, and this has made the difference.

Then there is our own experience with the Canadians. They do not feel, as far as I know, any insecurity, though we could walk across that border any day, because of our greater size and the strength of our forces.

In other words, the important thing is the attitude of people. I do not think the Arabs and the Israelis are going to achieve security until both sides make up their minds to accept a peaceful situation.

As to the guarantees, that is, the guarantees of the United Nations, I hope that organization would be serious in supporting the guarantees of the individual countries, including our own. I think that is what would contribute most to the development of an attitude, on the part of both the Arabs and the Israelis, that they are going to live in peace.

On the one hand, it would be an encouragement to make the Arabs feel that they could not upset it. It ought to disabuse their minds of the idea that they can destroy Israel. This in itself, it seems to me, would tend to cause that idea to evaporate, and cause them to reconcile themselves to the presence of Israel. That would be a part of their obligation. Whether or not they would actually do it is, of course, a question.

But the piece of paper is not the final answer; it is the change in the attitudes of the people themselves.

Such changes have come about in other areas. We know how suddenly the great animosity that existed between us and the Japanese and the Germans 25 years ago has changed. I do not know why we should assume that we are so superior to all other people that we can change and they cannot. I think these are all very gifted people, and can change. But we have to create the conditions that make the change possible.

Mr. PERCY. I assume that if there existed between the Israelis and the Arabs the feeling that exists between the Canadians and the United States, we would not have much of a problem. But the feelings that exist between the Arabs and the people of the State of Israel are a long way from that.

Mr. FULBRIGHT. That is why I say I do not like analogies. However, that of the French and the Germans is a rather dramatic——

Mr. PERCY. In the long run, I feel there is a basis for what the Senator suggests.

Mr. FULBRIGHT. And now between the Germans and the Russians we have seen at least the stirrings of a movement for conciliation. This is something quite remarkable.

Mr. PERCY. By the distinguished Senator's proposal, did he wish to remove from the area of negotiation the possibility that the belligerent parties themselves might agree that it makes sense for Israel to retain small areas which have no great value economically but which strategically may give great assurance to the people?

Mr. FULBRIGHT. Of course not. If the parties agree to that, I would welcome it. In anticipation that they may not, I simply suggested as an alternative that the Security Council undertake to station United Nations troops at those critical areas.

If they would agree to that, it would mean that they have progressed far beyond what I had anticipated they might as to their attitude. If they could reach that kind of reconciliation, that would be all the better.

Mr. PERCY. In other words, just on the eve of talks, it is not the Senator's intention to remove the initiative from the parties themselves or to impose from the outside the details of an arrangement or settlement on the parties themselves.

Mr. FULBRIGHT. Not at all.

Mr. PERCY. They could work out these details.

Mr. FULBRIGHT. The only reason for that is that, as the Senator knows, this has been going on for a long time, and they have been unable to work out the details. It would be much more acceptable if the parties themselves could work it out. It is only as a last resort, in recognition of the danger of this to us, that I make this proposal—on the theory that these proposals, if they are taken seriously, might be a further incentive for the parties to work it out. One can reason either way on that.

Mr. PERCY. I would presume that the distinguished Senator welcomed, as I did, the initiative taken by Secretary Rogers and the indicated willingness of Prime Minister Meir, King Hussein, and President Nasser to negotiate these conditions.

Mr. FULBRIGHT. Certainly.

Mr. PERCY. And nothing should interfere, then, with whatever progress can be made.

In other words, one might say that the proposal of the distinguished chairman of the Committee on Foreign Relations is there as another alternative, should the initiative which is now under way fail. In other words, if that fails, all is not lost. We would still have another route by which we could go. I feel that the United Nations should take a much more active role in this situation in the future than it has in the past.

Mr. FULBRIGHT. I certainly agree with the Senator.

As I have tried to emphasize, the point about involving the United Nations and having it undertake responsibility in this matter is one of the most important reasons for my making the speech, because the United Nations is important. It is especially important to small countries. It may be more important to them than it is to big countries, but I am not sure

that it is. Since the big countries seem inevitably to become involved in the problems of the smaller countries so, it is important to all. But the small countries are more immediately concerned. I think it is a very important element. If a Middle East settlement could be a precedent for action by the Security Council, it would be a great step forward.

Mr. PERCY. My principal concern goes to another area that I was not quite sure I fully understood yesterday in the press presentation of the Senator's point.

We would provide a commitment to the State of Israel, which would back up a solution to be worked out by the United Nations, to guarantee their security and the condition of peace in that area to the extent that we could. What, then, is to prevent the Arab States to literally, one might say, almost blackmail the Soviet Union into giving them a guarantee in which they might get a stronger guarantee than would be given to us? Then, reinforced with this guarantee and the highly emotional state of this whole situation out there, could it be probable that some Arab State might be inclined to take some rash action which today would be military suicide but which, backed up by a Soviet guarantee such as we had given, might then reinforce their intestinal fortitude, cause them to go ahead, which then, through an action of a third party, might force the super powers into a confrontation?

I shall very much appreciate some explanation as to how we could avoid this kind of situation should we give a guarantee on our side. This, of course, would not be the kind of guarantee that would give the State of Israel or the area any assurance for the future.

Mr. FULBRIGHT. I am not sure that I get the full impact of that.

My assumption all along has been that the Russians have an interest in settling the matter and do not have an interest in allowing the Arabs to involve them in a war with us.

It would be a wholly irrational act, if the Russians gave any such guarantee. I am not sure what kind of guarantee could go further than what I am proposing we take and the Security Council take.

I cannot imagine the Russians saying, "No matter how unreasonable, we will back you, even if you want to destroy Israel." I do not think they would enter into that agreement, unless one assumes that they are totally devious and deliberately fraudulent in what they agree to. If they have anything like that in mind, there is nothing to prevent them today from putting 10 times as many pilots in there, 10 times as many missiles, and everything else. I suppose they are physically capable of doing it, but I do not think they want to do it.

Here, again, we have to come back to the good faith of the people involved. If we cannot possibly have any confidence in their undertakings and their agreements, all of this is just so much talk. It may be that the human race is incapable of negotiating a settlement of its problems, that only force can be relied upon. We have not been very successful in it. We have had some minor successes here and there.

I think that the only way we can proceed is to assume some degree of confidence in solemn undertakings that countries make, in spite of the fact that in the past many of them have been breached. Upon that assumption, I think that what the Senator is proposing might happen with the Russians involves an assumption that they would act irrationally in this whole matter.

The PRESIDING OFFICER. The Senator's additional 15 minutes have expired.

Mr. PERCY. Mr. President, I ask unanimous consent to continue for 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. PERCY. Perhaps a hypothetical situation, then, could help clarify my concern.

We would presumably, under the Senator's proposal, guarantee that if Israel were attacked by an Arab State, we would go to Israel's defense. A counterpart proposal then would come from the Soviet Union to the Arab States, that if they were attacked by Israel, the Soviet Union would come to their defense.

Mr. FULBRIGHT. They go to the United Nations, as a member of the Security Council, and so do we.

Mr. PERCY. What I am concerned about is this: Let us say the fedayeen, or the commandos, would attack from an Arab State; that it might well be presumed by the State of Israel that the attack was being supported by the army, if not directly, at least indirectly, of that country. They then retaliated, as they have, and attacked the commandos. The Arab State interprets this as an attack upon it and says to the Soviet Union, "Attack Israel, because the treaty we have with you has been violated, and you are therefore compelled to come to our defense."

This is the kind of situation I feel certain we would all want to avoid, and I would hope that it could be clarified, so that this is not the kind of situation that the distinguished Senator would envision our being drawn into.

Mr. FULBRIGHT. I think the Senator is assuming a breach of the agreement which will have been guaranteed by the Security Council. Our entering into it does not change those conditions. If the Senator is assuming, say, that Egypt or Jordan should violate it by harboring and doing by proxy what they have agreed not to do directly, I can see no justification for saying it is not a violation. That is a violation of their undertaking. In contrast, we have the hypothetical situation that they are unable to control absolutely all the activities of small guerrilla bands who, in spite of the opposition and good faith efforts of the respective governments, can still make raids. And this could happen. Then it would not be a violation of the treaty because they have in good faith tried to live up to it. They cannot quite control all the commandos any more than we can quite control our own criminals here at home. As strong as we are, we have the same problem, although in a different context. But it is not a violation of the treaty. I would expect, certainly, that Israel would be quite competent to deal with an act. If it had no backing from an Arab government, Israel could certainly contain it. They can now, and they could under any reasonable circumstances, even though backed by the Russians, or even though backed by the government. It is like the criminals operating here in Washington or Chicago, we are not able quite to control them. But if we assume a breach, then the whole thing falls to the ground of course, and it is impossible. World War I started when a solemn obligation was breached with regard to Belgium. I am quite prepared and believe it is possible that someone will breach an agreement. But what is the alternative? If we try and fail, we will still be no worse off than we are now.

Mr. PERCY. With that, I certainly concur. I commend the Senator once again for his initiative in opening up this debate, which I hope will be carried on, because I think it helps our understanding of the complexity of the problem, and will help us also in the coming months on the negotiations.

My last question is an attempt to clarify the Senator's feelings as to the intention of the Soviet Union in the Middle East. I do not think that we dare underestimate Soviet determination to assume a major role in Middle East affairs. I think it is to our national interest to bring about an equitable peace in that area and, thereby, reduce Arab dependence on the Soviets while saving Israel.

In reading the Senator's speech, I felt that he was a little less concerned or maybe a good deal less concerned than I have been about Soviet intentions in the Middle East. Would the Senator comment on what he believes the Soviet intentions have been there, and what the direct relationship is to our national security?

With the answer to that question, I wish to thank my distinguished colleague for helping me better to understand his very, very forthright, fine, and valuable contribution to this debate.

Mr. FULBRIGHT. I thank the Senator very much for his works of approval of my efforts.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator may proceed for an additional 2 minutes.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

Mr. FULBRIGHT. With regard to the intention of the Soviet Union, first, I think they intend, wherever they wish, to be recognized as a major power. We often refer to the two existing superpowers, the Soviet Union and the United States because of our industrial power and our military power. I suppose the Soviets believe that they have a reasonable degree of parity with us in the art of destruction, but each of us has such tremendous military power that we could destroy each other and maybe most of the world if we sought to do so. So, the Soviets wish to be recognized. They do

not agree that we have an exclusive fee simple title in Mediterranean affairs, in the Middle East, in the Indian Ocean, in the Caribbean, or anywhere else, any more than they have a fee simple title that excludes us from various parts of the world. Their national ego, like our own, I suppose, requires that they be able to sail their ships in the Mediterranean, or anywhere else they like on the high seas. They do not recognize that we have a prior right to control of or access to various parts of the world. I think one of the reasons I happen to think they are willing even to talk at Vienna is that they feel they have acquired a degree of parity with us and therefore they are willing to talk. I do not believe that the old principle many people subscribe to, that we should negotiate only from strength is a feasible policy, because the opposite side says, "Well, we will not negotiate from weakness," therefore we never get to negotiate. I think the way we interpret their actions in the SALT talks is just that. They feel they have acquired a degree of parity in the world.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER (Mr. BOGGS). Under the previous order, the Senate will now proceed to the transaction of routine morning business, under the 3-minute limitation.

UNANIMOUS-CONSENT AGREEMENT REGARDING COSPONSORS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that for the remainder of the 91st Congress, any Senator may present a request in writing and signed by him, to add the names of cosponsor of bills, resolutions, and amendments, and that such request appear in the appropriate place in the CONGRESSIONAL RECORD.

The PRESIDING OFFICER (Mr. BOGGS). Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. BYRD of West Virginia. With the further understanding that the request presented by each Senator shall be signed by the Senator who turns in the request with the parliamentarian at the desk.

The PRESIDING OFFICER. With that further understanding, without objection, it is so ordered.

Mr. COOK. Mr. President, I ask if the Senator from West Virginia would consider including as a part of his unanimous-consent agreement that a notice go to all Senators in addition to being in the RECORD, so that all Senators will know that henceforth cosponsorship may be accomplished by tendering the request to the Parliamentarian at the desk.

Mr. BYRD of West Virginia. Mr. President, I make that request, and I ask unanimous consent that such a notice be included in the Daily Digest.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, a point of information. Would the unanimous-consent agreement involve the ones I have here in my hand to present this afternoon?

Mr. BYRD of West Virginia. Yes, it would. I make this request in the interest of saving time. So often Senators have to wait on the floor of the Senate in order to get recognition only for the purpose of adding the name of a cosponsor to a bill, resolution, or amendment. Under the unanimous-consent agreement which has been entered, any Senator may present in writing to the Parliamentarian at the desk, without getting recognition from the floor, the names of cosponsors of bills, resolutions, and amendments, and the CONGRESSIONAL RECORD will so show. This means that a staff aide cannot present such an item at the desk. It must be done by the Senator himself and the request must be signed by the Senator.

Mr. HATFIELD. Mr. President, I thank the Senator from West Virginia. However, in lieu of a signature to these requests, I shall make them in the RECORD.

Mr. BYRD of West Virginia. Mr. President, the Senator may, of course, do that if he so wishes.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of morning business today, the unfinished business remain laid aside and that the bill making appropriations for the Departments of State, Justice, Commerce, and the Judiciary be laid before the Senate and that it become the pending business.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia? Without objection, it is so ordered.

SENATOR INOUYE ON AN ALL-VOLUNTEER ARMED FORCE

Mr. HATFIELD. Mr. President, on behalf of the Senator from Hawaii (Mr. INOUYE), I ask unanimous consent that a statement of his position on Senate Amendment 844 to H.R. 17123 to establish an all-volunteer military to be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DANIEL K. INOUYE

The Senate will soon be considering Amendment number 844, which will add a new title to the Military Procurement Authorization Bill implementing the recommendations of the Gates Commission for an all-volunteer armed force.

I have decided, after a long period of agonizing review of the facts, that I shall support this amendment because I believe that the Selective Service System, as it is presently constituted, has outlived its usefulness. The time has come to institute a new system for raising manpower more consistent with the principles and ideals of the American political tradition.

Last year, I opposed the all-volunteer army concept because I believed it was impractical and would have dangerous implications for American freedom. I must frankly admit that I still do not regard it as the panacea which many of its enthusiastic supporters consider it.

I am still gravely fearful of the "professional" military. The "professionals" have too much power already. Events of this century should be convincing. To set them further apart from the general run of humanity is a dangerous development. At the very least, the draft added to the military thousands upon thousands of young men in uniform who hated the military. I do not suppose that with a volunteer army, men who hate military service will be volunteering. Nor will one with an advanced education and prospects for a well-paying job be enticed into entering this hard, sometimes lonely and dangerous, but very necessary profession. I fear that thousands of young men, freed from the specter of military service, will not join the military and hence deprive us of a body of officers and enlisted men who will subject military decisions to skeptical and suspicious scrutiny.

However, I have decided that the potential good of this amendment outweighs whatever doubts and misgivings I may have. My support for the amendment is based not only on the economic and political arguments familiar to the members of the Senate, but also on considerations of what the draft has done to our society. Compulsory service has had pernicious effects on our country and weakened our social fiber. It is my hope that much of this disruption and tension will ease if the draft is eliminated.

No one need convince me of the many inequities found in the draft. Everyone who has studied the problem has come across cases where induction has been used to repress dissent. Some local boards have been careless—by design or ignorance—in observing the legal rights of registrants and as a result have clogged the Federal courts with a multitude of complex cases. The loopholes and exemptions have led to tortured legal distinctions of "conscientious objection". Most important, the draft has been administered with an uneven hand, leaving those men with a college education and wealth a greater opportunity to pursue their interests than those who were less favored.

Finally, I am not unmindful of the great personal crises of conscience many men undergo when confronted with the momentous decision posed by the draft. This crisis has been aggravated by our involvement in the most unpopular war in our history, a war whose continuation I oppose. Approximately 60,000 men have fled to Canada. Uncounted numbers have fled to other countries willing to offer them asylum.

These decisions to flee have had tragic consequences on their families. They probably have destroyed promising careers, broken marriages, and caused irreparable loss to our national life. Many of those anti-military youths who accept induction have continued their insubordination and opposition to army policy, and their contribution to the spirit of restlessness in the military has been of great concern to career officers. The great hostility engendered by this anti-military feeling has led to skyrocketing rates of desertion from the armed forces. None of this human tragedy or alienation can be computed in dollars and cents.

I hope that our democracy will be strong enough to withstand the pressures of a "professional" military. I shall support efforts to terminate the present Selective Service Act. I pray that my decision is a correct one.

ALL-VOLUNTEER ARMED FORCE

Mr. HATFIELD. Mr. President, LeRoy Anderson, major general, U.S. Army retired, and former Member of Congress, recently made a statement on the all-volunteer military which I would like to commend to my colleagues. I ask unani-

mous consent that the statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF LEROY ANDERSON

The draft is unnecessary, unjust, expensive in money and moral values and a threat to the very fabric of our society. It is as un-American as the old British custom of shanghaiing or impressing seamen by force.

The usual reason given for continuing the draft is that it would be too expensive to have an all-volunteer military. Forget for the moment that this statement is, on the face of it, an acknowledgment that we are forcing a disproportionate share of the cost of national defense onto the shoulders of the young men selected for the draft (who had no part in making the mess they are supposed to clean up, at the possible cost of their lives). The fact is that the argument just will not stand up under close scrutiny, all factors considered.

The draft, far from being economical, is a most wasteful way of maintaining military manpower. What efficient corporation would tolerate a personnel system with the military services high rate of turnover, as it trains and retrains new men every few months to operate the increasingly complex and complicated machinery of modern warfare?

Let Congress determine the size of the military and then provide the funds to staff it with those who willingly choose the military profession. Whatever the required strength the personnel can be recruited if the pay and other incentives are competitive with other occupations and proportional to the demands of the service.

This will be more economical in the long run than our present antiquated system of conscription. We must move, in this time of increasingly sophisticated weapons, from a system of draftees, much of whose time is spent in training, and many of whom are unwillingly in the service, to a military that is professional and makes a career of it. Certainly savings, efficiency and a better standard of performance will then do the job with a smaller number of properly trained professional soldiers, supported by civilian employees where feasible.

Perhaps, too, we have overlooked the need for motivation to make the military efficient. A man will do a good job if he believes in it, a poor job if he is forced to do something he doesn't want to do, or something which is counter to his deep-felt convictions. Having been a tank battalion and task force commander in combat from Normandy to the Elbe in WWII, I was much impressed by the findings of then Colonel, now General, S. L. A. Marshall. General Marshall found that a large number of soldiers, nominally in combat, made no contribution to the success of their units. Many never fired their rifles or carbines, even when the flow of battle threatened their own bodily safety. Yet each of these non-effective soldiers required the same number of men to back him up in the support and logistical forces as did any other soldier in the lines. We can say that for each non-effective soldier the military was also providing backup personnel and supplies, and that this sum total was wasted.

I believe that in an all-volunteer service there would be far fewer non-effectives, reducing both combat and service expenditures and providing a far more effective and efficient military machine.

The arguments I have presented so far have been those concerned with justice, fairness and with the material, practical dollars and cents considerations. Those were my views when I sat on the House Armed Services Committee and they are still my views. Now, additionally, as an observer of the national scene, I am convinced that continuation of our present draft system could well have apocalyptic consequences in the growing alienation of our young from the rest of society. No other single cause is so responsible for the growing alienation, dissent and protest throughout our nation as is conscription and its concomitant issues of peace and war. This is a terrible and pervasive alienation, found among all classes of Americans, rich and poor, white and non-white alike.

The cause is to be found in the grave defects in the draft system itself, which call upon some young men to offer their lives for reasons which are, at the least, unclear; for reasons which appear to many to call upon them to participate in a war which they regard as totally unjustifiable, immoral and inconsistent with the great democratic and humanitarian traditions of our country. Much of the turmoil on our campuses is conscription and draft related. The fact that over 60,000 young men have left the country because of the draft and that some 30,000 are simply refusing the draft and taking their punishment bears eloquent testimony to the depth of their feelings and convictions.

The draft is terribly unjust, both as between one young man and another and even more because it forces certain young men to bear a disproportionate share of the cost, even to sacrificing their lives, of getting us out of (or deeper into) a mess that they had no part in creating.

In simple justice every young man should be free to make his own choice. A few should not be chosen, arbitrarily or by lot, to make a sacrifice for the security of us all. We must move at once to a professional all-volunteer military by setting the pay and incentives where they will attract the number and quality of men required to provide for our security.

We can do it, and have a more efficient and economical military. Nothing less will heal the wounds that scar our society. Let us move forward to make our people one again.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I be recognized for 6 minutes in the morning hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

NO. 1—WHY THE MILITARY BUDGET CAN BE CUT BY $5 BILLION

Mr. PROXMIRE. Mr. President, in the next few days, the Senator from Maryland (Mr. MATHIAS) and I, along with a number of other colleagues, intend to offer an amendment to cut military spending for fiscal year 1971 by $5 billion.

Thursday evening Deputy Secretary of Defense Packard made a remarkable speech in which he provided massive evidence in support of a major military budget cut. He sharply criticized Pentagon procurement practices. The Deputy Secretary put it very bluntly:

We have a real mess on our hands.

Speaking at a meeting of the Armed Forces Management Association in Los Angeles, Secretary Packard placed the blame squarely on the defense contractors:

We should buy only what we need—not systems you or anyone else thinks they can develop to do something that doesn't need to be done. The Defense Department has been led down the garden path for years on sophisticated systems that you promised would do all kinds of things for some optimistic cost. Too frequently we have been wrong in listening to you, and more frequently you have been unable to deliver on either of these promises—what it would do or what it would cost.

Mr. President, it is only rarely that a high Defense official is this candid about the inadequacies of the Defense Establishment. For this reason alone, we should take these remarks very seriously. Is there any better evidence that we can cut defense spending? When the men responsible for our defense programs say we are spending too much money, that the system is breaking down, it is time all of us in Congress began to listen.

Can we cut the military budget? Here is what Deputy Secretary Packard says:

When we are not in a hurry to get things done right, we over-organize, over-man, overspend, and under accomplish. The most dramatic contrast is within Lockheed—Kelly Johnson and his programs, and the Air Force and Lockheed on the C–5A.

Can there be any better evidence that we can cut the Defense budget without jeopardizing our national security? Can there be any better evidence that by cutting the budget we would actually be doing the Defense Department a great service? Many of us believe that we can improve our defense posture by spending less money. This is what the Secretary is saying. To quote him again:

We don't need more supervision and more people in the act. We need fewer people.

Mr. President, these are the words of the Deputy Secretary of Defense—not mine or those of other Defense Department critics. The Secretary is clearly telling all of us in Congress that we have provided the Department with too much money; that we are promoting inefficiency by appropriating such large sums of money for projects of questionable value.

Let me quote the Secretary once again:

Let's face it—the fact is that there has been bad management of many Defense programs in the past. We spend billions of the taxpayer's dollars; sometimes we spend it badly. Part of this is due to basic uncertainties in the defense business. Some uncertainties will always exist. However, most of it has been due to bad management, both in the Department of Defense and in the Defense Industry.

Let me repeat that, Mr. President:

Most of it has been due to bad management, both in the Department of Defense and in the Defense Industry.

What is the Secretary's answer? "Use fewer people, do not overorganize, do not overspend." I would hope that everyone in Congress hears this. If we want a better Defense Establishment, we should spend less money and use fewer people.

I would hope that every Member of Congress hears this. Under Secretary Packard said that we should spend less and not overorganize, but use fewer people. Secretary Packard's statement, it seems to me, implies that we can make very substantial cuts in procurement.

Mr. President, Congress can cut the

defense budget by as much as $5 billion. We are not doing the Pentagon a favor by giving them too much money. We are making their job more difficult. We are promoting inefficiency and waste. If we want a truly strong Defense Establishment, not one fat with people and programs we do not need, then we will cut the Defense budget. The Secretary has pointed to the C–5A. Other overruns such as those on the Minuteman III, the Mark–48 torpedo, the Gamagoat, the Navy's deep submersible rescue vehicle, the Sram missile, the DE–1052, and other weapons system could be added to the list.

The message is clear. We can cut the Defense budget without jeopardizing our national security. Such a cut would add to our security by forcing contractors to deliver all the performance promised, at the price promised. We will get better weapons, at a lower cost. For all these reasons, I urge Congress to carefully consider what Secretary Packard has said. I ask unanimous consent that his speech be printed in the RECORD, and I urge every Senator who is concerned with a truly strong Defense Establishment to read this speech carefully. We can cut the Defense budget now.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE DAVID PACKARD

I am delighted to be with you here in Los Angeles tonight. I am sorry I was not able to spend more time at this conference, and particularly sorry not to hear Gil Fitzhugh this noon. He and his Blue Ribbon Panel have done an outstanding job making recommendations which will improve the operation of the Defense Department.

Secretary Laird and I intend to move ahead as quickly as possible to put most of the 113 recommendations into effect.

I agree in particular with the Committee's recommendation that more decentralization of the Department is necessary. To me that means more decision-making at a lower level and less time-consuming and duplicate second-guessing topside.

This gives me a problem on the recommendation for the three deputies. We do not want to create a structure that adds more top-level involvement in the working man's business. I appreciate the implication that I have to work hard. I do put in long hours. I assure you, however, that much of my time has been spent doing things that lower levels should do. Three deputies would tend to pull even more decision-making up to the top, and we do not want to move in that direction. What we want to do is give a man a job and let him do it.

The report greatly under rates the Joint Chiefs of Staff. I have spent a great deal of time working with the Chiefs during the past year and a half. I found them among the finest, most dedicated, most capable men I have ever known. They have given Secretary Laird and me their complete support and cooperation.

There is no question about civilian control of military operations. Secretary Laird or I approve every operating order; but we do need to steamline the chain of command for operations. This will be done on a careful, step-by-step basis because the problems are complex, and also because we need to assure uninterrupted combat readiness of our forces.

We intend to give the Service Secretaries and the Services more responsibility so that they can do their jobs. Before they can do their jobs right they will have to break down some of the multi-layer staffing that has built up over the years and work together better to avoid unnecessary duplication. In short, the problem is not the people—it's the system. And now, how does this apply to the procurement problem and this meeting you have been holding this week?

I suppose that some of our critics will call this a meeting of the military-industrial complex. So be it. I am not embarrassed by the fact that we need industry to help the Department of Defense. I am only embarrassed that we haven't done a better job. Many of you, and certainly those *not* in the industry, may expect me to talk about what a grand job we have all done and how necessary we are for one another. I am not going to do that. I am going to talk about the things we do wrong and the things that we have to do better.

Let's face it—the fact is that there has been bad management of many Defense programs in the past. We spend billions of the taxpayers' dollars; sometimes we spend it badly. Part of this is due to basic uncertainties in the Defense business. Some uncertainities will always exist. However, most of it has been due to bad management, both in the Department of Defense and in the Defense industry. We can and are doing something about that. I am not talking just about cost over-runs as so many of our critics do. Over-runs are the end product of our mistakes rather than the key issue to be addressed. I am surprised that our critics took so long to discover cost over-runs. They have been around for a long time, and many of the cost over-runs that receive the most publicity were organized by Defense and industry years ago. We are now paying the price for mistakes in contracting, in development and in management.

Frankly, gentlemen, in Defense procurement, we have a real mess on our hands, and the question you and I have to face up to is what are we going to do to clean it up.

Let me first mention two things that won't help.

It won't help for Congress to legislate detailed and inflexible rules governing procurement.

Nor will it help to put the General Accounting Office in the process of making management decisions. The GAO deserves the highest marks for auditing, but the talents of a good auditor are not identical with those of a good manager.

The pressures are strong to insert the Congress and its right arm, the GAO, into the details of day to day management decisions in the Department of Defense. Until we in the Department and you in defense industry demonstrate that we can provide capable and efficient management, these pressures will continue.

I have been in this job now for 19 months. Frankly, I am ashamed I have not been able to do very many of the things that need to be done to improve the situation I found here in January 1969. The most frustrating thing is that we know how we ought to manage—you, me, all of us—and we refuse to change based on what we know. Every time we want something done in a hurry and want it done right, we have to take the project out of the system. We give a good man direction and authority and let him go—and it works. When we needed sensors in a hurry for Vietnam, we got the best man we could find—General Starbird—gave him all the authority he needed and told him to produce—and he did. And I don't know why anybody would be surprised. His successor, General Lavelle, has had the same authority, has consistently returned money from his budget, has done all the management things that people say you are supposed to do, and meets every requirement—financial, managerial or operational—that we could want. Industry does the same thing. The "Skunk Works" in Lockheed has had tough, complex, expensive and demanding programs. Kelly Johnson produces.

On the other hand, when we are not in a hurry to get things done right, we over-organize, over-man, over-spend and under-accomplish. The most dramatic contrast is within Lockheed. Kelly Johnson and his programs, and the Air Force and Lockheed on the C–5A. I simply cannot understand why we are unable to change the system to avoid the C–5As and get more Skunk Works. We must find a way to do this job right, and you bear as much responsibility as I do.

We need good people—and by that I mean you—who will step up to their responsibilities. That is what decentralization is all about.

In the hope you would do this, on May 28 I issued a memorandum of guidelines for Major Weapons System Acquisition. There is nothing in this memorandum that you don't already know. As a matter of fact, the management principles in my memorandum are so simple that anyone who could not have written the memorandum himself doesn't belong in management. Again and again I have made a big point about getting the right man in the right job and giving him authority. But it is just not that simple. Admiral Rickover is a good example. The Admiral is a man of considerable capability. He has his own style, but he produces. He got a program, had to fight the system tooth and nail to get it, challenges the system every chance he gets, but is still saddled with the system. I had a long talk with him after the 28 May memorandum was published, and it was clear that I hadn't taught him anything about management. He told me that the principles were great but that if we couldn't get to the system that sits on top of the manager, nothing else mattered. He is right.

I know Secretary Laird and I bear the responsibility for the system in the Department of Defense, and I am going to keep working at it. But you in industry bear a similar responsibiilty, and I expect you to do the same thing.

In my memo I told the Services to select people with the right background and education for management, give them appropriate training, give them recognition, and leave them on the job long enough to get something done.

All four Services have accepted my recommendations—and their letters say that they agree. But on at least two occasions they have taken actions exactly contrary to those suggested. The Air Force and the Navy are both involved. In one case, a small dedicated Air Force team developed the gunhsips which have been so successful in Vietnam. The Air Force decided to put this program into its formal system. About a month ago I asked when we would be able to get some more gunships. The answer was in two years. That program is now out of the Air Force system, and we will have more gunships in six months.

In the other case the Navy, shortly after agreeing that a good manager should be kept on the job long enough to get it done right, proceeded to promote a key manager at a critical time from an important program to another assignment. The system wins and the cause of good management loses.

In my memo I talked about policies for development of new weapon systems. The lesson that comes through loud and clear here is we should buy *only* what we need—not systems you or anyone else thinks they can develop to do something that doesn't need to be done. The Defense Department has been led down the garden path for years on sophisticated systems that you promised would do all kinds of things for some optimistic cost. Too frequently we have been wrong in listening to you, and more frequently you have been unable to deliver on either of these promises—what it would do

or what it would cost. And we in the past have sometimes been guilty of over-optimism on our cost estimates and over-demanding in our requirements. We share the blame together, but the mistakes of the past cannot be repeated if we are to provide for the nation's defenses in today's climate of a critical public and a critical Congress. We are going to buy only things that we need, and we are going to make sure they work before we buy. The same thought carries over into full-scale development and production. We must know what we are going to do and how to do it before we go into production. We are not going to put things into development until we are sure we need them, and we are not going to put things into production until we are sure that they work.

This has been a short speech. I have tried to speak very frankly and directly this evening because the problem is very real. It is you people here tonight and the Department of Defense that must take action to solve these problems. We recognize that these problems cannot be solved overnight and perhaps some of them cannot be solved at all, but it is very clear that it is unacceptable to continue to do business as we have done it in the past.

The things I have had to say tonight and the things I said in my 28 May memorandum are simple. Many times we have done a bad job—we are going to do a better one. We are going to know what we are doing before we do it, and we are going to manage it better. We have a lot of obstacles in front of us and some of them we created ourselves. We have given our critics the opportunity to find us at fault, and we run the danger that their efforts to direct Defense management will just compound the mistakes in the Department. We don't need more supervision and more people in the act. We need fewer people. The system in the Department of Defense is going to change. Secretary Laird and I are going to demand it. I expect you who are here tonight and everyone else who does business with the Department of Defense to do the same. That is all I have to say.

ORDER FOR RECESS UNTIL 9 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 9 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that upon the approval of the Journal tomorrow morning, the unfinished business be laid before the Senate and that then the amendment which has been offered today by the able Senator from Oregon (Mr. HATFIELD), be laid before the Senate and that the time then start running under the previous agreement.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that I may proceed for 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

POSITION OF ASSOCIATION OF THE U.S. ARMY ON ALL-VOLUNTEER ARMED FORCE

Mr. THURMOND. Mr. President, in view of the recent discussion on the Senate floor, reference the Hatfield amendment to establish an all-volunteer army, it would seem useful for the Senate to have the benefit of a white paper issued on this subject by the Association of the U.S. Army.

This paper was issued April 21, 1970, and the association feels it would be unwise to discard the selective service system at this time. The association does support taking steps to move toward an all-volunteer army, but feels that draft should be continued until more is accomplished toward this end.

Mr. President, I ask unanimous consent that this report be printed in the RECORD at the conclusion of my remarks.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

PROTECTING THE FREE SOCIETY: AN AUSA WHITE PAPER ON PROPOSALS FOR AN ALL-VOLUNTEER ARMED FORCE

INTRODUCTION

Almost since the inception of warfare, the problem of how to obtain manpower for the fighting forces has been a real bone of contention. Impressment, lotteries, universal military service, selective service, hiring substitutes and All-Volunteer systems have all been tried in a variety of forms but none has produced a system that both meets the need and satisfies the participants.

This subject has most recently come under scrutiny again as a result of the recently published report of the President's Commission on an All-Volunteer Armed Force—popularly known as the Gates Commission.

For those not familiar with the background of the Gates Commission, it had its genesis in some remarks prepared for a campaign speech of President Nixon's which was aired on radio on 17 October 1968. He said in part:

"A system of compulsory service that arbitrarily selects some and not others simply cannot be squared with our whole concept of liberty, justice and equality under the law. . . . The inequity stems from one simple fact—that some of our young people are forced to spend two years of their lives in the Nation's defense while others are not. It is not as much the way they are selected that is wrong, as it is the fact of selection. . . . The military services are the only employers today who don't have to compete in the job market."

Following Mr. Nixon's inauguration he announced on 27 March 1969, the creation of a Presidential Commission to be chaired by Thomas S. Gates, Jr., the former Secretary of Defense, which would "develop a comprehensive plan for eliminating conscription and moving toward an All-Volunteer Armed Force".

At the same time the Gates Commission was begining its work, the President directed the Secretary of Defense to undertake a similar study of the actions within the Department that would be required to reach the same All-Volunteer goal. The DOD group was known as the Project Volunteer Committee. Each of the services had a subordinate study group feeding their views into the Project Volunteer Committee. The Project Volunteer Committee has not issued a public report.

In 1967 two blue-ribbon panels undertook exhaustive studies that addressed themselves to the feasibility of an All-Volunteer Armed Force and what improvements should be made in the methods of procuring military manpower.

One of these was the President's National Advisory Commission on Selective Service—a group of 20 distinguished citizens, headed by Burke Marshall, which concluded that an All-Volunteer Force was not feasible or desirable.

The second 1967 study group was the Civilian Advisory Panel on Military Manpower Procurement which was set up by the Committee on Armed Services of the House of Representatives. Retired Army General Mark Clark was the Chairman of this distinguished group of eight educators and business leaders. Even more forcibly this group rejected the feasibility of an All-Volunteer Armed Force.

In the interim, several Congressional Committees have delved deeply into the subject and major draft reforms have been enacted.

This excerpt from the introduction of the Marshall Committee's report summarizes the problem:

". . . the necessity to search for a method of manpower procurement that would assure the Armed Forces' ability to acquire the men they need, under any circumstances, to protect the nation's security and to meet its commitments, and at the same time function as uniformly and equitably as possible with due regard for the problems and the rights of the individual into whose lives it must intrude".

Proponents of the All-Volunteer Armed Force including the Gates Commission advance some arguments with which there can be little quarrel.

As President Nixon pointed out, we have never been able to devise a system of conscription that was completely fair to all concerned. It is unlikely that we ever will, although Selective Service legislation is under almost constant review and modification.

If it were feasible to have an All-Volunteer Force, it almost certainly would be more cost-effective as the pipeline of entries was reduced and concurrently the training overhead. Up to a point, an All-Volunteer Force should be a more efficient one. Although it is difficult to conceive of a more superbly trained Armed Force than we have right now.

There can be little question that conscription is an invasion of the personal liberties of the young men being drafted. Some 17½ million young men have, since 1917, been drafted for duty to their country and they have borne this invasion of their liberties with surprising goodwill and comparatively small complaint.

We agree also with the premise of the Gates Commission that an All-Volunteer system, maintaining the same standards of quality, would be manned by approximately the same ethnic distribution of individuals as are in the service today.

We heartily endorse the Commission's strong fundamental consideration of: "The need to maintain and improve the effectiveness, dignity, and status of the Armed Forces."

We strongly support the Commission's view that material increases in compensation are overdue in our Armed Forces. The Commission is absolutely correct in emphasizing the needs for improvements in a variety of phases of career attractiveness.

There are, however, some areas of fundamental disagreement with the Gates Commission's recommendations which we shall enumerate.

First and foremost, is the very basic question will the All-Volunteer scheme work? We don't think so— for several reasons. First, there is nothing in our history to suggest that Congress will consistently appropriate the very sizeable expenditures that will be required to do all things necessary to attract volunteers in the numbers needed. Secondly, it just isn't realistic to expect that the expanding manpower requirements of the Reserve Forces could ever be met solely on a volunteer basis. We can't afford Reserve Force units manned at less than 75 to 80%.

The Gates Commission has recommended that the Selective Service System be put on a stand-by basis not to be reactivated without the consent of Congress after "public debate". Considering the past history of public debate surrounding Selective Service legislation this would have to be considered a very risky recommendation which we cannot support.

The Committee's recommendation that the stand-by draft system be established by 30 June 1971 is most unrealistic. We support Secretary of Defense Laird's view, "The transition to an All-Volunteer Force must, of course, be handled cautiously and responsibly so that our national security is fully maintained." Also, we feel his objective of getting to zero draft calls under the present Selective Service System is eminently more practical and desirable than undertaking the risky course toward an All-Volunteer Force.

The cost figures advanced by the Gates Commission appear to us to be seriously understated and fail to include many of the costs of improving career attractiveness which the Commission feels are necessary if sufficient volunteers are to be attracted. When these additional figures are included they exceed the Commission's cost estimates substantially.

It seems to us that the approach to the Reserve Forces manning problems as outlined by the Commission is not in keeping with our national defense needs nor is their recommended course of action, in fact, feasible or desirable.

We have some thoughts also in rebuttal to the Commission's philosophy expressed in this statement:

"A return to an All-Volunteer Force will strengthen our freedoms, remove an inequity now imposed on the expression of the patriotism that has been been lacking among our youth, promote the efficiency of the armed forces, and enhance their dignity. It is the system for maintaining standing forces that minimizes government interference with the freedom of the individual to determine his own life in accord with his values."

As the Commission so rightly points out elsewhere in its report, the vast majority of those now serving are volunteers and have had the full opportunity to express their patriotism, as did those who had to be drafted. Government interferes with our freedoms in a variety of ways—laws and regulations—taxes and civic responsibility—and some of these invasions are considered by many to be far more onerous than the draft. But this is part of the price we pay for our liberty under a democratic system which Winston Churchill has described as "the worst form of government except for the alternatives".

That young men be permitted, in time of national need, to decide whether or not a particular conflict is to their liking seems to us to be sheer folly. Even a cursory examination of our manpower procurement problems starting with the Revolution would suggest that to the young man of draft age the most unpopular war is the present one in which his life might be endangered.

The Gates Commission has made two kinds of pay recommendations:

1. Those requiring implementation prior to or concomitant with the transition to an All-Volunteer Force. These would include: increased basic pay; extension of skill differential pay to men in the first two years of service; and an increase in hostile fire pay.

2. Those the committee considers equally necessary for reasons of equity and efficiency but not primarily essential to an All-Volunteer Force. These would include the development of a military salary system comparable to that in the civilian sector, including the substitution of cash for some benefits that are now provided in kind. The modification of the present retirement system, including the introduction of vesting.

In this immediate examination, we shall restrict our comments primarily to those recommendations which the Commission felt were fairly essential to move promptly toward a volunteer system. Later on we shall discuss some of the points mentioned in 2 above.

The Commission started with an assumption that there would be an across-the-board 8% increase in basic pay for all military personnel effective 1 July 1970. From this point the Commission then made these specific recommendations:

1. Raise the average level of basic pay for enlisted military personnel in the first two years of service from $180.00 a month to $315.00 a month effective 1 July 1970.

2. The basic pay of officers in the first two years of service be raised from an average level of $428.00 per month to $578.00 per month.

On a percentage basis the Commission's recommendations and assumptions for pay increases are as follows:

57% for 1st term EM*.
14% for 2d term EM*.
36% for officers in first 3 years of service*.
8% for all other ranks.

*These include the 8% across-the-board increase.

If the Committee's recommendations for pay increase only are put into effect, they would entail a budget increase of an *estimated 3.3 billion for the following:*

	Billion
Basic pay increase	$2.68
Proficiency pay	0.21
Reserve pay increase	0.15
Additional medical corps expense	0.12
Recruiting, ROTC and misc	0.08
Total	3.24

The Committee computes that about 540 million of this budget increase would be returned to the Treasury in the form of income tax collections so that, in fact, this pay portion of their recommendations is an actual net increase in military costs of only 2.7 billion.

Let us look first at the Committee's recommendations for increases in basic pay and then later on in the context of other career compensation required, discuss its longer range recommendations.

First of all, AUSA strongly supports the 8% across-the-board pay increase. It is essential almost at once to keep military pay from falling any further behind pay in the civilian sector. So this increase for all is needed.

We agree also with the Commission in its view that those in the earliest years of service both officer and enlisted are deserving of the substantial increases which have been recommended. Certainly the adoption of these increases will improve the attractiveness of service and should increase the number of volunteers.

The Commission has made some assumptions and estimates that appear to us to require considerable testing before acceptance. For example, consider their linear mathematical equation which states, "a 10 percent increase in the current value of first term military compensation will result in an increase of about 12.5 percent in the voluntary enlistment rate from the 17 to 21 year old civilian population."

This says in effect that *all* you have to do is increase the pay and adequate volunteer enlistments will be forthcoming. We suggest that the situation is more complex. If it were purely a matter of pay, how is it that the D.C. Metropolitan Police Force cannot fill its ranks with personnel of very similar standards at a starting pay scale of $8,500.00 per year vs. the $3,750.00 plus room, board, medical care and uniforms per year which the Commission has recommended for military entrants?

A sub-committee of the Senate's Judiciary Committee put the problem this way, "Staffing the military establishment is not a typical employment problem, because of the singular circumstance that fighting may be part of the job." For many, even the hostile fire pay of $200.00 per month which the Commission has recommended will not make service that attractive since it is "restricted to those who in the course of their duties are regularly exposed to hostile fire and then only for the period of such exposure".

Allied with this concern is the problem of the inequality of hardships amongst the services and even within the services. Presumably volunteers will be permitted to select the service of their choice and probably the branch they desire within that service. The Commission recommends "an expansion of the current program whereby enlistees are permitted to specify their choice of occupation as a condition of enlistment". If that be true, the Army and Marines will continue to be the least popular. Consider these casualty figures from the Korean War—which are being pretty well validated in Vietnam:

Army (84% Infantry)	27,604
Marines	4,267
Air Force	1,200
Navy	458
Total	33,629

In the draft calls during the Vietnam conflict only the Army and occasionally the Marines have had to rely on Selective Service to fill their quotas.

All of this suggests that while pay will have an important bearing on our ability to attract volunteers some scheme not covered by the Committee's recommendations will have to be found to fill the ranks of those who must close with the enemy on the battlefield and defeat him. In the current vernacular, that's what it's all about.

So far we have discussed only the entering officers and enlisted personnel and have not discussed the very serious problems of retention. This plays an important part in an evaluation of the Commission's report since many of its recommendations are based on a low rate of personnel turnover both to reduce manpower requirements and costs. We shall return to this when we discuss other forms of compensation but we suggest that beyond the 8% across-the-board increases already included in this plan, that military pay scales generally are well behind those of their civilian counterparts even when you translate present pay and allowances and other emoluments into a salary basis such as the Hubbell Committee recommended and which the Gates Commission most strongly endorses. We feel therefore the amounts recommended for pay alone are too low to accomplish the objectives.

We shall discuss the Commission's recommendations on the Reserve Forces later on in this paper but while we are on the subject of pure pay a few observations are appropriate. The Commission's basic recommendation concerning Reserve drill pay is to increase it significantly in the lower grades (up to $2.50 per hour from about $1.00 an hour now) and lesser amounts in the higher grades. For an individual in the 6th year of service, the current point for initial reenlistment, pay would be increased about 6% over what it is now. The Committee's efforts here were to improve the position of Reserve drill pay compared to other part time employment compensation. To the extent this will affect volunteer enlistments and reenlistments in the Reserve Forces this is a sound move. However, the Commission points out that surveys indicate that as many as 75% of the enlisted personnel on their first enlistment in the Reserve Forces are there because of draft motivation. It seems unlikely that these comparatively

modest pay increases would attract anywhere near enough people to meet this requirement if the draft were stopped.

We shall not comment to any extent on the Commission's discussion of the conscription of physicians. They are quite undecided as to what course should be pursued in this troublesome area. They have made some pay increase suggestions, not funded in their cost figures, which would give a first year doctor $12,834.00 per year increasing to $39,995 at 22 years service. They indicate that the reduction in forces now going on plus the medical students already committed to military service gives more time to study the problem and to do some experimenting. We agree—and point out that it will also be necessary to keep a viable Selective Service System going until this and other problems are proven to be solved.

We subscribe to the Commission's opening statement in their chapter on Compensation:

"Pay is not the only, and perhaps not been the primary motivating force for joining or remaining in the military services. A sense of duty, a desire for adventure or travel, society's esteem for the military service, a desire for training, the quality of military life and the general conditions of military service—all affect an individual's decisions." We agree—that's why we question the linear mathematical equation the Commission has used. That's why we think its cost estimates are unrealistically low since the only cost that they have funded is for the basic pay increases. The general conditions of military service and the quality of military life need serious upgrading and this too will cost considerable sums—as will other other needed improvements.

OTHER COMPENSATION

If, as the Commission has suggested, pay may not even be the primary motivating force for joining or remaining in the military service, what then is being proposed to improve other areas of compensation that help affect these decisions? The Commission has not made concrete recommendations on some of these key problems.

The Commission has strongly urged the adoption of the so-called "salary plan" of pay for the Armed forces. This would give military pay more visibility and, to the extent that pay motivates, it should be more efficient in attracting and retaining personnel.

The Commission believes that it would be equitable and desirable to give officers and enlisted men the same vested retirement rights that civil service employees currently have. This would involve increasing military pay sufficiently to enable military personnel to contribute 6½% of their salaries annually to their retirement account without any loss in net income. It would introduce partial vesting after 5 years of service and a reduction in the retirement income available in the years prior to approximately the 25th year of service in most cases. The Commission *did not*, however, include the costs of this part of any pay raise in their estimates of the total cost of the Volunteer Force scheme.

The Commission decided against recommending general increases in such benefits as housing, educational programs, dependent medical and dental care and other items they refer to as "income in kind." They believe that instead individuals in the military should be compensated in cash for these. However, *no provision for funding* or specific recommendation for providing for these most important areas was made by the Commission. This is another reason why we feel their cost estimates are so fundamentally understated.

The whole area of housing, education, adequate medical and dental care are deserving of more attention than is evident in the Commission's report. For along with pay, among the tangible rewards, these areas have as much to do with job satisfaction and retention as almost any other factors. Certainly nothing contributes more to family well-being than these vital areas.

Secretary of Defense Laird said it this way in his FY 71 Posture Statement:

"We should improve the quality of education, both military and civilian, to ensure a high degree of professionalism and technical competence through the Department of Defense.

"We should reduce the inherent personal and family hardships of military service life by providing among other things: (a) reasonable sharing of the risks of combat; (b) quality education in overseas dependent schools; (c) adequate housings for all personnel without discrimination, and (d) quality medical care with efficiency.

"Despite budget reductions for almost all DOD activities, the Department has not cut back its request for 4,800 units for family housing for FY 1970. Moreover, we are requesting funds for the construction of another 8,000 units for FY 1971. This program represents an increase of 67 percent over FY 1970 and 86 percent over the average annual family housing construction program for the previous four years."

"I feel strongly that we must increase our efforts to upgrade housing conditions for military personnel. The provision of satisfactory housing for our servicemen and their families is a key factor in career motivation and retention and contributes substantially to improved morale within the Armed Forces."

One of the more puzzling contradictions in the whole Commission report stems from its stated belief, on the one hand, that the quality of military life needs to be improved generally if it is to attract and retain good people, and on the other hand, to recommend against general increases in the very sectors which would materially enhance the quality of military life. This it seems to us is a fundamental weakness in the report.

Surveys suggest that there are a number of reasons why young men and women enlist in the Armed Forces. Foremost among these is the desire to serve the nation and to receive recognition for that service. Patriotism is still an important motivator—and would be even more so with greater national recognition.

If good young people are to be attracted to the service, morale must be improved, job satisfaction must be provided, we must convey a sense of accomplishment and find ways to further enhance self-respect. The optimum would be for the service to satisfy both a desire to serve and the means to return to civilian life better prepared to assume a meaningful role in the community.

The goals can only be met by a major effort on several fronts. We have discussed improved pay. The living and working conditions, and in many instances, the facilities themselves, need immediate improvement. The services must reexamine many of the traditional restrictions on the personal lives of service people to see if living and working conditions cannot be improved. Those unnecessary or unpleasant duties not essential to the mission need careful examination with a view toward eliminating those we can.

Probably more needs to be done in supplying enlistment and reenlistment bonuses and options as well as providing greater post service benefits. Efforts in this latter category have often been studied but never adequately funded.

Finally, the importance of his duty to his country must be clearly evident to the serviceman and he must be given the best tools and equipment available to carry out his missions.

One of the weaknesses of the Commission's report in our view is its insistence of equating military service so directly with civilian employment. There is a considerable difference between the two and the difference is most important in a morale sense. If the Commission feels, for example, that the great bulk of its young officers or career enlisted men would prefer to rent civilian housing as opposed to being provided even less adequate housing on post, we suggest their survey sample was small indeed.

They have failed to grasp the real importance of these intangible factors of morale and camaraderie that for years have motivated career service people to put up with a life of genteel poverty while serving their country. They take pride in their service and their dedication to the country and pay alone will not motivate this type of individual to a career in the military.

RESERVE FORCES

Because about 75% of their first term enlistees are draft motivated, the Commission felt that they should give special attention to the manpower problems of the Reserve Forces. However, in our view, they failed to come to grips with some very basic problems that will have to be solved before any serious thought could be given to moving the Reserve Forces to an All-Volunteer status.

Beyond a modest pay raise, heavily weighted toward the first two years of the initial enlistment, the Commission recommended no other specific actions. They did feel that the Reserves should lower their sights both in terms of numbers and the quality of personnel they take in but beyond that, the Commission seems to feel that there are no insurmountable problems. In its view, as far as the Reserve Components are concerned, modest injections of pay will enable the Reserve Components to reverse the present situation.

This seems to us to be an unusual viewpoint. To begin with, President Nixon has made it abundantly clear on more than one occasion that this country will stand by its international commitments with more than 40 nations. And as the Commission has said, "In the event of a national emergency requiring a rapid increase in the number of men under arms, the first recourse should be the ready reserves, including the National Guard." So it would follow logically we think that if your commitments remain the same and you reduce materially the size of your active establishment, you may very well be talking about increasing the size of your Reserve Components. Certainly you will be placing greater reliance on them.

To assume that a modest increase in pay would permit the Reserve Forces to revert to voluntary enlistments flies directly in the face of all of our previous experience.

If we are realistically to give any consideration to reverting only to volunteer enlistments as the only source of manpower for the Reserve Forces there are a whole host of actions, many of them costing considerable sums, that seem to us to be almost as essential as they are for the active establishment.

First, we must provide the Reserve Forces with the training facilities and equipment they require to conduct meaningful and interesting training. Never in their entire history have the Reserve Forces been adequately supplied with the late model equipments they need for realistic training in anywhere near the quantities they need.

The monies expended for Reserve recruiting will have to be greatly increased.

It would probably be necessary to reduce 1st term enlistment from 6 years, which now calls for 6 months' active duty plus 5½ years in a unit, to 3 years to coincide with the active duty enlistments and be more realistic in an All-Volunteer environment. This, of course, doubles the input figures required. Where you now need 55,000 men each year going into the Reserve Enlistment Program for six years, you would need 110,000 under a 3 year enlistment.

Other possible inducements might include:

1. A reenlistment bonus of $100.00 or more and a bonus of similar amount for each year of satisfactory service for reservists.

2. Additional awards for reserve service.

3. Extending servicemen's group life insurance coverage to all reservists.

4. Allow credit for all inactive duty points accumulated in computing reservists retirement pay.

5. Medical care for reservists who contract a disease or aggravate an injury during any training period.

6. Provide proficiency pay for enlisted reservists.

The Commission maintains that the draft motivation data (i.e. 75% reservists draft motivated) significantly overstate the problem. It feels that if recruitment is focused on a younger, less well-educated group, than those who now populate the Reserve Forces, the flow of volunteers will be substantially larger than it is now. They do not suggest nor do we believe that this would amount to replacing the 75% figure in question. They feel the Reserves could be reduced by 113,000 (about 1/6th) with no harm to the national defense. Our position is just the opposite. In the present world climate as our active forces are cut back, we feel that we may wish to increase the size of our Reserve Forces while maintaning high standards of personnel quality.

We note with further concern that the Commission has made no provision for the maintenance of personnel currently maintained by all services in the Individual Ready Reserve. This vast reservoir of trained personnel are not only essential in time of national emergency, they are needed almost at once. These individuals are used to bring units of the active Army up to strength as well as to flesh out Reserve units called to active duty. A minimum of 600,000 Individual Ready Reservists are required for the Army manpower pool alone.

STANDBY DRAFT

Many of the theories and recommendations of the Gates Commission are subject to test and validation without lessening our security one bit. If Congress can be persuaded to provide the money for the pay increases and other improvements in career living for the military, we can determine whether or not these assumptions are correct and whether we can in effect buy enough volunteers to make conscription unnecessary. All of this can be done without taking the unwarranted risk that would result from terminating the draft as a viable on-going program. We should strive instead for a lengthy period of what Secretary Laird calls "zero draft calls".

The Commission recommends that Selective Service be put on a standby status on 30 June 1971 to be activated only by joint resolution of Congress upon request of the President. This strikes us as the most dangerous recommendation that the Commission has made, for the evidence is clear that the hot breath of the draft is solely responsible for large numbers of those now serving in both the active and reserve forces.

One of the reasons that the Commission recommends that Congressional approval be a prerequisite to the use of Selective Service is to guarantee the propriety of whatever action is under consideration. This seems to us to be a wrong reason.

The implication is that Selective Service legislation provides a vehicle for the Congress to exercise a stronger veto over the foreign policies of the administration. Since this is written in today's world, one draws the conclusion that had Selective Service been on a standby status it might have been possible to keep us out of let's say the Dominican Republic, the Cuban Crisis or most probably Vietnam. Things like the passage of the Gulf of Tonkin resolution, for example, indicate that this line of thought is in error. In any event, Selective Service legislation has no place in these kinds of foreign policy considerations.

Selective Service legislation comes up for review and extension every four years at least and in recent years it has been under almost continuous Congressional scrutiny with numerous public hearings and great public discussion as witness the introduction of the lottery and the "youngest first" call changes last year.

So we fail to see any validity in this particular recommendation of the Commission. The Commission goes on to state:

"The viability of an All-Volunteer Force ultimately depends upon the willingness of Congress, the President, the Department of Defense and the military services to maintain: (1) competitive levels of military compensation; (2) reasonable qualification standards; (3) attractive conditions of military service".

While the Commission's recommendations suggests a good start on (1) we do not feel that the Committee has made appropriate recommendations nor suggested the funding necessary for (3). Hence, we can only conclude that realistically, our political representatives will not be willing to undertake the fiscal expenditures required for a viable All-Volunteer Force.

Mr. Nixon made it clear that his basic goal was to stop conscripting people as soon as that was feasibly consistent with national security needs. We suggest along with Secretary of Defense Laird that we can do this and leave Selective Service intact. If draft calls drop to zero as a result of the implementation of the Commission's other recommendations, the young men who must register will not really care whether Selective Service is on standby or operational basis.

CONCLUSION

What then is the sum and substance of all this discussion? There are many who feel that it should not be necessary to conscript young men to meet the military manpower requirements of the nation. This may be true if we as a nation were willing to do those things and spend the money that would make military service a nationally recognized, prestige career.

However, in the present national climate of frustration with a whole host of problems, we feel strongly that no irrevocable, emotional decision should be made on such a fundamental matter. We must not repeat the mistakes of the past. We cannot reduce the strength of our Armed Forces to the point where they are no longer an effective instrument of national policy.

There is a practical way to prove out not only the feasibility of volunteer forces but at the same time insure that our national defense needs can be met.

This Association feels strongly that it is important to maintain an operational Selective Service System and, at the same time, strive through every practicable means to make military service attractive enough to eliminate the need to actually draft anyone. To discard a viable operative Selective Service System without first clearly establishing our ability to maintain adequate military forces without it, would be to accept a risk to our national security that is both unwise and unnecessary to take.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the President pro tempore (Mr. RUSSELL) laid before the Senate a message from the President of the United States submitting sundry nominations, which was referred to the Committee on Armed Services.

(For nominations received today, see the end of Senate proceedings.)

COMMUNICATION FROM AN EXECUTIVE DEPARTMENT

The PRESIDENT pro tempore (Mr. RUSSELL) laid before the Senate the following letter, which was referred as indicated:

REPORT OF NAVY OF RESEARCH AND DEVELOPMENT PROCUREMENT ACTIONS OF $50,000 OR OVER

A letter from the Deputy Chief of Naval Material (Procurement and Production), Department of the Navy, transmitting, pursuant to law, the Department's semiannual report of research and development procurement actions of $50,000 and over, for the period January 1 through June 30, 1970 (with an accompanying report); to the Committee on Armed Services.

FOREIGN BANK SECRECY AND BANK RECORDKEEPING—REPORT OF A COMMITTEE—SUPPLEMENTAL VIEWS (S. REPT. NO. 91-1139)

Mr. PROXMIRE. Mr. President, from the Committee on Banking and Currency, I report favorably, with amendments, the bill (S. 3678), to amend the Federal Deposit Insurance Act to require insured banks to maintain certain records, to require that certain transactions in U.S. currency be reported to the Department of the Treasury, and for other purposes, and I submit a report thereon.

I ask unanimous consent that the report be printed, together with the supplemental views of the Senator from Utah (Mr. BENNETT), the Senator from Texas (Mr. TOWER), the Senator from New York (Mr. GOODELL), and the Senator from Oregon (Mr. PACKWOOD), and that the committee have until midnight to deliver the copy for printing purposes.

The PRESIDING OFFICER. (Mr. HUGHES). The report will be received and the bill will be placed on the calendar; and, without objection, the report together with the supplemental views will be printed as requested by the Senator from Wisconsin.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. HARTKE:

S. 4282. A bill to amend the Internal Revenue Code of 1954 to restore the investment credit for small businesses;

S. 4283. A bill to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education;

S. 4284. A bill to amend the Internal Revenue Code of 1954 to provide for an increase in the amount of the personal exemptions for taxable years beginning after December 31, 1973; and

S. 4285. A bill to amend the Internal Revenue Code of 1954 to restore the investment credit; to the Committee on Finance.

By Mr. ANDERSON:

S. 4286. A bill to declare that certain federally owned lands are held by the United States in trust for the Indians of the Pueblo of Chochiti; to the Committee on Interior and Insular Affairs.

ADDITIONAL COSPONSOR OF BILLS

S. 368

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Colorado (Mr. ALLOTT) and the Senator from Arizona (Mr. FANNIN) be added as cosponsors of S. 368, to authorize the Secretary of the Interior to make disposition of geothermal steam and associated geothermal resources, and for other purposes.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

S. 3650

Mr. HATFIELD. Mr. President, on behalf of the Senator from Nebraska (Mr. HRUSKA), I ask unanimous consent that at the next printing, the name of the Senator from Arizona (Mr. FANNIN) be added as a cosponsor of S. 3650, to amend section 837 of title 18, United States Code, to strengthen the laws concerning illegal use, transportation, or possession of explosives and the penalties with respect thereto, and for other purposes.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

S. 3724

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Wyoming (Mr. MCGEE), I ask unanimous consent that, at the next printing, the names of the Senators from Nevada (Mr. BIBLE and Mr. CANNON) be added as cosponsors of S. 3724, to amend the Internal Revenue Code with respect to ammunition recordkeeping requirements.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

S. 4179

Mr. BYRD of West Virginia. Mr. President, on behalf of my colleague from West Virginia, Mr. RANDOLPH, I ask unanimous consent that, at the next printing, the name of the Senator from Michigan (Mr. HART) be added as a cosponsor of S. 4179, to amend the Public Works Acceleration Act.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

S. 4238

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Rhode Island (Mr. PELL) and the Senator from Texas (Mr. YARBOROUGH) be added as cosponsors of S. 4238, the Universal Enrollment Act.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

S. 4260

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Vermont (Mr. PROUTY), and the Senator from South Carolina (Mr. THURMOND) be added as cosponsors of S. 4260, to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code and to provide for statewide public planning, and for other purposes.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF JOINT RESOLUTION

SENATE JOINT RESOLUTION 229

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Oklahoma (Mr. HARRIS), I ask unanimous consent that at the next printing the name of the Senator from North Carolina (Mr. JORDAN) be added as a cosponsor of Senate Joint Resolution 229, to establish National Good Grooming Week from November 16 through November 22.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

SENATE RESOLUTION 454—SUBMISSION OF A RESOLUTION RELATING TO TERRORIST ACTS AGAINST DIPLOMATIC AND OTHER FOREIGN PERSONNEL IN LATIN AMERICA

Mr. BYRD of West Virginia. Mr. President, recently there has been a steady increase in cruel and inhumane terrorist activities in Central and South America.

Of particular concern is the recent rash of political kidnapings of foreign officials for extortion purposes. These brutal criminal acts violate all diplomatic concepts as practiced since ancient times.

Political kidnaping is abhorrent to a civilized society, contrary to the interests of world peace, and in violation of the fundamental rights and freedoms of man. Kidnaping used as a political weapon disrupts the efficient performance of functions vital to the comity of nations, and the well-being of their people. It directly affects the security and the domestic stability of the nation in which such an act occurs.

Mr. President, those radicals who intend to destroy governments friendly to the United States would pose dangers to our own national security. The security of the Western Hemisphere relies mainly on the solidarity of our neighboring nations, and the continued stability of their governments. Those who seek to create havoc with the conduct of these relations impair inter-American security.

Political kidnapings are no mere whims of a small band of guerillas, but a callous and calculated effort to embarrass and destroy free democratic governments.

Since January of 1968, there have been at least 13 major incidents of terrorist acts against diplomatic and other foreign personnel in Latin America. I have asked the Foreign Affairs Division of the Legislative Reference Service of the Library of Congress to prepare a report describing these incidents in detail, and, at the conclusion of my remarks, I shall ask unanimous consent that the report be printed in the RECORD.

Mr. President, the world is now praying for the safe release of two hostages currently held in Uruguay. When the Uruguayan Government rightly refused to accept the blackmail terms calling for the release of 150 political prisoners, ultra-leftist guerrillas called Tupamaros—fanatics who style themselves after an 18th century Inca chief—kidnaped and executed Daniel Mitrione, an American who was assisting the Uruguayan police in improving their security procedures.

What the fate of the two hostages—Dr. Claude L. Fly, an American agricultural expert, and Brazilian Consul Aloysio Mares Dias Gomide—will be is still unknown.

This morning the Uruguayan police found a new note, the 11th communique from the Tupamaros guerrillas. The Uruguayan authorities consider this new note to be an authentic document, and it is the latest one to be received since August 11 concerning the health and safety of Dr. Fly.

The note stated that Dr. Fly and the Brazilian consul are well, and that the disposition of the two hostages has not yet been determined. The note indicated that as long as "measures are being taken against them"—"them" referring to Tupamaros held as prisoners, and "measures" referring to continued questioning—the guerrillas will continue to hold the hostages. This could, however, be interpreted as a change from earlier demands that all prisoners be released.

In addition, the note confirmed an earlier document, which was obtained on August 5, which spoke of dissension within the Tupamaros movement, and the new note reiterated that the two hostages would be executed if the police or military made an effort to seize them.

The country of Uruguay is famous for its beauty. It is a nation small in territory and large in accomplishments. The people are industrious and educated. Poverty is almost unknown. Yet, if the violence of the ultra-left wing guerrillas continues to mount in Uruguay, the democratic government of President Jorge Pacheco Areco might very well fall.

The Uruguayan President has bravely stood his ground. More than 12,000 police and military personnel are now conducting a house-to-house search for the abductors and their hostages.

This is a needed policy, for if these terrorists are allowed to succeed, no foreign official or diplomat will be safe from the harassment of leftists in search of political gains.

The United States has instituted special protective measures, which have not been announced publicly for security reasons, to protect American diplomats stationed throughout Latin America. While this action has been welcomed by the diplomats and their families, it does not diminish or stop the subversive activities. What is needed is unified international agreement and action, so that all radicals will know that kidnaping will

no longer be tolerated, and that political asylum will no longer be given either to political prisoners whose release was in exchange for hostages, or to the abductors.

Mr. President, last June the General Assembly of the Organization of American States adopted a resolution condemning these acts, and at the same time, requesting the Inter-American Juridical Committee of the OAS to draft an inter-American instrument on kidnaping, extortion, and assaults against persons where such acts may have international repercussions. The Inter-American Juridical Committee was to have commenced its work this morning, but due to a procedural problem, it has now postponed its first meeting until August 31. A final report is expected not later than 60 days after this first meeting.

It is hoped that a strong multilateral agreement will be adopted, for it will implement the resolve with which the nations of this hemisphere can work together to prevent further terroristic violence from disrupting the political stability and solidarity of our hemisphere.

On June 26, Secretary of State Rogers spoke eloquently before the OAS, and on this issue said:

I hope this Assembly can deal effectively with terrorism and kidnapping, especially in their international aspects . . . Such acts clearly and distinctly violate the principles governing the conduct of relations between states. We would suggest that the Assembly initiate steps to prepare a new international agreement defining these acts as international crimes and establishing appropriate measures to deal with them.

On August 19, after a special meeting of the Council of Organization of American States, the U.S. delegation issued the following press release, which in essence reiterated the U.S. position taken during the secret meeting:

The United States has and will continue to have deep concern for the safety of U.S. personnel abroad. We have taken and are continuing to take steps to provide greater protection for our personnel overseas and to make it more difficult for kidnapping to take place. The host governments, who have the direct responsibility for the protection of foreign diplomats and consulate personnel, have been as concerned as we. If despite our combined efforts a United States official is nevertheless kidnapped, the U.S. Government determines its policy toward that unfortunate event in the light of all of the pertinent circumstances at the time. We do not, however, ask those governments to meet demands that are considered extreme; to do so would only serve to encourage terrorist groups to kidnap others.

Mr. President, I concur with the statements made by Secretary of State Rogers and the U.S. delegation to the OAS, and I believe the U.S. position deserves the full support of the Senate.

Unless something is done Americans and officials of other countries will continue to be harassed. On August 19, 1970, a group of Tupamaros kidnaped an American, Stephen Spann, held him for an hour, used his car in an attempted robbery, and released him. Although there may not have been any political implications intended in this abduction, the Spann incident does indicate that terrorists continue unabated to endanger the lives and freedom of Americans abroad.

The OAS Inter-American Juridical Committee will soon begin its work. The United States has presented a position which condemns kidnaping as an international crime, and which calls for appropriate measures to deal with such crimes. However, there could be an effort made by other Latin American governments to neutralize any international agreement which would serve as an effective deterrent against these heinous crimes.

For this reason, the United States must be strong in maintaining a position which would guarantee the safety of governmental and official personnel sent overseas, and thus I am introducing today for appropriate reference a resolution expressing the sense of the Senate that the United States should enter into agreements with other nations relating to measures to be taken against persons who unlawfully endanger the life and freedom of any official of a government of another nation or an international organization, or the life and freedom of a member of his family.

My resolution calls upon the President, as he is now doing, to take such action as may be necessary to secure, at the earliest practicable time, bilateral or multilateral agreements by which each signatory nation would agree to treat all such officials and members of their families with due respect, and to take all appropriate steps to prevent any threat or act which would unlawfully endanger the lives of such officials and members of their families.

In addition, each signatory nation would agree to take all measures properly within its jurisdiction to apprehend and to prosecute or extradite any person who commits, or threatens to commit such a threat or an act against such officials and members of their families.

Each signatory nation would agree—keeping in mind the need to act wisely in safeguarding the lives of such officials and members of their families—either, first, to refuse to accept any political hostages released as a result of such terroristic acts or threats; or second, to capture and hold in confinement for extradition, and to extradite any political hostages released as a result of terroristic acts who might have entered a country illegally.

My resolution also provides that each signatory nation would agree to withhold formal recognition of any government formed by terrorists who have participated in threats or acts endangering such officials and members of their families, and to take all other appropriate measures as may be necessary to deter any further terroristic activities.

This is an important resolution, and it merits early consideration by the Senate.

Mr. President, I submit the resolution, and ask unanimous consent that it, as well as the report prepared by the Library of Congress, be printed in the RECORD.

The PRESIDING OFFICER (Mr. BOGGS). The resolution will be received and appropriately referred; and, without objection, the resolution and the report will be printed in the RECORD.

The resolution (S. Res. 454) expressing the sense of the Senate that the United States should enter into agreements with other nations relating to measures to be taken against persons who unlawfully endanger the life and freedom of any official of a government of another nation of an international organization, or a member of his family, was referred to the Committee on Foreign Relations, and is printed in the RECORD, as follows:

S. RES. 454

Whereas the maintenance of international peace and security and the promotion of friendly relations among nations depend on the orderly and effective conduct of relations among nations;

Whereas any threat or act by any person which unlawfully endangers the life or freedom of any official of the government of another nation or an international oragnization, or a member of his family, is abhorrent to a civilized society, contrary to the interests of world peace, and violates the fundamental rights and freedoms of man;

Whereas any threat or act unlawfully endangering the life or freedom of any official of the government of another nation or an international organization, or a member of his family, may affect the security and domestic stability of the nation where such threat or act occurs;

Whereas any threat or act unlawfully endangering the life or freedom of any official of the government of another nation or an international organization, or a member of his family, disrupts the efficient performance of functions vital to the comity of nations and the well-being of their people; and

Whereas threats and acts unlawfully endangering the life or freedom of any official of the government of another nation or an international organization, or a member of his family, constitute heinous acts which have aroused world rebuke: Now, therefore, be it

Resolved, That it is the sense of the Senate that the President should take such steps as may be necessary to secure at the earliest practicable time bilateral or multilateral agreements by which each signatory nation agrees—

(1) to treat all officials of nations and international organizations, and members of their families, with due respect, and to take all appropriate steps to prevent any threat or act unlawfully endangering the life and freedom of any such official or member of his family;

(2) to take all measures properly within its jurisdiction to apprehend, prosecute, or extradite any person who commits, or threatens to commit, any such threat or act against an official of another nation or an international organization, or a member of his family;

(3) consistent with the need to safeguard the lives of such officials, or members of their families, who have been placed in jeopardy by any threat or act unlawfully endangering their lives or freedom, to refuse to grant asylum to any person, and to capture and to hold in confinement for extradition any person, whose release from custody of another nation was achieved by means of any such threat or act;

(4) consistent with the need to safeguard the lives of such officials, or members of their families, who have been placed in jeopardy by any threat or act unlawfully endangering their lives or freedom, to extradite any such person so captured and confined to the appropriate authority of the nation from which he was released following the removal or cessation of any such threat or act;

(5) to withhold formal recognition of any government formed by any person, or group

of persons, who have participated in such threat or act; and

(6) to undertake such other appropriate measures as may be necessary to deter any threat or act unlawfully endangering the lives or freedom of any such official or member of his family.

The report furnished by Mr. BYRD of West Virginia is as follows:

RECENT TERRORIST ACTS AGAINST DIPLOMATIC AND OTHER FOREIGN PERSONNEL IN LATIN AMERICA

(By Rieck B. Hannifin)

January 16, 1968, Guatamala, while returning from lunch, U.S. Army Colonel John D. Webber, commander of the 34-man U.S. military group in Guatemala, and Lieutenant Commander Ernest A. Munro, head of the group's navy section, were gunned to death by bullets from a passing car. Two U.S. military enlisted personnel were wounded in the attack. The following day the FAR (Armed Forces of the Revolution), a pro-Castro terrorist group, distributed leaflets throughout Guatemala City claiming responsibility for the assassinations. The leaflets declared that the shooting was to avenge murders by clandestine right-wing organizations which the FAR said received orders from the U.S. military mission.

U.S. Ambassador John G. Mein is said to have believed that the killings were an attempt to force an escalation of U.S. military strength in Guatemala, aimed both at arousing the population against the United States and at diverting U.S. soldiers and equipment from "wars of liberation" elsewhere (in short, Che Guevara's strategy of weakening the United States by creating various Vietnams).

(2) August 28, 1968, Guatemala, U.S. Ambassador to Guatemala John G. Mein was assassinated while enroute in the chauffeur-driven U.S. Embassy limousine from a luncheon at the Embassy residence to his office in downtown Guatemala City. The limousine was forced to the curb by a car, and blocked in from behind by a small truck. Several young men dressed in green fatigue uniforms and armed with at least one automatic weapon scrambled from their car and surrounded the Ambassador's limousine. Ambassador Mein leaped from his car and ran. He was struck in the back by a burst of submachine gun fire and killed instantly.

The following day the FAR issued a communique, given to the newspaper *El Imparcial*, announcing that Ambassador Mein was killed "while resisting political kidnapping as an answer to the capture of commandant Camilo Sanchez of the FAR." Sanchez, believed to have been in command of urban guerrilla units, reportedly was a prisoner in Guatemala City. It is speculated that the FAR sought to kidnap Mein as ransom for the release of Sanchez.

Ambassador Mein, whose life had been threatened repeatedly, knew that he was a possible target of leftist guerrillas. Nevertheless, he spurned a bodyguard, believing that U.S. policy was best served by refusing to give the terrorists an opportunity to boast that they had intimidated the United States. In conversation with friends, he indicated that he would attempt to escape rather than submit to capture and provide the terrorists with an opportunity to humiliate the United States and Guatemalan governments.

(3) September 4, 1969, Brazil, U.S. Ambassador Charles Burke Elbrick was kidnaped by four gunmen who ambushed Elbrick's car in a Rio de Janeiro street near the Embassy as the Ambassador was returning to his downtown office from lunch at the Embassy residence.[1] The abductors drove off with Elbrick, leaving behind the Ambassador's chauffer, a ransom note, and a homemade bomb which failed to explode. The note said that the Ambassador was seized because he was "the symbol of exploitation," and demanded the publication of the manifesto and that the Brazilian Government release 15 political prisoners who were to be flown to Algeria, Chile, or Mexico. If the demands were not met within 48 hours, Elbrick would be "executed."

The manifesto was signed by two left-wing terrorist organizations—the MR–8 and the National Liberation Alliance. It declared that they would no longer tolerate tortures, beatings and killings of their members at the hands of the authorities and contained a violent condemnation of Brazil's military regime.

The kidnapers negotiated with the Brazilian Government by notes, left first in an alms box in a church in Rio and then in the suggestion box at a supermarket in suburban Leblon. On September 5, the Brazilian Government agreed to the kidnapers' conditions, and that day broadcast the terrorists' manifesto. The following day, the fifteen specified prisoners were flown to Mexico. The prisoners were a varied group—representatives of student organizations, unions, and peasant groups, and members of the orthodox Brazilian Communist Party as well as representatives from the more radical Castroite, Trotskyits, and Maoist groups. In Mexico, one of the released prisoners, Mario Galhardo Zacanto, a 22-year-old former medical student, said he had organized eight bank robberies in the state of Minas Gerais to raise funds for the revolutionary movement. Two others, Ivens Marchetti and Onofre Pinto, a former army sergeant, said they had taken part in organizing the killing of U.S. army captain Charles Chandler.[2]

On September 7 Ambassador Elbrick was released by his captors, whom he described the following day as "young, very determined intelligent fanatics" who would have carried out their threat if their demands had not been met.

(4) March 6, 1970, Guatemala, Sean Holly, U.S. labor attache in Guatemala, was seized by two carloads of men armed with submachine guns who intercepted his automobile on a main street of Guatemala City as he returned to the Embassy from lunch. The urban guerrillas, members of Communist Rebel Armed Forces (FAR), held him hostage in the mountains for 39 hours to obtain the release of four of their comrades, threatening to kill Holly if the Guatemalan Government refused. In return for Mr. Holly's release, two imprisoned members of the FAR were released and were given political asylum in the Costa Rican Embassy on March 7. A third, whose release the guerrillas had demanded in the mistaken belief that he was in jail, contacted the Costa Rican Embassy on the morning of March 8 and was given political asylum there. All three were given safe conducts to go to Mexico. The fourth guerrilla on the kidnappers' list was allowed to go to Mexico earlier. Mr. Holly was taken to a church in a working-class district of Guatemala City on March 8 by two guerrillas who turned him over to the priest with a warning that the police not be called for an hour.

(5) March 11, 1970, Brazil, Nobuo Okuchi, Japanese consul general in Sao Paulo, Brazil, was abducted by terrorists while on the way home from his office in Sao Paulo. Three cars forced Mr. Okuchi's car to stop; then armed men threatened the chauffeur, made the consul get out of his limousine, and drove him off in another car. In a ransom note the following day, the kidnappers said they would release Mr. Okuchi after five prisoners had been released from Sao Paulo prison and sent into exile, preferably to Mexico. The abductors identified themselves as members of the Popular Revolutionary Vanguard, an urban terrorist organization under the leadership of a former Brazilian army captain. They threatened to kill Mr. Okuchi if the five prisoners were not released and if the government did not call off its massive manhunt. Soon after the kidnappers made their demands known, a note from Mr. Okuchi saying he was well and asking for caution by authorities was delivered to the Japanese Chamber of Commerce in Sao Paulo.

That evening, close to the deadline set by the kidnappers, the Brazilian Government announced that it would meet the ransom conditions. The following day, the Brazilian Government agreed to an additional demand—to guarantee all prisoners in Brazilian jails good treatment.

On March 14, the Brazilian Government released the five prisoners and sent them on a jetliner to Mexico. The prisoners included three self-confessed urban guerrillas and two women. One of the latter is the mother superior of a church-sponsored orphanage in Sao Paulo state who was imprisoned on October 25, 1969, on charges of allowing members of the Armed Liberation Front to use her convent as a base of operations. The other is the wife of a guerrilla leader who had been detained on February 26, 1969, following a raid on her home in which her husband was killed in a shoot-out with the police. Upon arrival in Mexico, the five released prisoners all claimed to have been tortured in prison.

Ten hours after the released prisoners arrived in Mexico, the kidnappers freed Mr. Okuchi unharmed.

(6) March 24, 1970, Dominican Republic, Lt. Col. Donald J. Crowley, United States air attache in the Dominican Republic, was kidnapped on arrival for his customary 8 a.m. calisthenics on the polo field beside the Hotel Embajador by five or six men in military uniforms and armed with rifles. In a note to the evening newspaper *El Nacional*, the kidnappers identified themselves as members of the United Anti-Reelection Command, a group of leftists seeking to block incumbent President Balaguer's attempt to serve another term as President. The kidnappers demanded that 21 prisoners be brought to Santo Domingo's main square by 10 a.m. the following morning, and released in a public ceremony attended by the auxiliary archbishop of Santo Domingo, the president of the university, and the president of the bar association. Lt. Col. Crowley would be released ten hours later. If anything happened to any of the prisoners, the kidnappers vowed to kill Crowley.

The Dominican Government agreed to exchange the prisoners for Crowley, but balked at waiting ten hours for his release and at freeing the prisoners in the Plaza Duarte. With Archbishop Hugo Polanco arbitrating between the Dominican Government and the kidnappers, a compromise was reached whereby 20 prisoners would be placed on board a jet airliner under protection of the Mexican Embassy, with Archbishop Polanco aboard as escort, and the plane would be permitted to depart as soon as Col. Crowley appeared. Crowley was released unharmed on March 26.

(7) March 24, 1970, Argentina, Waldemar Sanchez, Paraguayan consul in the border town of Ituzaingo, was kidnapped in the afternoon while showing his car to a group of prospective buyers in Buenos Aires. The abductors, members of the Argentine Liberation Front (formed in 1968 by militant dissidents of the Soviet-oriented Argentine Communist Party), threatened to kill the consul if two of their members, Carlos Dellanave and Alejandro Baldu, were not released by 10 p.m. on March 25.

The following day, President Stroessner of Paraguay arrived in Argentina for a scheduled vacation. That day, the Argentine Government (apparently with Stroessner's approval) refused to comply with the terrorists'

[1] Ambassador Elbrick, recently arrived in Brazil, refused an armed escort, a precaution which his predecessor, Ambassador Lincoln Cordon, regularly took.

[2] Chandler, assassinated in October 1968 in Sao Paulo, was a student of Portuguese and Brazilian history at the university of Sao Paulo. The terrorists claimed he was a CIA agent.

demands. The Government declared that Baldu was not in custody and that Dellanave was a common criminal and would stay in jail. In response, the Front said that Baldu had been either killed by the police or tortured so severely that the government could not release him. Dellanave was shown for ten seconds on television, but his father declared in a news conference that his son had been stripped by police, beaten, and tortured with an electric prod. On March 25 the kidnappers told Buenos Aires newspapers that if the two men were not released, they would execute Mr. Sanchez and "begin the execution of all managers of American business." On March 26 and 27, radio and television stations throughout Argentina declared every half-hour that the Government would not be blackmailed into releasing any prisoners.

On March 28 the kidnappers released Mr. Sanchez unharmed. The group said that it did not go through with its threat "for humanitarian reasons." In their final statement, issued after releasing their hostage, the Front declared that they would now "undertake the execution of an undetermined number of police and officials."

(8) March 29, 1970, Argentina, an attempted kidnapping of two Soviet Embassy diplomats failed when one of the diplomats fell out of the getaway Mercedes and the other was rescued when the car crashed during a police chase. Four men were waiting in the commercial garage used by the Soviet diplomats when Yuri Pivovarov, assistant commercial attache of the Soviet Embassy, his wife and infant daughter, and another Soviet official and his wife returned from a Sunday drive. The assailants forced the women from the car, subdued Pivovarov, with a blow of a pistol butt, and drove off. The women's screams alerted a police guard, who fired at the fleeing car. A passing police car took up the chase and riddled the Soviet car with bullets. The car collided with another and smashed into a tree. Three of the abductors were injured and captured by the police; the fourth escaped.

The Argentine Government identified one of the captured kidnappers as Deputy Inspector Carlos Boningno Balbuena of the Federal Police's 33d Precinct, a man known for right-wing beliefs. The two others were not connected with the police. A rightist terrorist organization MANO, or Argentine National Organization Movement) circulated a statement claiming responsibility for the attempted kidnapping and describing the three captured men as "war heroes."

(9) March 31, 1970, Guatemala, the West German Ambassador to Guatemala, Count Karl von Spreti, was forced from his limousine by armed men in downtown Guatemala as he was riding with his chauffeur from his embassy to his home shortly after noon. The FAR claimed responsibility for the abduction and demanded the release of 17 prisoners, among whom were three accused of killing a congressman and three policemen, others accused of taking part in shootings of pro-Government politicians and attacks on military installations, and five who were accused of carrying out the kidnap-ransom of Guatemala's foreign minister Alberto Fuentes Mohr, Guatemalan banker Gabriel Piguria, and U.S. labor attache Sean Holly. The Vatican Ambassador announced that he had been contacted by the guerrillas to act as intermediary.

On April 2 the Guatemalan Government announced that it would not release any prisoners, and issued a general declaration of war on rebel movements, imposed martial law, and proclaimed a state of emergency. The West German Government issued a protest to Guatemala, saying it could not "accept the decision" against freeing prisoners to obtain the Ambassador's release.

On the morning of April 3, a delegation of foreign ambassadors met with Foreign Minister Alberto Fuentes Mohr to protest the Guatemalan Government's decision not to meet the kidnappers' demand for the release of the 17 prisoners. Meanwhile, in a note to the Papal delegate, the kidnappers increased their price from 17 to 25 prisoners and $700,000. On the sames day, Bonn dispatched a special envoy to Guatemala to press its case. It is reported that West Germany offered to pay the $700,000 demanded by the abductors. However, that evening the Guatemalan Government renewed its refusal to meet any of the guerrilla's demands.

The kidnappers' ultimatum expired at 3 p.m. on April 4. On April 5, after an anonymous call, von Spreti's body was found in an abandoned house 17 kilometers from Guatemala City with a bullet wound in the temple.

(10) April 5, 1970, Brazil, United States Consul Curtis Cutter was shot in the back when he thwarted a kidnapping attempt in Porto Alegre, Brazil. Cutter, his wife, and a friend were returning to his residence after a late dinner when the path of his car was blocked by another. Several men wearing dark glasses and armed with submachine guns and revolvers jumped out of the car and headed toward the counsul's station wagon. Cutter pushed on the accelerator and sped off around the car, hitting one of the men and dragging him on the bumper for several yards. The others opened fire, wounding Cutter a fraction of an inch from his lung. He made it home, while the terrorists picked up their injured man and escaped.

(11) June 11, 1970, Brazil, West German Ambassador Ehrenfried von Hollenben was abducted in Rio de Janeiro as he returned to his residence from the German embassy. Several hundred yards from the residence, a station wagon swerved in front of the ambassador's car. Several terrorists jumped from the station wagon with submachine-guns blazing, spraying the ambassador's car and also hitting a follow-up guard car. The ambassador's police guard was killed, and Von Hollenben was chloroformed, put in the trunk of another car, and taken to a house in the outskirts of Rio.

At the site of the abduction the kidnappers left leaflets which said the ambassador would be returned safely if the government agreed to release an unspecified number of political prisoners. Later communiques from the terrorists demanded the release of 40 specified prisoners and that the government publicize an inflammatory proclamation issued by the kidnappers calling for guerrilla warfare and the overthrow of Brazil's military regime.

On June 15 the Brazilian government met the ransom demanded, flying 34 men and six women to Algiers which had agreed to grant them asylum for humanitarian reasons. Four of the prisoners exchanged (Fernando Paulo Nagle Gabiera, Cid de Queiroz Benjamin, Daniel de Arão Reis Filho, and Vera Silvia de Araujo Magalhães) had been charged with participating in the earlier kidnapping of U.S. Ambassador Elbrick.

In a press conference after his safe return, Ambassador von Hollenben said that his captors told him they had chosen a West German because the Federal Republic has strong business and investment links with Brazil, which would encourage Bonn to put pressure on the Brazilian Government to meet the kidnappers' demands.

(12) July 31, 1970, Uruguay. In four separate and well-coordinated actions in Montevideo, groups of Tupamaros (Uruguay's Marxist urban guerrillas) abducted a United States official and a Brazilian diplomat, and attempted unsuccessfully to kidnap two American diplomats.

Dan A. Mitrione, former police chief of Richmond, Indiana, and for the past two years head of the U.S. aid mission's public-safety program in Uruguay, reportedly was seized on his way to work by five terrorists who intercepted his chauffeured car and forced him into their station wagon at gunpoint. During his capture, Mitrione was shot in the chest.

At almost the same moment, Brazil's consul and second secretary of the embassy, Aloysio Mares Dias Gomide, was kidnapped by four gunmen who entered his home disguised as telephone repairmen.

Simultaneously, separate attempts were made to abduct M. Gordon Jones, second secretary of the United States embassy, and Nathan Rosenfeld, the embassy's cultural attache. Both men managed to elude their abductors after both were struck on the head and slightly injured. According to press reports, Jones was bound hand and foot and shoved into the rear of a pickup truck; he managed to escape by throwing himself out of the moving vehicle, then hobbled to a small store where he asked the owner to call the United States embassy. Details of Rosenfeld's escape have not been published.

In a statement delivered to the newspaper *El Diario* on August 2, the guerrillas demanded as ransom for the two hostages the release of all "political prisoners" (estimated variously from 100 to 150) and that they be sent to Mexico, Peru or Algeria. The communique made no mention of the consequences if their demands were not met. The Tupamaros also announced that Mitrione had undergone surgery for his wound and gave details of his treatment.

Uruguay's President Jorge Pacheco refused to "negotiate with criminals" and, instead, the government continued the nationwide search for the two kidnapped men begun immediately after their abductions.

On August 6 the guerrillas set a deadline of midnight August 7 for the government to decide on the release of all political prisoners. Their statement, delivered to a radio station, contained the vague warning that "if there is no official pronouncement by then we shall terminate this affair and do justice." The terrorists' message described Mitrione as "an American spy infiltrated by the government into the Uruguayan state" and Dias Gomide as the "representative of a dictatorship which has tortured and assassinated hundreds of patriotic Brazilians." In reply that evening, President Pacheco reiterated his refusal to bargain with the kidnapers, stating that he was "absolutely in agreement with" the Interior Ministry's refusal to recognize imprisoned guerrillas "political prisoners" and that it was his duty as President to "maintian law, institutions, and the intangible rights of legitimate justice."

Following capture of the Tupamaros' two most important leaders, Raul Sendic and Raul Bidegain Gressing, the terrorists announced on the night of August 8 that Mitrione would be executed at noon the following day because President Pacheco refused to release the political prisoners. The next day Dan Mitrione's body, shot twice in the head, was found in a car parked in a Montevideo street.

(13) August 7, 1970, Uruguay, as Uruguyan police and military searched for Mitrione and Dias Gomide who had been kidnapped the week before, terrorists seized Dr. Claude L. Fly, a soil expert working privately on contract to the Uruguayan government. Reportedly, Dr. Fly was meeting with Uruguayan agronomists at his laboratory on the outskirts of Montevideo when a band of armed Tupamaros rushed in and abducted him.

At this writing, Brazilian Consul Aloysio Mares Dias Gomides and Dr. Claude Fly are still in captivity. A Tupamaro communique on August 11 warned that if their hideout were found or if the Uruguyan government harmed any Tupamaros it held prisoner, the American and Brazilian captives would be shot.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. DOMINICK. Mr. President, I wish to congratulate the distinguished Senator from West Virginia for bringing this matter to the attention of the Senate.

One of my constituents, Dr. Claude L. Fly, is now a prisoner of the Tupamaros in Uruguay. We have been in touch with his family, his son and wife and daughter, to determine what can be done.

I was pleased to see that in the appropriation bill for State, Justice, and Commerce, which is now before us, there has been added a little over $1 million to try to give additional protection to our people working overseas in these perilous areas.

However, this does not cover the problem we have in many areas of the world. Dr. Fry was an officer in an independent agriculture organization which, in turn, had been hired by the Uruguayan Government. He was down there as the American representative of that group to try to give assistance in agricultural knowledge and the productive capacity of that country, so he was not an employee of the United States. He was an employee under contract with the Uruguayan Government. That means whatever efforts we undertake—and the State Department has been doing very well on this matter; I must give them an A-plus on this all the way through—have to be through the Uruguayan Government.

This, of course, doubles the number of problems we have.

I sincerely hope that we can start out just exactly as the Senator from West Virginia has been doing, to try to determine some method by which we can provide whatever assistance is necessary to give protection to both people who are trying to help other countries and those trying to carry out orders of this country.

I thank the Senator for what he has proposed. I want to establish myself as being on his team in this effort.

Mr. BYRD of West Virginia. I thank the Senator.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT—AMENDMENTS

AMENDMENT NO. 856

Mr. DOLE submitted an amendment, intended to be proposed by him, to the amendment—No. 814—proposed by Mr. HATFIELD, for himself and other Senators, to the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which was ordered to lie on the table and to be printed.

AMENDMENT NO. 857

Mr. BELLMON submitted an amendment, intended to be proposed by him, to H.R. 17123, supra, which was ordered to lie on the table, and to be printed.

DEPARTMENTS OF LABOR, HEALTH, EDUCATION, AND WELFARE APPROPRIATIONS, 1971—AMENDMENT

AMENDMENT NO. 858 TO H.R. 18515

Mr. JAVITS. Mr. President, I am submitting for myself and Senator NELSON, an amendment to H.R. 18515, to increase from $2,046,200,000 to $2,195,500,000 the appropriations for fiscal year 1971 to carry out the provisions of the Economic Opportunity Act of 1964, an increase of $149,300,000. The administration originally requested $2,080,200,000—an amount $32,200,000 above that requested for fiscal year 1970, and $132,200,000 above that estimated for fiscal year 1970.

Last year, with the administration's full support, the Congress gave the poverty program a new tenure and a new vote of confidence; it is now essential that the agency be given the funds to implement the policy set forth in the act:

> To eliminate the paradox of poverty in the midst of plenty in this Nation by opening to everyone the opportunity for education and training, the opportunity to work, and the opportunity to live in decency and dignity.

The poor are a nation within our Nation, equal in number to the entire population of Canada, or approximately one-half of that of France or the United Kingdom. In 1969, there were 24,300,000 persons classified as poor, approximately 69 percent of whom were white and 31 percent nonwhite.

While total Federal aid for the poor—which includes welfare payments, food programs, special education programs, manpower programs, and economic development—rose from $917,000,000 in 1961 to an estimated $29,700,000,000 in 1970, a substantial amount of the expenditures are in welfare payments. I need not remind the Congress that this same appropriation bill which contains funds for the poverty program at a level of approximately $2 billion, contains also a so-called uncontrollable expenditure of $2,540,683,000 for Federal costs for fiscal year 1971 under the welfare program known as aid to families with dependent children, a projected increase of $409,601,000 above the Federal costs of $2,131,082,000 in fiscal year 1970.

The poverty program is the only Federal program for the poor which emphasizes self-help and self-involvement on the part of the poor. Accordingly, it is to it that we must look, importantly, if we are to make these "uncontrollable" expenditures controllable in the future years.

Mr. President, in adopting the Economic Opportunity Act Amendments of 1969, the Congress authorized total appropriations of $2,879,700,000 for fiscal year 1971, some $684,200,000 more than the total amount which I seek by this amendment.

While there is no question that a full appropriation of $2,879,700,000 could itself be justified, we have chosen to seek an amount at a level which we believe the Congress can, and indeed, should, reasonably adopt under the current budgetary circumstances and which unquestionably can be put to effective use during this fiscal year.

In fact, the amount which we request that the Congress approve, is the total base amount authorized for last year—fiscal year 1970—under the Economic Opportunity Act Amendments of 1969.

I am aware that in connection with this appropriation bill the Appropriations Committee of the Senate has before it a request by the Office of Economic Opportunity that it be relieved from the earmarking provisions contained in the Economic Opportunity Amendments of 1969.

In light of that fact, I do not consider it appropriate to indicate my preferences at this time as to how the additional sums which I seek should be allocated among the many programs funded under the Economic Opportunity Act.

Mr. President, I defer to the Appropriations Committee on the question of elimination of the earmarking, and should those provisions be retained, then I shall leave it to the best judgment of the Director of the Office of Economic Opportunity and the heads of the other agencies involved as to how these sums which I seek can best be allocated. In that connection, I should underscore the fact that under section 616 of the Economic Opportunity Act of 1964, the Director has the authority as a general matter to transfer up to 15 percent of the amount appropriated or allocated from any appropriation from one program to another, with certain limitations as to the amount that can be added to a program depending on its size. I assume that within that authority the Director would use any additional funds that the Congress might approve, to transfer to the more successful and needy programs.

The administration is to be commended for the efforts that it has made to continue the poverty program and I think that the President deserves credit for his personal commitment to the appropriation request for fiscal year 1971, which, as I have indicated, is in excess of that for the previous year.

Mr. President if we are ever going to arrest the trend in this Nation toward welfare dependency and to alleviate the despair of many of the poor, we must allocate even more funds for these essential antipoverty programs.

We are now merely scratching the surface of need. Even with the increases sought by the administration for this fiscal year, we will reach less than 31 percent of all poor children ages 3–6 who need early childhood education; less than 10 percent of persons who could benefit from manpower programs; only 1.7 percent of the hard-core drug addicts among the poor; only 8.9 percent of those who could benefit from family planning services; only 7 percent of the poor who need legal services; and only 7.3 percent of the migrant and seasonal farmworkers.

I ask unanimous consent that there be included in the RECORD at this point, a table prepared at my request by the Of-

fice of Economic Opportunity, indicating the universe of need for selected proverty programs, together with estimates of the target population to be reached and the estimated and proposed budgetary amounts for fiscal years 1970 and 1971.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

UNIVERSE OF NEED DATA FOR SELECTED EOA PROGRAMS [1]

	Universe of need	1970 estimate target population reached [2]	Percent of total	Estimate 1970 obligations	1971 estimate target population reached	Fiscal year 1971 percent of total	Fiscal year 1971 President's Budget

[1] Data compiled from the "Justification of Appropriation Estimates" FY 1971, prepared for the Congressional Committees on Appropriations May 1970.
[2] Total program enrollees.
[3] Estimates include 100 projects with a 10,000-person capacity which will be initiated but which will not require refunding until fiscal 1972.
[4] Per year estimate for legal services.
[5] Cases served.

Mr. JAVITS. Mr. President, I shall now indicate a program by program justification for the additional funds which I have requested.

EMERGENCY FOOD AND MEDICAL SERVICES PROGRAM

Under Section 222(a)(5) of the Economic Opportunity Act of 1964, the emergency food and medical services program is designed to:

Provide on an emergency basis, directly or by delegation of authority pursuant to the provisions of Title VI of this Act, financial assistance for the provision of such medical supplies and services, as may be necessary to counteract conditions of starvation or malnutrition among the poor. Such assistance as may be provided by way of *supplement* to such other assistance as may be extended under the provisions of other Federal programs, and may be used *to extend and broaden such programs* to serve economically disadvantaged individuals and families where such services are not now provided and without regard to the requirements of such laws for local or State administration or financial participation. . . . (emphasis added)

Accordingly, in his historic message to the Congress on May 6, 1969, pledging to "end hunger in America for all time," the President coupled an expansion of the food stamp program with a request that the Director of OEO:

Redirect OEO funds into the Emergency Food and Health Service program to increase its food, health, and sanitation services for our most depressed areas. Presently, health and sanitary conditions in many of our most depressed counties are so poor that improved food services alone would have little impact on the nutritional health of the population. The Emergency Food and Health Service has provided invaluable services in aiding these areas, and its good work should be substantially expanded.

The administration has requested only $33,000,000 for the emergency food and medical services programs for fiscal year 1971, an amount which is $15,800,000 below the estimate for fiscal year 1970.

Substantially increased funds are necessary to provide the food, health, and sanitation services to which the President referred and to supplement and aid in the outreach of the food stamp and commodity programs. For, even under administration's plans for expansion of those two programs, total participation over the next 2 years will reach only approximately 17,500,000 of the 24,300,000 poor.

As of April 1970, the food stamp and commodity distribution programs reached only about 9,500,000 persons; in fact, the current participation rate in food stamps and commodity programs is lower than 30 percent in 18 of the Nation's 50 States.

I ask unanimous consent that there be included in the RECORD at this point a table submitted by the Select Committee on Nutrition and Human Needs, of which I am the ranking minority member, indicating the percentage of the poor in each State who are receiving either food stamps or commodities.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

State	Percentage of poor in food stamp program	Percentage of poor in commodity distribution program	Total percentage in programs
Alabama	16.3	27.5	43.8
Alaska	76	----------	76
Arizona	----------	47.0	47
Arkansas	28	3.0	31
California	41	14.5	55.5
Colorado	48	----------	48
Connecticut	53	6.4	59.4
Delaware	----------	56.0	56
District of Columbia	25	----------	25
Florida	1.4	28.0	29.4
Georgia	11	19.0	30
Hawaii	24	----------	24
Idaho	----------	26.0	26
Illinois	36	----------	36
Indiana	18	11.0	29
Iowa	24	1.7	25.7
Kansas	.7	13.0	13.7
Kentucky	28	10.0	38

State	Percentage of poor in food stamp program	Percentage of poor in commodity distribution program	Total percentage in programs
Wisconsin	16.5	13.0	29.5
Wyoming	33	6.9	39.9
Total	22	14.0	36

Note: Based on USDA commodity distribution figures for March 1970, and USDA food stamp figure for April 1970.

Mr. JAVITS. Mr. President, as indicated by Robert Choate, one of the leaders in bringing the "hunger issue" to national attention, in testimony before the House Committee on Appropriations on June 12, 1970:

To get food delivered to the blind; to carry food up six flights of stairs to the aged crippled; to truck commodities out to the end of a Kentucky hollow; to transport Indian families both to the trading post and to the commodity warehouse while the mother attends a nutrition class in Navajo; to buy food stamps in counties where many families have zero income; to visit door-to-door urging people to enroll in the school lunch program; to alert mass media of the need for nutrition education and public service spots commodity and food stamp benefits; to seek innovative methods of packaging and combining foods for those unable to make full use of the commodity package; to urge mothers to feed their infants better baby foods; to update cultural customs once based on good nutritional practice but today impaired by lowered food values; to invite inspection of water sources and parasitic infections; to pay for a doctor's care when the malnutrition is evident; to generate interest in apathetic communities over the plight of the hungry—all these are the rewards of a vigorous Emergency Food and Medical Services program.

If only the requested $33,000,000 is appropriated, OEO will not be able to fund any new emergency food and medical services programs for fiscal year 1971.

PRESCHOOL EDUCATION AND CHILD CARE

In his February 19, 1969 message to the Congress on economic opportunity programs, the President stated:

Much of our knowledge is new, but we are not on that ground absolved from the responsibility to respond to it. So crucial is the matter of early growth that we must make a national commitment to providing all American children an opportunity for healthful and stimulating development during the first 5 years of life.

The administration has underscored that commitment by requesting $339,000,000 for the Head Start program for fiscal 1971, an amount some $13,000,000 greater than the $326,000,000 estimated for fiscal year 1970.

With this new commitment of the administration, has come a desire to shift the emphasis from summer to full year Head Start programs. A full opportunity now costs approximately $800 per child more than for an opportunity in a summer program, and as a result of the change in emphasis, fewer children can be served. In fiscal year 1969, 664,000 children participated in the program. The number declined to 488,500 in fiscal year 1970. The administration's request for fiscal year 1971 would provide opportunities for only 403,700.

This last figure is less than one-third of the total estimated Headstart target population of 1,300,000 disadvantaged children between the ages 3–6.

Mr. President, the effects of early childhood neglect have become increasingly apparent over time and the need for programs to enhance the development of young children has been a matter of national concern.

Also of great importance is the "Follow-Through" program, which focuses on the education of disadvantaged children in the early primary grades. The program is designed to sustain and supplement the gains made by children from Headstart or similar preschool programs. Follow-Through programs are coordinated with Headstart in many of the same communities so that a continuum of intensive education is established for children from age 3 or 4 to the third grade. It is correct to say that there is a very close and necessary relationship between Headstart and Follow-Through and the success of both.

The Office of Economic Opportunity has requested $69,000,000 for this program for fiscal year 1971, a net decrease of $1,300,000 from the estimate for fiscal year 1970. These funds will provide opportunities for only 77,300 children and will permit the addition of only a few new projects.

The OEO justification of appropriations estimates that for 1971 there will be 430,000 full year Headstart and other quality year-long preschool program graduates. It is clear that 77,300 opportunities will be inadequate given the needs of the poor and the existing importance of the relationship between Follow-Through and Headstart.

As noted in the table prepared by the Office of Economic Opportunity, placed in the RECORD, only 17 percent of the "target population" for the Follow-Through program will be reached in fiscal year 1971 with the funds requested by the administration.

Mr. President, the administration has made a significant commitment to the development of child care facilities through its proposed Family Assistance Act. However, even the 450,000 opportunities that are to be provided under that act will be inadequate to the overall need. In 1969, there were an estimated 3,500,000 children ages 3 to 13 in poor families and there are now approximately 600,000 child-care spaces available in licensed facilities in the entire Nation.

Accordingly, the efforts now being taken by the Office of Economic Opportunity to assess the exact needs for child care and to develop new approaches in meeting those needs are crucial if we are ever to close the child-care gap. The Office of Economic Opportunity will allocate $20,000,000, its budget request for fiscal year 1971, for this purpose. The Congress should appropriate additional amounts so that even further efforts may be undertaken.

In that connection, I ask that there be printed in the RECORD a letter dated August 3, 1970 from the Office of Economic Opportunity detailing a number of the efforts being made in this crucial area.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF ECONOMIC OPPORTUNITY,
August 3, 1970.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: I am writing to give you a progress report on the present status of the Office of Economic Opportunity activities in the day care area. We would be pleased to arrange for an additional oral briefing if you feel this would be desirable.

The national *survey and analysis* of existing day care efforts has been commenced as outlined in my letter of March 11. From this project of our Office of Research and Evaluation, we are to have in hand by October a set of six in-depth community case studies and by November an extensive reference compendium on Federally-assisted day care programs. A national probability sample of some 55 communities will be drawn and field interviews conducted this fall with operators of some 400 or more day care centers and day care homes and with nearly 3,000 users and nonusers of day care services. The interview results will be processed and analyzed during the winter months and a final report on the whole survey project is due from the contractor in March of 1971.

The *"state-of-the-arts"* study by our Office of Research and Evaluation is also well under way and the compilation of material on child development needs, program content, supportive services, and a number of other topics is scheduled for completion by November.

The *summer workshop* on child development and day care is now in progress at Airlie House. The Office of Economic Opportunity and HEW's Office of Child Development have worked jointly in support of this effort, with actual project supervision by OCD. A series of publications will be available this fall as a result of the workshop effort.

In addition to these three projects, which were outlined in our March 11 letter, the Office of Economic Opportunity has also launched the following projects under the supervision of its Office of Program Development:

(a) A day care *policy studies* group to perform analyses on problems such as facilities, staff training, financing, methods of service delivery, and the role of the private sector. The Institute for Interdisciplinary Studies in Minneapolis, a nonprofit organization, was selected to carry out this research and analysis over a period of 18 months and is already at work.

(b) An *exemplary* day care project which is studying some 40 notable day care centers selected for one or more outstanding qualities of program concept and delivery. On the basis of a thorough on-site evaluation of these facilities, some 20 models of programs or major components of programs will be developed and made available to the day care community. The evaluation phase of the project is now under way and all field work is scheduled for completion by December 31.

(c) The feasibility/design phase of an *impact* project in comprehensive Federally-supported day care. This is now fully under way through the efforts of the grantee for this phase (Center for the Study of Public Policy, Cambridge, Massachusetts). The impact project itself is now envisioned as an ecomonic, social, and educational experiment to be conducted in two urban communities, adopting an entitlement (voucher) system in one and a project grant approach in the other. The current study phase, which is to be completed by the end of the current year, would then be followed by the planning grants to the two selected communities and the initiation of the full-scale operational experiment thereafter.

The following project in the State of *Vermont* was also supported by the Office of Economic Opportunity in Fiscal Year 1970 by transfer of approximately $1.1 million to the Department of Health, Education, and Welfare: the day care portion of a large-scale, rural-emphasis family assistance demonstration. This day care expansion project is under the supervision of the Office of the Secretary, HEW, and the Office of Child Development, HEW.

Detailed planning for the Fiscal Year 1971 Office of Economic Opportunity day care research and development program is still in process, but the following projects are under active consideration:

(1) A day care *licensing* study. This project would be supported by the Office of Economic Opportunity and carried out through the Office of Child Development, HEW. It would cover State and local practices in the regulation of day care facilities, particularly with regard to time and cost considerations associated with securing approvals for new or expanded facilities.

(2) Establishment of a number of *demonstration* centers intended to show how day care services can be delivered in different locales under a variety of auspices. These centers would be intended to complement those identified in the exemplary day care project.

(3) Establishment of a *clearinghouse* to utilize imaginative techniques to get good current day care practice into the hands of new project operators and to disseminate the results of our other research and analysis findings.

(4) Establishment of a series of experimental or *differential* day care centers to compare the relative impact of different types of child care programs when carried out under optimal conditions.

(5) Conduct of a *combined effects* experiment to examine the impact of income maintenance, manpower training, and day care on various economic decisions and behavioral patterns of families. (This project was mentioned in our March 11 letter.)

(6) Conduct of a *day care facilities* study directed toward the improvement of the physical environment of day care centers and the creation of new design principles.

Please let me know if you need additional information of any of our current day care activities or project plans.

Sincerely,

CAROL KHOSROVI,
Associate Director for Congressional and Government Relations.

SPECIAL IMPACT PROGRAMS

Mr. JAVITS. Mr. President, under title I(D) of the Economic Opportunity Act, which I had the opportunity to author with the late Senator Robert Kennedy, funds are provided for programs focusing on particular poor and geographically limited areas, attacking problems of economic development, as well as social problems. The first such project, established in my home area of Bedford-Stuyvesant, in New York City, has shown the success of this kind of approach to the problems of poverty. Under this program, the people of Bedford-Stuyvesant have developed 10 on-going projects. Among their accomplishments has been the renovation of approximately 1,000 homes since the program began, and the training and placement of some 400 previously hard-core unemployed.

The administration has sought $32,100,000 for this essential program for fiscal year 1971, a decrease of $4,700,000 from the $36,800,000 estimated for fiscal year 1970.

In May 1970 appropriations estimates, submitted to the Appropriations Committee, the Office of Economic Opportunity indicates that the $32,100,000 request will be used as follows: $20,500,000 will be allotted for Community Development Corp. programs, under the traditional model such as is exemplified in Bedford-Stuyvesant; $7,000,000 will be used for an Opportunity Funding program, testing the use of leverage to provide more capital to low-income communities; and $2,500,000 shall be applied to a new mechanisms program, designed to bring the resources and expertise of several agencies together to improve the design and potential impact of economic development programs. The remaining amount would be used for research, technical assistance, and program administration.

Mr. President, we cannot afford to let lapse existing efforts which have proven so successful. They should be expanded, instead. Much more than $20,500,000 indicated for community development programs will be needed in fiscal year 1971 to refund existing programs and to fund new programs that may be established as the result of seven planning grants funded in fiscal year 1970.

Moreover, of the 15 largest cities in the Nation—containing many pockets of poverty—only seven have received assistance under the special impact program operated by the Office of Economic Opportunity.

There is ample evidence that a number of community-based groups would qualify for assistance in these major cities were funds available; in fact during fiscal year 1970, when more funds were available, more than 170 applications, totaling $40,000,000 went unfunded.

LEGAL SERVICES PROGRAM

Mr. President, no program is more vital to the poor than the legal services program. As John D. Robb, chairman of the American Bar Association's Committee on Legal and Indigent Defenders told members of the Subcommittee on Employment, Manpower, and Poverty of the Senate Committee on Labor and Public Welfare last November 14:

I think this is terribly important. I cannot really get across to the committee our sense of urgency about the need for expansion of legal services to try to repair the divisions that are taking place in our society. We know from documented reports by various presidential commissions and by hearings that you yourselves have participated in that the poor by and large have little confidence in our society, in its structure, in its institutions, in lawyers, in the law, in the court system, and as a result, when their own rights are not honored it is not too surprising, I think, that they riot in the streets and that there is violence on our campuses. What we are trying to do in this program is to have a peaceful vehicle where these disputes can be taken from the strife-torn campuses, in the streets and the fire and burnings that are taking place and give these people a peaceful forum in which the grievances that they have against society can be aired, where their position can be set forth.

The administration requests $63,400,000 for this program—an increase of $9,600,000 over fiscal year 1970—but even at that level the program will serve only a fraction of the poor. As noted in the table prepared by the Office of Economic Opportunity and placed in the record, the program will reach only 7 percent of the 5,000,000 poor who require legal services. In fact, if the poor were to have the same number of lawyers as the population as a whole, there would have to be 50,000 lawyers serving the poor rather rather than the 4,000 now working in programs funded by OEO and other sources.

In spite of the substantial increases allotted to the Legal Services program, large areas of the country with the heaviest concentration of poverty have no or extremely limited legal services programs for the poor. There is only one program in Alabama, Delaware, and Maryland; there are only two programs in Arkansas, Kentucky, Mississippi, Minnesota, Nebraska, and Virginia; and there are only three in Georgia. North Carolina, South Carolina and Kansas. A large number of rural areas are without legal service. Yet under the current fiscal year 1971 budget request OEO plans to initiate only a few new programs. Clearly, more funds are needed to expand meaningfully beyond the current inadequate level of operations.

VOLUNTEERS IN SERVICE TO AMERICA

One of the most exciting and effective antipoverty programs, VISTA, is hampered by lack of funds.

VISTA was conceived as a domestic Peace Corps, providing volunteers to work with public and private nonprofit organizations in their efforts to assist the poor. Through this program, concerned Americans are given the opportunity to live and work directly in poverty neighborhoods.

The administration has requested $38,500,000 for this important program—a $3,500,000 increase over the estimate for fiscal year 1970—and thus there will be only a nominal increase in the number of volunteers. OEO estimates that the average number of VISTA volunteers in the field will rise from 4,700 to 4,900 in fiscal year 1971, but that the end of fiscal year volunteer strength will level off to approximately the same as in fiscal year 1970—6,051.

Our overseas Peace Corps has a projected fiscal year 1971 strength of 10,000. A nation like ours must be able to support antipoverty efforts at home equal to those it sponsors around the world.

Mr. President, recently I met with a number of VISTA volunteers who came to Washington to express their position on the direction of the VISTA program and to underscore the need for greater congressional support for the program. I was impressed by their sincerity, enthusiasm, and sense of purpose.

Congress can recognize the significance of this plea of these young people by supporting the additional amounts needed for the poverty program generally, and thus making available additional funds for the VISTA program.

SENIOR OPPORTUNITIES AND SERVICES

The administration has requested a total of $7,800,000 for fiscal year 1971 for the senior citizen program under section 222(a) of the act—an increase of only $1,000,000 over the $6,800,000 estimate for fiscal year 1970.

The senior opportunities and services program is designed to identify and meet the special economic, health, employment, welfare, and other needs of persons above the age of 60 in projects which serve or employ older persons as the exclusive or predominant participant or employee group. The projects aim at dealing with the specific problems of the older poor that cannot be met practically by more general programs designed to serve all or younger age groups. The program supports a wide variety of projects, ranging from those with specialized goals such as job training, to those with highly generalized purposes, such as community outreach and socialization-recreation. Currently, there are 217 such projects in 45 States which employ, serve, or involve older poor people.

The requested amount is expected to reach between 800,000 to 900,000 elderly persons. This is only 12 percent of the "target population" for this program—which includes more than 6,250,000 persons.

The inadequacies of the present budget request are obvious, and it is clear that appropriations should be substantially increased.

YOUTH PROGRAMS

Mr. President, there are an estimated 3,100,000 youths, aged 14 to 21, in poverty. For many, the usual problems of youth are exacerbated by discrimination, insufficient education, and growing pressures of a complex, urbanized society. The youth in poverty often has been forced, for economic and other reasons, to leave school without a high school diploma to enter the job market, and once in the job market, he is frequently out of work.

There are a multitude of Federal efforts directed at or directly related to the alleviation of the education, employment, and other needs of disadvantaged youth, yet it is clear that much more must be done for this sector of the poor population. For example, out of the 2,450,000 youths eligible for the special summer and youth programs, only 1,000,000 were reached during fiscal year 1970. In the coming fiscal year, OEO estimates that under its new budget requests, there will be a decrease of 200,000 youths reached.

COMPREHENSIVE HEALTH SERVICES

Under section 222(a)(4) of the Economic Opportunity Act of 1964 a special program of comprehensive health services is authorized to focus upon the need of urban and rural areas having high concentrations or proportions of poverty and marked inadequacy of health services for the poor.

To provide comprehensive health services to the poor, OEO has established a new health care delivery system—the neighborhood health center. Each center provides high quality, personalized, continuous health care by offering services for the entire family at conveniently located facilities. Various ambulatory services are provided under one roof also.

The administration has requested a total of $110,000,000 for fiscal year 1971, an increase of $36,000,000 above the $74,000,000 provided for fiscal year 1970.

As in the cases of the other increases, however, it must be considered against the backdrop of total need. Of the 49 original neighborhood health centers, 34 still have not reached what OEO terms "a fully operational and mature level." Dr. Thomas Bryant, Director of OEO's Office of Health Affairs, has estimated that it would require between approximately 600 and 800 neighborhood health centers in the United States to adequately provide health services to the poor. Information received from the Office of Economic Opportunity indicated that last year there were more than 200 applications that went unfunded and which would have required an appropriation of $400 million to meet.

As indicated in the table prepared by the Office of Economic Opportunity, which was placed in the record, the requested amounts will enable the program to reach only 6.5 percent of the 24,300,000 poor who could benefit from health services.

ALCOHOLIC RECOVERY

Mr. President, last year the Congress, upon the initiative of Senator HUGHES, included in the 1969 amendments to the Economic Opportunity Act a provision establishing a new alcoholic counseling and recovery program. The amendments reserved $15,000,000 for fiscal year 1971 for that purpose.

Under the administration's request the program would be funded at a level of $4,000,000—an amount $5,000,000 less than funding for fiscal year 1970 and $11,000,000 less than the amount which the Congress clearly deemed necessary. The justification submitted to the Appropriations Committee by the Office of Economic Opportunity explains that many of the programs initiated late in fiscal year 1970 will not require funding until fiscal year 1972.

Alcoholism ranks as the third major health problem in the Nation, and afflicts an estimated 800,000 poor persons each year. Yet the estimated capacity of OEO's alcoholic counseling and recovery projects for 1971 is only 35,000, or approximately 4.4 percent of the target population. It is essential that funds be increased to a level sufficient to provide additional funds to start new projects under this program.

DRUG REHABILITATION

Last year the Congress also adopted an amendment proposed by Senator DOMINICK for a new drug rehabilitation program, indicating a reserve as in the case of the alcoholism program, of $15,000,000 for fiscal year 1971.

Under the proposed budget, $3,000,000 would be provided is fiscal year 1971, a decrease of $1,500,000 from the amount requested for fiscal year 1970, and $12,000,000 short of the amount which the Congress determined should be reseved.

Again, it is asserted that programs begun late is fiscal year 1970 will not have to be refunded before fiscal year 1972.

However, the projects now funded will serve only 2,000 persons while there are at least 120,000 hard-core heroin addicts among the poor—and the rate of drug experimentation among poor youth is rising.

Mr. President, the tragedy of drug addiction has terrible consequences for more than just the user and his individual family. Addiction fosters crime which menaces entire communities. And again it is the poor who bear most of the burden. Residents of poverty communities are victimized by such crime more frequently than other groups, with resulting serious loss of income and opportunities.

The Congress should increase the appropriations so as to afford greater funding for this progam.

FAMILY PLANNING

The administration has requested $24,000,000, an increase of $7,400,000 over the amount estimated for fiscal year 1970 for this important program.

Even with this increase, the fact remains that at this program level, only 48,000 or 8.9 percent of the 5,400,000 medically indigent women in the Nation will receive the services provided.

A OEO survey has revealed that family planning services are available in only 1,200 of the Nation's 3,072 counties.

MERCHANTS AND SEASONAL FARMWORKERS

Through the efforts of Senator MONDALE, chairman of the Migratory Labor Subcommittee of the Labor and Public Welfare Committee, members of that committee, and others in the Congress, the plight of 3,900,000 migrants and seasonal farmworkers in the Nation is receiving the increasing recognition of the public at large.

Persons working as migrants and seasonally employed farmworkers rank second only to the American Indians in terms of severe deprivation and intergenerational poverty.

In light of the recognition—which I think parallels the discovery of hunger in America—the Office of Economic Opportunity seeks to increase the appropriation for this program by $4,600,000 over last year, in order to provide a total of $35,500,000.

However, funding at even that expanded level will serve only 286,500—or only approximately 7.3 percent—of the 3,900,000 mirgants and seasonal farmworkers in the "target population."

AMERICAN INDIANS

There is no more disadvantaged group than the American Indian. The conditions which cause so much suffering among the other low-income groups are many times worse in the Indian experience. Unemployment among Indians frequently ranges from 40 to 50 percent and on some isolated reservations ap-

proaches 90 percent of the available work force. Indian health is notoriously poor, with unjustifiably high mortality rates. Housing is a critical need, as is education.

Almost 80 percent of the 400,000 American Indians who live on Federal reservations are poor. In addition there are almost 400,000 Indians living away from these Federal areas. Thus the universe of need is estimated at approximately 700,000 hard-core poor, of whom approximately 391,000 are eligible for special OEO reservation anti-poverty programs.

OEO indicates that 370,000 of a total target population of 391,000 Indians will be reached generally under all Economic Opportunity Act programs on Federal reservations in fiscal year 1971. It is clear that in particular areas much more must be done than can be done under existing funds. For example, in the area of education, only 9,500 Indian children of a total universe of need of 30,000 will be reached by Head Start in FY 1971. Similarly, the Federal Government must do more to reach those many Indians residing in State reservations and in rural or urban enclaves.

RURAL POVERTY

In 1969, 8,200,000 persons—more than one-third of the Nation's poor—were living in rural areas.

Deprivation is much more common among the rural population than in the Nation as a whole, except for the rural nonfarm fringes of metropolitan areas. Approximately 22 percent of all farm families and 23 percent of rural nonfarm residents outside metropolitan areas have an income standard below the poverty line.

The effects of rural poverty are manifested daily in the large-scale migration to the cities and the resultant problems of poverty in those cities.

The Office of Economic Opportunity has advised that funds allocated to meet the problems of the rural poor have increased from 26 percent of the total in fiscal year 1969 to 31 percent of the total under the projected expenditures for fiscal year 1971. Yet, the greater number of rural poor will be untouched by such essential programs as Comprehensive Health, where only 170,000 of the 3,400,000 rural poor in the target group will be reached.

In an effort to stimulate economic development of the rural areas and thus raise the standard of living for the rural poor, Economic Opportunity Loans are provided under title III–A of the amended Economic Opportunity Act of 1964. These loans furnish low-cost credit, backed up by technical assistance and supervision, and are designed to assist low-income rural families in establishing small nonfarm enterprises, and enable poor farmers to combine basic real estate, machinery and equipment purchase in one loan flexibly tailored to meet limited resources.

The estimated universe of need for this program is 2,500,000 families. The OEO budget request for fiscal year 1971 allots only $500,000 to replenish the roughly $90,000,000 in the revolving loan fund. This represents a decrease of $5,400,000 from fiscal year 1970.

COMMUNITY ACTION AGENCIES

Mr. President, the special emphasis and other programs mentioned owe their successful operation, and in many cases, their origin, to the real backbone of the poverty program—the community action agencies. This program is designed to make possible the structure through which the process of community action is carried out and to enable each community to tailor its total antipoverty program to its people's needs. At the community level, funds are provided for staff to plan, coordinate, develop, and manage antipoverty programs.

The administration has requested $384,600,000 for fiscal year 1971, for community action operations, of which a portion is for local initiatives. This is an increase of only $2,500,000 over the fiscal year 1970 figure of $382,100,000. However, if the additions to the fiscal year 1971 funds for State offices are subtracted from this overall figure, then the total appropriation request for the community action operations programs is actually only $379,600,000, a decrease of $2,500,000 from the fiscal year 1970 request.

A review of some of the activities that come under the heading "Community Action Operations" programs suggest that a number of critical efforts will be cutback or merely maintained at last year's level:

The number of community action agencies will decrease from 1,003 in fiscal year 1970 to 1,000 in fiscal year 1971.

The funds for community action mission performance, which includes all the substantive functions of the CAA directed toward advancing the goal of community action, other than the actual running of service programs and traditional administrative services, will remain at the same level of $60,000,000 for fiscal year 1971.

The funds for community programming, which includes all the many programs sponsored by individual CAA's, ranging from manpower and education to housing development corporations and emergency financial assistance, will remain at the same $87,000,000 level for fiscal year 1971.

The funds for the neighborhood services systems will decrease from $107,000,000 in fiscal year 1970 to $105,000,000 in fiscal year 1971. This program establishes centers which offer on a regular basis a variety of different activities not relating to specific programs but dealing with the more general functions of intake, initial assessment, referral, and program placement. The neighborhood centers are the structure for developing and delivering antipoverty programs at the neighborhood level and are the primary vehicle for involving the poor.

Because of the requested $2,000,000 decrease for fiscal year 1971, the number of poor reached by the Neighborhood services system will remain at 3,100,000 in fiscal year 1971—only 12.7 percent of the total population of 24,300,000.

The Congress must recognize the crucial role played by the community action agencies in the overall poverty campaign.

MANPOWER PROGRAMS

Mr. President, the Committee on Labor and Public Welfare, of which I am the ranking minority member, has reported legislation which would greatly revamp and improve the manner in which manpower services are delivered to those whom they are designed to benefit.

As I firmly believe that manpower funds will be put to the most effective use under the new plans set forth in the proposed legislation, and that training efforts are a vital part of our efforts to combat poverty, I recommend that the Congress grant the full appropriations requests for these programs, which are contained in two sections of this appropriation bill.

The first part consists of manpower programs authorized under the Economic Opportunity Act of 1964, and administered by the Departments of Labor and Health, Education, and Welfare. They include the job opportunities in the business sector program—which has so successfully involved the private sector in efforts to combat poverty—and such other programs as the Neighborhood Youth Corp summer and out of school programs, the Job Corps, the public service careers, and the concentrated employment program.

The Office of Economic Opportunity has requested a total of $802,000,000 for these programs under the authority of the Economic Opportunity Act to provide a total of 647,240 opportunities. This represents an increase of $48,100,000 and 51,040 opportunities over fiscal year 1970, when $753,900,000 and 596,200 opportunities were made available.

The second part consists of the request of the Department of Labor under the authority of the Manpower Development and Training Act of 1962, an additional source of funding for many of the same programs which I have mentioned. A total of $747,494,000 has been requested, to provide approximately 336,600 opportunities. This represents an increase of $96,367,000 and a decrease of 48,800 opportunities over fiscal year 1970, when $651,127,000 and 385,400 opportunities were provided.

Accordingly, while funds for manpower training from these two sources for fiscal year 1971 would total $1,549,494,000 compared with $1,405,027,000 for fiscal year 1970, an increase of $144,467,000—the total number of opportunities will increase from 981,400 to 983,840—an increase of only 2,240.

Mr. President, I ask unanimous consent that there be included in the RECORD a table dated April 28, 1970, prepared by the Manpower Administration of the Department of Labor, indicating in detail a breakdown of these statistics in terms of specific programs.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

MANPOWER ADMINISTRATION FISCAL YEAR 1971 CONGRESSIONAL SUBMISSION

[1] Represents Federal positions.
[2] Excludes pending MA proposal for 1970 supplemental (+2.3 million) and 1971 amendment (+43.4 million).
[3] Reflects reduction of $21.4 million required by earmarking provisions of OEO Authorization Act.

Mr. JAVITS. Mr. President, while a total expenditure of more than $1,500,000 for manpower may seem substantial, it must be viewed against the funds which are allocated each year because families are unable to become self-sufficient, and against the total target population for these programs. As I noted earlier, the bill now before the Appropriations Committee includes an "uncontrollable" Federal expenditure for welfare in the amount of $2,540,683,000.

Mr. President, for fiscal year 1971 the number of disadvantaged who could benefit from manpower programs has been projected at more than 11,000,000 or 10 the number who will benefit under these funds.

In this connection, I wish to emphasize a particular program which has been of special concern to me—the Neighborhood Youth Corp summer program, which provides work and training opportunities to disadvantaged youth 14 to 21 years of age during the summer months.

The general amounts which I have cited do not reflect the supplemental appropriation approved in June of this year, and which many of the members of the Appropriations Committee supported. Under that supplemental approximately $35,000,000 of a total supplemental of $50,000,000 was made available for the Neighborhood Youth Corp summer job program.

The administration budget request for fiscal year 1971 for this program requests $1,400,000 less than the amounts appropriated for fiscal year 1970, under the regular appropriations bill.

Accordingly, taking into account the supplemental funding—this program is now projected at a level some $36,400,000 less than provided last summer. On the basis of this past summer's cost, this should mean that approximately 82,000 fewer youths will be able to participate next summer than last.
